The draw of the Padanarum highway bridge, mile 1.0 at South Dartmouth, shall open on signal from May 1 through October 31 from sunrise to 7:30 a.m., 9:30 a.m., 11:30 a.m., 1 p.m., 4:30 p.m., 6:30 p.m. and one hour after sunset. At all other times the draw shall open on signal if at least six hours notice is given. Public vessels of the United States and state and local vessels used for public safety shall be passed as soon as possible.

§ 117.589 Cape Cod Canal.

(a) The lift span of the Buzzards Bay railroad bridge, mile 0.7 at Bourne, will normally be kept in the raised (open) position except for the passage of trains or for maintenance. No signal is required if the lift span is raised.

(b) If the lift span is in other than the raised position, the opening signal shall be one prolonged and one short blast.

(c) Signals to be sounded from the bridge are:

(1) Immediately preceding the raising of the drawspan: One prolonged blast.

(2) Immediately preceding the lowering of the drawspan: Two prolonged blasts.

(3) When a vessel has sounded the opening signal and the drawspan cannot be raised immediately: Five short blasts in a rapid succession.

(4) When the draw is closed and visibility is reduced in foggy weather:

Five short blasts in rapid succession every two minutes.

§ 117.591 Charles River.

(a) The draw of the Charlestown bridge, mile 0.4 at Boston, need not open for the passage of vessels.

(b) The draws of the Boston & Maine railroad bridge, mile 0.8 at Boston, shall open on signal except that from 6:15 a.m. to 9:10 a.m. and 4:15 p.m. to 7:40 p.m., except Sundays and legal holidays observed in the locality, the draws need not open for the passage of vessels.

(c) The draw of the Massachusetts Bay Transportation Authority (East Cambridge Viaduct) railroad bridge, mile 1.0 at Boston, need not open for the passage of vessels.

(d) The draw of the Metropolitan District Commission bridge, mile 1.0 at Boston, shall open on signal except that from 6:15 a.m. to 9:10 a.m. and 4:15 p.m. to 7:40 p.m., except Sundays and legal holidays observed in the locality, the draw need not open for the passage of vessels.

(e) The draw of the Commercial Avenue bridge across Lechmere Canal, mile 0.0 at Boston, need not open for the passage of vessels.

(f) The draw of the First Street bridge across Broad Canal, mile 0.0 at Boston, shall open on signal from October 1 through May 31, except that from Monday through Friday, except legal holidays, from 7:30 a.m. to 9 a.m., and 4:30 p.m. to 6 p.m. the draws need not open. From June 1 through September 30 the draw shall open on signal if at least 12 hours notice is given.

(g) The draws of the bridges across Broad Canal need not open for the passage of vessels.

(h) Public vessels of the United States and state and local vessels used for public safety shall be passed as soon as possible.

(i) When high tide occurs at the Charlestown Navy Yard within 45 minutes before or after 6:15 a.m to 9:10 a.m.; the draws of each bridge shall open for no longer than a 10-minute period for vessels which draw more than 12 feet of water. This 10-minute period is dictated by train traffic. Once a vessel has begun passage it shall be pased through each bridge, in turn, until it reaches its destination.

(j) Signals.

(1) The open signal is two prolonged blasts followed by two short blasts.

(2) The opening signal from vessels entitled to pass any bridge during a closed period is four prolonged blasts.

(3) The acknowledging signal when the draw shall open is three prolonged blasts.

(4) The acknowledging signal when the draw cannot open or is open and must close is two prolonged blasts.

§ 117.593 Chelsea River.

(a) All drawbridges across the Chelsea River shall open on signal. The opening signal for each drawbridge is two prolonged blasts followed by two short blasts and one prolonged blast.

(b) The acknowledging signal is three prolonged blasts when the draw shall open immediately.

(c) The acknowledging signal is two long blasts when the draw cannot open or is open and must close.

§ 117.595 Danvers River.

The draws of the US1 bridge, mile 0.0, the Boston and Maine railroad bridge, mile 0.0, and the Essex County bridge, mile 1.0, all at Salem, shall open on signal except that from 12 midnight to 8 a.m. the draws shall open as soon as possible after notice is given to the drawtenders, either at the bridges during the time the operators are on duty or at their residences thereafter.

§ 117.597 Dorchester Bay.

The draw of the William T. Morrisey Boulevard bridge, mile 0.0 at Boston, shall open on signal from April 16 through October 14, except that the draw need not open for the passage of vessels from 7:30 a.m. to 9 a.m., and from 4:30 p.m. to 6 p.m. except on Saturdays, Sundays, or legal holidays observed in the locality. From October 15 through April 15, the draw shall open on signal if at least 24 hours notice is given. Public vessels of the United States and state or local vessels used for public safety shall be passed as soon as possible.

§ 117.599 Fort Point Channel.

(a) The draws of the Northern Street bridge, mile 0.1 at Boston, shall open on signal, except that from 7 a.m. to 9 a.m., and 4:30 p.m. to 6:30 p.m., Monday through Friday, except legal holidays, the draw need not open except for vessels whose draft is less that 18 feet. From 8 p.m. to 6 a.m. the draw need not open for the passage of vessels. Public vessels of the United States and state or local vessels used for public safety shall be passed as soon as possible.

(b) The draws of the Congress Street bridge, mile 0.3, and the Sumner Street bridge, mile 0.4, both at Boston, need not open for the passage of vessels.

(c) The draws of the Dorchester Avenue bridge, mile 0.8, the Amtrak railroad bridge, mile 0.8, the Broadway bridge, mile 1.0, and the Dover Street bridge, mile 1.2, all at Boston, need not open for the passage of vessels.

§ 117.601 Malden River.

The draw of the US1 bridge, mile 0.3 between Medford and Everett, need not open for the passage of vessels.

§ 117.603 Manchester Harbor.

The draw of the Boston and Maine railroad bridge, mile 1.0 at Manchester, shall open on signal from April 1 through November 1 from 9 a.m. to 1 p.m., and 2 p.m. to 6 p.m. At all other times at least two hours notice is required from 6:45 a.m. to 3:45 p.m. and at least five hours notice is required from 3:45 p.m. to 6:45 a.m. The notice is to be given to the Chief Dispatcher, Boston and Maine railroad, Boston.

§ 117.605 Merrimack River.

(a) The draws of the US1 bridge, mile 3.4 at Newburyport, shall open on signal May 1 through October 31 from 6 a.m. to 10 p.m., and from November 1 through April 30 from 8 a.m. to 5 p.m. At all other times the draws shall open if at least a one-hour notice is given.

(b) The draw of the Boston and Maine railroad bridge, mile 3.4 at Newburyport, will normally be maintained in the open position. When the draw is in the closed position, a drawtender shall be on duty and the draw shall open on signal.

(c) The draws of the Essex County bridge, mile 5.8 at Newburyport, the Essex County bridge, mile 12.6 at Rocks Village, and Groveland bridge, mile 16.5 at Groveland, shall open on signal if at least two hours notice is given.

(d) Public vessels of the United States and state or local vessels used for public safety shall be passed through the draw of each bridge as soon as possible.

§ 117.607 Mitchell River.

(a) The draws of the US1 bridge, mile 1.4, and the Boston and Maine railroad bridge, mile 1.8, both at Boston, shall open on signal except that from 7:45 a.m. to 9 a.m., 9:10 a.m. to 10 a.m. and 5 p.m. to 6 p.m., except Sundays and on legal holidays, the draws need not open for the passage of vessels whose draft is less than 18 feet. Public vessels of the United States and state or local vessels used for public safety shall be passed at any time.

(b) The draws of the Wellington bridge, mile 2.5, and the General Lawrence bridge, mile 3.6, both at Boston, need not open for the passage of vessels.

§ 117.608 Mystic River.

The draw of the Granite Avenue bridge, mile 0.0 at Boston, shall open on signal from May 1 through October 31 and from November 1 through April 30

from 8 a.m. to 4 p.m. The draw shall open on signal from November 1 through April 30 from 4 p.m. to 8 a.m. if at least 24 hours notice is given. Public vessels of the United States and state or local vessels used for public safety shall be passed at any time.

§ 117.611 Neponset River.

The draws of the S3A bridge, mile 1.6 at Scituate, and the Plymouth County bridge, mile 3.0 at Norwell, shall open on signal from May 1 through October 31 if at least four hours notice is given. From November 1 through April 30 the draws shall open on signal if at least 24 hours notice is given.

§ 117.613 North River.

The draw of the US1 bridge, mile 0.1, between Newburyport and Plum Island, shall open on signal from April 1 through November 30 during daylight hours two hours before to two hours after each high tide. Daylight shall begin one half hour before sunrise and end one half hour after sunset and high tide shall occur one half hour later than the time of high tide for Portland as published by the National Oceanic and Atmoshperic Administration. At all other times the draws shall open on signal if at least three hours notice is given.

§ 117.615 Plum Island River.

The draw of the Summer (L) Street bridge, mile 0.2 at Boston, shall open on signal from 9:30 a.m. to 4 p.m., Monday through Saturday, and from 9:30 a.m. to 4 p.m. on Sunday from April 1 through October 3. At all other times the draw shall open on signal if at least 10 hours notice is given. Public vessels of the United States and state or local vessels used for public safety shall be passed as soon as possible.

§ 117.617 Reserve Channel.

The draw of the Bristol County bridge, mile 10.3 at Berkley, shall open on signal from May 1 through October 31 from 5 a.m. to 10 p.m. and from November 1 through April 30 from 6 a.m. to 6 p.m. At all other times the draw shall open on signal if at least a one-half hour notice is given.

§ 117.619 Taunton River.

The draw of the Bristol County bridge, mile 10.3, at Berkley shall open on signal from May 1 through October 31 from 5 a.m. to 10 p.m. and from November 1 through April 30 from 6 a.m. to 6 p.m. At all other times the draw shall open on signal if at least a one-half hour notice is given.

§ 117.621 Weymouth Fore River.

The draw of the S3 bridge, mile 3.5, between Quincy Point and Weymouth, shall open on signal, except that the draw need not open from 6:30 a.m. to 9 a.m. and 4:30 p.m. to 6:30 p.m., Monday through Friday, except legal holidays observed in the locality. However, the draw shall open at any time for public vessels of the United States, any vessel of state or municipal government vessels used for public safety and in case of emergency or during severe storm conditions.

Michigan

§ 117.625 Black River.

(a) The draws of the Military Street bridge, mile 0.3, and Seventh Street bridge, mile 0.5, both at Port Huron, shall open on signal:

(1) From May 1 through October 31 on Sundays and Federal holidays from 5:30 p.m. to 9 a.m.

(2) From May 1 through October 31, from 9 a.m. to 5:30 p.m., Monday through Saturday, except Federal holidays, only on the hour and half hour.

(3) From November 1 through November 30 and April 1 through April 30 from 8 a.m. to 4 p.m., and from 4 p.m. to 8 a.m., if at least three hours notice is given.

(4) From December 1 through March 31 if at least 24 hours notice is given.

(b) The draw of the Tenth Street bridge, mile 0.9 at Port Huron, shall open on signal:

(1) From May 1 through October 31 from 8 a.m. to 11 p.m. and from 11 p.m. to 8 a.m. if at least one hour notice is given.

(2) From April 1 through April 30 and November 1 through November 30 if at least three hours notice is given.

§ 117.687 Missouri River.

The draws of the bridges across the Missouri River from the mouth to St. Joseph, shall open on signal except that from December 16 through the last day of February, the draws shall open on signal if at least 24 hours notice is given.

§ 117.689 Osage River.

The draw of the Missouri Pacific Railroad bridge, mile 5.6 at Osage City, need not open for the passage of vessels.

Nebraska

§ 117.691 Missouri River.

(a) The draw of the Illinois Central Gulf railroad bridge, mile 618.3 at Omaha, shall open on signal except that from December 1 through March 1 the draw shall open on signal if at least 24 hours notice is given.

(b) The draw of the I29 highway bridge, mile 732.3 at Sioux City, need not open for the passage of vessels.

New Hampshire

§ 117.695 Bellamy River.

The draw of the state highway bridge, mile 0.2 at Dover, shall open on signal from April 1 through October 31 from 6 a.m. to 10 p.m. if at least four hours notice is given. At all other times the draw shall open as soon as possible only for emergencies.

§ 117.697 Hampton River.

The draw of the state highway bridge, mile 0.0 at Hampton, shall open on signal from April 1 through October 31 for the passage of vessels during the daylight portions of the periods beginning three hours before and ending three hours after each high water. For the purpose of this section, daylight is construed to begin 30 minutes before sunrise and to end 30 minutes after sunset, and high water shall be deemed to occur 30 minutes later than the time of high water for Portland, Maine, as

given in the tide tables for the United States published by the National Oceanic and Atmospheric Administration. At all other times the draw shall open on signal if at least three hours notice is given.

§ 117.699 Little Harbor.

The draw of the US1 bridge, mile 1.0 between New Castle and Rye, shall open on signal from April 1 through October 31 from 6 a.m. to 10 p.m. if at least four hours notice is given. At all other times the draw shall open as soon as possible only for emergencies.

New Jersey

§ 117.701 Alloway Creek.

(a) The draws of the Salem County bridges, miles 5.1 at Hancocks, and 6.5 at Upper Hancocks, shall open on signal if at least 24 hours notice is given.

(b) The draw of the S49 bridge, mile 9.5 at Quinton, need not open for the passage of vessels.

§ 117.703 Bass River.

The draw of the US9 bridge, mile 2.6 at New Gretna, shall open on signal from March 1 through November 30 from 7 a.m. to 11 p.m. From March 1 through November 30, from 11 p.m. to 7 a.m., and from December 1 through the last day of February, the draw shall open on signal if at least six hours notice is given.

§ 117.705 Beaver Dam Creek.

The draw of the Ocean County bridge, mile 0.5 at Point Pleasant, shall open on signal from June 1 through September 30 and from 8 a.m. to 4 p.m. during April, May, October, and November. At all other times the draw shall open on signal if at least 24 hours notice is given.

§ 117.707 Cape Island Creek.

The draw of the Cape May County bridge, mile 0.3 at Cape May, need not open for the passage of vessels.

§ 117.709 Cheesequake Creek.

(a) The draw of the S35 bridge, mile 0.0 at Morgan, South Amboy, shall open on signal except that from May 15 through October 15 from 7 a.m. to 7 p.m. the draw need only open on the hour, and from December 1 through March 31 from 11 p.m. to 7 a.m., the draw need not open for the passage of vessels.

(b) The draws of the railroad bridge, mile 0.2, shall open on signal, except at least four hours notice is required:

(1) From January 1 through March 1 from 6 p.m. to 6 a.m.

(2) From April 1 through April 30 and November 1 through November 30, from 10 p.m. to 6 a.m., Monday through Thursday, and midnight Sunday through 6 a.m. Monday.

(3) From December 1 through December 31 from 10 p.m. to 6 a.m.

§ 117.711 Cohansey River.

The draw of the Broad Street bridge, mile 18.2 at Bridgeton, need not open for the passage of vessels.

§ 117.713 Cooper River.

(a) The draws of the State Street bridge, mile 0.3, the CONRAIL bridge at North River Avenue, mile 0.9, and the Federal Street bridge, mile 1.0, all at Camden, shall open on signal if at least four hours notice is given.

(b) The draw of the Admiral Wilson Boulevard bridge, mile 1.1 at Camden, need not open for the passage of vessels.

§ 117.715 Debbies Creek.

The draw of the Monmouth County highway bridge, mile 0.4 at Manasquan, shall open on signal except that from Memorial Day through Labor Day from 7 a.m. to 8 p.m., the draw need open only on the hour and half hour if any vessels are waiting to pass.

§ 117.717 Delaware River (Back Channel).

The draw of the Cities Service Company bridge, mile 117.0 between Petty Island and Camden, need not open for the passage of vessels.

§ 117.719 Elizabeth River.

(a) The draws of the railroad bridge, mile 0.7, the Baltic Street bridge, mile 0.9, the Summer Street bridge, mile 1.3, the South Street bridge, mile 1.8, and the Bridge Street bridge, mile 2.1, all at Elizabeth, need not open for the passage of vessels.

(b) The draw of the South Front Street bridge, mile 0.0 at Elizabeth, shall open on signal except that from 12 midnight to 7 a.m. the draw shall open on signal if at least three hours notice is given.

(c) The draws of the South First Street bridge, mile 0.4 at Elizabeth, shall open on signal if at least three hours notice is given.

§ 117.721 Great Channel.

The draw of the Cape May County Bridge Commission bridge, mile 0.7, between Stone Harbor and Nummy Island shall open on signal except that from November 1 through April 30 the draw shall open on signal if at least 24 hours notice is given.

§ 117.723 Hackensack River and Overpeck Creek.

(a) The draws of each bridge shall open on signal except that:

(1) The draw of AMTRAK's Portal bridge, mile 5.0 at Snake Hill, need not open Monday through Friday, except Federal holidays from 7:20 a.m. to 9:20 a.m. and from 4:30 p.m. to 6:50 p.m. Outside of these closed periods, an opening may not be delayed for more than ten minutes unless the drawtender and the vessel, communicating by radiotelephone, agree to a longer delay.

(2) The draw of the S46 bridge, mile 14.0 at Little Ferry, shall open on signal if at least six hours notice is given.

(3) The draw of the Court Street bridge, mile 16.2 at Hackensack, shall open on signal if at least two hours notice is given from 8 a.m. to 12 midnight. From 12 midnight to 8 a.m. the draw shall open on signal if at least six hours notice is given.

(4) The draws of the CONRAIL and New York, Susquehanna and Western railroad bridges, mile 0.0 on Overpeck Creek, shall open on signal if at least 24 hours notice is given.

(5) Public vessels of the United States, state or local vessels used for public safety, and vessels in distress shall be passed through the draw of each bridge as soon as possible.

(6) The draws of the New York, Susquehanna, and Western railroad bridge, mile 16.3, and the Midtown bridge, mile 16.5, both at Hackensack, need not open for the passage of vessels.

§ 117.725 Manantico Creek.

The draw of the highway bridge, mile 0.5 at Millville, need not open for the passage of vessels.

§ 117.727 Manasquan River.

The draw of the S70 bridge, mile 3.4 at Brielle Township, shall open on signal from 7 a.m. to 11 p.m. The draw need not open from 11 p.m. to 7 a.m.

§ 117.729 Mantua Creek.

The draw of the highway bridge, mile 1.7 at Paulsboro, shall open on signal from 7 a.m. to 11 p.m. The draw shall open on signal from 11 p.m. to 7 a.m. if at least four hours notice is given.

§ 117.731 New Jersey Intracoastal Waterway.

(a) The draw of the S37 bridge, mile 14.1 at Seaside Heights, shall open on signal except that:

(1) From December 1 through March 31 from 11 p.m. to 7 a.m., the draw need not open to navigation.

(2) From Memorial Day through Labor Day from 10 a.m. to 2 p.m. Saturdays, Sundays, and Federal holidays, the draw need only open on the hour and half hour, except that it shall open at any time for the passage of vessels with tows during such periods.

(b) The draws of the New Jersey Rail Transit Corporation railroad bridge, mile 68.9 at Atlantic City, shall open on signal from 11 p.m. to 6 a.m. The draw

shall open on signal from 20 minutes to 30 minutes after each hour from 6 a.m. to 11 p.m. if any vessels are waiting to pass.

(c) The draw of the Albany Avenue (US 40–322) bridge, mile 70.0 at Atlantic City, shall open on signal from October 1 through May 30, and from June 1 through September 30 from 9 p.m. to 9 a.m. From June 1 through September 30 from 9 a.m. to 4 p.m., and from 6 p.m. to 9 p.m., the draw shall open on the hour and half hour. From June 1 through September 30 from 4 p.m. to 6 p.m., the draw need not open.

(d) The draw of the Dorset Avenue bridge, mile 71.2 at Ventnor City, shall open on signal from October 1 through May 30 and from June 1 through September 30 from 9:15 p.m. to 9:15 a.m. From June 1 through September 30 from 9:15 a.m. to 9:15 p.m., the draw need open only on the quarter and three-quarter hours for any vessels waiting to pass. Public vessels of the United States and vessels in distress shall be passed at any time.

(e) The draw of the Route 52 (Ninth Street) bridge, mile 80.4 at Ocean City, shall open on signal except that from Memorial Day through Labor Day from 11 a.m. to 5 p.m. on Saturdays, Sundays, and Federal holidays, the draw need open only on the hour and half hour if any vessels are waiting to pass. Public vessels of the United States, vessels with another vessel in tow, and vessels in distress shall be passed at any time.

(f) The draw of the Stone Harbor Boulevard bridge across Great Channel, mile 102.0 at Stone Harbor, shall open on signal except that on Saturdays, Sundays, and holidays from Memorial Day through Labor Day from 8 a.m. to 6 p.m. The draw need open only on the hour, 20 minutes after the hour, and 40 minutes after the hour. Public vessels of the United States and vessels with another vessel in tow shall be passed at any time.

(g) All bridges need not stay open for more than 10 minutes for the passage of vessels nor need they stay closed for more than 10 minutes for the passage of land traffic.

§ 117.733 Oceanport Creek.

The draw of the Conrail railroad bridge, mile 8.4 near Oceanport, shall open on signal if at least four hours notice is given.

§ 117.735 Oldmans Creek.

The draws of the US 30 bridge, mile 3.1 at Nortonville, the Conrail railroad bridge, mile 4.0 at Jumbo, and the Salem County bridge, mile 5.1 at Pedricktown, need not open for the passage of vessels.

§ 117.737 Passaic River.

The draws of each bridge shall open on signal except that:

(a) The following bridges need not open during the hours specified, Monday through Friday, except Federal holidays:

(1) Amtrak's Dock bridge, mile 5.0, from 7:20 a.m. to 9:20 a.m. and 4:30 p.m. to 6:50 p.m. Outside of these closed periods, an opening of the Dock bridge may be delayed no more than 10 minutes unless the drawtender and the vessel, communicating by radiotelephone, agree to a longer delay.

(2) Conrail's Morristown Line bridge, mile 5.8, from 7:23 a.m. to 9 a.m. and 4:30 p.m. to 6:50 p.m.

(b) The opening of the draw of the following bridges may be delayed as specified:

(1) Route 280 (Stickel Memorial) bridge, mile 5.8. The draw shall open on signal if at least eight hours notice is given. In an emergency the draw shall open as soon as possible but not more than two hours after the opening request.

(2) CONRAIL bridge (West Arlington), mile 8.0, from 7 a.m. to 11 p.m., the draw shall open on signal if at least eight hours notice is given. From 11 p.m. to 7 a.m., the draw need not open.

(3) CONRAIL bridge (Lyndhurst), mile 11.7, from 8 a.m. to midnight, the draw shall open on signal. From midnight to 8 a.m., the draw shall open on signal if at least six hours notice is given.

(4) Route 3 bridge, mile 11.8 at Rutherford, shall open on signal if at least six hours notice is given.

(5) Union Avenue bridge, mile 13.2, shall open on signal except that from midnight to 8 a.m. the draw shall open on signal if at least eight hours notice is given.

(c) Public vessels of the United States, state or local vessels used for public service, and vessels in distress shall be passed through the draw of each bridge as soon as possible.

(d) The draws of the following bridges need not open for the passage of vessels:

(1) Gregory Avenue bridge, mile 14.0.

(2) Second Street bridge, mile 14.7.

(3) West Eighth Street bridge, mile 15.3.

§ 117.739 Raccoon Creek.

The draw of the CONRAIL railroad bridge, mile 2.0 at Bridgeport, shall open on signal except that from 10 p.m. to 6 a.m., Monday through Friday, and on Saturdays, Sundays and holidays, from December 1 through the last day of February at least four hours notice is required.

§ 117.741 Rahway River.

The draw of the railroad bridge, mile 2.0 at Linden, shall open on signal from April 1 through November 30 from 6 a.m. to 10 p.m. At all other times the draw shall open on signal if at least four hours notice is given.

§ 117.743 Rancocas River (Creek).

The draws of the S543 bridge, mile 1.3 at Riverside, the CONRAIL bridge, mile 1.6 at Delanco, the US130 bridge, mile 3.3 at Bridgeboro and the S38 bridge, mile 7.8 at Centerton, shall open on signal from April 1 through November 30 from 7 a.m. to 11 p.m. From December 1 through March 31 from 7 a.m. to 11 p.m. the draws shall open on signal if at least 24 hours notice is given. From 11 p.m. to 7 a.m. the draws need not open for the passage of vessels.

§ 117.745 Raritan River and Arthur Kill and their tributaries.

The draws of all bridges shall open on signal except that from 7:30 a.m. to 10 a.m. and 5 p.m. to 7:30 p.m. the draws may open for the passage of vessels for periods no longer than 10 minutes. Public vessels of the United States and state or local vessels used for public safety, shall be passed at any time.

§ 117.747 Salem River.

The draw of the S49 bridge, mile 3.5 at Salem, shall open on signal if at least 24 hours notice is given.

§ 117.749 Shark River (South Channel).

(a) the draws of S71 bridge, mile 0.8 at Avon, the railroad bridge, mile 0.9 at Avon and the S35 bridge, mile 0.9 at Avon, are considered and operate as one unit. The owners shall provide signal systems so connected that the operator of any of the bridges may simultaneously notify the operators of the other two. The operator of the first bridge to be passed shall be responsible for observing the approach of vessels for receiving and acknowledging signals, and for communicating to the operators of the other bridges, the intention of such vessels.

(b) The draws shall open on signal from October 1 through May 14 and from May 15 through September 30, Monday through Friday, except Federal holidays, from 7 p.m. to 4 p.m., and Saturdays, Sundays and holidays, from 9 p.m. to 9 a.m.

(c) From May 15 through September 30 from 4 p.m. to 7 p.m., Monday through Friday, except Federal holidays and from 9 a.m. to 9 p.m. Saturdays, Sundays, and holidays the draw need open only on the hour and half hour if a vessel is waiting to pass.

§ 117.751 Ship Channel, Great Egg Harbor Bay.

The draw of the S52 bridge, mile 0.5 at Ocean City, shall open on signal except that and from 11 p.m. to 7 a.m. the draw shall open on signal if at least 24 hours notice is given.

§ 117.753 Shrewsbury River (South Branch).

(a) The draw of the S36 bridge, mile 1.8 at Highlands, shall open on signal, except that from Memorial Day through Labor Day on Saturdays, Sundays, and Federal holidays from 10 a.m. to 7 p.m. The draw need open only on the hour and half hour to pass any accumulated vessels.

(b) The draw of the Monmouth County highway bridge, mile 4.0 at Sea Bright, shall open on signal except that from May 15 through September 30 on Saturdays, Sundays, Memorial Day, Independence Day, and Labor Day, from 11 a.m. to 7 a.m. the draw need open only on the hour and half hour. The draw need not open at any time for a sailboat unless it is under auxiliary power or is towed by a powered vessel.

§ 117.755 Tuckahoe River.

The draw of the State highway bridge, mile 8.0 at Tuckahoe, shall open on signal if at least 24 hours notice is given.

§ 117.757 Wading River.

The draw of the Burlington County highway bridge, mile 5.0 at Wading River, shall open on signal if at least 24 hours notice is given.

§ 117.759 Woodbridge Creek.

The draws of the Middlesex County highway bridge, mile 0.5 at Sewaren, and the railroad bridge, mile 0.6 at Sewaren, shall open on signal if at least four hours notice is given.

New York

§ 117.771 Bronx River.

(a) The draws of the Bruckner Boulevard highway bridge,mile 1.1 at New York City, shall open on signal except that from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m., Monday through Friday, the draws need not open for the passage of vessels. Public vessels of the United States, state or local vessels used for public safety and vessels in distress, shall be passed without delay.

(b) The draws of the Westchester Avenue highway bridge, mile 1.5, and the CONRAIL bridge, mile 1.6, both at New York City, need not open for the passage of vessels.

§ 117.773 Buffalo River.

(a) The draws of the Michigan Avenue bridge, mile 1.3, and the Ohio Street bridge,mile 2.1, both at Buffalo, shall open on signal, except that from 7:30 a.m. to 9 p.m. and from 4 p.m. to 5:45 p.m., Monday through Saturday, except New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving and Christmas, or other days observed in lieu of any of these under state law, the draws need not open for the passage of vessels.

(b) The draws of the South Park Avenue bridge, mile 5.3 at Buffalo, shall open on signal, except that from 7 a.m., to 8:30 a.m., and from 4 p.m. to 5:45 p.m., Monday through Saturday, except New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving and Christmas, or other days observed in lieu of any of these under state law, the draws need not open for the passage of vessels.

§ 117.775 Coney Island Creek.

The draws of the Cropsey Avenue bridge, mile 0.4, the Stillwell bridge, mile 0.6, and the New York City Transit Authority bridges near Stillwell Avenue, mile 0.7, all at New York City, need not open for the passage of vessels.

§ 117.777 Dutch Kills.

(a) The draws of the Hunters Point Avenue, mile 1.4, and the Borden Avenue bridge, mile 1.2, both at New York City, shall open on signal if at least six hours notice is given to the New York City Highway Department's Radio (Hotline) Room.

(b) The draws of the Long Island Railroad bridge, mile 1.1 at New York City, shall open on signal if at least six hours notice is given to the Long Island Railroad Movement Bureau.

(c) Public vessels or vessels employed by the United States, and state or local vessels used for public safety, shall be passed as soon as possible.

§ 117.779 Eastchester Bay (Arm of).

The draw of the highway bridge, mile 2.2 between Rodman Neck and City Island, need not open for the passage of vessels.

§ 117.781 East River.

The draw of the Roosevelt (Welfare) Island bridge, mile 6.4 at New York City, shall open on signal if at least six hours notice is given to the New York City Highway Department's Radio (Hotline) Room.

§ 117.783 Flushing Creek.

The draws of the Whitestone Parkway bridge, mile 0.2, the Roosevelt Avenue bridge, mile 0.8, and the Long Island Railroad bridge, mile 1.0, all at New York City, need not open for the passage of vessels.

§ 117.785 Genesee River.

(a) The draw of the CONRAIL bridge, mile 0.9 at Rochester, shall open on signal except that from December 15 through March 31, the draw shall open on signal if at least 12 hours notice is given.

(b) The draw of the Stutson Street bridge, mile 1.2, at Rochester shall open on signal from April 1 through December 15, from 7 a.m. to 9 a.m. and from 4 p.m. to 6 p.m., Monday through Friday, except Federal holidays, the draw need not open for the passage of vessels. From 9 a.m. to 4 p.m. and 6 p.m. to 11 p.m., Monday through Friday, except Federal holidays, and from 7 a.m. to 11 p.m. on Saturdays, Sundays, and Federal holidays, the draw need open only on the hour and half hour. From December 16 through March 31 the draw shall open on signal if at least 12 hours notice is given.

(c) Public vessels of the United States, vessels in distress, and vessels seeking shelter from rough weather shall be passed through either bridge as soon as possible.

§ 117.787 Gowanus Canal.

The draws of the Third Street bridge, mile 1.8, the Carroll Street bridge, mile 2.0., and the Union Street bridge, mile 2.1, all at New York City, shall open on signal except that from May 1 through September 30, the draws shall open on signal if at least six hours notice is given to the New York City Highway Department's Radio (Hotline) Room.

§ 117.789 Harlem River.

(a) The draws of all the bridges across the Harlem River, except the Spuyten Duyvil railroad bridge need not open from 5 p.m. to 10 a.m.

(b) The draw of the Spuyten Duyvil railroad bridge, mile 7.9, shall open on signal at any time.

(c) The draws of the 125th Street bridge, mile 1.3, the Willis Avenue bridge, mile 1.5, the 3rd Avenue bridge, mile 1.9, the CONRAIL (Park Avenue) bridge, mile 2.1, the Madison Avenue bridge, mile 2.3, the 145th Street bridge, mile 2.8, and the two Broadway bridges, mile 6.8, shall open on signal from 10 a.m. to 5 p.m. A delay of up to five minutes may be experienced at the railroad bridges.

(d) The draws of the 103rd Street bridge, mile 0.0, the Macombs Dam bridge, mile 3.2, and the 207th Street bridge, mile 6.0, shall open on signal from 10 a.m. to 5 p.m. if at least six hours notice is given to the New York City Highway Department's Radio (Hotline) Room.

(e) Public vessels of the United States, and New York City vessels used for public safety shall be passed through the draw of each bridge as soon as possible.

§ 117.791 Hudson River.

(a) The draws of the CONRAIL bridge, mile 146.2 between Albany and Rensselaer, shall open on signal except that from December 16 through March 31, the draw shall open on signal if at least 24 hours notice is given.

(b) The draws of the state highway bridge, mile 150.2 between Troy and Menands, need not open for the passage of vessels.

(c) The draws of the highway bridge, mile 152.7, between Troy and Green Island:

(1) Need not open from December 16 through March 31.

(2)(A) From April 1 through December 15 shall open on signal from 9 a.m. to 4 p.m.

(B) Need not open from 6 p.m. to 7 a.m., unless notice is given, before 4:30 p.m., of the time the vessel is expected to pass.

(C) Need not open from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m.

(d) The draws of the 112th Street bridge, mile 155.4 between Troy and Cohoes:

(1) Shall open on signal from 9 a.m. to 4 p.m.

(2) Shall open on signal from 6 p.m. to 7 a.m., if notice is given, before 4:30 p.m., of the time the vessel is expected to pass.

(3) Need not open from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m.

(4) During the period that the Federal Lock at Troy is inoperative, the draw need not open for the passage of vessels.

(e) The draws of any of these bridges shall open as soon as possible for the passage of:

(1) Public vessels of the United States.

(2) State or local vessels used for public safety.

(3) Vessels of 500 tons or more.

(4) Any tug with a tow on a hawser.

(5) Downbound vessels during a freshet whose height exceeds an elevation determined by the District Commander.

(f) The draws of any of these bridges shall not remain open for more than 15 minutes (except as provided for in paragraphs (e)(5) above) and can remain closed for up to 10 minutes to allow accumulated land traffic to be reduced.

§ 117.793 Hutchinson River.

The draws of the Hutchinson River Parkway bridge, mile 0.9, and the New England Thruway (I–95) bridge, mile 2.2, both at New York City, shall open on signal if at least six hours notice is given.

§ 117.795 Jamaica Bay and Connecting Waterways.

(a) The draws of the New York City Transit Authority bridge, mile 10.6 across the North Channel, at Hamilton Beach, and the New York City highway bridge, mile 10.0 at Jamaica Bay Boulevard, need not open for the passage of vessels.

(b) The draws of the New York City highway bridge, mile 0.8 across Mill Basin, on Belt Parkway need not open for the passage of vessels from noon to 9 p.m. on the following days: Sundays, from May 15 to September 30, Memorial Day, Independence Day, and Labor Day. However, on these days, during the period from two hours before to one hour after the time of predicted high tide for the locality the bridge shall open on signal. Public vessels of the United States and state or local vessels used for public safety shall be passed as soon as possible.

(c) The draw of the Marine Parkway bridge, mile 3.0, at Rockaway Inlet shall open on signal except that from 4 p.m. to 8 p.m. the draw shall open on signal if at least eight hours notice is given; however, the draw shall open, if at least a one hour notice is given for the passage of U.S. Navy or National Oceanic and Atmospheric Administration vessels.

Note.—For the purpose of the regulations in this part, high tide at the bridge shall be deemed to occur 15 minutes later than the time of high tide for Sandy Hook as given in the tide tables for the United States, published by the National Oceanic and Atmospheric Administration. The time stated in the tables is eastern standard time and one hour should be added thereto to convert to eastern daylight saving time.

§ 117.797 Lake Champlain.

(a) The draw of the Vermont highway bridge, mile 105.9, across the entrance to Missisquoi Bay, between Alburg Tongue and Hog Island, at East Alburg, shall open on signal if at least 24 hours notice is given.

(b) The draw of the Central Vermont railroad bridge, mile 105.6 across the Missisquoi Bay of Lake Champlain, shall open on signal from June 15 through September 15 from 7 a.m. to 11 p.m. The draw shall open on signal at all other times if at least 24 hours notice is given.

(c) The draws of the Vermont highway bridge, mile 91.8 between Sandy Island and North Hero Island:

(1) Shall open on signal from May 15 through October 15 from 7 a.m. to 9 p.m.

(2) Shall open on signal from May 15 through October 15 from 9 p.m. to 7 a.m. if at least four hours notice is given.

(3) Shall open on signal from October 16 through May 14 if at least 24 hours notice is given.

(d) The draws of each of these bridges shall open as soon as possible for public vessels of the United States and Vermont Fish and Game Department vessels.

§ 117.799 Long Island, New York Inland Waterway from East Rockaway Inlet to Shinnecock Canal.

(a) The draw of the Atlantic Beach Bridge across Reynolds Channel, mile 0.4, shall open on signal:

(1) From October 1 through May 14.

(2) From May 15 through September 30 the draw shall open on signal except that it need open only on the hour and half-hour:

(i) From 4 p.m. to 7 p.m. on weekdays; and

(ii) From 11 a.m. to 9 p.m. on Saturdays, Sundays, Memorial Day, Independence Day and Labor Day.

(3) From May 15 through September 30 the draw shall open on signal from two hours before to one hour after predicted high tide (predicted high tide for this bridge shall be 10 minutes earlier than that predicted for Sandy Hook as given in the tide tables for the United States published by the National Oceanic and Atmospheric Administration).

(b) The draw of the Long Beach Bridge across Reynolds Channel, mile 4.7, shall open on signal:

(1) From October 1 through May 14.

(2) From May 15 through September 30 the draw shall open on signal except that from 3 p.m. to 8 p.m. on Saturdays, Sundays, Memorial Day, Independence Day and Labor Day the draw need open only on the hour and half hour.

(3) From midnight to 7 a.m. the draw shall open on signal if at least four hours notice is given.

(c) The draw of the Loop Parkway Bridge across Long Creek, mile 0.7, shall open on signal:

(1) Every other hour on the even hour except that from April 1 through October 31 on Saturdays, Sundays, and Federal holidays, the draw shall open on signal every three hours beginning at 3 a.m.

(2) If an opening is desired at other than a scheduled time, notice may be given from the telephone located on either side of the bridge or via marine radiotelephone.

(d) The draws of the Meadowbrook State Parkway across Sloop Channel, mile 12.8, Wantagh State Parkway across Goose Creek, mile 16.1, and Captree State Parkway across State Boat Channel at Captree Island, mile 30.7, shall open on signal if at least one

hour notice is given to the New York State Department of Transportation, as follows:

(1) Every other hour on the even hour.

(2) From April 1 through October 31 on Saturdays, Sundays, and Federal holidays the draw of the Meadowbrook State Parkway Bridge across Sloop Channel, mile 12.8, shall open on signal every three hours beginning at 1:30 a.m.

(3) From April 1 through October 31 on Saturdays, Sundays, and Federal holidays the draws of the Wantagh State Parkway Bridge across Goose Creek, mile 16.1, and Captree State Parkway Bridge across State Boat Channel at Captree Island, mile 30.7, every three hours beginning at 3 a.m.

(4) Notice may be given from the telephone located at the moorings on each side of each bridge or by marine radiotelephone.

(e) The draws of the Smith Point bridge, mile 6.1, across Narrow Bay, West Bay bridge, mile 0.1, across Quantuck Canal, Beach Lane bridge, mile 1.1, across Quantuck Canal, Quoque bridge, mile 1.1, across Quoque Canal, and Ponquoque Point bridge, mile 78.0, across Shinnecock Bay:

(1) Shall open an signal from October 1 through April 30 from 8 a.m. to 4 p.m. and from May 1 through September 30 from 6 a.m. to 10 p.m.

(2) At all other times during these periods the draws shall open as soon as possible but no more than one hour after a request to open is received.

(f) Public vessles of the United States, state or local vessels used for public safety and vessels in distress shall be passed through the draws of each bridge as soon as possible.

(g) The draw of each of these bridges need not open for sailing vessels unless the vessel is under machinery power or under tow, if such an opening would unduly delay other vessel or vehicular traffic.

§ 117.801 Newtown Creek (East Branch).

The draw of the Grand Street bridge, mile 3.1 at New York City, shall open on signal except that Monday through Saturday, except holidays, the draw need not open from 6:45 a.m. to 7 a.m., 7:15 a.m. to 7:30 a.m., 4:30 p.m. to 4:45 p.m., and 5 p.m. to 5:15 p.m.

§ 117.803 Niagara River.

The draw of the Canadian National Railway bridge, mile 3.8, need not open for the passage of vessels.

§ 117.805 Peekskill (Annsville) Creek.

The draw of the CONRAIL bridge, mile 0.0 at Peekskill, need not open for the passage of vessels.

§ 117.807 Richmond Creek.

The draw of the Richmond Avenue bridge, mile 2.0 at New York City, need not open for the passage of vessels.

§ 117.809 Tonawanda Creek.

(a) The draw of the Penn Central Corporation railroad bridge, mile 0.1 at Tonawanda, is permanently maintained in the open to navigation position.

§ 117.811 Tonawanda Harbor.

The draw of the CONRAIL bridge, mile 0.2 at Tonawanda, shall open on signal if at least 24 hours notice is given.

§ 117.813 Wappinger Creek.

The draw of the CONRAIL bridge, mile 0.0 at New Hamburg, shall open on signal from May 15 through October 15 if at least eight hours notice is given and from October 16 through May 14 if at least 24 hours notice is given.

§ 117.815 Westchester Creek.

The draw of the Bruckner Boulevard bridge, mile 1.3, shall open on signal, except that from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m., Monday through Friday, the draw need not open for the passage of vessels. Public vessels of the United States, state or local vessels used for public safety, or vessels in distress, shall be passed without delay.

North Carolina

§ 117.821 Atlantic Intracoastal Waterway, Bogue Sound to Wrightsville Beach.

(a) The draw of the S58 bridge, mile 206.7, Atlantic Beach, Bogue Sound, shall open on signal except that from March 15 through October 15 the draw need open only on the hour from 8 a.m. to 8 p.m. for the passage of pleasure craft. If a pleasure craft is approaching the draw and cannot reach the draw exactly on the hour, the drawtender may delay the opening up to 10 minutes past the hour for the passage of the approaching vessel and any other vessels that are waiting. Public vessels of the United States, tugs with tows, commercial vessels, and any vessel in an emergency involving danger to life or property, shall be passed at any time.

(b) The draw of the highway bridge, mile 283.1 at Wrightsville Beach, shall open on signal from November 1 through April 30, and from 7 p.m. to 7 a.m. from May 1 through October 31. From May 1 through October 31 from 7 a.m. to 7 p.m. the draw need not open only on the hour.

(1) If a pleasure boat is approaching the drawbridge and cannot reach the draw exactly on the hour, the drawtender may delay the hourly opening up to 10 minutes past the hour for the passage of the approaching pleasure boat and any other pleasure boats that are waiting to pass.

(2) Public vessels of the United States, commercial vessels and any vessel in an emergency involving danger to life or property, shall be passed at any time.

§ 117.823 Neuse River.

(a) The draw of the US17 bridge, mile 33.7 at New Bern, shall open on signal except that the draw need not open from 6:30 a.m. to 7:30 a.m. and from 4:30 p.m. to 5:30 p.m., Monday through Friday. From May 24 through September 8, on Sundays and Federal holidays, the draw need not open from 2 p.m. to 7 p.m., however, the draw shall open at 4 p.m. and 6 p.m. if any vessels are waiting to pass. Public vessels of the United States, state or local vessels used for public safety, tugs with tows, and vessels in distress, shall be passed at any time.

(b) The draws of the Atlantic and East Carolina Railway bridge, mile 80.0 at Kinston, shall open on signal if at least 24 hours notice is given.

§ 117.825 Newport River.

The draw of the Atlantic and East Carolina Railway bridge, mile 13.0 at Newport, need not open for the passage of vessels.

§ 117.827 New River.

The draw of the Seaboard System Railroad bridge, mile 21.1 at Jacksonville, shall open on signal if at least 24 hours notice is given.

§ 117.829 Northeast River.

The draw of the Seaboard System Railroad bridge, mile 27.0 at Castle Hayne, shall open on signal only from 7:30 a.m. to 4:30 p.m., Monday through Friday. The draw shall open on signal from 4:30 p.m. to 7:30 a.m. for tugs with tows if at least 24 hours notice is given.

§ 117.831 Pamlico and Tar Rivers.

The draws of the US17–264 bridge, mile 37.2 at Washington, and the Boyds Ferry bridge, mile 44.8 at Grimesland, shall open on signal if at least 24 hours notice is given. The bridge owners shall restore constant attendance when so directed by the District Commander.

§ 117.833 Pasquotank River.

The draw of the Southern railroad bridge, mile 47.7 at Elizabeth City, will be maintained in the open position from 3:30 p.m. to 11:30 p.m. At all other times the draw shall open on signal.

§ 117.835 Perquimans River.

The draw of the US17 bridge, mile 12.0 at Herford, shall open on signal from 8 a.m. to midnight from April 1 through September 30 and from 10 a.m. to 10 p.m.

from October 1 through March 31. The draw need not open at all other times.

§ 117.837 Roanoke River.

(a) The draw of the US17 bridge, mile 37.5 at Williamson, shall open on signal if at least 24 hours notice is given.

(b) The draw of the Seaboard System Railroad bridge, mile 94.0 at Palmyra, need not open for the passage of vessels.

§ 117.839 Scuppernong River.

The draw of the US64 bridge, mile 4.5 at Columbia, shall open on signal if at least 24 hours notice is given. Public vessels of the United States, commercial fishing vessels unable to pass the closed draw, or vessels in an emergency involving danger to life or property, shall be passed as soon as possible.

§ 117.841 Smiths Creek.

The draw of the S133 bridge, mile 1.5 at Wilmington, shall open on signal if at least 24 hours notice is given.

§ 117.843 Trent River.

(a) The draws of the US70 bridge, mile 0.0, at New Bern, shall open on signal except that the draw need not open from 6:30 a.m. to 7:30 a.m. and 4:30 p.m. to 5:30 p.m., Monday through Friday. From May 24 through September 8 , on Sundays and Federal holidays, the draw need not open from 2 p.m. to 7 p.m., however, the draw shall open at 4 p.m. and 6 p.m., if any vessels are waiting to pass. Public vessels of the United States, state or local vessels used for public safety, tugs with tows, and vessels in distress shall be passed at any time.

(b) The draws of the Seaboard System Railroad bridge, mile 18.0 near Pollocksville, need not open for the passage of vessels.

§ 117.845 Wrightsville Beach (AIWW).

(a) The draw of the highway bridge, mile 283.1, Atlantic Intracoastal Waterway, at Wrightsville Beach shall open on signal from November 1 through April 30, and from 7 p.m. to 7 a.m. from May 1 through October 31. From May 1 through October 31 from 7 a.m. to 7 p.m. the draw need not open only on the hour.

(b) If a pleasure boat is approaching the drawbridge and cannot reach the draw exactly on the hour, the drawtender may delay the hourly opening up to 10 minutes past the hour for the passage of the approaching pleasure boat and any other pleasure boats that are waiting to pass.

(c) Public vessels of the United States, commercial vessels and any vessel in an emergency involving danger to life or property, shall be passed at any time.

Ohio

§ 117.847 Ashtabula River.

(a) The draw of the Fifth Street Bridge, mile 1.4 at Ashtabula, shall open on signal on the hour and half hour.

(b) The draw of the CONRAIL bridge, mile 2.2 at Ashtabula, shall open on signal from April 1 through November 30 from 7 a.m. to 11 p.m. At all other times the draw shall open on signal if at least 24 hours notice is given.

§ 117.849 Muskingham River (Zanesville Canal).

The draw of the CONRAIL bridge, miles 27.1 at Zanesville, shall open on signal Tuesday through Friday if the CONRAIL office is notified by 12:01 p.m. on day preceding the day and time the opening is required. For openings Saturday through Monday, the CONRAIL office shall be notified by 12:01 p.m. on day preceding the day and time the opening is required. For openings Saturday through Monday, the CONRAIL office shall be notified by 12:01 on Friday specifying which day and time the opening is required. In case of emergency, the draw shall be opened as soon as possible.

§ 117.851 Portage River

(a) The draws of the Monroe Street bridge, mile 1.1 at Port Clinton, shall open on signal:

(1) From May 1 through May 14 and from November 1 through December 1.

(2) From May 15 through October 31 and from 12 midnight to 6 a.m. From 6 a.m. to 12 midnight the draw shall open on signal from three minutes before to three minutes after the hour and half hour.

(3) From December 2 through April 30 the draw shall open on signal if at least 24 hours notice is given.

(b) The draws of the CONRAIL bridge, mile 1.5 at Port Clinton, shall open on signal except that from December 2 through April 30 the draw shall open on signal if at least 24 hours notice is given.

(c) Public vessels of the United States, state or local vessels used for public safety, commercial vessels, and vessels in distress or seeking shelter from rough weather, shall be passed as soon as possible.

§ 117.853 Sandusky Bay.

(a) The draw of the CONRAIL bridge, mile 3.5 at Sandusky, shall open on signal from April 1 through October 31 and from November 1 through November 30 from 8 a.m. to 4 p.m. At all other times the draw shall open on signal if at least 24 hours notice is given to the Chief Dispatcher, Central Union Terminal, Toledo.

(b) The draw of the Ohio Highway 269 bridge, mile 8.2 at Sandusky, shall open on signal except that from 11 p.m. to 7 a.m. the draw shall open on signal if at least 24 hours notice is given to the Sandusky Post, State Highway Patrol.

Oregon

§ 117.861 Blind Slough.

The draws of the Burlington Northern railroad bridge, mile 1.1 at Knappa, shall open on signal if at least one hour notice is given. However, the draw shall open promptly on signal from four hours before to four hours after each day's authorized commercial fishing period in the Columbia River Fishery below Bonneville Dam to the jetties at the mouth of the Columbia River as established by the Columbia River Compact (Washington State Department of Fisheries and the Fish Commission of Oregon).

§ 117.863 Catching Slough.

The draw of the secondary highway bridge, mile 1.0 near Eastside, shall open on signal if at least 48 hours notice is given.

§ 117.865 Clatskanie River.

The draw of the Burlington Northern railroad bridge, mile 0.7 at Clatskanie, shall open on signal if at least one hour notice is given. However, the draw shall open promptly on signal from four hours before to four hours after each day's authorized commercial fishing period in the Columbia River Fishery below Bonneville Dam to the jetties at the mouth of the Columbia River as established by the Columbia River Compact (Washington State Department of Fisheries and the Fish Commission of Oregon).

§ 117.867 Coalbank Slough.

The draws of the Southern Pacific railroad bridge, mile 0.1, and the Port of Hood River highway bridge, mile 0.2, both at Coos Bay, need not open for the passage of vessels.

§ 117.869 Columbia River.

(a) The draw of the Interstate 5 bridge, mile 106.5 at Vancouver, shall open on signal, except that from 6:30 a.m. to 8 a.m., and 3:30 p.m. to 6 p.m., Monday through Friday, except Federal holidays, the draws need not open for the passage of vessels.

(b) The draw of the Port of Hood River bridge, mile 169.8 at Hood River, shall open on signal if at least 12 hours notice is given.

§ 117.871 Coos Bay.

The draw of the Southern Pacific railroad bridge, mile 9.0 at North Bend, shall be kept open at all times except while actually required for the necessary passage of trains over the drawspan. During foggy weather a fog bell installed in the center of the drawspan shall be rung continuously, striking every 10 seconds. Any time during foggy weather, when the draw is closed and the passage is not clear for vessels, there shall be sounded continuously a siren which may be heard at a distance of one mile from the drawspan. When the bridge is again opened the siren shall be stopped, indicating that the way is clear for the passage of vessels.

§ 117.873 Coos River.

The draw of the Oregon State secondary highway bridge, mile 2.2 near Eastside, shall open on signal if at least 12 hours notice is given.

§ 117.875 Coquille River.

(a) The draws of the US101 highway bridge, mile 3.5 at Bandon, shall open on signal if at least two hours notice is given to the Coos Bay South Slough bridge attendant.

(b) The draws of the Oregon Secondary highway bridge, mile 24.0 at Coquille, shall open on signal if at least 48 hours notice is given.

§ 117.877 Dean Creek.

The draw of the highway bridge, mile 0.0 at Reedsport, need not open for the passage of vessels.

§ 117.879 Isthmus Slough.

The draw of the Oregon Stat e secondary highway bridge, mile 1.0 at Coos Bay, shall open on signal if at least four hours notice is given.

§ 117.881 John Day River.

(a) The draw of the Burlington Northern railroad bridge, mile 0.0 near Astoria, shall open on signal if at least one hours notice is given. However, the draws shall open promptly on signal from four hours before to four hours after each day's authorized commercial fishing period in the Columbia River Fishery below Bonneville Dam to the jetties at the mouth of the Columbia River as established by the Columbia River Compact (Washington State department of Fisheries and the Fish Commission of Oregon).

(b) The draw of the US30 highway bridge, mile 1.0 near Astoria, shall open on signal if at least 48 hours notice is given.

§ 117.883 Little Nestucca River.

The draw of the highway bridge, mile 2.0 at Oretown, need not open for the passage of vessels.

§ 117.885 Nehalem River.

The draw of the US101 highway bridge, mile 6.5 at Nehalem, need not open for the passage of vessels.

§ 117.887 Oregon Slough.

The draw of the Burlington Northern railroad bridge, mile 3.2 at Portland, shall open on signal if at least a one-half hour notice is given.

§ 117.889 Siuslaw River.

(a) The draw of the US101 bridge, mile 5.0 at Florance, shall open on signal if at least two hours notice is given.

(b) The draw of the Southern Pacific railroad bridge, mile 8.0 near cushman, shall open on signal if at least 24 hours notice is given.

§ 117.891 Umpqua River.

(a) The draw of the US101 bridge, mile 11.1 at Reedsport, shall open on signal from 8 a.m. to 4 p.m., Monday through Friday, from May 1 through October. At all other times the draw shall open on signal if at least four hours notice is given.

(b) The draw of the Southern Pacific railroad bridge, mile 11.5 at Reedsport, shall be kept fully open at all times except when actually required for the passage of trains or other railroad equipment or when maintenance to the drawspan is being performed. During foggy weather, when the draw is closed and the channel is not clear for the passage of vessels, there shall be sounded a fog horn with an audible range of one-half mile from the drawspan. The fog horn shall emit two clear signals of approximately six seconds duration each, repeated at intervals of sixty seconds from completion of the second signal to commencement of the next signal. The fog horn shall be sounded repeatedly from commencement of closure to full opening of the drawspan. When the drawspan is again in the open position, the fog horn shall be stopped, indicating that the channel is clear for the passage of vessels.

(c) Umpqua River (side channel). The draw of the US101 bridge, mile 11.1 near Reedsport, need not open for the passage of vessels.

§ 117.893 Walluski River.

The draw of the Oregon State secondary highway bridge, mile 1.0 near Astoria, shall open on signal if at least 48 hours notice is given.

§ 117.895 Willamette River.

(a) The draws of the following bridges shall open on the designated signal listed below except that from 7 a.m. to 8:30 a.m., and 4 p.m. to 5:30 p.m., except Saturdays, Sundays, and New Year's Day, Memorial Day, Fourth of July, Labor Day, Thanksgiving, and Christmas or days observed in lieu of these under state law, the draws need not open for the passage of vessels:

Bridge	Mile	Opening and acknowledging signals
(1) Broadway Bridge, Portland	11.7	Two prolonged followed by one short blast.
(2) Steel Bridge, Portland	12.1	One prolonged followed by one short blast.
(3) Burnside Bridge, Portland	12.4	One prolonged followed by two short blasts.
(4) Morrison Bridge, Portland	12.8	One prolonged followed by three short blasts.
(5) Hawthorne Bridge, Portland	13.1	One prolonged followed by four short blasts.

The acknowledging signals from the drawtender shall be those set forth in § 117.9.

Note.—The closed periods do not apply to harbor patrol or fire boats answering calls and for the Broadway Bridge only, oceangoing vessels of 750 gross tons or over.

(b) Signals to open shall be given by vessels at a distance of at least 1,000 feet from the bridge, except in case of a vessel leaving a wharf or anchorage or when waiting less than 1,000 feet from the bridge. In such cases the signal shall be given early enough to allow the operator of the bridge sufficient time in which to clear and open the draw before arrival of the vessel.

(c) In case two vessels approaching from opposite directions would meet at or near the bridge, the vessel bound downstream shall be considered as having the right of way.

(d) The draw of the Southern Pacific railroad bridge, mile 84.3 at Salem, need not open for the passage of vessels.

(e) The draw of the Southern Pacific railroad bridge, mile 119.6 at Albany, shall open on signal if at least six hours notice is given.

(f) The draw of the Oregon highway bridge, mile 132.1 at Corvallis, shall open on signal if at least seven days notice is given, however, the draw need not open on Saturdays, Sundays, and Federal holidays.

(g) The draw of the Southern Pacific railroad bridge, mile 184.3 near Harrisburg, need not open for the passage of vessels.

§ 117.897 Youngs Bay, Lewis and Clark River and Skippanon River.

(a) The draw of the US101 highway bridge, mile 0.7 across Youngs Bay at Smith Point, Astoria (New Youngs Bay

bridge), shall open on signal for the passage of vessels. The opening signal is two prolonged blasts followed by two short blasts.

(b) The draws of the Burlington Northern railroad bridges, mile 0.8 across Youngs Bay, at Smith Point, Astoria, and mile 1.9 across the Skienon River at Warrenton, shall be kept fully open at all times except when actually required for the passage of trains or other railroad equipment or when maintenance to the drawspan is being performed. When the draw is closed and visibility at the drawtender's station is less than one mile up or down the channel, the drawtender shall sound two prolonged blasts every minute. When the draw is reopened, the drawtender shall sound one prolonged blast followed by one short blast.

(c) The draw of the Oregon State highway bridge, mile 2.4 across Youngs Bay, at the foot of Fifth Street, Astoria (Old Youngs Bay bridge), and the draw of the Oregon State highway bridge, mile 1.0 across the Lewis and Clark River, shall open on signal from 5 a.m. to 9 p.m. At all other times, the draw shall open on signal if at least one-half hour notice is given to the drawtender at the New Youngs Bay bridge by marine radio, telephone or other suitable means.

(1) The opening signal for the Oregon State highway bridge across Youngs Bay is two prolonged blasts followed by one short blast.

(2) The opening signal for the Oregon State highway bridge across the Lewis and Clark River is one prolonged blast followed by four short blasts.

(d) All other signals shall be those set forth in § 117.9.

Pennsylvania

§ 117.901 Chester Creek.

The draw of the Front Street bridge, mile 0.1 at Chester, shall open on signal if at least 24 hours notice is given.

§ 117.903 Darby Creek.

(a) The draws of the CONRAIL railroad bridge, mile 0.3 at Essington, and the Reading railroad bridge, mile 0.3 at Essington, shall open on signal from May 15 through October 15 at 7:15 a.m., 10:30 a.m., 1 p.m., 3 p.m., 7:30 p.m., and 10:30 p.m., and at other times from 7 a.m. to 11 p.m. from May 15 through October 15 if an opening will not unduly delay railroad operations. Any vessel which has passed through one of these bridges shall be passed through the draw of the other bridge without delay. When once open for the passage of any vessel these bridges shall remain open sufficiently long to permit the passage through both bridges of all vessels waiting to pass.

(b) From 11 p.m. to 7 a.m. from May 15 through October 15 the draws need not open for the passage of vessels.

(c) From October 16 through May 14 the draws shall open on signal if at least 24 hours notice is given.

(d) The draws shall open as soon as possible for an emergency or vessel in distress.

§ 117.905 Schuylkill River.

(a) The draw of the University Avenue bridge, mile 6.2 at Philadelphia, shall open on signal from 8 a.m. to 4 p.m., and 8 p.m. to 4 a.m., Monday through Friday. At all other times the draw shall open on signal if at least two hours notice is given.

(b) The draws of the CONRAIL bridge, mile 6.4 near Christian Street, at Philadelphia shall open on signal if at least two hours notice is given.

Rhode Island

§ 117.907 Providence River.

The draw of the US1 (Point Street) bridge, mile 7.5 at Providence, need not open for the passage of vessels from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m. At all other times, the draw shall open on signal if at least 24 hours notice is given to the Director of Public Works, City Hall, Providence. However, loaded, self-propelled cargo vessels and any assisting tugs shall be passed as soon as possible.

South Carolina

§ 117.911 Atlantic Intracoastal Waterway, Little River to Savannah River.

(a) *Sullivans Island Narrows.* The draw of the Ben Sawyer, S703 bridge, mile 462.2 (AIWW), between Sullivan's Island and Mount Pleasant, shall open on signal, except that the draw need not open from 7 a.m. to 9 a.m. and from 4 p.m. to 6 p.m., Monday through Friday; and on Saturdays, Sundays, and Federal holidays from 2 p.m. to 6 p.m., the draw need open only on the hour and one-half hour. However, public vessels of the United States, tugboats, freight boats, commercial fishing boats, and vessels in distress, shall be passed at any time.

(b) *Wappoo Creek.* The draw of the S171/700 bridge across Wappoo Creek, mile 470.8, at Charleston, shall open on signal, except that the draw need not open from 6:30 a.m. to 9 a.m. and from 4 p.m. to 6 p.m., Monday through Friday; and on Saturdays, Sundays, and Federal holidays from 2 p.m. to 6 p.m., the draw need open only on the hour and one-half hour. However, public vessels of the United States, tugboats, freight boats, commercial fishing boats, and vessels in distress shall be passed at any time.

(c) *Bueaufort River.* The draw of the Ladies Island bridge across the Beaufort River, mile 536.0 at Beaufort, shall open on signal, except that from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m., Monday through Saturday, except legal holidays, the draw need open only at 8 a.m. and 5 p.m. if any vessels are waiting to pass. However, public vessels of the United States, commercial tows, and vessels in distress shall be passed at any time.

§ 117.913 Ashepoo River.

The draw of the Seaboard System Railroad bridge, mile 32.0 at Ashepoo, need not open for the passage of vessels.

§ 117.915 Ashley River.

(a) The draws of the US17 highway bridges, miles 2.4 and 2.5 at Charleston, shall open on signal except that from 7 a.m. to 9 a.m., Monday through Friday, and 4 p.m. to 7 a.m. daily the draws need open only if at least 12 hours notice is given. The draws of either bridge shall open as soon as possible for the passage of vessels in an emergency involving damage to life or property.

(b) The draw of the Seaboard System Railroad bridge, mile 12.0 near Drayton Hall, shall open on signal from 7 a.m. to 11 p.m. From 11 p.m. to 7 a.m. the draw shall open on signal if at least three hours notice is given.

§ 117.917 Battery River.

The draw of the state highway bridge, mile 2.1 between Beaufort and Parris Island, shall open on signal if at least 24 hours notice is given.

§ 117.919 Black River.

The draw of the US17 highway bridge, mile 8.0 near Georgetown, shall open on signal if at least 12 hours notice is given.

§ 117.921 Broad River.

(a) The draw of the S170 bridge, mile 14.0 near Beaufort, shall open on signal if at least 24 hours notice is given.

(b) The draw of the Seaboard System Railroad bridge, mile 17.0, near Whale Branch shall open on signal if at least 24 hours notice is given.

§ 117.923 Congaree River.

The draw of the Southern Railway bridge, mile 4.3 at Moye's Station, shall open on signal if at least 24 hours notice is given.

§ 117.925 Cooper River.

The draw of the Seaboard System Railroad bridge, mile 42.8 near Cordesville, shall open on signal from 7 a.m. to 12 noon, and 1 p.m. to 4 p.m. At all other times the draw shall open on signal if at least 24 hours notice is given.

§ 117.927 Coosaw River (Whale Branch).

The draw of the Seaboard System Railroad bridge, mile 5.3 at Seabrook, and the draw of the US21 bridge, mile 7.0 at Beaufort, shall open on signal from 6 a.m. to 8 a.m., Monday through Friday, if at least 24 hours notice is given. At all other times the draw need not open for the passage of vessels.

§ 117.929 Durham Creek.

The removable span of the South Carolina Electric & Gas Co., railroad bridge, mile 1.7 at Bushy Park, shall be removed to allow the passage of dredges and construction equipment if at least 20 days notice is given. When notified by the City of Charleston of an emergency in the Bushy Park Reservoir the span shall be removed as soon as possible to permit the passage of dredges and construction equipment.

§ 117.931 Harbor River (a tidal estuary in St. Helena Sound).

The draw of the S285 bridge, mile 0.5 at Hunting Island, shall open on signal if at least 24 hours notice is given.

§ 117.933 Pee Dee River.

The draws of the Seaboard System Railroad bridges, miles 72.6 and 107.2 near Poston, need not open for the passage of vessels.

§ 117.935 Rantowles Creek.

The draw of the Seaboard System Railroad bridge, mile 1.1 near Rantowles, need not open for the passage of vessels.

§ 117.937 Savannah River.

(a) The draw of the Seaboard System Railroad bridge, mile 60.9 at Clyo, shall open on signal from 6 a.m. to 11 a.m. and from 12 noon to 3 p.m. At all other times the draw shall open on signal if at least three hours notice is given. VHF radiotelephone communications will be maintained at the bridge tender's house and the dispatcher's office in Savannah, Georgia.

§ 117.939 Wando River.

The draw of the state highway bridge, mile 10.0 near Cainhoy, shall open on signal if at least 12 hours notice is given.

Tennessee

§ 117.943 Cumberland River.

The draw of the Seaboard System Railroad bridge, mile 126.5 at Clarksville, shall open on signal when the vertical clearance under the navigational span is 47 feet or less. The draw shall open on signal if at least two hours advance notice has been given when the vertical clearance is greater than 47 feet. The draw need not open for a vessel that arrives at the bridge more than 30 minutes after the time specified in the advance notice, unless a second two hours notice have been given. A resumé of these regulations shall also be conspicuously posted at the Kentucky and Pickwick Locks on the Tenessee River and at the Barkley and Cheatham Locks on the Cumberland River.

§ 117.945 Hatchie River.

The draws of the Illinois Central Gulf railroad bridge, mile 35.0 at Covington, and the Seaboard System Railroad bridge, mile 71.0, at Brownsville need not open for the passage of vessels.

§ 117.947 Obion River.

The draws of all bridges need not open for the passage of vessels.

§117.949 Tennessee River.

The draws of the Southern Railway (Chief John Ross) bridge, mile 464.1 at Chattanooga, and the Southern Railway bridge, mile 470.7 at Hixon, shall open on signal when the vertical clearance beneath the draw span is 50 feet or less. When the vertical clearance beneath the draw is more than 50 feet at least eight hours advance notice is required. Whenever any vessel that required the opening of the draw will return through the draw within four hours and informs the drawtender of the probable time of its return, the drawtender shall return one-half hour before the time specified and the draw shall be promptly opened on signal for the passage of the vessel on the return trip without further advance notice. When a vessel has given advance notice and fails to arrive within one hour after the arrival time specified, whether upbound or downbound, a second eight hours notice shall be required. Notices of these regulations shall be posted at the Nickajack and Watts Bar Locks on the Tennessee River.

Texas

§ 117.951 Arroyo-Colorado River.

The draw of the S106 highway bridge, mile 22.5 at Rio Hondo, shall open on signal if at least 12 hours notice is given.

§ 117.953 Brazos River (Diversion Channel).

(a) The draw of the S36 highway bridge, mile 4.4 at Freeport, shall open on signal if at least 12 hours notice is given.

(b) The draw of the Missouri Pacific railroad bridge, mile 22.6 at Brazoria, need not open for the passage of vessels.

§ 117.955 Buffalo Bayou.

(a) The draw of the Southern Pacific railroad bridge and all drawbridges upstream, except the Houston Belt and Terminal railroad bridge, mile 4.3, shall open on signal if at least 24 hours notice is given.

(b) The draw of the Houston Belt and Terminal railroad bridge, mile 4.3, need not open for the passage of vessels.

§ 117.957 Cedar Bayou.

(a) The lift span of the Missouri Pacific automated bridge, mile 7.0 at Baytown, shall be maintained at a vertical clearance of 81.4 feet above mean high water. Fixed green navigation lights shall be displayed in the center of the lift span.

(b) When a train appoaches the bridge, the navigation lights shall be changed from green to red, alternating flashing red lights shall be turned on, a horn shall be sounded for six minutes, and at the end of six minutes the horn shall be stopped and the draw may be lowered and locked if the scanning equipment does not detect any object under the span. If the scanning equipment detects an obstruction, the draw shall be raised until the obstruction is cleared.

(c) After a train has cleared the bridge, the draw shall be raised to 81.4 feet above mean high water, the flashing red lights shall be stopped, and the navigation lights shall be changed from red to green.

§ 117.959 Chocolate Bayou.

The draw of the Missouri Pacific railroad bridge, mile 11.4 at Liverpool, need not open for the passage of vessels.

§ 117.961 Clear Creek.

(a) The draw of S146 bridge, mile 1.0 between Kemah and Seabrook, shall open on signal except that on Saturdays, Sundays and Federal holidays, from 8 a.m. to 8 p.m., the draw need open only every other 10 minutes if any vessels are waiting to pass.

(b) The draw of the Southern Pacific railroad bridge, mile 1.0 at Seabrook, will be maintained in the open position for the passage of vessels except when it is necessary to close the draw for the passage of trains or for maintenance.

§ 117.963 Colorado River.

The draw of the highway bridge, mile 10.7 at Wadsworth, shall open on signal if at least 24 hours notice is given.

§ 117.965 Cow Bayou.

The draws of the Orange County highway bridge, mile 2.9 at West Orange, and the S87 bridge, mile 4.5, at Bay City shall open on signal if at least six hours notice is given.

§ 117.967 Greens Bayou.

The draw of the Port Terminal Railroad Association railroad bridge, mile 2.8 at Houston, shall open on signal if at lest four hours notice is given. The draw shall open on signal for three hours thereafter if the opening is for returning downbound vessels.

§ 117.969 Lavaca River.

The draws of the Missouri Pacific railroad bridge, mile 11.2, and the highway bridge, mile 11.2, both at Vanderbilt, shall open on signal if at least 48 hours notice is given. In emergencies the draws shall open as soon as possible.

§ 117.971 Neches River.

The draw of the Atchison, Topeka and Santa Fe railroad bridge, mile 53.9 at Evadale, need not open for the passage of vessels.

§ 117.973 Nueces Bay.

The draw of the US181 bridge, mile 0.5 Corpus Christi, need not open for the passage of vessels.

§ 117.975 Old Brazos River.

The draw of the Missouri Pacific railroad bridge, mile 4.4 at Freeport, shall be maintained in the fully open to navigation position except for the crossing of trains or for maintenance.

§ 117.977 Pelican Island Causeway.

The draw of the Pelican Island causeway bridge, mile 356.1 across Galveston Channel at Galveston, shall open on signal except that from 7 a.m. to 8:30 a.m., 12 noon to 1 p.m. and 4:15 p.m., to 5:15 p.m., Monday through Saturday, except Federal holidays, the draw need not open for the passage of vessels. Public vessels of the United States and vessels in distress shall be passed at any time.

§ 117.979 Sabine Lake.

The draw of the S82 bridge, mile 10.0 at Port Arthur, shall open on signal except that from 9 p.m. to 5 a.m., the draw shall open on signal if at least six hours notice is given to the Maintenance Construction Supervisor or the Maintenance Foreman at Port Arthur.

§ 117.981 Sabine River.

The draws of the Southern Pacific railroad bridge, mile 19.3 at Echo, the Kansas City Southern railroad bridge, mile 36.2, at Ruliff, and the Texas and Louisiana railroad bridge and the Louisiana S7 bridge, mile 40.8, both at Deweyville, shall open on signal if at least 24 hours notice is given.

§ 117.983 Sabine River (Old Channel) behind Orange Harbor Island.

The draw of the highway bridge, mile 9.5 at Orange, shall open on signal from 7 a.m. to 12 midnight, Monday through Friday, except Federal holidays. The draw shall open on signal at all other times if at least eight hours notice is given.

§ 117.985 Taylor's Bayou.

The draws of the Southern Pacific railroad bridge, mile 2.0, and the S73 bridge, mile 10.2, both at West Port Arthur, need not open for the passage of vessels.

§ 117.987 Trinity River.

The draws of the Southern Pacific railroad bridge, mile 41.4 at Liberty, the Missouri Pacific railroad bridges, mile 54.8 at Kenefick, and mile 181.8 at Riverside, and the Atchison, Topeka and Santa Fe railroad bridge, mile 96.2 at Romayor need not open for the passage of vessels.

§ 117.989 Victoria Channel.

(a) The draw of the Missouri Pacific railroad automated bridge, mile 29.4 near Bloomington, need not be manned by a regular attendant.

(b) The lift span is normally in the down position, providing a vertical clearance of 22 feet above mean high water.

(c) Three prolonged blasts of a horn or whistle from an approaching vessel activates navigational approach detectors, located one-half mile upstream and downstream from the bridge. If the span is inoperable, these sound signals will activate an alarm to alert bridge maintenance crews.

(d) Interruption of the approach detector beams by a vessel will cause (1) the draw to open to the fully raised position of 50 feet above mean high water for 10 minutes, (2) a navigation warning siren to sound, (3) the navigation light in the center of the lift span to change from red to green, (4) the indicator lights, located one-quarter mile of each side of the bridge, to change from red to yellow. However, if a train is approaching the bridge so closely that the train may not be safely stopped, the light will remain red and the bridge will not open until the train has passed.

(e) Interuption of the detector beam, located at the end of the bridge fender system, will cancel the existing time intervals and start a new 10-minute interval during which the bridge will remain open. The span will not close until the vessel clears the detector located at the opposite end of the fender system, or the 10-minutes interval elapses, which ever occurs earlier.

(f) If a vessel is unable to reach the detectors located on the outer ends of the fender system before the span closes, an additional signal of three prolonged blasts of a horn or whistle will cause the span to reopen and initiate a new 10-minute interval.

(g) If the draw is in the open position for the passage of a vessel, and a train enters an approach circuit to the bridge, the bridge will remain open for five minutes if the detector beam has been interrupted. If the detector beam has not been interrupted the span will close at the end of the original 10-minute opening period and will not reopen in response to the additional signal described in paragraph (f) of this section. After the train passes, the span will open on signal for any waiting vessles.

Vermont

§ 117.993 Lake Champlain.

(a) The draw of the Vermont highway bridge, mile 105.9 between Alburg Tongue and East Alburg, shall open on signal if at least 24 hours notice is given.

(b) The draw of the Central Vermont railroad bridge, mile 105.6 between South Hero Island and North Hero Island, shall open on signal from 7 am. to 11 p.m. from June 15 through September 15. At all other times the draw shall open on signal if at least 24 hours notice is given.

(c) The draw of the Vermont highway bridge, mile 91.8 between South Hero Island and North Hero Island, shall open on signal:

(1) From May 15 through October 15 from 7 a.m. to 9 p.m.

(2) From May 15 through October 15 from 9 p.m. to 7 a.m. if at least four hours notice is given.

(3) From October 16 through May 14 if at least 24 hours notice is given.

(d) The draw of each of these bridges shall open as soon as possible for the passage of public vessels of the United States and Vermont Fish and Game Department vessles.

Virginia

§ 117.995 Appomattox River.

The draw of the Seaboard System Railroad bridge, mile 2.5 at Hopewell, shall open on signal if at least 24 hours notice is given to the Seaboard System Agent at Hopewell. A drawtender shall be placed in constant attendance and the draw shall open on signal upon 30 days notice, in writing, to take such action from the District Commander.

§ 117.997 Atlantic Intracoastal Waterway, South Branch of the Elizabeth River to the Albemarle and Chesapeake Canal.

(a) Elizabeth River, South Branch.

(1) The draw of the Jordan (S337) bridge, mile 2.8 at Portsmouth-Chesapeake, shall open on signal except that from 6:30 a.m. to 7:30 a.m. from 3:30 p.m. to 4:30 p.m., Monday through Friday, except Federal holidays, the draw need not open for the passage of pleasure craft.

(2) The draw of the Norfolk and Western railroad bridge, mile 3.6 at Portsmouth-Chesapeake, shall be maintained in the open to navigation position except the draw may close for the crossing of trains and the maintenance of the bridge. When the draw is closed, there shall be a drawtender present and the draw shall open on signal.

(3) The draw of the I–64 bridge, mile 7.1 at Chesapeake, shall open on signal if at least 24 hours notice is given.

(b) *Albemarle and Chesapeake Canal.* The draw of the S169 bridge, mile 12 at Chesapeake (Great Bridge), shall open on signal except that from 6 a.m. to 7 p.m., the draw need open only on the hour. If any vessel is approaching the drawbridge and cannot reach the draw exactly on the hour, the drawtender may delay the hourly opening up to 10 minutes past the hour for the passage of the approaching vessel and any other vessels that are waiting to pass. Vessels in an emergency condition which presents danger to life or property, shall be passed at any time.

§ 117.999 Blackwater River.

The draw of the S189 bridge, mile 9.2 at South Quay, shall open on signal if at least 24 hours notice is given.

§ 117.1001 Cat Point Creek.

The draw of the S634 bridge, mile 0.3 at Naylors, need not open for the passage of vessels.

§ 117.1003 Chickahominy River.

The draw of the highway bridge, mile 1.5 at Barrets Ferry, shall open on signal except that from 11 p.m. to 7 a.m., the draw shall open on signal if at least 12 hours notice is given.

§ 117.1005 Chuckatuck Creek.

The draw of the US17 bridge, mile 1.0 at Crittenden, shall open on signal if at least two hours notice is given. If an emergency exists, the draw shall open as soon as possible.

§ 117.1007 Elizabeth River—Eastern Branch.

The draw of the Campostella bridge, mile 1.8 at Norfolk, shall open on signal except that from 7:35 a.m. to 7:50 a.m., Monday through Friday, the draw need not open except for the passage of tugs with tows.

§ 117.1009 Elizabeth River—Western Branch.

(a) The draw of the Seaboard System Railroad bridge, mile 3.8 at Portsmouth, shall open on signal except that from 1 a.m. to 6 a.m. from April 1 through October 31 the draw shall open on signal if at least eight hours notice is given. (Any vessel operator intending to return through the draw during this period shall notify the drawtender prior to 6 a.m. of the time of return passage and the draw shall open on signal at the specified time.) From November 1 through March 31 the draw shall open on signal if at least four hours notice is given.

(b) The draw of the S337 bridge, mile 4.7 Hodges Ferry, shall open on signal if at least eight hours notice is given.

§ 117.1011 Great Wicomico River.

The draw of the S200 bridge, mile 8.0 at Tipers, shall open on signal except that if an opening is desired from 6 p.m. to 6 a.m., the drawtender on duty must be notified before 6 p.m.

§ 117.1013 Kinsale Creek.

The draw of the state highway bridge, mile 4.0, at Kinsale need not open for the passage of vessels.

§ 117.1015 Mattaponi River.

The draws of the Lord Delaware (S33) bridge, mile 0.8 at West Point, and the S629 bridge, mile 28.5 at Walkerton, shall open on signal if at least 24 hours notice is given. The drawtender service for either bridge shall be increased to the degree determined to be adequate within 20 days after written notice is received from the District Commander to take such action.

§ 117.1017 Nansemond River.

The draw of the US 460 bridge, mile 18.2 at Suffolk, shall open on signal if at least 12 hours notice is given.

§ 117.1019 Nansemond River—Western Branch

The draw of the S10 bridge, mile 2.0 at Reids Ferry, need not open for the passage of vessels.

§ 117.1021 North Landing River.

The draw of the S165 bridge, mile 20.2 at Chesapeake, shall open on signal except that from 6 a.m. to 7 p.m. the draw need open only on the hour and half hour for the passage of pleasure craft. Public vessels of the United States, commercial vessels, and vessels in an emergency endangering life or property, shall be passed at any time.

Washington

§ 117.1031 Chehalis River.

(a) The draw of the US101 highway bridge, mile 0.1 at Aberdeen, shall open on signal except that from 7:15 a.m. to 8:15 a.m. and 4:15 p.m. to 5:15 p.m., Monday through Friday, except Federal holidays, the draw need not open for the passage of vessels of less than 5,000 gross tons.

(b) The draw of the Union Pacific railroad bridge, mile 13.1 at South Montesano, shall be maintained in the open to navigation position except the draw may close for the crossing of trains and the maintenance of the bridge. When the draw is closed, there shall be a drawtender present and the draw shall open on signal.

§ 117.1033 Columbia River.

(a) The draw of the Interstate 5 bridge, mile 106.5 at Vancouver, shall open on signal, except that from 6:30 a.m. to 8 a.m., and 3:30 p.m. to 6 p.m., Monday through Friday, except Federal holidays, the draws need not open for the passage of vessels. The opening signal is two prolonged blasts followed by one short blast.

(b) The draw of the Port of Hood River bridge, mile 169.8 at Hood River, shall open on signal if at least 12 hours notice is given.

§ 117.1035 Columbia and Snake Rivers in the vicinity of Pasco.

(a) The draw of the Burlington Northern railroad bridge across the Columbia River, mile 328.0 between Pasco and Kennewick, shall open on signal from 8 a.m. to 4 p.m. At all other times, the draw shall open on signal if at least two hours notice is given through the General Yardmaster, Pasco, Washington.

(b) When two vessels approaching from opposite directions meet near the Union Pacific railroad bridge across the Columbia River, mile 323.5, the Burlington Northern railroad bridge across the Columbia River, mile 328.0, and the Burlington Northern railroad bridge across the Snake River, mile 1.5, the downbound vessel shall have the right-of-way. When one vessel waits for passage of another, the waiting vessel shall repeat the call signal for the bridge and receive an acknowledging signal from the drawtender before proceeding.

(c) Signals.

(1) Opening sound signal—to be repeated until acknowledged by the drawtender.

(i) Burlington Northern railroad bridge—two prolonged blasts and one short blast.

(ii) Burlington Northern railroad bridges—one prolonged blast and two short blasts.

(2) Opening visual signals may be used in conjunction with sound signals for all bridges listed in this section. These visual signals are a white flag by day and a white light at night swung in a full circle at arm's length infull sight of the bridge facing the draw.

(3) The acknowledging sound signal shall be the same as the opening sound signal when the draw will open. When the draw cannot open, the signal shall be four short blasts, given in rapid succession, repeated until acknowledged by the same signal from the vessel.

(4) Sound and visual signals may be omitted when radiotelephone communcations have been satisfactorily established and maintained between the drawtender and the approaching vessel, until the vessel has passed through the bridge.

§ 117.1037 Cowlitz and Lewis Rivers.

(a) The draw of the Burlington Northern railroad bridge, mile 2.0 across the Lewis River at Woodland, need not open for the passage of vessels.

(b) The draw of the Allen Street bridge, mile 5.5 across the Cowlitz River at Kelso, shall open on signal if at least two hours notice is given. In the event a vessel is delayed, the operator will remain a reasonable time, not to exceed two hours, and open the bridge on signal for the passage of the vessel. If a vessel is expected to be delayed more than two hours the operater will be so advised, and notified of the later time the opening will be required. If a vessel passing through the bridge intends to return through within two hours the vessel shall notify the bridge tender who shall remain at and open the draw upon signal for the vessel's return passage.

(c) When fog prevails by day or by night, the drawtender, after giving the opening signal, shall toll a bell continuously during the approach and passage of the vessel.

§ 117.1039 Deep River.

The draw of the Washington State highway bridge, mile 3.5 near Deep River, shall open on signal if at least four hours notice is given.

§ 117.1041 Duwamish Waterway at Seattle.

(a) The draws of each bridge across the Duwamish Waterway shall open on signal except that the draws of the Southwest Spokane Street bridge and the First Avenue South bridge need not open for the passage of vessels from 6:30 a.m. to 8:30 a.m. and 3:45 p.m. to 5:45 p.m., Monday through Friday, except Federal holidays. However, the draws of these bridges shall open at any time for a vessel of 5,000 tons or more.

(b) The following bridges shall open on the following signals:

(1) Burlington Northern railroad bridge, mile 0.4, and Southwest Spokane Street bridge, mile 0.3. One prolonged blast followed quickly by three short blasts.

(2) Burlington Northern railroad bridge, mile 0.4. One prolonged blast followed quickly by one short blast.

(3) First Avenue South bridge, mile 2.5. Three prolonged blasts.

(4) Fourteenth Avenue South bridge, mile 3.8. One prolonged blast followed quickly by one short blast and one prolonged blast.

(c) When fog prevails by day or by night, the drawtender, after giving the opening signal, shall toll a bell continuously during the approach and the passage of the vessel.

§ 117.1043 Grays Harbor.

When fog prevails by day or by night, the drawtender, after giving the opening signal, shall toll a bell continuously during the approach and passage of the vessel.

§ 117.1045 Hood Canal.

(a) The draw of the Washington State pontoon highway bridge near Port Gamble shall open on signal if at least one hour's notice is given.

(1) Telephone requests for bridge opening may be directed as collect calls to the Toll Office at the bridge site. The call may also be made by direct telephone communication, through the Seattle Marine Operator, Station KOH, or through other marine wire or radio telephone service.

(2) The sound signal is one prolonged blast of a horn or whistle followed quickly by two short blasts. The bridge attendant will acknowledge when the draw shall open by repeating the signal.

(3) If the drawspan cannot open immediately, or if open and must close immediately, the drawtender will sound five or more short blasts of a horn or whistle, to be repeated at regular intervals until acknowledged.

(4) During unusual or emergency periods, the authorized representative of the owner of or agency controlling the bridge will be required to operate the draw of the bridge on a demand basis for specified periods of time, which will normally not exceed 48 hours, when requested by the Department of the Navy. While on a demand basis the drawtender will be in attendance on the bridge with radio communications equipment in operation.

§ 117.1047 Hoquiam River (Grays Harbor Tributary).

The draw of the Simpson Avenue bridge, mile 0.5 at Hoquiam, shall open on signal if at least a one hour notice is given. The opening signal is two prolonged blasts followed by one short blast. The State Department of Transportation shall accept collect telephone calls from vessels via the local marine telephone operator, or long distance telephone, and shall provide a two-way radiotelephone on the Chehalis River bridge which will be attended at all times. Vessels may place one hour's notice calls for the Hoquiam River Simpson Avenue bridge through the Chehalis River bridge operator.

§ 117.1049 Lake Washington.

(a) The draw of the pontoon highway bridge between Foster Island and Evergreen Point shall open on signal if at least one hour's notice is given.

(1) Telephone requests for bridge opening may be directed as collect calls to the Highway Radio. The call may also be made by direct telephone communication, through the Seattle Marine Operator, Station KOH, or through other marine wire or radiotelephone service.

(2) Sound signals shall be one prolonged blast of a horn or whistle followed quickly by two short blasts in the immediate vicinity of the drawspan. The bridge attendant will acknowledge by repeating the signal.

(3) The draw need not open Monday through Friday from 7 a.m. to 9 a.m. and 4 p.m. to 6 p.m. for any vessel or other watercraft of less than 2,000 gross tons, unless such vessel has in tow a vessel of 2,000 gross tons or over, or a piledriver that is unable to pass under the fixed spans.

(b) The draw of the Pontoon highway bridge between Seattle and Mercer Point shall open on signal, except that fom 6:30 a.m. to 9:30 a.m. and 3 p.m. to 6:30 p.m., Monday through Friday, except Federal holidays, the draw need not open for any vessels of less than 2,000 gross tons, unless such vessels has in tow a vessle of at least 2,000 gross tons. The draw shall also open for the passage of a pile driver at any time.

(c) All non-self-propelled vessels, crafts, and rafts, navigating this waterway, for which the opening of any draw is necessary, shall be towed by a suitable self-propelled vessel(s) while passing the draw.

§ 117.1051 Lake Washington Ship Canal.

(a) The draw of the Burlington Northern railroad bridge, mile 0.1, shall open on signal.

(b) The draws of the Ballard (15th Avenue) bridge, mile 1.1, Fremont Avenue bridge, mile 2.6, University bridge, mile 4.3, and Montlake bridge, mile 5.2, all at Seattle, shall open on signal except that they:

(1) Need not open from 7 a.m. to 9 a.m., and from 4 p.m. to 6 p.m., Monday through Friday, except Federal holidays, for vessels of less than 1,000 tons unless the vessel has a vessel of over 1,000 tons in tow, except under emergency conditions when the Seattle City Engineer is notified.

(2) Shall open on signal from 12 midnight to 8 a.m., if at least one hour notice is given by telephone, radiotelephone, or otherwise to the drawtender at the Fremont Avenue drawbridge.

(c) The opening sound signal for each bridge is one prolonged blast followed by one short blast, except that the University bridge opens on one prolonged blast followed by three short blasts.

(d) When fog prevails by day or by night, the drawtender after giving the opening signal, shall toll a bell continously during the approach and passage of the vessel.

(e) All non-self-propelled vessels, craft, or rafts, navigating this waterway, for which the opening of any draw is necessary, shall be towed by a suitable self-propelled vessel(s) while passing the draw.

§ 117.1053 Skagit River.

The draws of all bridges across the Skagit River need not open for the passage of vessels.

§ 117.1055 Skamokawa Creek.

The draw of the Washington State highways bridge at Skamokawa need not be opened for the passage of vessels.

§ 117.1057 Snohomish River, Steamboat Slough, and Ebey Slough.

(a) The draws of the Twin bridges, mile 3.6 across the Snohomish River at Everett, shall open on signal if at least one hours notice is given. During freshets a drawtender shall be in constant attendance and the draws shall open on signal when so ordered by the District Commander. Notice shall be given by marine radio, telephone or other means; on weekends to the drawtender at these bridges; and on weekdays to the drawtender at the Ebey Slough bridge.

(b) The draw of the US2–SH15 bridge, mile 6.9 across the Snohomish River at Everett, shall open on signal if at least four hours notice is given. During freshets a drawtender shall be in constant attendance and the draw shall open on signal when so ordered by the District Commander.

(c) The draws of the state highway bridge, mile 15.0, and the Burlington Northern railroad bridge, mile 15.5, both across the Snohomish River at Snohomish, need not open for the passage of vessels.

(d) The draw of the Burlington Northern railroad bridge, mile 1.0, and the Twin Washington State highway bridges, miles 1.1 and 1.2, all across Steamboat Slough near Maryville, shall open on signal if at least four hours notice is given.

(e) Signals. (1) The opening signal for the Burlington Northern railroad bridge, mile 3.5, across the Snohomish River is one prolonged blast, one short blast and one prolonged blast.

(2) The opening signal for the US99 bridge, mile 3.6, across the Snohomish River is three prolonged blasts followed by one short blast (one signal opens both bridges).

(3) The opening signal for the US2–SH15 bridge, mile 6.9, across the Snohomish River is three prolonged blasts.

(4) The opening signal for the Burlington Northern railroad bridge, mile 1.0, is one short blast followed by one prolonged blast.

(5) The opening signal for the US99 bridges, mile 1.1, is two prolonged blasts followed by one short blast (one signal for both bridges).

(6) *Acknowledging Signals.* (A) When draw can be opened immediately. Two prolonged blasts followed by one short blast or three loud and distinct strokes of a bell.

(B) When draw cannot be opened immediately, or when it is open and must be closed immediately. Two prolonged blasts or two loud and distinct strokes of a bell. (This signal may also be used by a vessel to countermand its call signal.)

(f) *Fog Signal.* When fog prevails by day or by night, the drawtender, after giving the opening signal, shall toll a bell continuously during the approach and passage of the vessel.

Tacoma Harbor Waterway

§ 117.1059 City Waterway.

(a) The draw of the South 11th Street bridge, mile 0.6 at Tacoma, shall open on signal if at least two hours notice is given. However, the draw need not open from 6:30 a.m. to 8:30 a.m. and 3:30 p.m. to 5:30 p.m., Monday through Friday, except Federal holidays, for vessels of less than 1,000 gross tons, unless such vessel has in tow a vessel of 1,000 gross tons or over, or opening of the draw is required for the pickup for towing of a vessel of 1,000 gross tons or over. Under emergency conditions, openings will be made as soon as possible upon notification to the city of Tacoma, Department of Public Works.

(b) The draw of the Union Pacific railroad bridge, mile 0.9 at Tacoma, shall open on signal except that from 7:15 a.m. to 8 a.m. and 4:45 p.m. to 5 p.m., the draw need not open.

(1) The opening signal is one prolonged blast followed by one short blast followed by one prolonged blast.

§ 117.1061 Puyallup Waterway and River.

The draw of the Milwaukee Road railroad bridge, mile 0.9 at Tacoma, shall open on signal if at least 24 hours notice is given.

§ 117.1063 Blair Waterway.

The draw of the East 11th Street bridge at Tacoma shall open on signal except that the draw need not open from 6:30 a.m. to 8:30 a.m. and 3:30 p.m. to 5:30 p.m., Monday through Friday, except Federal holidays, for vessels of less than 1,000 gross tons, unless such vessel has in tow a vessel of 1,000 gross tons or over, or opening of the draw is required for the pickup for towing of a vessel of 1,000 gross tons or over. Under emergency conditions, openings will be made as soon as possible upon notification to the City of Tacoma, Department of Public Works.

§ 117.1065 Hylebos Waterway.

The draw of the East 11th Street bridge at Tacoma shall open on signal except that the draw need not open from 6:30 a.m. to 8:30 a.m., and 3:30 p.m. to 5:30 p.m., Monday through Friday, except Federal holidays, for vessels of less than 1,000 gross tons, unless such vessel has in tow a vessel of 1,000 gross tons or over, or opening of the draw is required for the pickup for towing of a vessel of 1,000 gross tons or over. Under emergency conditions, openings will be made as soon as possible upon notification to the City of Tacoma, Department of Public Works.

All Tacoma Harbor Bridges

Note.—Fog signals. When fog prevails by day or night, the drawtender, after giving the opening signal, shall toll a bell continuously during the approach and passage of a vessel.

§ 117.1067 Willapa Harbor.

(a) The draws of the Washington State highway bridge, mile 7.8 North Fork of the Willapa River at Raymond, and the Washington State highway bridge, mile 2.5 at Naselle, shall open on signal from 8 a.m. to 5 p.m., Monday through Friday, except Federal holidays,

if at least two hours notice is given, and at all other times if at least eight hours notice is given. The opening signals for the North Fork bridge at Raymond are one prolonged blast, one short blast and one prolonged blast and the bridge at Naselle, one long blast.

(b) The draw of the Burlington Northern railroad bridge across the South Fork of the Willapa River, mile 0.3 at Raymond, shall open on signal if at least 24 hours notice is given. The opening signal is two prolonged blasts followed by one short blast.

§ 117.1069 Wishkah River.

(a) The draws of the Heron Street bridge, mile 0.2, and the Wishkah Street bridge, mile 0.4, both at Aberdeen, shall open on the signal of one prolonged blast followed by two short blasts if at least a one-half hour notice is given. The Washington State Department of Transportation shall accept collect telephone calls from vessels via the local marine telephone operator or long distance telephone. The Washington State Department of Transportation shall provide a two-way radiotelephone on the Chehalis River bridge which will be attended at all times. Vessels may place calls for the Wishkah River bridges through the Chehalis River operator.

(b) When fog prevails by day or by night the drawtender on giving signal that draw will be opened, shall toll a bell continuously during the approach and passage of the vessel.

Wisconsin

§ 117.1081 Black River.

(a) The draw of the Milwaukee Road railroad bridge, mile 1.0 at La Crosse, shall open on signal if at least two hours notice is given.

(b) The draw of the Wisconsin highway bridge, mile 1.9 at North La Crosse, shall open on signal if at least 24 hours notice is given.

§ 117.1083 Duluth-Superior Harbor (St. Louis River).

(a) The draws of the Burlington Northern railroad bridge, mile 5.7, shall open on signal except that from January 1 through March 15 the draws shall open on signal if at least 24 hours notice is given. The following opening signals shall be used:

Minnesota Draw—One prolonged blast followed by two short blasts
Wisconsin Draw—Two prolonged blasts followed by two short blasts.

All other signals shall be those set forth in § 117.11.

(b) The draws of the Grassy Point bridge, mile 8.0, and the Arrow Head bridge, mile 8.7, shall open on signal except that from January 1 through March 15 the draw shall open on signal if at least 24 hours notice is given. The following opening signals shall be used:

Grassy Point bridge—Two prolonged blasts followed by one short blast.
Arrowhead bridge—Three prolonged blasts.

(c) The draw of the Duluth Missabe and Iron Range Railway bridge, mile 16.3, need not open for the passage of vessels.

§ 117.1085 East River.

The draw of the Monroe Street bridge, mile 0.3 at Green Bay, need not open for the passage of vessels.

§ 117.1087 Fox River.

(a) The draws of the Main Street bridge, mile 1.6, Walnut Street bridge, mile 1.8, and Mason Street bridge, mile 2.2, all at Green Bay, need not open for the passage of vessels, Monday through Saturday, except Federal holidays:

7 a.m. to 8 a.m.
12 noon to 1 p.m.
4 p.m. to 5 p.m.

However, public vessels of the United States, vessels of 300 short tons or over cargo capacity engaging in commercial transportation and their attendant towing tugs, and tugs and fireboats shall be passed at any time.

(1) The opening signals for each bridge are:

Main Street—Two short blasts followed by one prolonged blast
Walnut Street—One prolonged blast followed by two short blasts
Mason Street—One prolonged blast followed by one short blast

(b) The draw of the George Street bridge, mile 7.2 at DePere, shall open on signal during the navigation season except that from 6 p.m. to 8 a.m., during the navigation season, the draw shall open on signal if at least two hours notice is given.

§ 117.1089 Manitowoc River.

(a) The draws of the Eighth Street bridge, mile 0.3, and the Tenth Street bridge, mile 0.5, both at manitowoc, shall open on signal, Monday through Friday, except Saturdays, Sundays, and New Year's Day, Independence Day, Labor Day, Thanksgiving, and Christmas or on the Monday following such holidays when they occur on a Sunday. However, the draws need not open from:

6:50 a.m. to 7 a.m.
7:50 a.m. to 8 a.m.
11:55 a.m. to 12:10 p.m.
12:45 p.m. to 1 p.m.

(1) The opening signals for each bridge are:

Eighth Street—One prolonged blast followed by one short blast
Tenth Street—Two short blasts followed by one prolonged blast

(b) The draw of the Soo Line railroad bridge, mile 0.9, shall open on the signal of two short blasts followed by one prolonged blast.

Note.—When signal is given by a car ferry or other large vessel to pass either of the two bridges, the remaining bridge shall also open promptly so that such vessel shall not be held between the two bridges.

§ 117.1091 Menomonee River.

The draw of the Ogden-First Street bridge, mile 0.4 at Marinette, shall open on signal except that from November 1 through April 30 the draw shall open on signal if at least 12 hours notice is given.

§ 117.1093 Milwaukee, Menomonee, and Kinnickinnic Rivers, and South Menomonee Canal, Milwaukee.

(A) The draws of the North Broadway Street bridge, mile 0.5, North Water Street bridge, mile 0.6, and Michigan Street bridge, mile 1.1, across the Milwaukee River; the North Plankinton Avenue bridge, mile 0.1, across the Menomonee River, and the Kinnickinnic Avenue bridge, mile 1.5, across the Kinnickinnic River, shall open on signal, except that from 7:30 a.m. to 8:30 a.m. and 4:30 p.m. to 5:30 p.m., Monday through Saturday, except Federal holidays, the draws need not open.

(b) The draws of the Milwaukee Road railroad bridge and the Chicago and Northwestern Railway bridges across the Kinnickinnic River, mile 1.5 and mile 1.52, respectively; and the draw of the Milwaukee Road railroad bridge across the Burnham Canal, mile 0.8, shall open on signal if at least two hours notice is given.

(c) The draws of all bridges across the Milwaukee River need not open 7:30 a.m. to 8:30 a.m. and 4:30 p.m. to 5:30 p.m. At all other times the draws shall open on signal if at least two hours notice is given.

(d) All other drawbridges across the Kinnickinnic, and Menomonee Rivers, and the Menomonee and Burham Canals shall open on signal. However, from 7:30 a.m. to 8:30 a.m., and 4:30 p.m. to 5:30 p.m., Monday through Saturday, except Federal holidays, the draws need not open, and from 11 p.m. to 7 a.m., the draws shall open on signal if at least two hours notice is given.

(e) Signals.

(1) The opening signals for all drawbridges except those listed below is one prolonged blast followed by one short blast.

(i) The opening signal for the Chicago and Northwestern drawbridges across the Kinnickinnic River, mile 1.0, and the Milwaukee River, mile 0.3, is two prolonged blasts.

The opening signal for the Broadway Street drawbridge, mile 0.5, is three prolonged blasts followed by one short blast.

(iii) The opening signal for the Water Street drawbridge, mile 0.6, is three prolonged blasts followed by two short blasts.

(iv) The opening signal for the Milwaukee road railroad drawbridge across the Menomonee River, mile 0.1, is two prolonged blasts followed by two short blasts.

(2) The acknowledging signal when the draw will open is the same as the opening signal.

(3) The acknowledging signal when the draw will not open or is open and must be closed is four short blasts.

(f) The draws of each bridge listed in this section shall open as soon as possible for the passage of public vessels of the United States, vessels carry United States mail, vessels licensed to carry 50 or more passengers when on their regular routes and fireboats of the City of Wilwaukee.

§ 117.1095 Root River.

(a) The draw of the Main Street bridge, mile 0.3, shall open on signal, except that:

(1) From April 1 through December 1, from 6 a.m. to 6 p.m. the draw need open only on the hour, 20 minutes after the hour and 40 minutes after the hour. During the period the draw shall remain open long enough to pass all accumulated vessels.

(2) From December 2 through March 31 the draw shall open on signal if at least two hours notice is given.

(b) The draw of the State Street bridge, mile 0.5, shall open on signal, except that from October 16 through April 30 the draw shall open on signal if at least two hours notice is given.

(c) The draws of each bridge shall open as soon as possible for passage of public vessels of the United States, state or local vessels used for public safety, commercial vessels and vessels in distress.

§ 117.1097 Sheboygan River.

(a) The draw of the Eighth Street bridge, mile 0.7 at Sheboygan, shall open on signal from May 1 thorugh October 31 from 6 a.m. to 10 a.m. as follows:

(1) From 6 a.m. to 8 a.m., 9 a.m. to 12 noon, 1 p.m. to 4 p.m., and 6 p.m. to 7 p.m., the draw need open only on the hour, quarter hour, half hour, and three-quarter hour.

(2) From 8 a.m. to 9 a.m., 12 noon to 1 p.m., and 4 p.m. to 6 p.m. the draw need open only on the hour and half hour.

(3) At all other times the draw shall open on signal if at least two hours notice is given.

(4) Public vessels of the United States, state or local vessels used for public service, and vessels in distress shall be passed as soon as possible at any time.

§ 117.1099 St. Croix River.

(a) The draws of all bridges from the mouth through Hudson shall open on signal except that from December 15 to March 1, the draws shall open on signal if at least 24 hours notice is given.

(b) The draw of the S36 (Stillwater) bridge, mile 23.4, shall open on signal:

(1) From May 15 through October 15 from Monday through Friday, except Federal holidays, as follows:

8 a.m. to 11 a.m. every hour on the hour
11 a.m. to 3 p.m. every hour and half hour
3 p.m. to 6 p.m. every hour on the hour
6 p.m. to 10 p.m. every hour and half hour
10 p.m. to 8 a.m. if at least two hours notice is given.

(2) On Saturdays, Sundays, and Federal holidays, as follows:

8 a.m. to 11 a.m. every hour and half hour
11 a.m. to 8 p.m. every hour on the hour
8 p.m. to midnight every hour and half hour
Midnight to 8 a.m. if at least two hours notice is given.

(3) From October 16 through May 14 if at least 24 hours notice is given.

(c) The draw of the Soo Line railroad bridge, mile 40.7 at Otisville, need not open for the passage of vessels.

§117.1101 Sturgeon Bay.

(a) The draws of the highway bridge, mile 4.3 at Sturgeon Bay, shall open on signal:

(1) From March 15 through May 14 and from September 15 through December 31.

(2) From May 15 through September 15, the draw shall open on signal from 6 p.m. to 6:30 a.m.

(3) From May 15 through September 15, from 6:30 a.m. to 6 p.m. the draw shall open on the hour and half hour provided vessels are waiting to pass. However, public vessels of the United States and commercial vessels shall be passed through the draw without delay during this period.

(4) From January 1 through March 14 the draw shall open on signal if at least 12 hours notice is given.

§117.1103 Upper Mississippi River.

(a) The draws of all bridges between Lock and Dam No. 2, mile 815.2, and Lock and Dam No. 10, mile 615.1, shall open on signal except that from December 15 through March 1 the draws shall open if at least 24 hours notice is given.

(b) The draws of all bridges between Lock and Dam No. 2, mile 815.2, and Lock and Dam No. 1, mile 847.6, shall open on signal except that from December 15 through March 1 the draws shall open on signal if at least 12 hours notice is given.

§117.1105 Wisconsin River.

The draws of each drawbridge shall open on signal if at least 48 hours notice is given.

§117.1107 Wolf River.

The draw of the Winneconne highway bridge, mile 2.4 at Winneconne, shall open on signal, except that from 11 p.m. to 7 a.m., from May 1 through October 31 at least two hours notice is required and from November 1 through April 30 at least 12 hours notice is required. Public vessels of the United States, state and local vessels used for public safety and vessels in distress shall be passed as soon as possible.

Dated: May 23, 1983.

R. A. Bauman,

Rear Admiral, Coast Guard Chief, Office of Navigation.

BILLING CODE 4910-14-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[AID-FRL 2280-6]

Approval and Promulgation of Implementation Plans; Rule Revisions in the State of Nevada

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed rulemaking.

SUMMARY: Revisions to Clark County Health District regulations were submitted to EPA by the State of Nevada for incorporation into their State Implementation Plan (SIP). The regulations address cutback asphalt and malfunction. EPA is proposing to approve the cutbacks asphalt regulations since it is consistent with the control requirements recommended in EPA's Control Techniques Guideline (CTG) document. However, the malfunction regulation is inconsistent with EPA policy since it allows a finding of no violation for certain periods of excess emissions. Therefore, this notice proposes to disapprove the malfunction regulation.

DATES: Comments may be submitted up to June 30, 1983.

ADDRESSES: Comments may be sent to: Regional Administrator, Attn: Air Management Division, Air Programs Branch, State Implementation Plan Section (A–2–3), Environmental Protection Agency, Region 9, 215 Fremont Street, San Francisco, CA 94105.

Copies of the proposed revisions and EPA's associated Evaluation Report are available for public inspection during normal business hours at the EPA Region 9 office at the above address and at the following location: Nevada Department of Conservation and Natural Resources, 201 S. Fall Stree, Carson City, NV 89710.

FOR FURTHER INFORMATION CONTACT: Douglas Grano, Chief, State Implementation Plan Section, Air Programs Branch, Air Management Division, Environmental Protection Agency, Region 9, (415) 974–7641.

SUPPLEMENTARY INFORMATION: The State of Nevada submitted the following Clark County Health District regulations on November 17, 1981:

Subsection 60.4.2 *Evaporation Leakage* (Cutback Asphalt).

Section 25 *Upset/Breakdown, Scheduled Maintenance, Malfunctions.*

EPA has evaluated these rules for conformance with EPA policy. the submitted revision to subsection 60.4.2 reduces the geographic area where the rule applies. All of Clark County formerly constituted this area. Now, however, it consists of only the portion of Las Vegas Valley which lies withing Clark County. The revision is approvable since it is consistent with the ozone nonattainment area designation and the Nevada SIP.

Section 25 is proposed to be dissapproved. The rule is deficient because it allows, if certain conditions are met, for a finding of no violations for excess emissions which result from the malfunction or scheduled maintenance or air pollution control and process equipment. EPA policy requires "malfunction" rules to consider any period of excess emissions a violation. Enforcement action on a violation is then taken unless the excess emissions are proven to be truly beyond the control of the source.

The Adminstrator has certified that SIP actions do not have a significant economic impact on a substantial number of small entities. (see 46 FR 8709.)

Under Executive Order 12291, today's action is not "Major." It has been submitted to the Office of Management and Budget (OMB) for review. Any comments from OMB to EPA and any response are available for public inspection at the EPA Region IX office (see address above).

40 CFR Parts 414 and 416

[WH–FRL 2372–7]

Organic Chemicals and Plastics and Synthetic Fibers Point Source Category Effluent Limitations Guidelines, Pretreatment Standards, and New Source Performance Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Extension of comment period; notice of public hearing.

SUMMARY: On March 21, 1983, EPA proposed a regulation under the Clean Water Act to limit effluent discharges to waters of the United States and the introduction of pollutants into publicly owned treatment works from facilities engaged in the production of organic chemicals, plastics, and synthetic fibers (48 FR 11828). The Agency has received numerous complaints from the organic chemicals and plastics and synthetic fibers industry that additional comment time is needed to allow them to comment fully and to supply data to support their comments. EPA is extending the period for comment on this proposed regulation from June 19, 1983 to August 3, 1983.

Additionally, notice is hereby given of a hearing open to the public to discuss and receive comments on the pretreatment standards proposed in the March 21, 1983, **Federal Register** notice.

DATE: Comments on the proposed regulation for the organic chemicals and plastics and synthetic fibers category (48 FR 11828) must be submitted to EPA by August 3, 1983.

ADDRESSES: Send comments on the proposed regulation to Mr. E. H. Forsht, Effluent Guidelines Division (WH–552), Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460. Attention: Docket Clerk, Organic Chemicals and Plastics and Synthetic Fibers Industry. The supporting information and all comments on this proposal are available for inspection and copying at the EPA Public Information Reference Unit, Room 2404 (Rear) PM–213. The comments will be added to the record as they are received. The EPA Information Regulation (40 CFR Part 2) provides that a reasonable fee may be charged for copying.

The public hearing has been scheduled for July 14, 1983 and will be held at the following address: Skyline Inn South Capitol and I Street, S.W., Washington, D.C.

FOR FURTHER INFORMATION CONTACT: E. H. Forsht, (202) 382–7135 for information concerning extension of the comment period. For further information about the public hearing contact Marvin B. Rubin, Project Officer for Public Participation, Effluent Guidelines Division (WH–552), Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460 (202) 382–7113.

SUPPLEMENTARY INFORMATION: On March 21, 1983, EPA proposed a regulation to limit effluent discharges to waters of the United States and the introduction of pollutants into publicly owned treatment works from facilities engaged in the production of organic chemicals and plastics and synthetic fibers (48 FR 11828). The March 21, 1983 notice stated that comments on the proposal were to be submitted on or before June 19, 1983.

The Agency has received numerous complaints from the organic chemicals and plastics and synthetic fibers industry that additional comment time is needed to allow them to comment fully and to supply data to support their comments. Given the size and diversity of the industry, the complexity of issues raised by this rulemaking, and the fact that there were delays of several weeks in the printing of the technical development document and in making the complete rulemaking record available to the public, EPA has determined that it is necessary to extend the comment period 45 days to allow the public adequate time to review and comment on this proposed regulation. This extension will give all members of the public adequate time to comment fully on this regulation.

The public hearing on pretreatment standards is being held for the Organic Chemicals and Plastics and Synthetic Fibers point source category in

accordance with Section 307(b) of the Clean Water Act, 33 U.S.C. 1317(b). Registration for the hearing will be held from 8:30 to 9:00 a.m. The hearing will start at 9:00 a.m. Following the registration period there will be a brief presentation by an EPA official on the development of these pretreatment standards. Opportunity will also be given throughout each session for the audience to submit written questions to the Presiding Officer. These questions will be addressed during a question and answer session at the conclusion of the oral testimony presentations for each category. For those people making an oral presentation, it is requested that a written transcript of their presentation as well as correct spellings of names, affiliations and addresses, be submitted to the court recorder. Official transcripts of the public hearing will be available upon request.

Date May 20, 1983.

Frederic A. Eidsness, Jr.,

Assistant Administrator for Water.

[FR Doc. 83-14272 Filed 5-27-83; 8:45 am]

BILLING CODE 6560-50-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

[Docket No. FEMA-6527]

National Flood Insurance Program; Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency.

ACTION: Proposed rule.

SUMMARY: Technical information or comments are solicited on the proposed base (100-year) flood elevations and proposed modified base flood elevations listed below for selected locations in the nation. These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

DATES: The period for comment will be ninety (90) days following the second publication of this proposed rule in a newspaper of local circulation in each community.

ADDRESSES: See table below.

FOR FURTHER INFORMATION CONTACT: Dr. Brian Mrazik, Acting Chief, Engineering Branch, Natural Hazards Division, Federal Emergency Management Agency, Washington, D.C. 20472, (202) 287-0230.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency gives notice of the proposed determinations of base (100-year) flood elevations and modified base flood elevations for selected locations in the nation, in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR 67.4 (a).

These elevations, together with the flood plain management measures required by Section 60.3 of the program regulations, are the minimum that are required. They should not be construed to mean the community must change any existing ordinances that are more stringent in their flood plain management requirements. The community may at any time enact stricter requirements on its own, or pursuant to policies established by other Federal, State, or regional entities. These proposed elevations will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and their contents.

Pursuant to the provisions of 5 U.S.C. 605(b), the Associate Director, to whom authority has been delegated by the Director, Federal Emergency Management Agency, hereby certifies that the proposed flood elevation determinations, if promulgated, will not have a significant economic impact on a substantial number of small entities. A flood elevation determination under Section 1363 forms the basis for new local ordinances, which, if adopted by a local community, will govern future construction within the floodplain area. The elevation determinations, however, impose no restriction unless and until the local community voluntarily adopts floodplain ordinances in accord with these elevations. Even if ordinances are adopted in compliance with Federal standards, the elevations prescribe how high to build in the floodplain and do not proscribe development. Thus, this action only forms the basis for future local actions. It imposed no new requirement; of itself it has no economic impact.

List of Subjects in 44 CFR Part 67

Flood insurance, Floodplains.

The proposed base (100-year) flood elevations for selected locations are:

PROPOSED BASE (100-YEAR) FLOOD ELEVATIONS

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
Arizona	Clifton (town) Greenlee County	San Francisco River	At the intersection of Laine Boulevard and 6th Street	*3,448
		Ward Canyon Creek	At the intersection of Southern Pacific Railroad and Ward Canyon Road.	*3,450
		Chase Creek	At the intersection of U.S. Highway 666 and Chase Creek Street.	*3,475
Maps available for inspection at City Manager's Office, City Hall, Clifton, Arizona. Send comments to Honorable Thomas Aguilar, P.O. Box 1415, Clifton, Arizona 85533				
California	Monterey County (Unincorporated areas)	Arroyo Del Rey	60 feet upstream from center of Blue Lakespur Lane	*259
		Arroyo Seco	40 feet upstream from center of Miller's Ranch Road dip crossing.	*617
		Calera Creek	50 feet upstream from center of Robley Road	*452
		Carmel River	50 feet upstream from center of State Highway 1	*27
		[illegible]	50 feet upstream from center of Boronda Road	*250

		El Toro Creek	50 feet upstream from center of State Highway 68	*225
		Elkhorn Slough	50 feet upstream from center of San Miguel Canyon Road.	*32
		Gabilan Creek	25 feet downstream from center of Natividad Road	*139
		Natividad Creek	50 feet upstream from center of Sherwood Lane	*94

PROPOSED BASE (100-YEAR) FLOOD ELEVATIONS—Continued

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
		Pajaro River	50 feet upstream from center of State Highway 1	*27
		Pajaro River—Without Consideration of Levee.	At the intersection of Trafton Road and McGowan Road.	*14
		Pine Canyon Creek	50 feet upstream from center of Jolon road	*[illegible]
		Reclamation Ditch	50 feet upstream from center of Boronda Road	*[illegible]
		Salinas River	At the intersection of Nashua Road and Cooper Road	*25
		Salinas River (Near King City)	50 feet upstream from center of U.S. Highway 101 Southbound.	*291
		Salinas River (Near San Ardo)	250 feet downstream from center of Cattlemen Road	*415
		San Lorenzo Creek	50 feet upstream from center of 1st Street	*323
		San Miguel Canyon Creek	At the intersection of Reese Circle and Cross Road	*[illegible]
		Santa Rita Creek	At the intersection of Paul Avenue and Rogge Road	*123
		Tembladero Slough	At the intersection of Preston Road and Salinas Street	*12
		Thomasello Creek	At point 100 feet northwest of intersection of creek and road on Pajaro River levee.	*45
		Carr Lake	Confluence of Gabilan Creek, Natividad Creek, and Reclamation Ditch.	*44
		Pacific Ocean	At the intersection of Elkhorn Slough and center of State Highway 1.	*[illegible]

Maps available for inspection at Monterey Flood Control and Water Conservation District, 855 E. Laurel Drive, Salinas, California.

Send comments to Honorable William G. Peters, P.O. Box 1819, Salinas, California. 93902.

Colorado	Montrose (City) Montrose County	Uncompahgre River	500 feet downstream from center of West Main Street (State Highway 90).	*5,770
		Montrose Arroyo	At the intersection of South 9th Street and Park Avenue.	*5,833

Maps available for inspection at the Planning Department, City Hall, Montrose, Colorado.

Send comments to Honorable Ted Hermanns, Box 790, Montrose, Colorado 81402

Connecticut	Clinton, (Town) Middlesex County	Long Island Sound	Entire shoreline within community	*16

Maps available for inspection at the Town Hall, Clinton, Connecticut.

Send comments to Honorable James Cave, First Selectman of the Town of Clinton, Town Hall, 52 East Main Street, Clinton, Connecticut 06413.

Connecticut	Stamford, (City) Fairfield County	Long Island Sound	Shoreline at Shippan Point	*17
			Shoreline of Stamford Harbor at Dolphia Cove Way (extended).	*17
			Shoreline of Stamford Harbor at Cook Road (extended).	*15
			Shoreline of Holly Pond at Weed Circle (extended)	*13
			Shoreline of East Branch Rippowam River behind hurricane barrier.	*[illegible]

Maps available for inspection at the Office of the Environmental Protection Board, City Hall, 429 Atlantic Street, Stamford, Connecticut.

Send comments to Honorable Louis Clapes, Mayor of the City of Stamford, 429 Atlantic Street, Stamford, Connecticut 06904.

Illinois	(C) Mt. Vernon, Jefferson County	Bishop Creek	At mouth	*453
			Just upstream of Norfolk Southern Railway (at 5th Street).	*547
			At 11th Street	*464
		Brickyard Creek	At mouth	*453
			Just upstream of Norfolk Southern Railway (at 5th Street).	*456
			Just upstream of 11th Street	*470
		West Tributary	Just upstream of Shiloh Drive	*442
			About 2,300 feet upstream of Richview Road	*491
		Church Tributary	About 150 feet downstream of State Route 37	*467
			About 1,250 feet upstream of State Route 37	*471
		Botches Ditch	Just downstream of State Route 37	*435
			Just downstream of Missouri Pacific Railroad	*456
			Just upstream of State Route 148	*466
			About 250 feet upstream of South Fishers Lane	*[illegible]
		East Fork Botches Ditch	At mouth	*467
			About 70 feet upstream of South Fishers Lane	*477
		Bell Street Ditch	At mouth	*436
			Just downstream of 10th Street	*458
		Casey Fork	About 1,800 feet downstream of State Route 142	*435
			About 3,000 feet upstream of Tolle Road	*456

Maps available for inspection at the City Engineer's Office, City Hall, 1100 Main Street, Mt. Vernon, Illinois.

Send comments to Honorable William Thackery, Mayor, City of Mt. Vernon, City Hall, 1100 Main Street, Mt. Vernon, Illinois 62864.

Illinois	(V) Lyndon, Whiteside County	Rock River	About 0.55 mile downstream of 6th Avenue West	*[illegible]
			About 1.2 miles upstream of 6th Avenue West	*608

Maps available for inspection at the Village Hall, Lyndon, Illinois.

Send comments to Honorable Lyle Gehlsen, Village President, Village of Lyndon, Village Hall, P.O. Box 205, Lyndon, Illinois 61261.

Illinois	(V) Walnut, Bureau County	Walnut Creek	About 1,400 feet downstream of Main street	[illegible]
			About 2,225 feet upstream of Main street	[illegible]

Maps available for inspection at the Village President's Office, Village Hall, Jackson Street, Walnut, Illinois.

Send comments to Honorable Keith York, Village President, Village of Walnut, Village Hall, Jackson Street, Walnut, Illinois 61376.

Kentucky	Unincorporated Areas of carter County	Cory branch	Just upstrem of Chessie System	*695
		Damron Branch	Just upstream of Private Road (Approximately 2,560 feet upstream of month).	*603

PROPOSED BASE (100-YEAR) FLOOD ELEVATIONS—Continued

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
		Dry Fork	Approximately 1,000 feet Upstream of confluence of Lost Creek.	*632
		Flat fork	Just upstream of Interstate Highway 64	*[illegible]
		Grahn Fork	Just upstream of Unnamed Bridge (Approximately 740 feet upstream of Mouth).	*[illegible]
			Approximately 100 feet upstream of Kiser Branch Road.	*734
		Hitchins Tributary	Just upstream of Private drive (approximately 2,030 feet upstream of confluence with Little Fork of Little Sandy River).	*[illegible]
		Little Sandy River	Approximately 3,700 feet upstream of Interstate Highway 64.	*[illegible]
		Little Sinking Creek	Approximately 210 feet downstream of Fultz Road	*[illegible]
			Just downstream of Secondary Road 181 Bridge	*[illegible]
		Little Fork of Little Sandy River	Just downstream of Secondary Road 1,496	*[illegible]
			Just upstream of Secondary Road 1122	*[illegible]
		Lower Stinson Creek	Just upstream of Old U.S. Highway 60 (downstream crossing).	*[illegible]
		Soldier Fork	Approximately 210 feet downstream of Secondary Road 174 (downstream crossing).	*780
			Just downstream of confluence with Bradley Branch	*[illegible]
		Star Creek	Just upstream of U.S. Highway 60	*[illegible]
			Just upstream of Star Creek Road	*723
		Tygarts Creek	Approximately 2,380 feet upstream of Interstate Highway 64.	*729
			Just upstream of Secondary Road 174	*[illegible]
		Upper Stinson Creek	Just downstream of U.S. Highway 60	*[illegible]
		Upper Tygart Branch	Just upstream of U.S. Highway 60	*[illegible]
		Williams Creek	Just upstream of Secondary Road 854	*[illegible]

Maps available for inspection at Carter County Courthouse, Grayson, Kentucky 41143.

Send comments to Judge Joe Kitchens, Carter County Courthouse or Mr. D.C. Baldwin, Director of Disaster and Emergency Services, 711 East Main Street, Grayson, Kentucky 41143.

Massachusetts	Sandisfield, Town, Berkshire County	West Branch of the Farmington River.	Downstream corporate limits	*725
			Upstream Old Route 8	*750
			Downstream Private Drive	*774
			Downstream Routes 57 & 8	*[illegible]
			Approximately 5,000' upstream Routes 57 & 8	*910

49 CFR Parts 172 and 173

[Docket HM-187; Notice No. 83-2]

Requirement for Small Arms Ammunition

AGENCY: Materials Transportation Bureau, Research and Special Programs Administration, DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to authorize certain types of small arms ammunition to be classed and offered for shipment as ORM-D under the Department's Hazardous Materials Regulations. This change, if adopted, will eliminate the requirements for shipping papers to accompany the shipment.

DATE: Comments must be received by August 1, 1983.

ADDRESS: Address comments to: Dockets Branch, Materials Transportation Bureau, U.S. Department of Transportation, Washington, D.C. 20590. Comments should identify the docket and be submitted in five copies. The Dockets Branch is located in room 8426 of the Nassif Building, 400 Seventh Street, S.W., Washington, D.C. Public dockets may be reviewed between the hours of 8:30 a.m. and 5:00 p.m. Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Thomas J. Charlton, Chief, Standards Division, Office of Hazardous Materials Regulations, Materials Transportation Bureau, U. S. Department of Transportation, 400 Seventh Street, S.W., Washington, D.C. 20590, (202) 462–2075.

SUPPLEMENTARY INFORMATION: On June 30, 1982, the Sporting Arms and Ammunition Manufacturers Institute, Inc. (SAAMI) petitioned the Office of Hazardous Materials Regulation (OHMR) to authorize the transportation of small arms ammunition classed as ORM-D instead of Class C explosive. The Materials Transportation Bureau (MTB) considers the SAAMI request to have merit but to be too broad in scope because small arms ammunition includes such devices as tear gas cartridges, tracer cartridges for machine guns, and seat ejector cartridges for aircraft. However, MTB is proposing that limited types of small arms ammunition which are used in rifles, shotguns, and pistols be classed as ORM-D. The SAAMI proposal suggested an additional "Small arms ammunition" entry in 49 CFR 172.101. The entry "Small arms ammunition" with the hazard class ORM-D is proposed to be added to the hazardous materials table.

Years of experience in shipping small arms ammunition indicate that these devices present only a very small hazard in transportation and this has been confirmed by extensive tests conducted by SAAMI. The MTB has reviewed a documentary film of the SAAMI tests and arrangements can be made for this film to be viewed by any interested person. Most of the weight in a small arms shipment is in the projectiles and the shell or cartridge cases. There is only a relatively small amount of propellant explosive present. For example, in shot shells the weight of the propellant powder is only about 4% and in rifle cartridges only about 8% of the total weight. There is no significant hazard from the shot or bullets in a fire because they are not accelerated unless the ammunition is fired in a weapon.

Information furnished by SAAMI indicates that savings to their members on shipments by one motor carrier alone would be approximately $100,000 per year. Although MTB does not have

specific data on the numbers of shipments by other shipper (such as distributers) and by other carriers it is believed that the annual savings on these shipments would also be substantial. MTB solicits comments from interested parties on the cost savings and burden reduction associated with this proposal, including specific data to quantify these savings.

Under existing regulations, small arms ammunition is not required to be in specification packaging and is not required to be labeled. This proposal would permit a different marking on the packages and would eliminate the need for shipping papers for surface transportation.

List of Subjects

49 CFR Part 172

Hazardous materials transportation, Labeling, Packaging, Containers.

49 CFR Part 173

Hazardous materials transportation, Packaging, Containers.

In consideration of the foregoing, Parts 172 and 173 of Title 49 of the Code of Federal Regulations would be amended as follows:

PART 172—HAZARDOUS MATERIALS TABLES AND HAZARDOUS MATERIALS COMMUNICATIONS REGULATIONS

1. In § 172.101, the Hazardous Materials Table would be amended by adding the following entry:

§ 172.101 Hazardous Materials Table.

	Small arms ammunition	ORM–D		None	None	173.1201	65 pounds gross.	65 pounds gross.	1,3	1,3	
	•	•	•	•	•		•	•			

2. Section 173.101 would be amended by adding paragraph (g) to read as follows:

§ 173.101 Small-arms ammunition.

* * * * *

(g) Special exceptions for shipment of certain types of small arms ammunition in the ORM–D class are provided in Subpart N of this part.

3. Subpart N of Part 173 would be amended by adding a new § 173.1201 as follows:

§ 173.1201 Small arms ammunition.

Small arms ammunition offered for transportation under provision of this section may only be ammunition for rifle, pistol, or shotgun containing either inert projectiles or blank ammunition. Small arms ammunition offered for transportation under provision of this section may not have any tear gas, incendiary or detonating explosive components, and may not be larger than 10 gauge for shot shells and 45 caliber for rifle and pistol ammunition. It must be packed in pasteboard or other inside boxes, in partitions designed to fit snugly in the outside packaging, or in metal clips. Partitions and metal clips must be so designed as to protect the primers from accidental initiation. Inside boxes, partitions, and metal clips must be packed in securely closed strong outside wooden or fiberboard boxes.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53, App. A to Part 1 and paragraph (a)(3) of App. A. to Part 106)

Note.—The MTB has determined that this document will not result in a "major rule" under the terms of Executive Order 12291 or a significant regulation under DOT's regulatory policy and procedures (44 CFR 11034) and does not require an environmental impact statement under the National Environmental Policy Act (49 U.S.C. 4321 *et seq.*). I certify that this document will not have a significant economic impact on a substantial number of small entities because the overall economic impact of this document will be minimal. A regulatory evaluation and environmental assessment are available for review in the docket.

Issued in Washington, D.C., on May 23, 1983.

Alan I. Roberts,

Associate Director for Hazardous Materials Regulation, Materials Transportation Bureau.

BILLING CODE 4910–60–M

Federal Highway Administration

49 CFR Part 387

[BMCS Docket No. MC–107; Notice No. 82–14]

Minimum Levels of Financial Responsibility for Motor Carriers of Passengers

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document proposes to amend 49 CFR 387 by adding a new subpart B to establish minimum levels of financial responsibility for for-hire motor carriers of passengers involved in interstate and foreign transportation. This action is in accord with the provisions of Section 18 of the Bus Regulatory Reform Act of 1982. This document further provides for the implementation and enforcement of the proposed standards.

DATE: Comments must be received on or before August 1, 1983.

ADDRESS: All comments should refer to the docket and notice number that appears at the top of this document and should be submitted preferably in triplicate, to Room 3404, Bureau of Motor Carrier Safety (BMCS), 400 Seventh Street, SW., Washington, D.C. 20590. All comments received will be available for examination at the above address between 7:45 a.m. and 4:15 p.m. e.t., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Mr. Neill L. Thomas, Bureau of Motor Carrier Safety, (202) 426–9767; or Mrs. Kathleen S. Markman, Office of the Chief Counsel, (202) 426–0346; Federal Highway Administration, 400 Seventh Street, SW., Washington, D.C. 20590. Office hours are from 7:45 a.m. to 4:15 p.m. e.t., Monday through Friday.

SUPPLEMENTARY INFORMATION: The FHWA has determined that this document does not contain a major rule under Executive Order 12291. It has further been determined that it contains a significant regulation under the regulatory policies of the Department of Transportation.

A draft regulatory evaluation and a Regulatory Flexibility Analysis are available for review in the public docket. A copy may be obtained by contacting Mr. Neill L. Thomas at the address provided above under the heading **"FOR FURTHER INFORMATION CONTACT"** of this document. The FHWA specifically requests information upon which to determine whether implementation of Section 18 of the Act would have a significant economic impact on a substantial number of small entities.

Background

On September 20, 1982, the President signed the Bus Regulatory Reform Act of 1982, Pub. L. 97–261 (the Act). Section 18 of the Act establishes minimum levels of financial responsibility covering public liability and property damage for the transportation of passengers by for-hire motor vehicles in interstate or foreign commerce.

The Act establishes minimum levels of financial responsibility that must be met by affected persons as of November 19, 1983 unless the Secretary issues regulations that require higher or lower levels. The Secretary may promulgate those regulations to require higher levels and the Secretary's authority to reduce these levels is limited. The statute precludes the Secretary from reducing the minimum levels below specified levels and provides that the authority to impose reduced levels applies only to a period of up to 2 years beginning either on: (1) The effective date of the rule provided that the rule is made effective by November 19, 1983, or (2) the 366th day after the effective date of Section 18 of the Act provided a rule is made effective 1 year after enactment or later.

The purpose of the financial responsibility provision of the Bus Regulatory Reform Act of 1982 is to create additional incentives to motor carriers to operate their buses in a safe manner and to assure that they maintain adequate levels of financial responsibility sufficient to satisfy claims covering public liability and property damage. The legislative history of Section 18 indicates a Congressional belief that the establishment of minimum levels of financial responsibility to enhance safety will also ensure that adequate sources of compensation are available to compensate those who may be injured while traveling by bus. It is also believed, given the interstate nature of many motor carrier operations, a single Federal standard for financial responsibility coverage will be more efficient for carriers and more equitable and certain for consumers.

Also appearing in today's **Federal Register** are the delegations of authority necessary for the issuance of this notice of proposed rulemaking (NPRM). The Bus Regulatory Reform Act of 1982 vests the Secretary with the authority to prescribe minimum financial responsibility levels. This authority is delegated to the FHWA, and, in turn, the FHWA is delegating the authority to the Director, Bureau of Motor Carriers Safety (BMCS).

Minimum Levels of Financial Responsibility Required

The current limits of liability required of motor carriers of passengers subject to regulation by the Interstate Commerce Commission (ICC) are:

(1) $100,000/$500,000/$50,000 for vehicles having a seating capacity of more than 12 passengers; and

(2) $100,000/$300,000/$50,000 for vehicles having a seating capacity of 12 passengers or less. These levels will remain in effect until final rules are promulgated by the FHWA or changed by the ICC.

The minimum levels of financial responsibility set forth in the Act that will take effect 1 year after the effective date of the Act unless the Secretary exercises the statutory authority to establish different levels, are as follows:

(1) $5 million for vehicles having a seating capacity of 16 or more passengers; and

(2) $1.5 million for vehicles having a seating capacity of 15 passengers or less.

The Secretary's authority to change the requirements for the 2-year phase-in period allows reductions as follows:

(1) The $5 million statutory requirement to no less than $2.5 million for vehicles having a seating capacity of 16 or more passengers; and

(2) The $1.5 million statutory requirement to no less than $750,000 for vehicles having a seating capacity of 15 or less passengers.

Generally, the Secretary may make these reductions provided the Secretary finds that such reductions (1) will not adversely affect public safety and (2) will prevent a serious disruption in transportation service.

Financial responsibility may be established under Section 18 of the Act by any one or combination of the following methods acceptable to the Secretary:

(1) Evidence of insurance, including high self-retention;

(2) Guarantee; or

(3) Surety bond.

The Act requires that any bond filed shall be issued by a bonding company authorized to do business in the United States.

Discussion

The following is a discussion of the proposed rules developed by the FHWA.

For the sake of clarity the rules concerning the minimum levels of financial responsibility for motor carriers of passengers will be designated as Subpart B of 49 CFR 387. The FHWA intends to designate existing sections 387.1 thru 387.17 concerning financial responsibility for motor carriers of property, as Subpart A.

Purpose, Scope, and Applicability (§ 387.25—Subpart B)

The minimum levels of financial responsibility, covering public liability and property damage, as proposed in this document, would apply to for-hire motor carriers of passengers involved in interstate and foreign commerce.

Section 18 of the Act does not apply to: 1. A motor vehicle transporting only school children and teachers to or from school;

2. A motor vehicle providing taxicab service and having a seating capacity of less than 7 passengers and not operated on a regular route or between specified points; and

3. A motor vehicle carrying 15 or less individuals in a single, daily round trip to commute to and from work.

It should be noted that the language of the Act clearly indicates that motor vehicles for-hire, carrying 16 or more individuals, even in a single, daily round trip to commute to and from work are subject to the law.

As previously discussed, the purpose of requiring increased levels of financial responsibility is to enhance safety. It is believed that the public will be better served by the proposed limits, especially considering that motor carriers would have greater incentives to create and maintain more effective safety programs to help keep their premiums lower. This belief is based on the observation that carriers having good safety records are usually evaluated in a favorable light by insurance companies since generally the premiums that insurance companies charge are directly related to their insureds' loss experience.

Equally important to safety in considering minimum levels of financial

responsibility is the economic conditions under which the motor carrier industry operates. Such consideration is required not only by Section 18 which directs the Secretary of Transportation to focus on safety without creating undue economic burdens on the motor carrier and insurance industries, but also by Executive Order 12291, dated February 17, 1981. Further, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354, September 19, 1980; 5 U.S.C. 60; et seq.) requires more flexible regulatory approaches for small business entities. In accordance with these requirements, a draft regulatory evaluation/regulatory flexibility analysis has been prepared. Initial findings contained in this document will be discussed in the section of this preamble entitled "Financial Responsibility, Minimum Levels (§387.33)."

Definitions (§ 387.29)

The proposed definitions for this subpart, particularly those referencing terminology commonly used in the insurance industry, are based on definitions found in 49 CFR 387.5. These definitions were developed with the assistance of the insurance and motor carrier industries during an earlier rulemaking action concerning liability requirements for motor carriers of property and are discussed in detail in a notice of proposed rulemaking published January 26, 1981, 46 FR 8186. Other definitions, such as those specifically relating to motor carriers of property, have been adjusted to reflect the transportation of passengers.

One term introduced in Section 18 of the Act which has not previously been defined in the FMCSR is "seating capacity." It is believed that this term is generallly self-explanatory since manufacturers designate the seating capacity for most vehicles. However, in the case of a custom made vehicle, or any other vehicle not having a designated seating capacity, the seating capacity will be determined in accordance with the National Highway Traffic Safety Administration's (NHTSA) definition of "designated seating position" (49 CFR 571.3). The NHTSA defines, "designated seating position" as "any plan view location capable of accommodating a person at least as large as a 5th percentile adult female, if the overall seat configuration and design and vehicle design is such that the position is likely to be used as a seating position while the vehicle is in motion, except for auxillary seating accomodations such as temporary or folding jump seats. Any bench or split bench seat in a passenger car, truck or multi-purpose passenger vehicle with a GVWR less than 10,000 pounds, having greater than 50 inches of hip room (measured in accordance with SAE Standards J1100(a)) shall have not less than three designated seating positions, unless the seat design or vehicle design is such that the center position cannot be used for seating."

Financial Responsibility Required (§ 387.31)

This notice proposes that policies of insurance, surety bonds, and endorsements required under this section shall remain in effect continuously until terminated. Cancellation may be effected by the insurer or the insured motor carrier giving 35 days notice in writing to the other.

An analysis of comments received in reponse to BMCS Docket No. MC–94, concerning minimum levels of financial responsibility for motor carriers of property, indicated that: (1) 35 days constitutes a reasonable amount of time for cancellation of policies of insurance, surety bonds, and endorsements, (2) it is sufficient time for a motor carrier to obtain replacement coverage, unless the carrier's performance record is extremely poor, (3) it is also sufficient time for an insurance company to be relieved of further liability since normally there is enough premium deposit to cover that period, and (4) 35 days is ample time to prepare cancellation papers. It is also important to note that the 35 days notice of cancellation would commence on the day that such notice is mailed with proof or mailing sufficient proof of notice.

Further, the proposed rule allows the motor carrier the right to obtain adequate coverage for a finite period (e.g., coverage by binder) of time to cover any lapse in continuous compliance without triggering the 35-day cancellation requirement. This will afford assurance that the public will be protected.

The proposed regulations would require that an endorsement(s) be attached to insurance policies for the purpose of assuring the insured that all the criteria of Section 18 of the Act have been met in the policy. Further, surety bonds, on a prescribed form, using prescribed language, would be permitted in lieu of the policy of insurance and required endorsement.

The required endorsements (See Illustrations I and II) would alleviate the often times confusing translation and interpretation of an insurance policy or surety bond. It is believed that this requirement would not create an undue

paperwork burden on the insurance industry as it consists of a single page form using simple language. Further, the proposal reflects the Department's belief that the benefits of having endorsement attached to policy far outweigh any considerations against it, since it would provide confirmation of full coverage to the motor carrier and the public at a glance. This type of endorsement is already provided to motor carriers of property in accordance with 49 CFR 387.7 and to motor carriers of passengers presently regulated by the Interstate Commerce Commission.

The proof of financial responsibility, whether it be an endorsement attached to a policy of insurance or a surety bond, would be kept at a motor carrier's principal place of business. This proof would be available to the public upon reasonable request for review. Such availability is in keeping with the intent of Congress to provide protection to the public. It would also provide the assurance needed by a lessor of a motor vehicle that the minimum levels of financial responsibility have been met by a motor carrier.

Financial Responsibility, Minimum Levels (§ 387.33)

As previously discussed, a draft regulatory evaluation/regulatory flexibility analysis has been prepared. The preliminary findings of the evaluation, when considered in light of Executive Order 12291, indicate that the public safety will not be adversely affected by reducing the mandated levels of financial responsibility to the lowest levels permitted for the full two-year period provided for in the Act.

The draft regulatory evaluation indicates that the accident rate for the interstate bus industry is less than one half of that for the interstate trucking industry. A comparative analysis between trucks and buses shows societal costs, as measured by number of fatalities and injuries, and property damage, for buses are low. Passenger safety is superior in buses compared to truck driver/co-driver safety; from 1.4 to 2.4 times as safe fatality wise and, while the number of injuries in bus and truck accidents is considerably closer, this can be attributed to the passenger-density factor on buses. This information, coupled with accident cost data which shows that the lowest levels are adequate to cover liability claims in the majority of cases, indicates that the 2-year phase-in period may be advisable.

While the data used to prepare the draft regulatory evaluation has been limited to BMCS accident statistics, it is believed that this information is very reliable and accurate. It is understood however that more detailed information, which will hopefully be obtained from the regulated industry in response to this notice, may indicate that the lowest levels may not be adviseable.

The information which is solicited from the regulated industry is needed to assist the FHWA in its assessment of what limits will best protect the public's safety without seriously disrupting transportation service. The regulatory evaluation also indicates that the cost of the highest levels may not represent significantly higher costs for the insured when compared to the expense of current limits. If the comments reflect such marginal increases in premiums, the FHWA may permit limits higher than the absolute minimum to take effect for protection of the public without placing significant burdens on the bus industry.

Should the comments to this notice warrant it, consideration will also be given to the option of layering the required levels depending on such variables as fleet size or annual mileage. The option of permitting a graduated phase-in over the two-year period is also considered feasible. Such considerations would be in keeping with the intent of the Regulatory Flexibility Act of 1980, Pub. L. 96–354, which addresses regulatory burden on small businesses.

In order to assist the FHWA in its final evaluation, it is requested that small bus companies (Class II and III) and small commuter companies, including vanpool operations where vans carry 16 or more individuals, submit their financial statements for aggregation and use in the final evaluation. The financial data should cover the years 1977-1981 and provide particular attention to insurance premium information, number of vehicles operated in each year, as well as type of services offered. Interstate bus companies are also requested to submit their accounting of total costs (itemized if possible) of serious accidents involving fatalities, personal injuries, and property damage.

State Authority and Designation of Agent (§ 387.35)

Section 18 of the Act states that "financial reponsibility may be established under this section by any one or combination of the following methods acceptable to the Secretary: evidence of insurance, including high self-retention, guarantee, or surety bond. Any bond filed shall be issued by a bonding company authorized to do business in the United States."

Based on comments received in response to Docket MC–94 on this same matter, it is proposed that both policies of insurance and surety bonds will satisfy the financial responsibility requirements of this part if the insurer or surety furnishing the policy or bond is—

(a) Legally authorized to issue such policies or bonds in each State in which the motor carrier operates; or

(b) Legally authorized to issue such policies or bonds in the State in which the motor carrier has its principal place of business or domicile, and designates a person upon whom process, issued by or under the authority of any court having jurisdiction of the subject matter, may be served in any proceeding at law or equity brought in any State in which the motor carrier operates; or

(c) Legally authorized to issue such policies or bonds in any State of the United States and eligible as an excess or surplus lines insurer in any State in which business is written, and designates a person upon whom process, issued by or under the authority of any court having jurisdiction of the subject matter, may be served in any proceeding at law or equity brought in any State in which the motor carrier operates.

It should be noted that even though the Act provides for "guarantees" as an acceptable method of meeting the financial requirements, this method has not been provided for in this proposed rule. This is due to the fact that our research shows no evidence that motor carriers regulated by the ICC consider this method a viable tool for meeting financial responsibility requirements. Further, neither the ICC nor the respondents to Docket MC–94 were able to enlighten the Department as to how a guarantee can be practically applied to the financial responsibility requirements for motor carriers. Comments, data or detailed information concerning this matter are welcome.

Violation and Penalty (§ 387.41)

To additionally strengthen the incentives for motor carriers to concentrate more rigorously on safety, Congress included a civil penalty of up to $10,000 per violation to be assessed against any motor carrier proven to be in violation of the final regulations implementing Section 18.

List of Subjects in 49 CFR Part 387

Highways and roads, Motor carriers, Motor vehicles Financial responsibility, Insurance, Penalties.

(Catalog of Federal Domestic Assistance Program Number 20.217, Motor Carrier Safety)

Issued on: May 20, 1983.

Kenneth L. Pierson,

Director, Bureau of Motor Carrier Safety, Federal Highway Administration.

In consideration of the foregoing and under the authority of § 18 of the Bus Regulatory Reform Act of 1982, Pub. L. 97–261; 23 U.S.C. § 315; and 49 CFR 1.48 and 301.60, the Federal Highway Administration proposes to amend Title 49, Code of Federal Regulations, Subtitle B, Chapter III, by revising Part 387 as set forth below.

PART 387—MINIMUM LEVELS OF FINANCIAL RESPONSIBILITY FOR MOTOR CARRIERS

1. Sections 387.1 through 387.17 are designated as Subpart A with the title "Motor Carriers of Property."

2. Subpart B is added to Part 387 to read as follows:

Subpart B—Motor Carriers of Passengers

Sec.

387.25 Purpose and scope.
387.27 Applicability.
387.29 Definitions.
387.31 Financial responsibility required.
387.33 Financial responsibility, minimum levels.
387.35 State of Authority and designation of agents.
387.37 Fiduciaries.
387.39 Forms.
387.41 Violation and penalty.

Authority: Sec. 18, Pub. L. 97–261, 96 Stat. 1102 (23 U.S.C. 315); 49 CFR 1.48 and 301.60.

Subpart B—Motor Carriers of Passengers

§ 387.25 Purpose and scope.

This subpart prescribes the minimum levels of financial responsibility required to be maintained by for-hire motor carriers of passengers operating motor vehicles in interstate or foreign commerce. The purpose of these regulations is to create additional incentives to carriers to operate their buses in a safe manner and to assure that they maintain adequate levels of financial responsibility.

§ 387.27 Applicability.

(a) This subpart applies to for-hire motor carriers operating motor vehicles transporting passengers in interstate or foreign commerce.

(b) *Exception.* The rules in this subpart do not apply to—

(1) A motor vehicle transporting only school children and teachers to or from school;

(2) A motor vehicle providing taxicab service and having a seating capacity of less than 7 passengers and not operated

on a regular route or between specified points; and

(3) A motor vehicle carrying less than 16 individuals in a single, daily round trip to commute to and from work.

§ 387.29 Definitions.

As used in this subpart—

Accident—includes continuous or repeated exposure of the same conditions which results in public liability which the insured neither expected nor intended.

Bodily injury—means injury to the body, sickness, or disease to any person, including death resulting from any of these.

Endorsement—an amendment to an insurance policy.

Financial responsibility—the financial reserves (e.g., insurance policies or surety bonds) sufficient to satisfy liability amounts set forth in this subpart covering public liability.

For-hire carriage—transportation of passengers by motor vehicle except when—

(a) The passengers are transported by a person engaged in a business other than transportation; and

(b) The transportation is within the scope of, and furthers a primary business (other than transportation) of the person.

Insured and principal—the motor carrier named in the policy of insurance, surety bond, endorsement, or notice of cancellation, and also the fiduciary of such motor carrier.

Insurance premium—the monetary sum an insured pays an insurer for acceptance of liability for public liability claims made against the insured.

Motor Carrier—means a for-hire carrier of passengers by motor vehicle.

Property damage—means damage to or loss of use of tangible property.

Public Liability—means liability for bodily injury or property damage.

§ 387.31 Financial responsibility required.

(a) No motor carrier shall operate a motor vehicle transporting passengers until the motor carrier has obtained and has in effect the minimum levels of financial responsibility as set forth in § 387.33 of this subpart.

(b) Policies of insurance, surety bonds, and endorsements required under this section shall remain in effect continuously until terminated. (1) *Exception.* Policies of insurance and surety bonds may be obtained for a finite period of time to cover any lapse in continuous compliance. (2) Cancellation may be effected by the insurer or the insured motor carrier giving 35 days notice in writing to the other. The 35 days notice shall commence to run from the date the notice is mailed. Proof of mailing shall be sufficient proof of notice.

(c) Policies of insurance and surety bonds required under this section may be replaced by other policies of insurance or surety bonds. The liability of the retiring insurer or surety, as to events after the termination date, shall be considered as having terminated on the effective date of the replacement policy of insurance or surety bond or at the end of the 35 day cancellation period required in paragraph (b) of this section, whichever is sooner.

(d) Proof of the required financial responsibility shall be maintained at the motor carrier's principal place of business. The proof shall consist of—

(1) "Endorsement(s) for Motor Carriers of Passengers Policies of Insurance for Public Liability Under Section 18 of the Bus Regulatory Reform Act of 1982" (form MCS–90B) issued by an insurer(s); or

(2) A "Motor Carrier of Passengers Surety Bond for Public Liability Under Section 18 of the Bus Regulatory Reform Act of 1982" (form MCS–82B) issued by a surety.

(e) The proof of minimum levels of financial responsibility required by this section shall be considered public information and be produced for review upon reasonable request by a member of the public.

§ 387.33 Financial responsibility, minimum levels.

The minimum levels of financial responsibility referred to in § 387.31 of this subpart are hereby prescribed as follows:

SCHEDULE OF LIMITS, PUBLIC LIABILITY—FOR-HIRE MOTOR CARRIERS OF PASSENGERS OPERATING IN INTERSTATE OR FOREIGN COMMERCE

Vehicle seating capacity	Effective dates	
	[Nov. 19, 1983]	[Nov. 19, 1985]
(1) [Any vehicle] with a seating capacity of 16 passengers or more	[$2,500,000] to [$5,000,000]	$5,000,000
(2) [Any vehicle] with a seating capacity of 15 passengers or less	[$750,000] to [$1,500,000]	$1,500,000

§ 387.35 State authority and designation of agent.

A policy of insurance or surety bond does not satisfy the financial responsibility requirements of this subpart unless the insurer or surety furnishing the policy or bond is—

(a) legally authorized to issue such policies or bonds in each State in which the motor carrier operates; or

(b) legally authorized to issue such policies or bonds in the State in which the motor carrier has its principal place of business or domicile, and designates a person upon whom process, issued by or under the authority of any court having jurisdiction of the subject matter, may be served in any proceeding at law or equity brought in any State in which the motor carrier operates; or

(c) legally authorized to issue such policies or bonds in any State of the United States and eligible as an excess or surplus lines insurer in any State in which business is written, and designates a person upon whom process, issued by or under the authority of any court having jurisdicition of the subject matter, may be served in any proceeding at law or equity brought in any State in which the motor carrier operates.

§ 387.37 Fiduciaries.

The coverage of fiduciaries shall attach at the moment of succession of such fiduciaries.

§ 387.39 Forms.

Endorsements for policies of insurance (Illustration I) and surety bonds (Illustration II) must be in the form prescribed by the FHWA and approved by the OMB. Endorsements to policies of insurance and surety bonds shall specify that coverage thereunder will remain in effect continuously until terminated as required in § 387.31 of this subpart. The endorsement and surety bond shall be issued in the exact name of the motor carrier.

§ 387.41 Violation and penalty.

Any person (except an employee who acts without knowledge) who knowingly violates the rules of this subpart shall be liable to the United States for civil penalty of no more than $10,000 for each violation, and if any such violation is a continuing one, each day of violation will constitute a separate offense. The amount of any such penalty shall be assessed by the Director, Bureau of Motor Carrier Safety, by written notice. In determining the amount of such penalty, the Director shall take into account the nature, circumstances, extent, the gravity of the violation committed and, with respect to the person found to have committed such violation, the degree of culpability, any history of prior offenses, ability to pay, effect on ability to continue to do business, and such other matters as justice may require.

ENDORSEMENT FOR
MOTOR CARRIER POLICIES OF INSURANCE FOR PUBLIC LIABILITY
UNDER SECTION 18 OF THE BUS REGULATORY REFORM ACT OF 1982

Issued to _____ of _____

Dated at _____ this _____ day of _____, 19____

Amending Policy No. _____ Effective Date _____

Name of Insurance Company _____

Countersigned by _____
Authorized Company Representative

The policy to which this endorsement is attached provides primary or excess insurance, as indicated by "☒", for the limits shown:

☐ This insurance is primary and the company shall not be liable for amounts in excess of $ _____ for each accident.

☐ This insurance is excess and the company shall not be liable for amounts in excess of $ _____ for each accident in excess of the underlying limit of $ _____ for each accident.

Whenever required by the Bureau or the ICC, the company agrees to furnish the Bureau or the ICC a duplicate of said policy and all its endorsements. The company also agrees, upon telephone request by an authorized representative of the Bureau or the ICC, to verify that the policy is in force as of a particular date. The telephone number to call is: _____

Cancellation of this endorsement may be effected by the company or the insured by giving (1) thirty-five (35) days notice in writing to the other party (said 35 days notice to commence from the date the notice is mailed, proof of mailing shall be sufficient proof of notice), and (2) if the insured is subject to the ICC's jurisdiction, by providing thirty (30) days notice to the ICC (said 30 days notice to commence from the date the notice is received by the ICC at its office in Washington, D.C.).

DEFINITIONS AS USED IN THIS ENDORSEMENT

ACCIDENT includes continuous or repeated exposure to conditions which results in Public Liability which the insured neither expected nor intended.

BODILY INJURY means injury to the body, sickness, or disease to any person, including death resulting from any of these.

MOTOR CARRIER means a for-hire carrier of passengers by motor vehicle.

PROPERTY DAMAGE means damage to or loss of use of tangible property.

PUBLIC LIABILITY means liability for bodily injury or property damage.

The insurance policy to which this endorsement is attached provides automobile liability insurance and is amended to assure compliance by the insured, within the limits stated herein, as a for-hire motor carrier of passengers with Section 18 of the Bus Regulatory Reform Act of 1982 and the rules and regulations of the Federal Highway Administration's Bureau of Motor Carrier Safety (Bureau) and the Interstate Commerce Commission (ICC).

In consideration of the premium stated in the policy to which this endorsement is attached, the insurer (the company) agrees to pay, within the limits of liability described herein, any final judgment recovered against the insured for public liability resulting from negligence in the operation, maintenance or use of motor vehicles subject to financial responsibility requirements of Section 18 of the Bus Regulatory Reform Act of 1982 regardless of whether or not each motor vehicle is specifically described in the policy, and whether or not such negligence occurs on any route or in any territory authorized to be served by the insured or elsewhere. Such insurance as is afforded, for public liability, does not apply to injury to or death of the insured's employees while engaged in the course of their employment, or property transported by the insured, designated as cargo. It is understood and agreed that no condition, provision, stipulation, or limitation contained in the policy, this endorsement, or any other endorsement thereon, or violation thereof, shall relieve the company from liability or from the payment of any final judgment, within the limits of liability herein described, irrespective of the financial condition, insolvency or bankruptcy of the insured. However, all terms, conditions, and limitations in the policy to which the endorsement is attached shall remain in full force and effect as binding between the insured and the company. The insured agrees to reimburse the company for any payment made by the company on account of any accident, claim, or suit involving a breach of the terms of the policy, and for any payment that the company would not have been obligated to make under the provisions of the policy except for the agreement contained in this endorsement.

It is further understood and agreed that, upon failure of the company to pay any final judgment recovered against the insured as provided herein, the judgment creditor may maintain an action in any court of competent jurisdiction against the company to compel such payment.

The limits of the company's liability for the amounts prescribed in this endorsement apply separately to each accident and any payment under the policy because of any one accident shall not operate to reduce the liability of the company for the payment of final judgments resulting from any other accident.

The Bus Regulatory Reform Act of 1982 requires limits of financial responsibility according to vehicle seating capacity. It is the MOTOR CARRIER'S obligation to obtain the required limits of financial responsibility.

MOTOR CARRIER PUBLIC LIABILITY SURETY BOND UNDER SECTION 18 OF THE BUS REGULATORY REFORM ACT OF 1982

PARTIES

Surety Company and Principal Place of Business Address	Motor Carrier Principal, I.C.C. Docket No., and Principal Place of Business Address
_____	_____
_____	_____
_____	_____
_____	_____

PURPOSE

This is an agreement between the Surety and the Principal under which the Surety, its successors and assignees, agree to be responsible for the payment of any final judgment or judgments against the Principal for public liability and property damage claims in the sums prescribed herein, subject to the governing provisions and following conditions.

GOVERNING PROVISIONS

(1) Section 18 of the Bus Regulatory Reform Act of 1982
(2) Rules and regulations of the Federal Highway Administration's Bureau of Motor Carrier Safety (Bureau)
(3) Rules and regulations of the Interstate Commerce Commission (ICC)

CONDITIONS

The Principal is or intends to become a motor carrier of passengers subject to the applicable governing provisions relating to financial responsibility for the protection of the public.

This bond assures compliance by the Principal with the applicable governing provisions, and shall inure to the benefit of any person or persons who shall recover a final judgment or judgments against the Principal for public liability or property damage claims (excluding injury to or death of the Principal's employees while engaged in the course of their employment, and loss of or damage to property of the Principal, and the cargo transported by the Principal). If every final judgment shall be paid for such claims resulting from the negligent operation, maintenance, or use of motor vehicles in transportation subject to the applicable governing provisions, then this obligation shall be void, otherwise it will remain in full effect.

Within the limits described herein, the Surety extends to such losses regardless of whether such motor vehicles are specifically described herein and whether occurring on the route or in the territory authorized to be served by the Principal or elsewhere.

The liability of the Surety for each motor vehicle subject to the applicable governing provisions for each accident shall not exceed $_____, and shall be a continuing one notwithstanding any recovery thereunder.

The surety agrees, upon telephone request by an authorized representative of the Bureau or ICC, to verify that the surety bond is in force as of a particular date. The telephone number to call is: _____.

This bond is effective from _____ (12:01 a.m., standard time, at the address of the Principal as stated herein) and shall continue in force until terminated as described herein. The Principal or the Surety may at any time terminate this bond by giving (1) thrity five (35) days notice in writing to the other party (said 35 days notice to commence from the date the notice is mailed, proof of mailing shall be sufficient proof of notice), and (2) if the Principal is subject to the ICC's jurisdiction, by providing thirty (30) days notice to the ICC (said 30 days notice to commence from the date notice is received by the ICC at its office in Washington, D.C.). The Surety shall not be liable for the payment of any judgment or judgments against the Principal for public liability or property damage claims resulting from accidents which occur after the termination of this bond as described herein, but such termination shall not affect the liability of the Surety from the payment of any such judgment or judgments resulting from accidents which occur during the time the bond is in effect.

Notices

Federal Register
Vol. 48, No. 105
Tuesday, May 31, 1983

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Organization, Functions and Delegations of Authority

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice of agency organization.

SUMMARY: This notice sets forth the organization, functions, and delegations of authority for the Food and Nutrition Service (FNS).

SUPPLEMENTARY INFORMATION: FNS was established by the Secretary of Agriculture on August 8, 1969, pursuant to authority under Reorganization Plan No. 2 of 1953. Authority for Food and Consumer Services is delegated by the Secretary of Agriculture to the Assistant Secretary in 7 CFR Part 2.15. Authority for the administration of the Food and Nutrition Service is delegated to the Administrator in 7 CFR Part 2.93. Pursuant to these two regulatory provisions, FNS administers various food and nutrition programs, to include the Food Stamp Program, School Lunch Program, child nutrition programs and commodity distribution programs. This notice supersedes the notice of FNS Organization, Functions and Delegations of Authority published at 35 FR 8835 (1970).

Section 1. *General.* The principal office of FNS is located in Alexandria, Virginia. Program activity in the field is carried on through seven regional offices. In addition, there are a number of special purpose offices geographically located in the field, which perform food stamp compliance, appeals review and certain automated data processing services.

Section 2. *Organization and Functions:*

(a) *The Administrator.* The Administrator reports to the Assistant Secretary for Food and Consumer Services. He/she serves as the chief executive officer of FNS and is responsible for the overall planning, direction and control of FNS programs and activities. He/she must establish and maintain working relationships and lines of communication with the Secretary and Deputy Secretary of Agriculture, Assistant Secretary, Congress, heads of other operating adminstrations, other agencies and the general public.

(b) *Associate Administrator.* The Associate Administrator reports to the Administrator and shares with the Administrator responsibility for the overall development, administration and coordination of FNS activities, providing executive leadership in developing, administering, executing and coordinating operational programs of the Agency; reviewing proposed programs, policies, and procedures inherent in Agency operations to determine that they are coordinated internally with other agencies of the Department, Federal, State and local government, or cooperating agencies; and providing liaison with Government Accounting Office (GAO) and coordinating GAO activities within FNS.

(c) *Director, Office of Analysis and Evaluation.* The Director, Office of Analysis and Evaluation, provides to the Administrator valid and timely analysis and evaluation information to support decisions regarding the legislative, budgetary, regulatory and program management processes.

(d) *Director, Office of Governmental Affairs and Public Information.* The Director, Office of Governmental Affairs and Public Information, establishes clear and continuing lines of communication between Congress and FNs, prepares legislative reports, monitors and reports on legislation status and other congressional activity affecting FNS, and coordinates testimony and other appearances before legislators and their staffs. He/she is responsible for the planning, development, coordination and implementation of information programs in support of FNS' policies and programs.

(e) *Deputy Administrator for Family Nutrition Programs.* The Deputy Administrator for Family Nutrition Programs provides direction and leadership in the formulation of Food Stamp Program policies and requirements, and in the development of program regulations and directives, the oversight of food assistance program grants and the review and evaluation of Food and Nutrition Service Regional Offices' and States' efforts to implement Food Stamp Program regulations, policies and requirements.

(f) *Deputy Administrator for Special Nutrition Programs.* The Deputy Administrator for Special Nutrition Programs participates with the Administrator in the overall planning and formulation of all special nutrition policies, programs and activities of FNS and provides direction and leadership in the administration of Special Nutrition Programs.

(g) *Deputy Administrator for Regional Operations.* The Deputy Administrator for Regional Operations provides operational direction and leadership in implementing the policies of food and nutrition programs. Operational activities are divided into regions, each headed by a Regional Administrator. The Regional Administrators are responsible for the Food Stamp and Special Nutrition Programs including Child Nutrition, Special Supplemental Food and Food Distribution and for providing staff support for Regional activities. The United States and its territories are divided into the following seven regions:

(i) Mid-Atlantic Regional Office includes Pennsylvania, New Jersey, Delaware, Maryland, West Virginia, Virginia, Puerto Rico, and the Virgin Islands.

(ii) Midwest Regional Office includes Minnesota, Wisconsin, Michigan, Illinois, Indiana, and Ohio.

(iii) Mountain Plains Regional Office includes Montana, Wyoming, North Dakota, South Dakota, Nebraska, Iowa, Utah, Colorado, Kansas, and Missouri.

(iv) Northeast Regional Office includes Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, Connecticut, and New York.

(v) Southeast Regional Office includes Kentucky, Tennessee, Mississippi, Alabama, Georgia, North Carolina, South Carolina, and Florida.

(vi) Southwest Regional Office includes New Mexico, Texas, Oklahoma, Arkansas, and Louisiana.

(vii) Western Regional Office includes Washington, Oregon, Idaho, California, Nevada, Arizona, Alaska, Hawaii,

American Samoa, and Northern Marianas.

(h) *Deputy Administrator for Financial Management.* The Deputy Administrator for Financial Management participates with the Administrator in the overall planning and formulation of all financial policies, programs and activities of FNS and directs and administers the Agency's financial management program through the development, maintenance and operation of comprehensive systems that meet management needs.

(i) *Deputy Administrator for Management.* The Deputy Administrator for Management is responsible for participating with the Administrator in the overall planning, formulation, and direction of all administrative management policies, program activities of FNS, and providing executive direction to FNS administrative management activities and operation.

Section 3. *Delegations of Authority:*

(a) *Associate Administrator.* The Associate Administrator is hereby delegated the authority to perform all the duties and to exercise all the functions and power which are now, or which may hereafter be vested in the Administrator, except such authority as is, or may be, reserved to the Administrator.

(b) *Deputy Administrators.* The Deputy Administrators for Family Nutrition Programs, Special Nutrition Programs, Regional Operations, Financial Management, and Management are hereby delegated the authority to perform all the duties and to exercise all the functions and powers which are now, or which may hereafter be vested in the Administrator (including the power of redelegation except when prohibited) except such authority as is, or may be reserved to the Administrator. Each Deputy Administrator shall be primarily responsible for the program and activities of FNS hereafter assigned them.

(c) *Concurrent Authority and Responsibility.* No delegation or authorization prescribed herein shall preclude the Administrator, the Associate Administrator or each Deputy Administrator, from exercising any of the powers or functions or from performing any of the duties conferred herein, and any such delegation or authorization is subject at all times to withdrawal or amendment by the Administrator and, in their respective fields, each Deputy Administrator. The officers to whom authority is delegated herein shall maintain close working relationships with the officers to whom they report, keep them advised with respect to major problems and developments, and discuss with them proposed actions involving major policy questions or other important considerations or questions including matters involving relationships with other Federal agencies, other agencies of the Department, other divisions or offices of FNS or other governmental or private organizations or groups.

(d) *Authority to Act as Administrator.* In the Administrator's absence the person designated by the administrator or Acting Administrator as Acting Administrator is hereby delegated broad authority to perform all duties and to exercise all the functions and powers which are now or which hereafter may be vested in the Administrator, except such authority as is or may be reserved by the Administrator.

(e) *Prior Authorizations and Delegations.* All prior delegations and redelegations of authority relating to any functions, program or activity covered by this State of Organization, Functions and Delegations of Authority, shall remain in effect except as they are inconsistent herewith or a are hereafter amended or revoked. Nothing herein shall affect the validity of any action heretofore taken under prior delegations or redelegations of authority or assignments of functions.

Dated: May 19, 1983.

Robert E. Leard,

Administrator.

BILLING CODE 3410-30-M

Forest Service

Recommended Renewable Resources Program (RPA) 1985 Update Progress Report; Availability

In response to the Forest and Rangeland Renewable Resources Planning Act (RPA) of 1974, as amended, the Department of Agriculture, Forest Service, has prepared a Progress Report on the 1985 Program for the nation's renewable resources. The Progress Report (Forest Service Publication No. 384) is available for inspection at any of the Forest Service Regional Offices and at the Washington Office.

During the past year a scoping process was conducted which resulted in the selection of initial goals and proposed alternatives. Those goals and alternatives are described in the Progress Report on the 1985 Program.

A notice of intent to prepare an environmental impact statement for the development of the 1985 Program Update was published in the **Federal Register** in August of 1981 (FR Vol. 46, No. 151, August 6, 1981, p. 40063). The initial goals and proposed alternatives will be addressed in detail in the environmental impact statement. As established in the August 6, 1981 notice of intent, the schedule to complete the 1985 Program and environmental impact statement is to file the draft statement with the Environmental Protection Agency and distribute it to the public in November 1983. Public review is expected to be completed by February 1984, and the final Program and environmental impact statement is expected to be filed with the Environmental Protection Agency and distributed to the public and the Congress in December 1984.

A limited number of single copies of the Progress Report may be obtained, free of charge, to the extent practicable, by contacting any Forest Service Regional Office or the Washington Office of RPA, USDA, Forest Service, P.O. Box 2417, Washington, D.C. 20013.

For questions or further information on any aspect of the Progress Report for the 1985 Program, or the environmental impact statement, please contact Thomas E. Hamilton, Director, RPA, USDA, Forest Service, P.O. Box 2417, Washington, D.C. 20013. Telephone: (202) 447-5440.

Dated: May 20, 1983.

F. Dale Robertson,

Associate Chief.

BILLING CODE 3410-11-M

Soil Conservation Service

Cheshire Flood Prevention RC&D Measure, Connecticut; Environmental Impact

AGENCY: Soil Conservation Service, USDA.

ACTION: Notice of a finding of no significant impact.

FOR FURTHER INFORMATION CONTACT: Philip H. Christensen, State Conservationist Soil Conservation Service, Rt. 44 Mansfield Professional Park, Storrs, Connecticut 06268, telephone (203) 429-9361.

SUPPLEMENTARY INFORMATION: Pursuant to Section 102(2)(C) of the National Environmental Policy Act of 1969; the Council on Environmental Quality Guidelines (40 CFR Part 1500); and the Soil Conservation Service Guidelines (7 CFR Part 650); the Soil Conservation Service, U.S. Department of Agriculture, gives notice that an environmental impact statement is not being prepared for the Cheshire Sewage Treatment

Plant Flood Prevention RC&D Measure, New Haven County, Connecticut.

The environmental assessment of this federally assisted action indicates that the project will not cause significant local, regional, or national impacts on the environment. As a result of these findings, Philip H. Christensen, State Conservationist, has determined the preparation and review of an environmental impact statement are not needed for this project.

The measure concerns a flood prevention plan to protect the Cheshire Sewage Treatment Plant. The planned works of improvement include an earthen dike, 1,770 feet long with an average height of 8 feet, a 700 foot long vegetated diversion channel with an average depth of 3 feet, a one cfs pump for handling interior floodwaters, and a pumping station to pump treated effluent over the dike during flood periods. All disturbed areas will be seeded.

The Notice of Finding of No Significant Impact (FONSI) has been forwarded to the Environmental Protection Agency. The basic data developed during the environmental assessment are on file and may be reviewed by contacting Philip H. Christensen. The Environmental Assessment has been sent to various Federal, State, and local agencies and interested parties. A limited number of copies of the Environmental Assessment are available to fill single copy requests at the above address.

Implementation of the proposal will not be initiated until 30 days after the date of this publication in the **Federal Register**.

(Catalog of Federal Domestic Assistance Program No. 10.901, Resource Conservation and Development Program. Office of Management and Budget Circular A-95 regarding State and local clearinghouse review of Federal and federally assisted programs and projects is applicable)

Dated: May 23, 1983.

Petitions have been accepted for filing from the following firms: (1) Evantov Diamond Company, Inc., 125 West 45th Street, New York, New York 10036, producer of jewelry (accepted May 2, 1983); (2) G. V. Furniture & Decoration, Inc., P.O. Box GB, Caparra Heights, San Juan, Puerto Rico 00922, producer of household furniture (accepted May 2, 1983); (3) West Orange Manufacturing Company, Inc., 177 Main Street, West Orange, New Jersey 07052, producer of women's robes, sleepwear and blouses (accepted May 2, 1983); (4) Steve Ognibene & Sons, Inc., 5520 North Byron Road, Elba, New York 14058, producer of onions (accepted May 2, 1983); (5) Boston Cutting Die Company, 50 Freeport Street, Boston, Massachusetts 02122, producer of cutting dies (accepted May 2, 1983); (6) Oxford Royal Mushroom Products, Inc., Route 796, Kelton, Pennsylvania 193346, producer of mushrooms (accepted May 2, 1983); (7) Gould & Eberhardt Gear Machinery Corporation, Sutton Road, Webster, Massachusetts 01570, producer of machine tools (accepted May 3, 1983); (8) Hawaiian Reflection, 3210 Production Avenue, Oceanside, California 92054, producer of wallets, purses and travel bags (accepted May 3, 1983); (9) Arttrim, Inc., 212 West 35th Street, New York, New York 10001, producer of apparel trimmings (accepted May 4, 1983); (10) Armstrong Cement & Supply Corporation, Route 2, Cabot, Pennsylvania 16023, producer of cement and mortar (accepted May 5, 1983); (11, Wilbrecht Electronics, Inc., 240 East Plato Boulevard, St. Paul, Minnesota 55107, producer of resistors and other electronic components (accepted May 5, 1983); (12) Hayes-Albion Corporation, 1999 Wildwood Avenue, Jackson, Michigan 49202, producer of aluminum and iron castings (accepted May 6, 1983); (13) Richtone Knits, Ltd., 498 7th Avenue, New York, New York 10018 producer of women's suits and dresses (accepted May 6, 1983); (14) Mickey Madann Handbags, Inc., P.O. Box H-3067, New Bedford, Massachusetts 02741, producer of handbags (accepted May 6, 1983); (15) Claymore Sportswear, Inc., 304 Boerum Street, Brooklyn, New York 11206, producer of women's coats and jackets (accepted May 9, 1983); (16) Jenice Fabrics, Inc., 160 John Street, Brooklyn New York 11201, producer of knit fabric (accepted May 9, 1983); (17) Automatic Spring Coiling Company, 4045 W. Thorndale Avenue, Chicago, Illinois 60646, producer of automotive and other springs (accepted May 9, 1983); (18) Veva Art Products, Inc., 4726 Park Harbor Drive, Erie, Pennsylvania 16511, producer of wind chimes (accepted May 9, 1983); (19) Icon Corporation, 156 Sixth Street, Cambridge, Massachusetts 02142, producer of numerical control systems for machines (accepted May 9, 1983); (20) Viking Die Cast Corporation, 7700 West Michigan Avenue, Kalamazoo, Michigan 49009, producer of machined die castings (accepted May 9, 1983); (21) Northern Shoe Bindings Company, Inc., P.O. Box 503, Beverly Massachusetts 01915, producer of shoe components

(accepted May 10, 1983); (22) Chemetals, Inc., 7310 Ritchie Highway, Glen Burnie, Maryland 21061, producer of manganese metals and compounds (accepted May 10, 1983); (23) Jordan Chemical Company, 1830 Columbia Avenue, Folcroft, Pennsylvania 19032, producer of chemicals (accepted May 10, 1983); (24) California Amforge Corporation, 750 North Vernon Avenue, Azusa, California 91702, producer of steel forgings (accepted May 10, 1983); (25), (accepted May T. G. Industries, Inc., 7445 Greenbush Avenue, North Hollywood, California 91605, producer of automotive carburetors (accepted May 10, 1983); (26) R.M.C. Fabricating, Inc., Main Street Genesee, Pennsylvania 16923, producer of metal furniture parts (accepted May 10, 1983); (27) Walker Shoe Company, Drawer 1167, Asheboro, North Carolina 27203, producer of men's and boy's footwear (accepted May 11, 1983); (28) Dumore Corporation, 1300 17th Street, Racine, Wisconsin 53403, producer of drilling and grinding equipment and motors (accepted May 11, 1983); (29) Cea & Cea Marine Supply, Inc., 412 North Marine Avenue, Wilmington, California 90744, producer of marine hardware (accepted May 11, 1983); (30) Class–5, Inc., 1480 66th Street, Emeryville, California 94608, producer of men's and women's jackets, vests, shirts and shorts; sleeping bags, backpacks and comforters (accepted May 13, 1983); (31) Sillas Manufacturing Corporation, 5560 Brooks Street, Montclair, California 91763, producer of wood chairs (accepted May 13, 1983); (32) Datamarine International, Inc., 53 Portside Drive, Pocasset, Massachusetts 02559, producer of marine instruments (accepted May 13, 1983); (33) J. & H. Plastic Bag Corporation, 346 Grand Street, Brooklyn, New York 11211, producer of sports, shopping and travel bags (accepted May 16, 1983); (34) Vi-Mill, Inc., 167 Bridge Street, Cambridge, Massachusetts 02141, producer of men's and women's jackets and women's rainwear (accepted May 16, 1983); (35) Herman Schwabe, Inc., 147 Prince Street, Brooklyn, New York 11201, producer of die-cutting machinery and equipment (accepted May 16, 1983); (36) J. G. Tilp, Inc., 80 Milltown Road, Union, New Jersey 07087, producer of injection molds (accepted May 16, 1983); (37) All American Manufacturing Company, 2201 E. 51st Street, Los Angeles, California 90058, producer of wrenches and metal stampings (accepted May 16, 1983); (38) Harley-Davidson Motor Company, Inc., P.O. Box 653, Milwaukee, Wisconsin 53201, producer of motorcycles (accepted May 16, 1983); (39) Saw Mill River Industries, Inc., 937 Saw Mill River Road, Yonkers, New York 10710, producer of exercise equipment and closet accessories (accepted May 20, 1983); (40) Augello & Vigneri, Oak Orchard Road, Elba, New York 14058, producer of potatoes (accepted May 20, 1983).

The petitions were submitted pursuant to Section 251 of the Trade Act of 1974 (Pub. L. 93–618) and Section 315.23 of the Adjustment Assistance Regulations for Firms and Communities (13 CFR Part 315). Consequently, the United States Department of Commerce has initiated separate investigations to determine whether increased imports into the United States of articles like or directly competitive with those produced by each firm contributed importantly to total or partial separation of the firm's workers, or threat thereof, and to a decrease in sales or production of each petitioning firm.

Any party having a substantial interest in the proceedings may request a public hearing on the matter. A request for a hearing must be received by the Director, Certification Division, Office of Trade Adjustment Assistance, International Trade Administration, U.S. Department of Commerce, Washington, D.C. 20230, no later than the close of business of the tenth calendar day following the publication of this notice.

The Catalog of Federal Domestic Assistance official program number and title of the program under which these petitions are submitted is 11.309, Trade Adjustment Assistance. Inasfar as this notice involves petitions for the determination of eligibility under the Trade Act of 1974, the requirements of Office of Management and Budget Circular No. A–95 regarding review by clearinghouses do not apply.

Jack W. Osburn, Jr.,

BILLING CODE 3510–25–M

Final Negative Countervailing Duty Determinations; Certain Softwood Products From Canada

AGENCY: International Trade Administration, Commerce.

ACTION: Final negative countervailing duty determinations: Certain softwood products from Canada.

SUMMARY: We determine that no benefits which constitute subsidies within the meaning of the countervailing duty law are being provided to manufacturers, producers, or exporters in Canada of certain softwood products, as described in the "Scope of Investigations" section of this notice. The total estimated net subsidy for each product is *de minimis*, and therefore our final countervailing duty determinations are negative.

EFFECTIVE DATE: May 31, 1983.

FOR FURTHER INFORMATION CONTACT: Roland MacDonald or Mary S. Clapp, Office of Investigations, Import Administration, U.S. Department of Commerce, 14th Street and Constitution Avenu, N.W., Washington, D.C. 20230, telephone: (202) 377–4087 or (202) 377–2438.

SUPPLEMENTARY INFORMATION:

Final Determinations

Based upon our investigations, we determine that the following programs confer subsidies on the products under investigation:

A. Federal Programs

1. Certain Aspects of the Investment Tax Credit.
2. Program for Export Market Development.
3. Forest Industry Renewable Energy Program.
4. Regional Development Incentives Program (RDIP)—Grants.
5. Federal Employment Program—CIAP.

B. Federal/Provincial Programs

1. Agricultural and Rural Development Agreements (ARDA).
2. General Development Agreements:
   a. British Columbia—Assistance to Small Enterprise Program (ASEP).
   b. New Brunswick—NED, KED and SIFAP.
   c. Ontario—Eastern Ontario Subsidiary Agreement.

C. Provincial Programs

1. Alberta—Stumpage Payment Deferral.
2. British Columbia:
   a. Low-Interest Loan Assistance (LILA).
   b. Stumpage Payment Deferral.
3. Ontario:
   a. Stumpage Pricing for Non-Integrated Licensees.
   b. Stumpage Payment Deferral.
4. Québec:
   a. Stumpage Pricing on Timber Limits.
   b. Aide à la Promotion des Exportations.
   c. Société de Récupération, d'Exploitation et de Développement Forestiers du Québec.
   d. FRI Tax Abatement Program.
   e. SDI Export Expansion Program.

The total estimated net subsidies are 0.349 percent *ad valorem* for softwood lumber, 0.260 percent *ad valorem* for softwood shakes and shingles, and 0.304 percent *ad valorem* for softwood fence. These *ad valorem* subsidies are *de minimis*. Therefore, we determine that no benefits which constitute subsidies within the meaning of section 701 of the Tariff Act of 1930, as amended (the Act), are being provided to manufacturers, producers, or exporters in Canada of certain softwood products, as described

in the "Scope of Investigations" section of this notice.

Case History

On October 7, 1982, we received a petition from counsel for the United States Coalition for Fair Canadian Lumber Imports on behalf of a number of producers in the United States of certain softwood products. The petitioner alleged that certain benefits which constitute subsidies within the meaning of section 701 of the Act are being provided, directly or indirectly, to manufacturers, producers, or exporters in Canada of certain softwood products. We found the petition to contain sufficient grounds upon which to initiate countervailing duty investigations, and on October 27, 1982, we initiated investigations (47 FR 49878). Since Canada is a "country under the Agreement" within the meaning of section 701(b) of the Act, injury determinations are required for these investigations. Therefore, we notified the U.S. International Trade Commission (ITC) of our initiations. On November 22, 1982, the ITC determined that there is a reasonable indication that these imports are materially injuring U.S. industries.

In our notice of initiations, we stated that we expected to issue preliminary determinations by December 31, 1982. We subsequently determined that the investigations are "extraordinarily complicated," as defined in section 703(c) of the Act, and postponed our preliminary determinations for 65 days until March 7, 1983 (47 FR 56686).

We presented questionnaires concerning the allegations to the Embassy of Canada in Washington, D.C. on December 6, 1982. On January 4, 1983, we received responses. Additional information was received on January 17, 1983.

A supplemental questionnaire was presented on February 9, 1983, and a response was received on February 23, 1983. Additional information was submitted on numerous dates.

Preliminary negative countervailing duty determinations were published on March 11, 1983 (48 FR 10395) and a correction was published on March 21, 1983 (48 FR 11731). Both petitioner and respondent filed briefs pertaining to these investigations prior to and after our preliminary determinations. We received a request to hold a public hearing in accordance with § 355.35 of the Commerce Department Regulations, but that request was subsequently withdrawn.

Scope of Investigations

The products covered by these investigations are:

- Softwood lumber.
- Softwood shakes and shingles.
- Softwood fence.

The products are fully described in Appendix A of this notice. There are a large number of producers and/or exporters of certain softwood products in Canada. The period for which we are measuring subsidization is the most recent year for which data are available, as stated in the appropriate program descriptions.

Analysis of Programs

In its responses, the government of Canada (GOC) provided data at the federal and provincial levels for the applicable periods. In addition, information was provided by counsel for the Canadian producers and counsel for the petitioner.

General principles applied by the Department of Commerce (the Department) to the immediate investigations concerning certain softwood products from Canada, many of which are repeated throughout this notice, are described in detail below. Other principles are discussed in the appropriate sections of this notice.

Petitioner alleged that respondent companies have received numerous grants for various purposes. Grants determined to be countervailable have been treated according to the Department's established methods. To calculate the benefit received from the countervailable grants being considered in these investigations, we allocate the present value of grants "tied" to the purchase of capital equipment over the relevant period. If the grant was "tied" to the purchase of capital assets, but not to specific capital assets, we use the number of years reflecting the average useful life of capital assets in the sector producing the products under investigation. A grant is considered tied where the intended use is known to the donor, and where such use is acknowledged prior to, or concurrently with, its bestowal. In these investigations no grants were tied to specific items of capital equipment. Based on evidence in the record, we determine that the average useful life of sawmill plants and equipment is 15 years.

"Present value" is a mechanism for allocating money received in one year to other years and is calculated using a discount rate. For this purpose, we determine that the most appropriate discount rate is the "risk-free" rate. For these investigations, we determine the risk-free rate is the secondary market rate for long-term (ten years and over) Canadian government debt. The source used to determine the Canadian "risk-free" rate was *Financial Statistics*, published by the Organization for Economic Cooperation and Development (OECD).

Certain small grants are expensed in the year received for reasons discussed in the appropriate program descriptions in the "Programs Determined to Confer Subsidies" section of this notice.

We normally use data from a uniform period in calculating subsidies. The responses contained data based on both fiscal years and calendar years. Where the grants were reported on a fiscal year basis, we used those amounts as the best information available and allocated the calculated net benefit over annual sales values. Where information provided was based on fiscal year data and it was necessary to apply a discount rate, a fiscal year discount rate was calculated by averaging the appropriate monthly rates.

Unless otherwise stated in the "Programs Determined to Confer Subsidies" section of this notice, the denominator used to calculate an *ad valorem* subsidy depended on whether the response provided information on a product-by-product basis or on a combined basis. Where loans and grants were reported on a product-by-product basis, we allocated the benefits over the total sales, for the most recent year for which data are available, of the producers of that specific product. Where loans and grants were reported on a combined basis for some or all of the products under investigation, we allocated the benefits over the total sales, for the most recent year for which data are available, of the producers of those certain softwood products. To determine the total sales figures for the producers of the products under investigation, we used value of shipments statistics provided by the GOC, which are the most recent and best data available.

Based on our analysis of the petition, responses to our questionnaires, arguments made by interested parties, and our verification, we determine the following.

I. Programs Determined To Confer Subsidies

We determine that subsidies are being provided to manufacturers, producers, or exporters in Canada of certain softwood products included in these investigations under the programs described below. The total estimated net subsidy for each product under

investigation, however, is *de minimis*, and therefore our determinations are negative.

A. Federal Programs

1. *Certain Aspects of the Investment Tax Credit.* The investment tax credit incentive is available to all secondary industries which purchase new buildings, machinery and equipment for use in manufacturing and processing activities. Credits for the purchase price of eligible assets are subject to a yearly maximum of $15,000 [1] and 50 percent of the excess over $15,000 of federal taxes payable. Unused credits are carried forward for five years.

The program provides a credit of seven percent of the capital cost of qualified property acquired by companies located anywhere in Canada. A credit of 20 percent is given for qualified property acquired for use anywhere in the provinces of Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and the Gaspé Peninsula. Other areas, as designated by the Department of Regional Economic Expansion (DREE) under the Regional Development Incentives Act (RDIA), are eligible for a ten percent credit. A company can receive a credit of 50 percent when an asset is used in census divisions which record family unemployment rates over 30 percent greater than the national average, and per capita incomes less than 89 percent of the national average. This category is further limited to five percent of the Canadian population living in areas that meet the above tests. Companies in a province can only receive benefits in this category for areas including no more than 40 percent of that province's population.

Since investment tax credits up to seven percent are available to all companies on equal terms, the Department has determined that such credits do not confer a subsidy. However, credits over seven percent are limited to companies located within specific regions, and confer a subsidy.

In our preliminary determinations, we evenly allocated the investment tax credits taken to each of the four rate categories since we did not know more precisely the amount of investment tax credits claimed under each category. During verification, we obtained additional information on capital investment by Standard Industrial Code (SIC) 25 industries [sawmilling industries) and the shipments by SIC 251 (sawmills and planing mills) and 259 (miscellaneous wood products) industries. We determine that capital investment and shipments parallel each other, so we believe it is reasonable to assume that the distribution of investment tax credits granted corresponds to the volume of shipments. Therefore, we allocated investment tax credits claimed in 1980 (the most recent year for which data are available) as appropriate to the four rate categories based on shipment data.

The subsidy calculation for this program takes into account the fact that an investment tax credit immediately reduces the depreciable value of an asset and thus reduces the capital cost allowance benefits for purposes of both federal and provincial taxation. In the preliminary determinations, we assumed a 25 percent rate for capital cost allowance, since we did not realize that 50 percent was the rate applicable for property acquired prior to November 12, 1981. We are now using the 50 percent rate. The net benefit from the capital cost allowance is equal to the amount of the deduction multiplied by the taxpayer's combined federal and provincial tax rate. we used the 1979 combined federal and provincial tax rate of 41 percent, the most recent data available.

The subsidy to the producers of softwood lumber and softwood shakes and shingles, allocated over the value of total 1980 sales for sawmills and planing mills, amounts to 0.030 percent *ad valorem*. The subsidy to softwood fence producers, allocated over total 1980 sales of miscellaneous wood products, amounts to 0.018 percent *ad valorem*.

2. *Program for Export Market Development (PEMD).* PEMD is administered by the Department of External Affairs and is available to all businesses in the manufacturing or service sectors which export, including producers of the products under investigation. PEMD facilitates the development of export markets for Canadian products by sharing with the companies the costs of travel, per diem and some special expenses. PEMD assistance is in the form of interest-free loans with forgivable repayment terms. If sales result from the export market development activities, the funds must be repaid at a rate of two percent of sales generated for a period of three years up to the amount of assistance provided.

Between 1980 and 1982 two small projects were funded by PEMD to develop market opportunities in the United States for softwood fence and softwood lumber. The disbursements for both projects were made in 1982. The sole purpose of PEMD is to stimulate exports; therefore, we determine that assistance provided under the program confers benefits which constitute export subsidies. Because there is no absolute obligation to repay the loan and because PEMD assistance covered costs normally expensed in the year incurred, we treated the funds disbursed as grants expensed in the year of receipt. We allocated the 1982 benefit of each project over the total 1981 export sales to the United States of softwood fence and softwood lumber, respectively, and calculated a subsidy of 0.009 percent *ad valorem* for softwood fence and less than 0.001 percent *ad valorum* for softwood lumber.

3. *Forest Industry Renewable Energy Program.* The Forest Industry Renewable Energy (FIRE) program is administered by the federal Department of Energy, Mines and Resources. The purpose of the program, which began in 1979, is to encourage the substitution of biomass energy sources for fossil fuels by companies that would otherwise have no economic incentive to do so. FIRE assistance is given in the form of taxable grants that are tied to the purchase of capital equipment (facilities for burning biomass in place of fossil fuels).

We verified that prior to April 1, 1981, funds were made available under the FIRE program only to "forest industry firms," as defined by the GOC according to the Treasury Board submission of August 16, 1978. Thereafter, FIRE assistance became available to all industries throughout Canada according to the Treasury Board submission of January 8, 1981.

This program involves the provision of a monetary benefit which could be used by all industries if made available to them. Since the restrictions on the availability of FIRE grants from August 16, 1978 to January 8, 1981 were due entirely to governmental action, we determine that the grants received by the producers of the products under investigation during that period confer subsidies within the meaning of the Act. Grants awarded after that period do not confer subsidies because eligibility was not limited by governmental action.

The benefit is based on the amount of grants received by the producers of the products under investigation during the first two years of the program's existence. We calculated the benefit to these producers in accordance with our grant methods described in the "Analysis of Programs" section of this notice. We allocated the benefit received over the total sales value of the producers of the products under

[1] Throughout this notice, all amounts are expressed in Canadian dollars, unless otherwise specified.

investigation, and calculated a subsidy of 0.003 percent *ad valorem.*

4. *Regional Development Incentives Program (RDIP)—Grants.* The RDIP is administered by DREE for the purpose of creating stable employment opportunities in areas of Canada where employment and economic opportunity are chronically low. The program provides development incentives (grants) and loan guarantees to manufacturers whose capital investment projects for establishing new facilities or expanding or modernizing existing facilities will create jobs and economic opportunities in areas designated as economically disadvantaged. Loan guarantees are discussed in the "Programs Determined Not to Confer Subsidies" section of this notice. The Governor-in-Council may designate a region upon the report of the Minister of DREE, if satisfied that existing opportunities for productive employment in the region are exceptionally inadequate and the provision of development incentives will make a significant contribution to economic expansion and social adjustment within that region. Development incentives and loan guarantees are currently not available to manufacturing and processing industries located in southern Ontario, southern Alberta and southern British Columbia (BC).

The prime criterion for DREE approval of a proposed project is the likelihood that the project will provide needed economic opportunities and social adjustment. Projects which would proceed without RDIP assistance are ineligible.

RDIP grants were provided to producers of the products under investigation. We determine that grants provided through the RDIP program of DREE confer subsidies because the benefits are limited to companies located within specific regions.

The subsidy to producers of the products under investigation has been calculated according to the grant methods described in the "Analysis of Programs" section of this notice.

The grants received since fiscal 1970 (when the program started) were provided on a product-by-product basis. Therefore, we have calculated a separate subsidy for each product. The amount of subsidy provided by RDIP grants is 0.180 percent *ad valorem* for softwood lumber, 0.070 percent *ad valorem* for softwood shakes and shingles, and 0.151 percent *ad valorem* for softwood fence.

5. *Federal Employment Program—CIAP.* The Community-Based Industrial Adjustment Program (CIAP), which began early in 1981, is one of the two components of the Industry and Labour Adjustment Program, which is administered by the Department of Industry, Trade and Commerce. Its purpose is to alleviate the distress caused in "designated" Canadian communities by large-scale permanent industry dislocation in a given sector when such dislocation causes high unemployment in these communities. CIAP assistance comes in the form of grants for consulting costs of interest-free loans for the funding or capital costs.

At verification, we ascertained that communities in Canada are designated for CIAP assistance at the discretion of the federal Cabinet from a list of depressed communities. We also verified that one producer of softwood lumber received one small grant in 1982 under the CIAP program. Since the benefits under this program are limited to companies located in specific regions, we determine that CIAP assistance constitutes a subsidy within the meaning of the Act. Because the grant covered costs normally expensed in the year incurred, we allocate the grant exclusively to the year of receipt. Allocating this CIAP grant over the total sales value of the producers of softwood lumber, we calculated a subsidy of less than 0.001 percent *ad valorem.*

B. Federal/Provincial Programs

1. *Agricultural and Rural Development Agreements (ARDA).* The ARDA's resulted from joint determinations by the federal and provincial governments that government action is required to promote economic development and to alleviate conditions of social and economic disadvantages in certain rural areas. These agreements are available to all provinces in Canada.

Of the six programs under the General ARDA, the Alternative Income and Employment Opportunities in the Rural Development Region (Alternative Income and Employment) is the only program that provided benefits to the producers of the products under investigation.

The Alternative Income and Employment program was available to all provinces, but was used only in Ontario and BC. The program was designed to provide grants to establish, expand or modernize production facilties in order to increase income and alternative employment opportunities for low income people in designated rural areas of a province. Both BC and Ontario received federal funds to finance 50 percent of the assistance given under this program for rural areas which are "economically depressed." Since the eligibility for General ARDA is limited to companies located within specific regions, we have determined that both federal and provincial benefits under this program confer a subsidy.

As a supplement to the General ARDA program, the Special ARDA program is aimed at improving employment and income opportunities for people of native ancestry in rural areas (defined by specific criteria). These agreements have been signed with Manitoba, the Northwest Territories, the Yukon, BC and Saskatchewan.

Since the benefits of the Special ARDA program are limited to companies located in rural areas, we determine that Special ARDA confers subsidies.

We used the grant methods described in the "Analysis of Programs" section of this notice to calculate the benefits under the ARDA programs. Allocating the benefits over the total sales value of producers of the products under investigation, we calculated a subsidy of 0.005 percent *ad valorem.*

2. *General Development Agreements.* As part of its activities to spur developent in Canada, DREE entered into ten-year General Development Agreements (GDA's) with all provinces except Prince Edward Island. A similar 15-year comprehensive development plan exists for Prince Edward Island.

GDA's have become the principal instruments of DREE's development policies, both in terms of expenditure and coordination of planning and programming. Within each GDA, specific subsidiary agreements have been negotiated with individual provinces. These mainly fund general planning, infrastructure and community development, although some assistance has been provided to individual companies.

Under the GDA's, subsidiary agreements with provisions for assistance to small enterprises are available to all provinces and have been negotiated with Manitoba, Ontario BC and New Brunswick. Funds were provided to producers of the products under investigation in the latter three provinces.

a. *British Columbia—Assistance to Small Enterprise Program (ASEP).* This program is jointly funded by BC (Ministry of Industry and Small Business Development) and the federal government (DREE) under the authority of the Canada-British Columbia Industrial Development Subsidiary Agreement. ASEP offers interest-free loans to companies in the manufacturing and processing sector with annual revenues of less than $500,000. The

terms of the loans provide that the loans will be forgiven. These loans are available for the construction of new facilities (the lesser of 50 percent of the eligible capital costs or $30,000), and for modernization projects (the lesser of 30 percent of the eligible capital costs or $18,000).

The ASEP program began in 1977 and continued until March 31, 1983. During that period, only companies located outside the "Lower Mainland and Southern Vancouver Island" regions were eligible for funds. During June 1980-July 1981, the area excluded from ASEP was included in the Small Manufacturers Assistance Program (SMAP), a similar program established and funded by BC (Ministry of Industry and Small Business Development).

We determine that all federal assistance provided through ASEP is countervailable because it was limited to companies in specific regions. We determine that provincial assistance provided through ASEP is countervailable during the period in which SMAP was not in operation because provincial benefits were then likewise limited to companies within specific regions. Provincial assistance provided through ASEP is not countervailable during June 1980-July 1981, when it was generally available because the SMAP program was also in operation.

Because the loans by their terms are to be forgiven, we treated them as grants and used the grant methods described in the "Analysis of Programs" section of this notice to calculate the benefits. The total amount of ASEP loans to producers of the products under investigation was adjusted to account for loans made to operations that were destroyed, were in receivership, were permanently closed prior to 1981, or had the assets which were purchased with the proceeds of the loans repossessed.

The subsidy amounts to 0.002 percent *ad valorem* for softwood lumber, 0.044 percent *ad valorem* for softwood shakes and shingles, and 0.010 percent *ad valorem* for softwood fence.

b. *New Brunswick-NED, KED and SIFAP.* Three subsidiary agreements between New Brunswick and the federal government provide assistance to small enterprises in the province. These are the Northeast New Brunswick Development Subsidiary Agreement (NED), the Kent Region Pilot Project Subsidiary Agreement (KED), and the Industrial Development Subsidiary Agreement (SIFAP). No applications for funds under these programs were accepted after the 1980–81 fiscal year, and no funds have been disbursed since March 31, 1982.

The benefits under these programs were interest-free forgivable loans. The total amount of funding provided could not exceed 50 percent of the cost of new manufacturing or processing facilities or 30 percent for modernization or expansion of existing facilities. To be eligible, firms had to have average sales of less than $1,000,000 over the past two years and had to be located in specific regions, which varied for each of the three programs. Companies were required to contribute new equity of at least 20 percent of the cost of a project. Producers of the products under investigation received interest-free forgivable loans under this program between 1978 and 1981.

We determine that benefits under NED, KED, and SIFAP are countervailable because they are limited to companies located within specific regions. Because loans under the programs are forgivable and they have all been forgiven, we treated the benefits as grants.

In calculating the benefits, we used the grant methods described in the "Analysis of Programs" section of this notice. The subsidy under this program amounts to 0.008 percent *ad valorem* for softwood shakes and shingles, 0.007 percent *ad valorem* for softwood fence, and less than 0.001 percent *ad valorem* for softwood lumber.

c. Ontario—Eastern Ontario Subsidiary Agreement. Under the Eastern Ontario Subsidiary Agreement, interest-free forgivable loans are provided to industries located in the eastern region of Ontario. Producers of softwood lumber received such loans in fiscal year 1981. Benefits under this program are countervailable because they are limited to companies located within a specific region. Because loans under the program are, by their terms, to be forgiven, we treated them as grants.

In calculating the benefits, we used the grant methods described in the "Analysis of Programs" section of this notice. The subsidy under this program amounts to less than 0.001 percent *ad valorem* for softwood timber.

C. Provincial Programs

1. *Alberta.—Stumpage Payment Deferral.* The government of Alberta has deferred the payment of stumpage dues and holding and protection charges for one year from May 1, 1982 to May 1, 1983. This applies to holders of stumpage rights under Forest Management Agreements, Quota Certificates, and Commercial Timber Permits. Stumpage dues are paid on a monthly basis and holding and protection charges are paid on an annual basis. The terms of the deferral specify that the cumulated deferred dues must be repaid in 12 equal monthly installments beginning on May 1983. The deferred holding and protection charges were to be repaid in May 1983.

The deferral involves the provision of a benefit which could be used by all industries if made available to them. Since the restrictions on availability are due entirely to governmental action, we find that the program was limited to a specific industry or group of industries. Furthermore, because recipients paid no interest, the deferral is on terms inconsistent with commercial considerations. Therefore, the benefits under this program confer a subsidy on the products under investigation.

Because stumpage dues are paid on a monthly basis, we treated each month's deferred dues, through December 1982, as a separate loan at zero interest rate with deferment of principal. To calculate the benefit, we compared what the companies would pay a commercial lender in principal and interest with what was actually to be paid. For the commercial benchmark, we used the rate for prime corporate paper (90 days) in Canada, as reported in the OECD *Financial Statistics*. We then calulated the percent value of the monthly stream of benefits of these loans using as the discount rate the secondary market bond yield for Canadian government bonds (one to three years), as reported in the OECD *Financial Statistics*.

Because holding and protection charges are paid annually and were to be repaid in May 1983, we treated this deferral as a one-year loan. For the commercial benchmark we used the rate for prime corporate paper (90 days), as reported in the OECD *Financial Statistics*. Allocating the benefits of these loans over total sales of the producers of the products under investigation, we calculated a subsidy of 0.003 percent *ad valorem*.

2. *British Columbia.—a. Low-Interest Loan Assistance (LILA).* When the joint Canada-British Columbia Industrial Development Subsidiary Agreement (IDSA) was signed in 1977, a program was established to provide loans at low interest rates. Funding for LILA loans is provided by BC through the Ministry of Small Business Development and the Special Purpose Appropriation Act. The British Columbia Development Corporation (BCDC) acts as trustee for the province in administering the LILA program. During February 1978–April 1979 the program's eligibility criteria were determined by the IDSA, and participation was limited to areas outside the Lower Mainland and Southern Vancouver Island regions. In

April 1979, the province changed the program criteria and LILA became generally available throughout BC.

LILA loans are used for captial improvements for plant expansions or modernizations, or for the establishment of production facilities which will create new economic activity and benefits. The loan rate, established twice a year, is the BCDC's prime commercial rate divided by two, subject to a maximum of ten percent per year.

From April 1977, when the program began, to August 1982, 24 loans were received by producers of the products under investigation. Of those loans, four were given during February 1978–April 1979 when eligibility was limted to companies located outside the Lower Mainland and Southern Vancouver Island regions. LILA loans given during this period are countervailable because of their availability was limited to companies located in specific regions, and because they were provided on terms inconsistent with commercial considerations.

The terms for the four loans given during February 1978–April 1979 matched the economic life of the fixed assets purchased. After 1981, the loan term was the lesser of three years or the economic life of of the asset.

We compared what a company would pay a normal commercial lender in principal and interest in any given years with what was actually paid on the loan in that year to calculate the subsidy rate for the four LILA loans identified. We also accounted for a six-month interest payment deferral on LILA loans. The benchmark rate used was the chartered banks' prime rate in Canada, as reported in the OECD *Financial Statistics*.

After calculating the payment differential in each year of the loan, we then calculated the present value of this stream of benefits in the year the loan was made using as the discount rate the secondary market bond yield for Canadian government bonds (one to three years), as reported in the OECD *Financial Statistics*. The subsidy provided by LILA loans amounts to less than 0.001 percent *ad valorem* for the products under investigation.

b. *Stumpage Payment Deferral.* The Fort Nelson Selling Price Zone was created in northeastern BC in recognition of the problems of logging in spruce swamplands where logging is only possible after "freeze-up" (mid-November to March 1). However, the lumber mills operate over a 12-month period. The volumes logged during the period November through February are allocated during the period November through October and stumpage is billed accordingly, regardless of the month in which the lumber was actually cut. Only licensees within the Fort Nelson Selling Price Zone are eligible for this deferral.

We determine that this deferral of stumpage payments confers a subsidy since the deferral is limited to companies located within a specific region and is on terms inconsistent with commercial considerations. The subsidy was calculated by taking the difference between the monthly stumpage payments due based on when the timber was actually cut and the monthly stumpage payments due based on the 12-month distribution plan. We treated these monthly differences as one-month loans at a zero interest rate, and multiplied the amount of the difference by a benchmark short-term interest rate. For the benchmark rate we used the rate for prime corporate paper (90 days) in Canada, as reported in the OECD *Financial Statistics*. The best information available for calculating the benefit from the deferral of stumpage payments due was billing information for the period November 1981–October 1982. The subsidy on the products under investigation amounts to less than 0.001 percent *ad valorem*.

3. *Ontario.*—a. *Stumpage Pricing for Non-Integrated Licensees.* Stumpage prices in Ontario are based largely on Crown dues, which are derived by multiplying an administratively set base rate by an index tied to end prices for forest products. The base rate for "non-integrated" licensees is set at 90 percent of the base rate for "integrated" licensees; the province defines "integrated" as "a licensee who owns or operates any pulp mill in Manitoba, Ontario or Quebec or is related to any person who owns or operates any such pulp mill."

During the course of these investigations, we asked about the basis for the difference in the two rates. We were told that integrated mills are larger and more efficient, and thus can afford to pay more for stumpage.

The fact that base rates for non-integrated licensees are lower does not necessarily mean that they are preferential within the meaning of subsection 771(5)(B)(ii). We recognize that there may be valid bases for charging different stumpage prices to integrated and non-integrated licensees. However, we do not have sufficient evidence on the record to explain the rate differential.

Consequently, we determine that the price charged to non-integrated licensees is preferential and constitutes a subsidy within the meaning of subsection 771(5)(B)(ii). To calculate the subsidy, we took the difference between the base rate for integrated licensees and that charged to non-integrated licensees. We then multiplied this difference by the volume of softwood timber sold in fiscal 1981–82 to non-integrated licensees. Because stumpage dues are current obligations, we treated this amount as a grant expensed in the year received and calculated a subsidy of 0.015 percent *ad valorem*.

b. *Stumpage Payment Deferral.* In December 1981, the government of Ontario initiated a six-month program whereby billings for stumpage payments could be deferred for approved applicants. The program was extended for an additional six months in July 1982. We determine that the program conferred a subsidy on the products under investigation because the benefits were provided only to sawmills and on terms inconsistent with commercial considerations.

We treated the amount of stumpage payments deferred for each month during the period for which we are measuring subsidization as a short-term loan at a zero interest rate. We multiplied the amount of each loan by a benchmark short-term interest rate for the months in which billings were deferred. For the benchmark rate we used the rate for prime corporate paper (90 days) in Canada, as reported in the OECD *Financial Statistics*. The subsidy amounts to 0.005 percent *ad valorem* for softwood lumber.

4. *Québec.*—a. *Stumpage Pricing on Timber Limits.* The timber limit is one of two forms of stumpage tenure and allocation in Québec (see Appendix B, section on Québec). Stumpage dues charged by the province for sawlogs harvested on timber limits are lower than those charged by the province for pulpwood. In most instances, the cutting rights for sawlogs or the cut sawlogs themselves are sold by the timber limit holders to sawmills and other users. The timber limit holder pays only $0.77 per m^3 to the province for sawlogs harvested on the limit. However, the limit holder can in turn charge a higher price to the purchaser. In the 1981–82 fiscal year, there were five timber limit holders that produced softwood lumber from sawlogs harvested on their own limits, and they paid the $0.77 per m^3 charged by the province.

During the course of these investigations, we asked about the basis for the difference in the two prices. We were told that timber limits are primarily held by pulp and paper producers and that they were not harvesting sawmill quality timber on their limits. Since the province wanted that timber harvested, it set a price

which it considered would encourage the harvesting of sawlogs. In contrast, the stumpage price for pulpwood is based on a percentage of the price per ton of newsprint delivered in New York.

The fact that sawlog prices are lower does not necessarily mean that they are preferential within the meaning of subsection 771(5)(B)(ii). We recognize that there may be valid bases for charging different stumpage prices for pulpwood and sawlogs. However, we do not have sufficient evidence on the record to explain the lower price for sawlogs.

Consequently, we determine that the price charged for sawlogs is preferential and constitutes a subsidy within the meaning of subsection 771(5)(B)(ii). To calculate the subsidy, we took the difference between the price charged for pulpwood ($3.36 per m^3) and that charged for sawlogs ($0.77 per m^3). We then multiplied this difference by the volume of sawlogs harvested in fiscal 1981–82 by timber limit holders and processed in their own sawmills. Because stumpage dues are current obligations, we treated this amount as a grant expensed in the year received and calculated a subsidy of 0.061 percent *ad valorem*.

b. *Aide à la Promotion des Exportations.* The Aide à la Promotion des Exportations (APEX) program is administered by the recently created Ministère du Commerce Extérieur of Québec. Prior to a December 1982 reorganization in the provincial government, APEX was administered by the Ministère de l'Industrie, du Commerce et du Tourisme (Office Québécois du Commerce Extérieur). The program has been available since 1977 to manufacturing and service companies in Québec. Under APEX, grants are awarded to companies for market research and for trade expositions for the promotion of exports of Québec goods and services outside Canada.

In 1982, two small APEX grants were made to exporters of the products under investigation specifically to develop export markets in the United States. Because APEX is expressly designed to stimulate exports, we determine that the program confers benefits which constitute export subsidies. One of the 1982 grants went to a producer of softwood lumber and softwood shakes and shingles. We allocated it over the 1981 export sales to the United States of those products, and calculated a subsidy of less than 0.001 per cent *ad valorem*.

We allocated the other 1982 grant, which went to a producer of softwood fence, over the total 1981 export sales to the United States of softwood fence and calculated a subsidy of 0.002 percent *ad valorem*.

c. *Société de Récupération, d'Exploitation et de Développement Forestiers du Québec.* The Société de Récupération, d'Exploitation et de Développement Forestiers du Québec (REXFOR) was incorporated in 1973 under Québec's REXFOR Act as a provincial Crown corporation. Under the joint trusteeship of the Ministère des Finances and the Ministère de l'Energie et des Ressources of Québec, its entire stock is allotted to the former, which approves REXFOR's operating and investment budgets.

REXFOR was created to manage specific provincially owned forest lands, to preserve and protect provincial forest lands through silviculture, and to encourage the development of the "forest industry" in Québec. REXFOR owns sawmills and pulp and paper mills, and produces the softwood products under investigation as well as a wide variety of products not under investigation. In carrying out these activities, REXFOR receives funds from both the Canadian and Québec governments, and is also an active investor in and provider of funds to the "forest products industry" in Québec.

(1) *Assistance to REXFOR from the Government of Canada.* REXFOR and three of its subsidiaries producing softwood lumber received six RDIP grants from DREE. These grants, which we determine to confer subsidies, are included in the federal portion of the "Programs Determined to Confer Subsidies" section of this notice.

(2) *Assistance to REXFOR from the Government of Québec.*—(a) *Loans and Loan Guarantees.* Between 1973 and 1977, REXFOR and its subsidiaries received a number of loans and a loan guarantee from the government of Québec (GOQ) at interest rates inconsistent with commercial considerations. We consider these loans and loan guarantee to have been targeted to a specific company. Accordingly, we determine that these loans and loan guarantee confer a subsidy on REXFOR.

To calculate this subsidy, we compared the principal and interest a company would pay a normal commercial lender in any given year with amounts actually repaid in that year. For purposes of these determinations, we included deferral of principal and interest payments in our subsidy calculations.

The benchmark rate used was the chartered banks prime rate in Canada, as published in the OECD *Financial Statistics*. After calculating the payment differential in each year of the loan, we then calculated the present value of this stream of benefits in the year the loan was made, using the secondary market bond yield for Canadian government bonds, as published in the OECD *Financial Statistics*, as the discount rate.

We allocated the benefits from these loans and loan guarantee over the total sales of the producers of softwood lumber and softwood shakes and shingles and calculated a subsidy of less than 0.001 percent *ad valorem*.

(b) *Grants.* Between 1977 and 1981, REXFOR received a grant from the GOQ for the production of softwood lumber. We consider grants made to REXFOR by the GOQ to have been targeted to a specific company. Accordingly, we determine that this grant confers a subsidy on REXFOR.

We calculated the benefit to REXFOR in accordance with the grant methods described in the "Analysis of Programs" section of this notice. We allocated the benefit received over the total sales of the producers of softwood lumber, and calculated a subsidy of less than 0.001 percent *ad valorem*.

(c) *Loss Coverage.* In two instances, the GOQ covered operating losses sustained by REXFOR in connection with two of its subsidiaries which respectively produce softwood lumber (Scieries Chic-Chocs) and all the products under investigation (Samoco). In both instances, the amounts received exceeded the losses sustained by REXFOR. In the case of Scieries Chic-Chocs, the excess of the funds received over the loss incurred was used to purchase fixed assets; in the case of Samoco, the excess was transferred into REXFOR's retaining earnings.

We determine that loss coverage confers a subsidy. We expensed those portions of the grants used to cover actual operating losses in the year in which they were received. We treated the excess amounts as grants and allocated them over 15 years, the average useful life of capital assets of sawmill plants and equipment. We allocated the benefit received over the total sales of the prducers of softwood lumber (in the case of Scieries Chic-Chocs) and of the producers of the products under investigation (in the case of Samoco), and calculated a subsidy of 0.017 percent *ad valorem* for softwood lumber, and 0.014 percent *ad valorem* for softwood shakes and shingles and softwood fence.

(d) *Equity Purchases.* The GOQ has made equity purchases in REXFOR under two difference sections of the REXFOR Act. Under section 6 of the REXFOR Act, the proceeds from

VOL

1983
UMI

Quebec's equity purchases are made available to REXFOR for "general intvestment" purposes to be used as the company sees fit. Under section 7, the proceeds from Quebec's purchases of REXFOR stock are specifically directed by the GOQ to be used for loans to or equity purchases in third companies which may or may not be subsidiaries or affiliates of REXFOR, some of which produce softwood lumber or shakes and shingles.

(i) After analyzing REXFOR's financial statements since 1973, especially the company's debt position and rate of return on equity, we conclude that the GOQ's section 6 equity infustions into REXFOR were not inconsistent with commercial considerations. Therefore, we determine that government equity purchases in REXFOR that were not specifically directed do not confer a subsidy.

(ii) With regard to government equity purchases made pursuant to section 7 that were specifically directed, but *not* to producers of the products under investigation, we determine that these purchases did not confer subsidies on the products under investigation.

(iii) With regard to equity purchases made by the GOQ pursuant to section 7 that were specifically directed to producers of the products under investigation:

- Where the proceeds were used by REXFOR to make equity infusions in subsidiaries, affiliates or unrelated companies, we must consider whether these infusions were made on terms inconsistent with commercial considerations.

Our analysis of these companies leads us to conclude, based on verified financial data contained in the responses and REXFOR's annual reports, that REXFOR's equity purchases in these companies were in fact not inconsistent with commercial considerations. Accordingly, we determine that these equity purchases do not confer subsidies within the meaning of the Act on producers of the products under investigation.

- There were no loans made by REXFOR pursuant to section 7 that were specifically directed to producers of the products under investigation, for which principal was still outstanding during the period for which we are measuring subsidization.

d. *FRI Tax Abatement Program.* The Tax Abatement Program (TAP) is one of two programs under the aegis of the Fonds de Relance Industrielle (FRI) of Québec, which provided assistance to producers of the products under investigation. The second FRI program, *i.e., the Industrial Incentives Fund, is discussed below in the section titled "Programs Determined Not To Confer Subsidies."*

The FRI is a fund, administered by the Ministère de l'Industrie, du Commerce et du Tourisme of Québec with the assistance of Revenu Québec, which provides financial aid in order to stimulate modernization and development of Québec-based manufacturing enterprises.

TAP applies to capital equipment investments of at least $50,000 and allows a company to retain the lesser of 50 percent of taxes payable to the province or 25 percent of the investment costs. The total abatement can be spread over a maximum of five years. The company chooses in which of those five tax years it will file for the abatement and may use the retained amount as it sees fit, but it may not claim more than $500,000 during the five-year period. The program was discontinued in 1981, and no applications filed after March 31, 1981 have been accepted. However, disbursements are still being made on previously approved applications.

Companies located in the metropolitan area of Montréal are excluded from this program. Since TAP is limited to companies located within specific regions, we conclude that it confers a subsidy within the meaning of the Act.

Producers of the products under investigation took advantage of tax savings under this program. Total tax abatements claimed by these producers for the 1981 tax year amounted to $284,481. We consider this benefit to be received in 1982 because the companies do not know their tax savings under TAP until the completion of the tax year. We allocated these savings over the total sales value of the products under investigation, and calculated a subsidy of 0.005 percent *ad valorem*.

e. *SDI Export Expansion Program.* The Société de Développement Industriel (SDI) was established in 1971 by the Assemblée Nationale (Legislature) of Québec as a Crown corporation. SDI is wholly owned by the province and administered by the Ministère de l'Industrie, du Commerce et du Tourisme, but has certain powers and authority of its own as spelled out in the SDI Act. SDI gives financial assistance to the private sector in order to promote new business investment, plant expansion or modernization, and the export of Québec goods and services. This assistance comes in several forms: Loans, loan guarantees, grants as cash reimbursements for interest costs on investments or partial forgiveness of loans, and acquisition of capital stock (the latter with the proviso that SDI not hold a majority of any given company's shares).

SDI receives annual budget appropriations voted by the Assemblée Nationale which are used to cover its administrative expenses and grants. In fiscal 1981–1982, SDI received $55.8 million from the Assemblée, of which $44.9 million was specifically earmarked for "subsidies" (grants). Another source of SDI funding is an endowment established by the GOQ at the time of SDI's formation in 1971 to provide liquidity against which SDI could guarantee its loans. This fund now totals $47.4 million, of which $32 million is the initial endowment and the balance is accumulated interest. Finally, SDI finances itself, in part, through borrowings on the capital markets, which amounted to $74 million as of July 15, 1982.

SDI assistance programs fall under three categories: the Export Expansion Program, which we determine to confer a subsidy for the reasons outlined below; development grant programs; and loans and loan guarantees to manufacturing firms. The latter two categories are described later in the "Programs Determined Not to Confer Subsidies" section of this notice.

Under the Export Expansion Program, SDI reimbursed interest costs to Québec firms whose direct exports increased by 25 percent over the previous year. The program has been discontinued; May 25, 1981 was the final date for receipt of new applications. Disbursements were made through May 1982.

The maximum grant awarded to a recipient company was the lesser of two percent of the company's export sales value or the amount of interest expense paid in a given year. Once the total grant was computed, SDI allocated the amount to the company for U.S. and overseas exports respectively, in direct proportion to the company's export sales to the United States and overseas.

Producers of softwood lumber received funds under this program. We determine the Export Expansion Program to confer an export subsidy. Because interest charges are normally expensed in the year paid, we calculated the benefit by allocating the amound provided by SDI in 1981 (the most recent year for which data are available) to softwood lumber producers for their exports to the United States over the total sales value of exports of softwood lumber to the United States, and calculated a subsidy of 0.019 percent *ad valorem*. Producers of softwood shakes and shingles and softwood fence did not receive funds

under this program during the period for which we are measuring subsidization.

II. Programs Determined Not To Confer Subsidies

We determine that the Canadian federal provincial governments are not providing subsidies to manufacturers, producers, or exporters of certain softwood products included in these investigations under the following programs:

A. Stumpage Programs of the Canadian Federal and Provincial Governments

Petitioner alleges that the stumpage programs [2] of the Canadian federal and provincial governments confer both a domestic and an export subsidy on the products under investigation.

Concerning the former allegation, petitioner alleges that stumpage programs are provided to a specific group of industries within the meaning of subsection 771(5)(B) of the Act. Also, rather than alleging that stumpage programs constitute the provision of a good at preferential rates under subsection 771(5)(B)(ii) of the Act, petitioner alleges that stumpage programs constitute the assumption of a cost of production within the meaning of subsection 771(5)(B)(iv) of the Act. Essentially, petitioner claims that "assumption," as used in subsection (iv), should have a broad, all-inclusive meaning, encompassing any governmental activity that reduces or absorbs production costs on terms inconsistent with commercial considerations.

First, stumpage programs do not confer an export subsidy, because they do not operate and are not intended to stimulate export rather than domestic sales, and because they are not offered contingent upon export performance. The mere fact that significant quantities of products made from stumpage are exported to the U.S. does not mean that stumpage programs confer an export subsidy.

Further, stumpage programs do not confer a countervailable domestic subsidy for the following reasons. First, we determine tht stumpage programs are not provided only to a "specific enterprise or industry, or group of enterprises or industries." Rather, they are available within Canada on similar terms regardless of the industry or enterprise of the recipient. The only limitations as to the types of industries that use stumpage reflect the inherent characteristics of this natural resource and the current level of technology. As technological advances have increased the potential users of standing timber, stumpage has been made available to the new users. Any current limitations on use are not due to activities of the Canadian governments.

Although nominal general availability of a program does not necessarily suffice to avoid its being considered a possible domestic subsidy, the Department further determines that stumpage is used within Canada by several groups of industries. Stumpage is cut by the lumber and wood products industries (which manufacture products ranging from simple "two-by-fours" to window frames), the veneer, plywood and building boards industries, the pulp and paper industries (which manufacture products ranging from cardboard boxes to newsprint), and the furniture manufacturing industries, each of which requires different types of processing equipment and uses different channels of trading. Stumpage permits are also held by individual consumers and by industries producing turpentine, charcoal, wood alcohol, and even food additives (*i.e.*, vanillin and lignin). In this regard, we note also that, under the classification systems of both Canada and the United States, the lumber and wood products industries, the pulp and paper industries, and the furniture manufacturing industries constitute at least three groups of industries. Therefore, in view of its general availability without governmental limitation and its use by wide-ranging and diverse industries, we determine that stumpage is not provided to a "specific group of * * * industries."

We note, however, the importance of stumpage's general availability without governmental limitation. Where, on the other hand, the governments expressly limit programs to the so-called "forest products industries," we have found some domestic subsidies. Unlike stumpage programs, these types of programs involve the provision of benefits, usually money, that can be used by all enterprises and all industries. In such cases, the restrictions on availability are due entirely to governmental action, and not to any specific characteristics of that which is provided. With respect to these types of programs, we believe that there is sufficient evidence of governmental action to support a determination that a benefit is conferred upon a "specific group of * * * industries."

Even if stumpage programs were being provided to a "specific group of * * * industries," we determine that they would not confer a domestic subsidy. In this regard, we determine that Canadian stumpage programs, except for certain aspects of those of Ontario and Québec, do not confer a domestic subsidy, because they do not provide goods at preferential rates to the producers of the products under investigation within the meaning of subsection 771(5)(B)(ii).

In our opinion, subsections 771(5)(B)(i)–(iv) are mutually exclusive. We recognize that subsections (i)–(iv) are not an all-inclusive list of domestic subsidies. However, we maintain that where a particular subsection clearly covers a given program, the determination whether that program is a subsidy must be based upon the standard provided in the relevant subsection. In addition, we recognize that in some situations it may be arguable as to which subsection most closely describes a particular program. However, this problem does not arise in the instant investigations, because stumpage programs clearly involve the prosision of a good (raw timber), and thus clearly fall within sucsection (ii). Therefore, we determine that subsection (ii) is the controlling provision insofat as these stumpage programs are concerned.

The standard contained in subsection (ii) is "preferential," which normally means only more favorable to some within the relevant jurisdiction than to others within that jurisdiction.[3] In this context, it does not mean "inconsistent with commercial considerations," a distinct term used in subsection 771(5)(B)(i) (which is not applicable with regard to stumpage programs in general, because they do not involve the provision of capital, loans, or loan guarantees).

Assuming *arguendo* that subsection (iv) also applies to stumpage programs, we determine that Canadian stumpage programs do not "assume" a cost of production. We believe that the most reasonable interpretation of "assumption" is that it refers only to government activity which relieves an enterprise or industry of a pre-existing statutory or contractual obligation. Otherwise, subsection (iv) would embrace all of the activities described in preceding subsection (i)–(iii), because

[2] In general, "stumpage" refers to standing timber and "stumpage programs" refer to the systems by which individuals and companies acquire rights to cut and remove standing timber from government forest lands. The stumpage programs of the various Canadian governments are described in further detail in Appendix B of this notice.

[3] There may be other cases in which the number of users of a good or service may be so limited that the preferentiality test may need to be examined further. In addition, as the Department and the Department of the Treasury have recognized in prior cases, "different" does not necessarily mean "preferential."

the activities described in those subsections could all be regarded as activities which reduce or absorb—and thereby arguably "assume"—costs of production. Such a broad construction of the term "assumption" would make subsection (iv) largely redundant of subsections (i)–(iii) and is, as a matter of law, not preferred. Accordingly, "assumption," as used in subsection (iv), means something other than the universe of governmental activities which could have the effect of reducing or absorbing a cost of production. Rather, it refers to a specific type of activity. In the financial and legal terms relevant to subsection 771(5)(B)'s list of domestic subsidies, an "assumption" is the relief from a pre-existing statutory or contractual obligation.

Under this interpretation, stumpage programs do not constitute the assumption of a cost of production, because the Canadian governments do not relieve the producers of any pre-existing statutory or contractual obligations. To the contrary, the governments impose a cost for the stumpage, which they have owned themselves for well over a century. These imposed costs include not only cash payments for stumpage, but also one or more other costs, such as ground rents, forest management plans, silviculture and road building, as detailed for each province in Appendix B.

Even if "assumption" were construed more broadly, we determine, based upon available information in the record of these investigations, that Canadian stumpage programs have not effectively reduced, and thereby "assumed," a cost of production. Petitioner claims that because there is an allegedly unified North American market for softwood lumber, shakes and shingles and fence, the Department should compare Canadian stumpage prices to prices for stumpage in the United States. We disagree. First, it has been the Department's policy not to use cross-border comparisons in establishing commercial benchmarks.

Second, while there may be a unified North American market for each of the products under investigation, there is not a unified market and a unified price for stumpage, because each individual stand of timber is unique due to a variety of factors, such as species combination, density, quality, size, age, accessibility, and terrain and climate. Stumpage prices vary substantially both regionally and locally within Canada and the United States, even within a mill's timber supply area. For example, a publication called *Timber-Mart South* publishes stumpage prices for the southeastern United States. This publication covers thirteen states, each divided into three regions, and lists separate prices for each species within each region of each state.

We believe that a comparison of Canadian stumpage prices with U.S. prices would be arbitrary and capricious in view of: (1) The wide differences between species composition; size, quality, and density ot timber; terrain and accessibility of the standing timber throughout the United States and Canada; (2) the additional payments which are required in many provinces in Canada, but not generally in the United States; (3) the fact that in recent years, prices in national forests in the United States have been bid anywhere between two to five years in advance of cut, without taking into account the fluctuations in demand for lumber; and (4) the fact that in recent years the U.S. Forest Service has restricted the supply of timber in certain national forests due to budgetary and environmental constraints.

Alternatively, even if one believes that there is a rational basis for comparing U.S. and Canadian stumpage prices, the record of these investigations includes studies showing that once appropriate adjustments are made to take into account the differences in quality, accessibility, as well as additional cash payments and in-kind services, Canadian prices for standing timber do not vary significantly from U.S. prices. Indeed, in some cases the Canadian price may be higher. Therefore, even if one were to use U.S. prices as a benchmark, there is evidence in the record which establishes that the Canadian governments do not assume costs of production through their stumpage programs.

In the absence of a market price for stumpage with which Canadian stumpage prices may reasonably be compared, we could, as petitioner suggests, alternatively determine whether Canadian stumpage prices reflect "true market value."

The value of stumpage derives from a number of factors, including the price of the end products made from it, and not from any intrinsic value of the standing timber. One method of establishing stumpage prices, which is used in BC and some parts of the United States, is to calculate its residual value based upon the end-product price. Under the residual value approach, the seller makes allowances for normal profit and risk factors and deducts manufacturing costs from the end-product price to determine the minimum price for stumpage below which it will not sell.

As noted above, residual valuation is used in BC, which between 1977 and 1981 produced 67 percent of the softwood lumber manufactured in Canada. We believe that it constitutes a reasonable method for establishing stumpage prices. Therefore, we determine that prices charged in BC for stumpage may not be said not to reflect "true market value," as alleged by petitioner. Accordingly, one cannot find that stumpage programs in BC assume a cost of production, even if that term is interpreted broadly. In addition, other provinces established stumpage prices (such as competitively bid prices) which cannot be said not to reflect "true market value."

For all the above reasons, we determine that Canadian stumpage programs do not assume a cost of producing the products under investigation.

In conclusion, based on information in the record, we determine that Canadian stumpage programs (with the exceptions noted above for Ontario and Québec) do not confer a subsidy within the meaning of the Act because they are not offered contingent upon export performance, because they are not provided to a "specific enterprise or industry, or group of enterprises or industries," and because they do not confer a domestic subsidy within the meaning of subsection 771(5)(B).

B. Federal Programs

1. *Deductible Inventory Allowance.* The federal Income Tax Act authorizes a deduction equal to three percent of the opening value of inventories held for sale or for the production of goods for sale. This deduction is available on equal terms to all businesses holding inventories for sale throughout Canada.

We determine that the deductible inventory allowance does not confer countervailable benefits because it is not limited to a specific industry, group of industries or to companies in specific regions.

2. *Capital Cost Allowances.* The federal Income Tax Regulations provide for a capital cost allowance for businesses throughout Canada that purchase qualifying assets used in abating water or air pollution, manufacturing or processing, or conserving energy. These companies receive a full write-off over three years with a cumulative maximum deduction of 25 percent in the first year, 75 percent in the second year and 100 percent in the third year. This is the only method of depreciation allowed for these

properties, and they are depreciated according to this schedule regardless of use by industrial sector.

We determine that these capital cost allowances do not confer countervailable benefits because they ae not limited to a specific industry, group of industries or to companies in specific regions.

3. *Export Credit Insurance.* Petitioner alleges that the GOC covered export credit insurance losses incurred by the Export Development Corporation (EDC). EDC is a Canadian Crown corporation providing financial services to Canadian exporters and foreign buyers to develop Canada's export trade. The GOC is the sole stockholder in EDC. One of EDC's financial services is export credit insurance. EDC maintains its own commercial insurance operation, as well as a separate operation on behalf of the government. We verified that exports to the United States of the products under investigation are not insured under the government account.

EDC has never incurred a fiscal year loss on its commercial operations, although there has been a downward trend in earnings. This downward trend in earnings prompted EDC to develop a cost allocation and accounting system in 1982. Although not fully implemented, the system is designed to assign costs and forecast revenue requirements more accurately for all of EDC's commercial operations, including the insurance operation. In this regard, EDC's Financial Planning Division also conducts an annual review of the past five year's claims experience, and then forecasts the percentage of every premium dollar that should be assigned to claims. In 1982, the percentage of every premium dollar allocated to cover future claims was increased from 38 percent to 50 percent. Because the claims provision was increased, EDC has raised its premium rates twice in the past two years. We verified that between 1982 and 1983, premiums on exports of lumber to the United States were raised 25 percent.

Based upon our review of information on the record, it appears that the petitioner's allegation pertains to export credit insurance losses sustained by EDC in its operation on behalf of the GOC and not in its commercial operation. Exports to the United States of the products under investigation are insured solely through EDC's commercial operation. Further, as noted above, EDC has raised premium rates when the claims provision was increased. Thus, it appears that EDC is charging premiums sufficient to cover long-term operating costs and losses. We determine that EDC's export credit insurance does not confer an export subsidy within the meaning of the Act.

4. *Federal Employment Programs.*—a. *Local Employment Assistance Program.* The Local Employment Assistance Program (LEAP), administered by the Canada Employment and Immigration Commission (CEIC), aims to increase the self-sufficiency of chronically un- or under-employed workers, such as handicapped persons, through grants for job creation and worker training. LEAP assistance is not limited to a specific industry, group of industries or to companies in specific regions. Moreover, "for-profit" organizations or entrprises are not eligible for LEAP funding. We determine that these grants did not confer any countervailable benefits upon the producers of the products under investigation.

b. *Work Sharing Program.* The purpose of the Work Sharing Program, which is also administered by the CEIC, is to avert temporary layoffs during short-term economic downturns by reducing workweeks, taking steps so that available work is shared, and providing unemployment benefits when no work is available. It does not relieve participating employers of any contractual oblibations. Employees of producers of the products under investigation received benefits under this program.

The Work Sharing Program is financed through the national Unemployment Insurance (UI) fund, to which employers contribute 47 percent; employees, 33 percent; and the federal government, 20 percent. Eligibility is not limited to a specific industry, group of industries or to companies in specific regions. Any company whose employers and employees pay regular UI premiums may receive Work Sharing assistance. Therefore, we determine that the Work Sharing Program did not confer any countervailable benefits to producers of the products under investigation.

5. *Regional Development Incentives Program (RDIP)—Loan Guarantees.* The RDIP, administered by DREE, as described in the "Programs Determined to Confer Subsidies" section of this notice, provides loan guarantees to manufacturers whose capital investment projects for establishing new facilities or expanding or modernizing existing facilities will create jobs and economic opportunities in areas designated as economicaly disadvantaged.

Under the loan guarantee program, DREE insures ultimate payment of losses related to approved loans at a cost of one percent of the balance of the guaranteed principal per annum. Some producers of the products under investigation have defaulted on these loans. However, the security or assets pledged by the companies enabled the private lender to recover the principal and thus avoid an insurance claim against DREE.

These loans are made on terms not inconsistent with commercial considerations. We determine that no benefit is being provided by RDIP loan guarantees, as all loans to producers of products under investigation were contracted at a rate of interest above the average Canadian commercial rate of interest based on the chartered banks' prime lending rate, as reported in the OECD *Financial Statistics.*

6. *Enterprise Development Program (EDP).* The Enterprise Development Program (EDP) was established in 1977 to provide loans, loan insurance and contributions to manufacturers (individuals, firms or corporations in Canada engaged in a manufacturing or processing activity) and, in the case of loan insurance, to private lenders to assist in projects of product development or enhancement, or for other types of productivity initiatives. The program is administered by one national and ten regional Enterprise Development Boards (one in each province), in conjunction with the federal Department of Industry, Trade and Commerce.

Enterprise Development Regulations provide a listing of the qualifying purposes for which any loan, loan insurance or contribution may be issued, and state that a regional board may exercise and perform the powers, duties and functions of the Board under the regulations with respect to:

- Any loan, insurance or contribution made where the total amount of any such loan, insurance or contribution does not exceed $200,000, the aggregate liability of the manufacturer does not exceed $200,000 and the dollar volume of sales of the manufacturer did not exceed $5,000,000 in its fiscal year immediately preceding the application for the loan, insurance or contribution.
- Any loan or insurance where the total amount of any such loan or insurance does not exceed $50,000 and the aggregate liability of the manufacturer does not exceed $200,000, except as a result of the making of such loan or the provision of such insurance.
- Any contribution where the total amount of the contribution does not exceed $20,000 and the aggregate liability of the manufacturer does not exceed $200,000, except as a result of the making of such contributions.

Loan insurance and contributions are determined not to confer subsidies and are discussed below, while loans

provided under EDP are discussed in the "Programs Determined Not to Be Used" section of this notice.

a. *EDP Loan Insurance.* The GOC provides loan insurance under the EDP to private lenders for loans to companies for approved productivity projects. The private lender pays a fee of one percent per annum, twice yearly, on the outstanding obligation for the insurance. The insurance allows the lender to recover up to 90 percent of the actual loss it experiences on defaulted loans after all security has been realized.

Companies participating in this program first negotiate a loan insurance agreement witht he Enterprise Development Board and then go to the private market to negotiate a loan. Loans vary in duration from three to ten years, with the repayment schedule being set by the lender.

Loan insurance may be provided under EDP on loans made by a private lender to a manufacturer, individual, firm or corporation in Canada if a loan is required to enable the manufacturer to meet changing competitive circumstances and if the provision of loan insurance is necessary to encourage private lending at normal commercial rates.

A few producers of the products under investigation received loan insurance under the EDP. We verified that EDP loan insurance was provided to a wide range of industries and was not limited to companies in specific regions. Therefore, we determine that the provision of the loan insurance does not confer a subsidy.

b. *DEP Contribution.* Under EDP the GOC shares the cost of approved projects with companies. Audits are conducted to verify that expenditures were made for the intended purpose. Contributions are administered in accordance with the terms and conditions approved by the Treasury Board. The funds are available to manfuacturers in any industry or region for a project which represents a significant departure from a company's traditional productivity improvement practices and has an existing potential for productivity gains but demonstrated uncertainty as to benefits. The cost of any feasibility study and implementation of the results thereof should represent a significant burden on the company's resources. In addition, the manufacturer must be capable of implementing the results of the study.

We found that small contributions were provided to producers of the products under investigation to assist in product development, proposal development, identification of new products and productivity enhancement. We verified that EDP grants were provided to a wide range of industries and were not limited to companies in specific regions. Therefore, we determine that they do not confer a subsidy on the products under investigation.

7. Transportation Programs. a. *Rail Freight Rates.* There are 33 common carrier companies providing rail transportation services in Canada, almost half of which are U.S. subsidiary lines. Of the Canadian lines, two companies—Canadian National (CN) and Canadian Pacific (CP)—are engaged in countrywide transport. Their combined trackage comprises 89 percent of the total railway trackage in Canada.

CP is a privately owned company, while CN is a Canadian Crown corporation. Laws and regulations governing railway operations and freight rates are promulgated by the federal government and administered by the Canadian Transport Commission.

Both Canadian and U.S. railroads offer several types of rates: class rates, competitive rates, commodity rates, and contract rates. In Canada, "agreed charges" is the term applied to contract rates for intra-Canada shipments. Rail shipments within Canada that do not fall under agreed charges generally move under competitive or commodity rates. At the present time, class rates apply to very little rail traffic. International rail shipments move under rates established jointly by the U.S. and Canadian rail companies involved.

The petitioner alleged that agreed charges are a domestic subsidy because they are below "tariff rates" and because they apply only to "forest (wood) products." In its response, the GOC provided copies of published agreed charges covering a large number of different commodities, such as foodstuffs, automobiles, appliances and petroleum products. Ten of these agreed charges cover shipments of lumber, shakes and shingles, and fence. Agreed charges are generally used when the companies are moving large volumes on a regular basis.

As require by section 32(2) of the Transport Act of 1938, the railroads that are competitive at the points of origin and/or destination must concur on the agreed charge rates to be charged the shippers. The railroads develop a joint position which is then presented to the shippers. We verified that agreed charges are rates agreed upon after arm's length negotiations between the Canadian railway(s) and the shippers. Agreed charges are renegotiated every year and reflect such variables as market and modal competition, value of the commodity, loadability, and equipment use.

In addition to the agreed upon rates, agreed charges stipulate that a certain percentage of volume must be shipped. For lumber this volume requirement is 80 percent. The lumber agreed charges also specify that the railcars must be completely off-loaded in Canada and that the agreed charge rates cannot be used in constructing combination rates to the United States. Under agreed charge regulations, any shipper who is moving the same goods under similar conditions between the same points can become a signatory to the agreed charge, and cannot be charged more than the agreed charge rate.

Agreed charges, like all rates charged by the railroads, must be compensatory; that is, the rate must cover the railroads' variable costs on each movement. However, the railroads charge what the market will bear. As such, their variable costs represent a floor below which a rate cannot go, but they do not represent a ceiling on rates.

During verification, we compared agreed charge rates for lumber with agreed charge rates for some other commodities and found that lumber agreed charge rates are higher both in cents per ton and cents per ton-mile. Moreover, although the rates charged by the railroads are not calculated on a per car-mile or per ton-mile basis, the Waybill Analysis from 1978–80 (the latests available published statistics) for all rate structures shows that "forest products" generated higher revenue for the railways than all other commodities both on a per car-mile and per ton-mile basis.

Because there are a number of agreed charges covering a wide range of commodities and because agreed charges are negotiated at arm's length, we determine that agreed charges do not confer benefits which constitute subsidies within the meaning of the Act.

b. *Currency Exchange Rate Tariff (No. 6016A).* The currency exchange rate tariff was implemented in 1921 on all rail shipments between the United States and Canada. Because of currency fluctuations, the railroads agreed that the value of that portion of the rail haul taking place in the United States should be reflected in U.S. currency and the value of that portion taking place in Canada should be reflected in Canadian currency. A study was conducted showing that of the total amount of freight charges collected on international shipments, 60 percent accrued to U.S. railways and 40 percent accrued to Canadian railways. Based on this study, Canadian railways were

authorized to collect a surcharge of 60 percent or to provide a discount of 40 percent on international shipments depending on prevailing exchange rates. These percentages were calculated to correspond to the average portion of a movement that took place in each country. Although the Canadian government has not legally mandated the exchange rate tariff since 1967, it is still applied by the Canadian railroads to all rail traffic between Canada and the United States.

The program works as follows. When U.S. funds are at a premium in relation to Canadian funds, the Canadian railways collect a surcharge of 60 percent of the current exchange rate differential on any prepaid movement from Canada to the United States without regard to the industry or region involved. When U.S. funds are at a discount in relation to Canadian funds, the shipper who pays in Canadian funds receives a discount of 60 percent of the exchange rate differential. If, however, charges are paid in the United States, the Canadian shipper must pay a surcharge of 40 percent of the prevailing exchange rate. Because the sole purpose of the tariff is to adjust for the differences in the value of the two currencies, it applies only to shipments exported to the United States.

Since 1977, U.S. currency has been at a premium in relation to Canadian currency. Therefore, Canadian shippers have been paying a surcharge on exports to the United States. Because Canadian shippers have been paying a surcharge, no benefits are being bestowed through the currency exchange rate tariff on exports of the products under investigation. Based upon our review of information on the record, the tariff is not intended, nor does it operate, to stimulate exports. Rather, it is a mechanism for maintaining Canadian rail carrier revenue. Therefore, we determine that the currency exchange rate tariff does not confer a subsidy within the meaning of the Act.

c. *Fuel Tax Refund and Fuel Tax Exemption.* The fuel tax refund is a program which applies to the movement of motor carriers operating in interstate service within the United States, in interprovincial service within Canada, or in international service between Canada and the United States. The purpose of this program is to ensure that all states and provinces collect taxes equal to the actual fuel consumed within each jurisdiction but which has been purchased outside that jurisdiction. The tax refund is applied by each jurisdiction uniformly on all truck movements regardless of the type of merchandise carried, if any.

Each motor carrier must keep a log of travel to ensure proper payment of tax. Each jurisdiction may have different means of assessing the tax and the amount of fuel tax refund. Assessments are made on the basis of a motor carrier's log.

The fuel tax refund is a mechanism to ensure that each state or province receives proper payment of its share of fuel taxes. It does not relieve carriers of any tax, nor does it provide any benefits to shipments of the products under investigation.

Within the provinces as well as the states, certain machinery and vehicles are exempt from paying fuel taxes. Exemptions can include stationary machinery, off-road vehicles, airplanes and public transportation. Off-road vehicles and machinery used in agricultural, forestry, and mining operations are generally exempt from paying fuel taxes. In addition, machinery and vehicles used on private roads are exempt because historically, fuel taxes have been used to maintain public roads. Even though some forestry and mining roads may be designated as public roads, certain machinery and vehicles operating on them may be exempt from paying fuel taxes because the forestry and mining operators are responsible for road maintenance. Becaujse a wide range of industries are exempted from fuel tax within each province, we determine that the fuel tax exemption does not provide benefits to a specific industry or group of industries. Therefore, we determine that the fuel tax refund and the fuel tax exemptions do not confer subsidies on the products under investigation.

C. Federal/Provincial Programs

1. *Forestry Subsidiary Agreements.*—a. *Funding for Long-Term Forest Management Under the Forestry Subsidiary Agreements.* As described in the "Programs Determined to Confer Subsidies" section of this notice, DREE entered into ten-year GDA's with all provincial governments except Prince Edward Island. A similar 15-year comprehensive development plan exists for Prince Edward Island. Forestry subsidiary agreements are available to any province with a GDA and to Prince Edward Island, and have been negotiated with seven provinces.

Most of the funding under these agreements is for long-range resource management on public lands and public infrastructure development. Examples of these activities include funding for silviculture camps, tree nurseries and soil and forest inventory studies. A few other programs are funded under the forestry subsidiary agreements; these are discussed in other sections of this notice, as appropriate.

The long-term forest management activities are conducted by the province on provincial lands, and do not relieve any companies of obligations incurred in their licensing arrangements. The benefits from these long-term forest management activities will not be realized until the rotation age (life span from planting to cutting for a tree) is met. This span is at least 40–60 years in eastern Canada and 60–80 years in the west. Further, activities under the forestry subsidiary agreements are primarily designed to help achieve the government's goal of renewing a "sustained-yield" forest. For example, ths silvicultural camps facilitate cone collection for seed supplies of tree nurseries, and soil surveys are for the study of the proper species to plant in certain areas. These benefits would be attributable to the owner of the resource, the government, not to the short- or medium-term licensee, which may have its annual allowable yield reduced as a result of these long-term management practices.

Because these benefits will not be bestowed on the products under investigation until well into the future, if at all, and would be attributable to the government as owner of the resource, we determine that the funding of long-term forest management activities under the forestry subsidiary agreements does not confer a countervailable benefit on producers of the products under investigation in the period for which we are measuring subsidization.

Under the forestry subsidiary agreements, the federal government makes payments to the provincial governments for the construction of forest access roads. The companies using these roads for forestry operations are responsible for all maintenance costs. Although the extraction of wood is one of the primary purposes of building forest roads, access to mineral resources, recreation, environmental protection, general development and forest management are other purposes. Roads built in each province under the FSA's are open to the public at all times, with occasional exceptions, such as during the spring when weather conditions may require closure to prevent damage to the road. Further, the establishment of minimum standards and specifications for various classes of forest roads, above those standards which would be required by those harvesting stumpage, ensures that the roads will meet the needs of not only

those holding stumpage rights, but also the traveling public and other users. For these reasons, we determine that the construction of forest access roads does not confer a subsidy within the meaning of the Act.

b. *Saskatchewan Forestry Subsidiary Agreement: Opportunity Identification and Technological Advancement.* Sector A (Opportunity Identification and Technological Advancement) of the Saskatchewan Forestry Subsidiary Agreement provides for provincial funding of research and feasibility studies. These studies are usually conducted by private counsultants hired by the company receiving the funding. The objectives of the studies are to determine industrial opportunities in forestry, conduct market and feasibility analyses and transfer known technology to an existing or new industrial application. The results of the studies are held by the government and appear to be publicly available on equal terms. Therefore, we determine that the studies do not provide contervailable benefits to producers of the products under investigation.

c. *Forestry Job Program.* The Employment Bridging Assistance Program (EBAP) is a job creation program sponsored by individual provinces and the Canadian government, pursuant to section 38 of the Federal Unemployment Insurance Act of 1971. EBAP contracts have been signed with all provinces.

Established organizations, businesses, partnerships, corporations, federal/provincial/territorial/municipal government departments and agencies are eligible to propose or promote a project. Programs are created according to vocational skills and the industries involved have included mining, forestry, fishing, tourism and energy. The activities provided by a program must not replace existing jobs.

The British Columbia/Canada Employment Bridging Assistance Program (Forest) was created to allow forestry-dependent communities to retain skilled workers during periods of recession.

The federal contribution to project participants consists of unemployment insurance benefits, subject to a maximum of $240 per week per claimant. The maximum allowable amount payable by the Canada Employment and Immigration Commission (CEIC) for project overhead and administrative costs is $40 per claimant per week. Any assets purchased with CEIC funds, which have not been physically incorporated into the project, are sold and the revenue is applied to project costs.

The CEIC contribution is charged to the Special Response Feature Appropriation and is paid to sponsors in three installments. The cost of premiums for worker's compensation is also paid from this appropriation.

We verified that EBAP assistance is not limited to a specific industry, group of industries, or to companies in specific regions. Moreover, such programs have been created in many vocational areas. For these reasons, we determine that this program does not confer a subsidy.

d. *Canada/Nova Scotia and Canada/New Brunswick Forestry Subsidiary Agreements—Grants For Private Woodlot Owners.* The Canada/Nova Scotia and Canada/New Brunswick Forestry Subsidiary Agreements provide grants and technical assistance to private landowners to promote effective management of their forest resources and to support various silvicultural actitives. Producers of the products under investigation appear to have received grants under both of these programs.

We determine that these grants do not confer countervailable benefits because they are available to all private landowners and are not limited to a specific enterprise or industry, or group of enterprises or industries, or to companies in specific regions.

D. Provinicial Programs

1. Alberta—a. *Timber Salvage Incentive Program.* The Timber Salvage Incentive Program was created because of the need to harvest large amounts of timber damaged or destroyed by fire or insects. Alberta currently has an extremely high proportion of damaged timber due to three consecutive years of extensive forest fires. It is in the province's interest to have the timber harvested. If it is not harvested there is a danger that fire and disease will spread, thus impeding the government of Alberta's effective management of its forests.

The government instituted the Timber Salvage Incentive Program effective November 1, 1981 through October 31, 1983. The program provides an incentive of $34 per thousand board feet of timber produced from fire-killed and beetle-killed timber. These payments are available to all present and future timber harvesters.

Therefore, we determine that the Timber Salvage Incentive Program does not cover countervailable benefits because it is not limited to a specific enterprise or industry, group of enterprises or industries, or to companies in specific regions.

b. *Alberta Opportunity Company.* The Alberta Opportunity Company (AOC) is a provincial Crown corporation funded by the government of Alberta. We reviewed with company officials the annual reports and other records of AOC and found that a variety of industries in the manufacturing and service sectors received assistance from AOC and that the lumber and wood products producers received only a small percentage of the total assistance provided by AOC. Therefore, we determine that because AOC aid is not limited to a specific industry, group of industries, or to companies in specific regions, it is not countervailable.

2. *British Columbia—Section 88 Roads.* Under section 88 of BC's Forest Act, certain licensee expenditures for constructing approved roads on Crown lands are credited against total stumpage dues payable to the province. Such costs are beyond those considered to be normal operating costs of an efficient logger, which are taken into account in BC's stumpage appraisal system (described in the "British Columbia" section of Appendix B).

The Ministry of Forests grants section 88 road credits because section 88 roads serve to open up areas to recreationalists and other resource users, and are of higher standards than required by loggers. Licensee expenditures for these main access roads are not considered in the stumpage appraisal system. The companies who build the roads receive a credit against stumpage payments for the agreed-upon construction costs. Section 88 roads are under the jurisdiction of the Ministry of Forests, but licensees are responsible for maintaining them.

We determine that section 88 road credits do not confer a subsidy because these roads are build to higher standards than necessary for normal logging purposes and are open to and used by the general public.

3. *Ontario.* a. *Employment Development Fund.* The Employment Development Fund (EDF) was created in the spring of 1979 by an administrative action of the Cabinet of Ontario. The fund was designed to increase long-term investment and employment in the province through the provision of grants and loan guarantees to companies making investments that had the potential to create new jobs. Funding was generally limited to between $2,000 and $3,000 per job created where the new fixed asset investment was from 10 to 20 times the size of the grant. The EDF was terminated in January 1981, although committed disbursements were made through August 31, 1982. One grant was provided under this program to

producers of the products under investigation in 1979.

EDF funding was provided to a wide range of industries in Ontario and was not limited to a specific industry, group of industries, or to companies in specific regions. Therefore, we determine that the EDF did not confer a subsidy on the products under investigation.

b. *Non-Forestry Subsidiary Agreement Roads.* Under the Ontario Forest Management Agreements (described in detail in the "Ontario" section of Appendix B), the province reimburses companies building primary and secondary roads on Crown lands. These reimbursement provisions are separate from those included in the Canada-Ontario Forestry Subsidiary Agreement (FSA). (Federal/provincial FSA's and roads covered by them are discussed above in this section of the notice.)

These roads are open to the public and must be built to standards set by the province to accommodate other users, such as recreationalists and the mining industries. Reimbursement is on a per-mile basis, up to a set maximum construction cost established by the Ministry of Natural Resources. The companies are responsible for all maintenance.

We determine that assistance provided for road construction under Ontario's forest management agreements does not confer a subsidy because these roads are build to higher standards than necessary for normal logging purposes and are open to and used by the general public.

4. *Québec.*—a. *Caisse de Dépôt et Placement du Québec.* The Caisse de Dépôt et Placement du Québec (CDPQ) was established by an Act of the Assemblée Nationale of Québec in 1965. Under the trusteeship of the provincial Ministére des Finances and the Régie des Rentes of Québec, CDPQ manages several pension funds and insurance programs, namely:

- The universal auto insurance program against physical injury to persons;
- A specific insurance program for farmers;
- The universal pension plan for all citizens of Québec; and
- Specific pension plans for all Québec civil servants and construction workers.

CDPQ is prevented by law from acquiring more than 30 percent of any company's common stock, and from making funds available to companies on other than commercial terms. Indeed, CDPQ is compelled by law, as a fiduciary institution, to invest pension and insurance funds in order to achieve the best possible return on investment for the benefit of its annuitants.

We verified that CDPQ funds are invested over a broad spectrum of industries not only throughout Québec and Canada, but also on the international financial markets. Accordingly, we determine that none of the producers of the products under investigation received any countervailable benefits from CDPQ.

b. *FRI Industrial Incentives Fund for Small and Medium-Sized Businesses.* This program, which falls under the aegis of FRI (see the "Programs Determined to Confer Subsidies" section of this notice), was established to allow small and medium-sized firms to deposit one half of their income tax payable to the province into an escrow fund, from which they could withdraw funds equivalent to 25 percent of the cost of approved development projects (up to the amount of their deposit only). The program was discontinued in June, 1981.

We verified that producers in a wide range of industries in all regions of Québec participated in this program. Because the FRI Industrial Incentives Fund was not limited to a specific industry, group of industries, or to companies in specific regions, we determine that it did not confer subsidies on the products under investigation.

c. *Programme Expérimental de Création d'Emplois Communautaires.* The Programme Expérimental de Création d'Emplois Communautaries (PECEC), administered by the Office de Planification et de Développement du Québec (OPDQ), makes cash payments to entrepreneurs to assist them in maintaining and creating jobs for the chronically unemployed. A few producers of the products under investigation received grants under this program, as did producers in many other industries. We verified that the program was not limited to a specific industry, group of industries, or to companies in specific regions. Accordingly, we determine that this program does not confer subsidies on the products under investigation.

d. *PME-Innovation.* The PME-Innovation (PME-I) program, which was discontinued late in 1981, was administered by the Ministére de l'Industrie, du Commerce et du Tourisme of Québec. Its purpose was to assist small and medium-sized businesses ("petites et moyennes entreprises") in obtaining capital for investment in a production or marketing project. Under this program, one loan was made to a softwood lumber consortium. We verified that PME–I assistance was not limited to a specific enterprise or industry, group of enterprises or industries, or to companies in specific regions of the province of Québec. Therefore, we determine that the program does not confer a subsidy on the products under investigation.

e. *SDI Programs.* The Export Expansion Program administered by SDI is discussed in the "Programs Determined to Confer Subsidies" section of this notice. In addition, SDI manages a number of domestic programs of which producers of the products under investigation availed themselves. These programs fall under two headings: development grant programs and a loan and loan guarantee program, entitled "Financial Assistance to Manufacturing Firms."

(1) *Development Grant Programs.* Grants for SDI domestic development programs are in the form of cash reimbursements for interest costs accrued on a company's investment.

(a) Financial Assistance for High-Growth Firms. To be eligible for this program, a firm must be located and have its headquarters in Québec, and its growth and profitablity rates must equal or exceed the provincial average.

(b) Financial Assistance Program for Mergers and Acquisitions. Under this program, which was discontinued in the summer of 1982, SDI paid a percentage of the investment costs involving stocks or assets in an approved merger. Benefits paid under this program were sometimes combined with reductions in interest rates on loans bestowed under the program described in (2) below.

Under each of these programs, the overall maximum grant amount is a certain percentage of the investment cost. Grants are generally disbursed for five years in equal annual installments. Regardless of the authorized maximum, the annual disbursement can never exceed actual interest paid by the company in a given year.

We note that in our final affirmative countervailing duty determination on "Railcars from Canada" (48 F.R. 6569, February 14, 1983), we erroneously determined SDI's domestic programs to be countervailable on the basis that their availability only in Québec made them region-specific within the broader context of Canada. In fact, since it is a program of the GOQ and is generally available throughout Québec, it is not region-specific.

Further, we erroneously calculated the benefit by considering funds authorized instead of funds actually disbursed. The petition was withdrawn and the case terminated before we discovered these two errors. We have now calculated

that the correct subsidy in that case, after deduction of the improperly applied SDI "benefit" of the U.S. $173 per railcar, was actually U.S. $110,392 per railcar, instead of the U.S. $110,565 as set forth in the final determination (a reduction of 0.16 percent).

(2) Financial Assistance to Manufacturing Firms. Under this program, SDI makes loans and loan guarantees to profitable firms that prove they cannot obtain financing through normal channels. Since 1981, SDI has used a monthly composite of long-term commercial interest rates of the ten major lenders in Canada. We verified that SDI loans are made on terms not inconsistent with commercial considerations. Moreover, their availability is not limited to a specific industry, group of industries or to companies in specific regions.

Therefore, we conclude that the above SDI grant and loan programs do not confer subsidies within the meaning of the Act.

III. Programs Determined Not To Be Used

We determine that the following programs which were listed in the notice of "Initiation of Countervailing Duty Investigations" are not used by the manufacturers, producers, or exporters of the products subject to these investigations.

A. Federal Programs.

Enterprise Development Program—Loans. The Enterprise Development Program includes a component that provides loans to companies, as described in the "Programs Determined Not To Confer Subsidies" section of this notice. We found that no loans under the EDP were issued to producers of the products under investigation. We determine that this part of the EDP program was not used by producers of the products under investigation during the period for which we are measuring subsidization.

B. Federal/Provincial Programs

Canada/Nova Scotia Forestry Subsidiary Agreement—Grants. Subsidiary agreements for forest management could be negotiated under the GDA's. Forestry subsidiary agreements have been reached with seven provinces.

Under the Nova Scotia forestry subsidiary agreement, grants were provided to producers of the products under investigation under two components, the sawmill improvement component and the forest management component. The forest management component grants are discussed in the "Programs Determined Not to Confer Subsidies" section of this notice. The forestry subsidiary agreements with other provinces are discussed in other sections of this notice, as appropriate.

The sawmill improvement component of the Canada-Nova Scotia Forestry Subsidiary Agreement provided grants of up to $50,000 per mill to encourage the adoption of improved sawmilling technology, better safety and improved conditions. We found that the grants under this component were designed and used to offset the short-term operating expenses and the lower productivity associated with the installation of improved sawmilling technology and better safety and working conditions in the recipient mill.

Producers of the products under investigation received improvement grants between 1978–1981, but not in 1982. Because the grants were used to offset short-term operating expenses, we would allocate them to the year received. Because no grants were provided to producers of the products under investigation in 1982, we determine that this program was not used during the period for which we are measuring subsidization.

C. Provincial Programs

1. *Alberta—Inventory Financing.* The Alberta Inventory Financing program was administered by the Alberta Opportunity Company. Although the program was approved, there were no disbursements made under it, and the program is now longer in effect. Producers of the products under investigation did not use the program during the period for which we are measuring subsidization.

2. *British Columbia.–Market Development Assistance (MDA).* The MDA program is designed to benefit manufacturers of new, innovative products who are attempting to develop new export markets. Only two or three producers/exporters of the products under investigation have received support under this program, and all were assessing markets other than the United States. Therefore, we determine that this program was not used by producers/exporters for exports to the United States of the products under investigation during the period for which we are measuring subsidization.

3. *Québec—SDI—Financial Assistance Program to Advanced Techology Firms.* Financial Assistance to Advanced Technology Firms is one of the three domestic development grant programs administered by SDI (see the "Programs Determined Not To Confer Subsidies" section of this notice). To be eligible for assistance under this program, a firm must demonstrate higher-than-average productivity, and the individual investment for which the grant is awarded must be at least $50,000. Since the program's inception in 1974–75, producers of the products under investigation have not met these basic eligibility requirements, and we verified that none of these producers received funds under the program. We determine that this program was not used by any of the producers of the products under investigation during this period for which we are measuring subsidization.

Comments. The issues raised by the parties during of these investigations are discussed in detail in Appendix C to this notice.

Verification. In accordance with section 776(a) of the Act, we verified the data used in making our final determinations. During this verification, we followed normal procedures, including inspection of documents, discussions with government officials at the federal and provincial levels and on-site inspection of manufacturers' operations and records.

Administrative Procedures. The Department has afforded interested parties an opportunity to present oral views in accordance with its regulations (19 CFR 355.35). The only request for a public hearing was withdrawn. In accordance with the Department's regulations (19 CFR 355.34(a)), timely written views have been received and considered.

This notice is published pursuant to section 705(d) of the Act (19 U.S.C. 1671d(d)).

Lawrence J. Brady,

Assistant Secretary for Trade Administration.

Appendix A—Description of Products

The products covered by these investigations are described below:

The term *"softwood lumber"* covers those products included in the *Tariff Schedules of the United States (1982) (TSUS)* in items 202.03–202.30 (rough, dressed, or worked softwood lumber). Specifically excluded are drilled and treated lumber, wood siding, and edge-glued or end-glued wood not over 6 feet in length or over 15 inches in width. "Rough lumber" is lumber just as it comes from the saw, whether in its original sawed size or edged, resawn, crosscut, or trimmed to smaller sizes. "Dressed lumber" is lumber which has been dressed or surfaced by planing on at least one edge or face. "Worked lumber" is lumber which has been matched (tongue-and-grooved), shiplapped (rabbeted or lapped joint), or patterned on a matching machine, sticker, or molder.

2. The term *"softwood shakes and shingles"* refers to wood products most frequently made from red cedar, that are used for roofing or siding. "Softwood shakes" are

approved durable wood of random widths ranging from 4 inches to 14 inches which come in four types: hand-split and resawn, taper-split, straight-split and taper-sawn. "Softwood shingles" are tapered pieces of approved durable wood, sawed both sides, of random widths ranging from 3 inches to 14 inches and in lengths of 16 inches, 18 inches or 24 inches. For purposes of this investigation, the term "softwood shakes and shingles" refers only to those products designated in TSUS as item 200.65.

3. The term *"softwood fence"* refers to three types of fences: picket, stockade, and rail. Picket fences are made of wood pickets nailed to horizontal back rails which are fastened to the supporting posts. The pickets vary in length and thickness, lengths range from 24" to 92", and thickness varies from ½" to 3". The species of wood used in picket fences is usually cedar for the posts and conifers or softwoods for the backrails and pickets. Rail fences consist of line posts and horizontal rails. Cedar is generally used for the line posts and cedar or conifers or northern softwood are used for the rails. Stockade fences vary in height from 3 feet to 10 feet. Widths are usually 7 feet or 8 feet. Line posts are generally cedar, and stockade sections are made from northern softwoods. This investigation covers softwood fences both assembled and unassembled, which fall under TSUS item 200.75.

Appendix B—Provincial stumpage

Provincial Crown lands account for 81 percent of the productive forest lands in Canada. Under the terms of the Canadian Constitution, provincial crown lands fall under the jurisdiction of the provincial governments which are exclusively responsible for the management and administration of the forests on these lands.

Alberta

Background

Approximately two thirds of Alberta is covered by forests, almost all of which are owned by the provincial government. Most of the forested area is inaccessible, and logging can only be carried out during winter when the ground is frozen. According to the provincial government, cold-weather logging increases timber harvesting costs. Managed by the Alberta Forest Service under a long-term sustained yield policy, the forests are divided into forest management units which are allocated under the stumpage allocation arrangements described below. Only 60 percent of the annual allowable cut (AAC) has been allotted under the stumpage allocation arrangements, because supply exceeds demand. Any company, including foreign companies, registered in Alberta or Canada can be awarded stumpage rights under the various allocation arrangements.

Softwood lumber is the only product under investigation manufactured in Alberta. Lumber accounted for 61.7 percent by volume of the coniferous round timber harvested in 1981. Plywood accounted for 8.9 percent pulpwood 25.9 percent.

Stumpage Allocation Arrangements

There are five stumpage allocation arrangements in Alberta:

- Forest Management Agreement (FMA);
- Timber or Coniferous Quota Certificate (Quota);
- Commercial Timber Permit (CTP);
- Local Timber Permits; and
- Forest Products Tags.

FMA's and Quotas are 20-year allocations, while the CTP's can range from one to five years, and Local Timber Permits and Forest Products Tags are limited to terms of one year or less. The rights to cut standing timber under any of these allocation arrangements do not vary by the type of product that will be manufactured from the stumpage, but they do vary by type of allocation arrangement.

These arrangements can cover both coniferous and deciduous timber; however different requirements and dues rates are specified for each type of timber. Under all the allocation arrangements, the Forest Service retains primary responsibility for fire prevention and suppression, as well as for insect and disease control.

Forest Management Agreement

Currently, there are six Forest Management Agreements (FMA's) outstanding which account for 35.8 percent of the total net coniferous AAC. The term of each FMA is 20 years with renewal rights for an additional 20 years. The procedure for acquiring stumpage rights through an FMA is as follows.

The Forest Service advertises a development area and invites proposals for one year. The proposals are analyzed by the Forest Service and public hearings are held, after which the successful proponent is selected by the government. After selection, the actual agreement is negotiated and approved by the Cabinet through an Order-in-Council.

The government's intent in allocating timber under an FMA is good use and development of the resource under a long-term sustained yield policy. In order to achieve this, the company holding an FMA is required to develop a management plan to ensure sustained yield, and to develop inventory studies, conduct reforestation and regeneration, conduct ongoing silviculture, build roads, and make a performance guarantee ranging from $25,000 to $2,000,000 in the development area.

In addition to undertaking these responsibilities, the company must pay stumpage dues on the sawlogs harvested. All FMA holders except one pay the regulation rate of dues set forth in the Timber Management Regulations of the Forest Act of 1971 (one company negotiated a lower rate of dues in view of the inferior quality of the timber and the need for special equipment). The Regulatons state that the General Rate of Crown Dues on green coniferous timber suitable for lumber manufacture is $0.70 per cubic meter. Holders must also pay annual holding and protection charges which cover ground rent and protection costs.

Under the FMA's the provincial government must approve the management plan and the ACC in accordance with Timber Management Regulations.

Timber Quota Certificates

The quota certificate (Quota) is a long-term right to harvest a share of the AAC of a forest management unit. Implemented in 1966, the Quota system replaced the short-term competitive bid system. Currently, the Quota system accounts for 19.9 percent of the total net coniferous AAC. The purpose of the Quota system was threefold:

1. to eliminate abuses inherent in the bid system, such as speculation resulting in timber being held and not cut;
2. to ensure that a fair price would be paid and that timber would be cut; and
3. to provide timber operators with a long-term secure stumpage supply in order to encourage industry to make capital investments in the area.

In 1966, quotas were granted to all established timber operators for up to 20 years based on each operator's average production from 1960 through 1964. Most quotas issued since 1966 have been sold competitively.

The 20-year term of the Quota is divided into five-year periods. At the end of every five-year period, a Quota holder is subject to penalties, including revocation of the Quota, if the amount of timber harvested is not within ten percent of the total of the AAC's for the five-year period.

In order to cut the timber authorized in the Quota, a holder must obtain a Timber License and submit, for Forest Service approval, an annual operating plan for the Timber License. The Quota holder is also responsible for regeneration and reforestation, as well as for road construction and silviculture.

Stumpage dues paid by the Quota holder are determined through an appraisal formula which modifies the regulation rate of dues according to logging conditions. The appraisal factor is based on four elements and is fixed for five years:

1. Average haul distance to nearest usable trackage point;
2. Average gross volume per harvestable [illegible];
3. Average gross volume per tree; and
4. Average cull as a percentage of gross volume.

Timber Management Regulations provide that the minimum rate of dues under the Quota system, after taking into account the appraisal factor, cannot be less than 25 percent of the regulation rate. The appraisal system takes into account the quality and accessibility of timber. Quota holders must also pay annual holding and protection charges.

Under the Quota system, the Forest Service is responsible for the sustained yield management plan. The Forest Service lays out the cutting sequence and selects the areas to be logged.

Commercial Timber Permit

The Commercial Timber Permits (CTP's) are short-term (one to five years with an average of two to three years) arrangements which are sold at public auction to the highest bidder except when issued to Quota holders for the salvage of dead or damaged timber. Only 2.4 percent of the total net coniferous AAC is allotted under CTP's. Generally, to obtain a CTP the permittee must own or operate a mill within the area

and must not hold any other active stumpage arrangement.

The bidding process for a CTP determines the actual amount of dues to be paid. The minimum starting bid equals the regulation rate of dues plus the appraisal factor which can be a positive or negative number. This starting bid becomes the upset price which is added to the highest bid rate in order to establish the rate of dues to be paid. In addition to dues, the CTP holder must deposit a performance guarantee, pay a reforestation levy, and pay holding and protection charges.

As with the Quota system, CTP holders must submit an annual operating plan for Forest Service approval. Under a CTP, the Forest Service is responsible for selection of the stands to be cut, silviculture and reforestation (the company pays a reforestation levy).

The CTP differs from a Quota in that the CTP represents the right to cut standing timber, while the Quota grants the right to a certain share of the AAC. As such, while the "value" of the stumpage forms the basis of the bid price for a CTP, the Quota cannot be based on the "value" of the stumpage, since the share of AAC provided under the Quota varies in accordance with the changes in the AAC.

Local Timber Permit (LTP)

Issued for a term of one year or less, the LTP authorizes logging for the permittee's own use or to supplement his income by selling logs to local mills. LTP's account for 1.5 percent of the total net coniferous AAC. LTP's are issued on a first-come, first-served basis unless demand is high, in which case they are issued by draw.

The dues charged are the regulation rate in effect at the time the LTP is issued. Permittees are exempt from cruising, holding and protection charges, and only pay a reforestation levy if the volume harvested is over 130 cubic meters.

Forest Products Tag (Tree Tag)

Tree Tags are 30-day authorizations to cut timber for personal use or for small volumes of Christmas trees, firewood and fenceposts. Tree tags are non-renewable and non-refundable. The holder pays the regulation rate of dues, but no other charges. The percentage of AAC allocated under Tree Tags is negligible.

British Columbia

Background

The Forest Act lists seven different forest tenure arrangements available in British Columbia: Tree Farm Licenses, Forest Licenses, Timber Sale Licenses (Major), Timber Sale Licenses (Minor), Timber Sales, Pulpwood Agreements and Woodlot Licenses. Annual rents represent a charge for reserving the use of the resources under license.

On request or independently, the Minister of Forests may advertise and invite applications for licenses. A license may not be entered into unless there has been an advertisement and a public hearing has been held on all applications.

In addition, the province must evaluate the proposal in terms of its objectives, including revenues, management and use, environmental issues, and social benefits such as increased employment. Stumpage rights can be awarded to non-Canadian persons and/or companies doing business in British Columbia. However, a non-Canadian company must register in British Columbia before acquiring the license.

The tenure agreements are described in detail below:

1. *Tree Farm License.* A tree farm license shall:

(a) Be for a term of 25 years, and can be revised at each succeeding ten-year anniversary under an "evergreen arrangement" which initiates a new 25-year replacement license with revised conditions;

(b) Describe a tree farm license area composed of Crown land and private tenures;

(c) Require its holder to pay to the Crown stumpage or royalty, in additon to a bonus bid (which is fully paid when the license is issued);

(d) Require its holder to submit for the approval of the Chief Forester, once every five years, a management and working plan prepared by a registered professional forester;

(e) Grant to its holder the exclusive right to harvest timber (chosen by the licensee) from the tree farm license area during the term of the license;

(f) Provide for cutting permits to be issued by the Crown to its holder authorizing the AAC (determined by the Chief Forester) to be harvested from specific areas in the tree farm license area within plus or minus 50 percent on a yearly basis and within plus or minus ten percent on a five-year basis, subject to a penalty assessment;

(g) Require that each year during its term a volume of timber chosen by the licensee shall be harvested by persons under contract with its holder; and

(h) Reserve to the Crown the right to enter into a free use permit on the tree farm license area with a person other than the holder of the tree farm license.

A tree farm license cutting permit authorizes timber harvesting operations on a specific portion of the tree farm license area. It provides for the determination of stumpage rates payable through an appraisal system established under section 84 of the Forest Act and for periodic rate adjustments based on changes in the average market value of the logs or lumber products. Separate permits are issued for operations on different geographic parts of the license, where separate stumpage rate determinations are appropriate or where different cutting permit conditions are needed.

Tree farm licenses account for 28.6 percent of the Province's total AAC.

2. *Forest Licenses (formerly Timber Sale Harvesting Licenses).* The timber sale harvesting license was a license to harvest timber within a public sustained yield unit at a stipulated annual rate. These licenses, granted under the former Forest Act, were not replaced by forest licenses until the latter part of 1982. We verified that the timber sale harvesting licenses in effect during the period for which we are measuring subsidization are very similar to the forest license explained below.

A forest license:

(a) Shall be for a term not exceeding 20 years, and can be revised at each succeeding five-year anniversary under an "evergreen arrangement," which initiates a new five-year replacement license with revised conditions;

(b) Shall describe a public sustained yield unit of a timber supply area within which timber may be harvested;

(c) Shall specify an AAC (determined by the Chief Forester) that may be harvested under the license from specific areas of land, subject to annual and five-year cut control provisions;

(d) Shall require its holder to pay to the Crown stumpage and a bonus, if any, in the amount offered in the application;

(e) Shall require its holder to submit, for the approval of the regional manager, a management and working plan prepared by a professional forester;

(f) Shall require that if the allowable annual cut of the timber supply area declines, the licensees must accept proportional reduction in harvesting rates without compensation; and

(g) May make provisions for timber to be harvested by persons under contract with its holder.

A forest license cutting permit is indentical to the tree farm license cutting permit.

Forest licenses account for 61 percent of the Province's total AAC.

3. *Timber Sale Licenses (Major).* The timber sale licenses (major) generally have the same requirements as the new "forest licenses." The award of a new timber sale license (major) is by the appropriate Regional Manager or District Manager. The Forest Act requires the award be made to the applicant submitting the highest bonus bid.

This license is used in circumstances where an evergreen replacement feature would not be appropriate; for example, a situation where an ongoing supply of timber is not expected (because of a flood, a fire, or an insect infestation), but where the volume comprises part of the approved AAC and a limit is therefore imposed on the rate of harvesting.

A timber sale license (major):

(a) Shall be for a term not exceeding ten years; there is no provision for replacement, but rights are renewable pursuant to section 18(5);

(b) Shall describe an area of land within which Crown timber may be harvested;

(c) May specify an AAC (determined by the Forest Service) that its holder is eligible to harvest, subject to annual and five-year cut control provisions;

(d) May provide for cutting permits to be issued by the Crown to its holder to authorize an AAC to be harvested, within the limits provided in the license;

(e) Shall require its holder to pay to the Crown stumpage and a bonus, if any, in the amount bid; and

(f) Shall require its holder to submit, for the approval of the Chief Forester, a management and working plan prepared by a registered professional forester.

Timber sale licenses (major) account for 1.3 percent of the Province's total AAC.

4. *Timber Sale Licenses (Minor).* The award of a timber sale license (minor) is made by the appropriate Regional or District Manager of the Forest Service to the highest bidder.

This license is used for sales of timber under the small business enterprise program and in other instances where the volume of timber is not sufficient to warrant delegation of major forest management responsibilities for investments.

A timber sale license (minor):

(a) Shall be granted through a competitive bid process which determines the total amount of stumpage dues payable (although the appraisal system determines the base rate of stumpage due, adjusted monthly and subject to annual reappraisal);

(b) Shall be for a term from one to three years, without provision for replacement;

(c) Shall allow the license to cut the timber, within site-specific areas, at any rate within the terms of the license and the periodic cut control requirements; and

(d) Requires small business enterprises without timber processing facilities to sell all harvested logs, and small business enterprises with timber processing facilities to process a pre-specified portion of the logs harvested.

Timber sale licenses (minor) account for 7.2 percent of the province's total AAC.

5. A *pulpwood agreement* shall:

(a) Be for a term not exceeding 25 years, with "evergreen replacement" at ten-year intervals;

(b) Describe an area of land as a pulpwood area; and

(c) Require its holder to construct, expand or continue a timber processing facility in accordance with his application.

In 1981 and 1982 there were no mills which acquired stumpage rights under a pulpwood agreement.

6. A *woodlot license* shall:

(a) Be for a term not exceeding 15 years, with an "evergreen replacement" at five-year intervals with satisfactory performance;

(b) Describe a woodlot license area determined by the regional manager or district manager to be composed of private land and not more than 400 hectares of Crown land;

(c) Give to its holder the exclusive right to harvest timber on the Crown land for its term subject to five-year cut control provisions (determined by the Forest Service);

(d) Require its holder to pay to the Crown stumpage in respect of timber harvested from land and a bonus bid, if any, in the amount tendered; and

(e) Provide for cutting permits to be issued to its holder to authorize timber to be harvested from specific areas in the woodlot license area.

Woodlot licenses account for 0.7 percent of the province's total AAC; however, there have been no woodlot licenses offered to date.

7. A *timber license* shall:

(a) Describe an area of Crown land over which it is to apply;

(b) (When in a tree farm license area) be for a term that expires with the tree farm license, and (when not in a tree farm license area) be for terms based on a required schedule for the continued orderly logging of all the timber licenses held by the licensee;

(c) Grant to its holder the exclusive right during its term to harvest all merchantable timber in the area of Crown land;

(d) Where the timber license is in a tree farm license area, require its holder to harvest timber in accordance with the tree farm license and the management and working plan approved under it;

(e) Where a timber license is not in a tree farm license area, require its holder to submit an operating plan prepared by a professional forester, which is used by the Forest Service to determine the AAC;

(f) Provide for cutting permits to be issued by the Crown to its holder authorizing timber to be harvested from specific areas of land described in the timber license;

(g) Require its holder to pay to the Crown stumpage or royalty; and

(h) Requires its holder to carry out reforestation or other treatment for the re-establishment of the forest on the land described in the timber license.

Timber licenses comprise approximately five percent of harvest, but are not subject to any allowable cut restrictions. There have been no new timber licenses offered, and the Forest Act does not provide for any to be offered in the future.

Stumpage prices for all forest tenure agreements in the six forest regions of British Columbia are based on the residual value method. This method takes into account three components: The selling price of the end product (logs), allowances for production and operating costs, and allowances for profit and risk. The stumpage price is subject to monthly adjustments based on selling price fluctuations and an annual reappraisal. Licensees pay at the adjusted rate in effect for each species during the month the timber was scaled. Charges due are payable upon receipt, with interest due after 30 days, at prime plus one percent. The Ministry of Forests of the British Columbia provincial government is responsible for fee collection.

Due to the type and quality of trees in British Columbia, there are two appraisal systems in operation. The coastal appraisal system emphasizes quality and the interior appraisal system emphasizes quantity.

A. *Coastal British Columbia Appraisal System.—Sales Value of End Products.* Coastal appraisals are based on log prices. Three-month rolling average prices for each species are established monthly by log grades from a monthly survey of domestic log sales representing arm's length transactions. Coastal appraisals are based on log prices, which vary by species and grade within each species.

Production and Operating Costs. Logging costs account for all costs of development, harvesting, transportation, contractual obligations, administration and tenure agreement responsibilities. The "average efficient operator" concept is used by the Ministry for appraisal purposes. Costs are derived from industry experience (as determined from annual surveys) to estimate what costs would be incurred by an efficient operator in harvesting timber and the expected recovery value of that timber in terms of revenue. In the appraisal, logs are assumed to be transported to the point which would result in the highest total stumpage price. No consideration is given to the location of the purchaser's mill.

Profit and Risk. The six risk factors included in the stumpage appraisal are: market, defect, investment, pioneering, incentive and chance. The ranges of values assigned to each of the risk factors are incorporated in the appraisal manuals. The values assigned differ from year-to-year depending on changing market, log quality and logging difficulty.

Minimum Stumpage Prices. This is the lowest price at which the government would sell its timber resource. The minimum rate is used whenever the appraised rate falls below the minimum rate, and there is no compensation provision.

"Timber quality is determined at the time of the timber cruise, by a determination of percentage of log grades for each species." Log quality influences the logging cost estimate in the appraisal.

B. *Interior British Columbia Appraisal System for Lumber.—Sales Value of End Products.* In the interior, the appraisal system is based on the end value of lumber and by-product pulp chips. Three-month rolling averages are established monthly from lumber sales in the five interior selling price zones, based on sales f.o.b. mill, consummated in each of these zones. Approximately 80 mills report monthly lumber sales transactions, which are audited by the Ministry of Forests. These prices are single averages for each of the species by zone.

Lumber selling prices are in dollars per thousand board feet and standing timber is cruised (measured) for appraisal purposes in cubic meters. A "lumber recovery factor" is used to convert cubic measures of timber into the value of the end product. By-product pulp chip prices are set around $10 per bone-dry unit. The government contends that the introduction of an actual chip value would not have a significant effect on stumpage fees.

Stud producers and small operators (those having annual production less than 3775 cubic meters) are separately classed. Although the appraisal system is identical in structure for all categories, product prices, operating practices and costs which are pertinent to these groups are taken into consideration in the appraisal.

Production and Operating Costs. Manufacturing costs are required for interior appraisals, where lumber and by-product chips are the appraisal products, rather than logs, as is the case on the coast. The manufacturing costs are obtained from an annual survey of about 55 sawmills deemed to represent the efficient segment of the industry. Separate zonal milling costs have been established for the Prince George-Quesnel and Ft. Nelson areas (two isolated milling centers north of Ft. Saint James) and the remainder of the interior of the province. A second survey is made for stud-producing mills.

Profit and Risk. The same method is used as in the coastal appraisal system, supra.

Minimum Stumpage Prices. Interior statutory minimum stumpage rates are established for each species at three percent of the selling price of lumber and by-product pulp chips. The statutory minimum rate may be reduced to 0.75 percent for salvage timber. Timber is cruised and classified according to species, size, and visual defect.

Adjustments to Stumpage

A. *Stumpage Price Adjustment Method.* The stumpage price of any species will change at the beginning of each month: provided the selling price of lumber (interior) of that species departs $5.00 per MBF (thousand board feet) or more from the selling price last used to determine the existing stumpage price; or, whenever the selling price of logs (coast) of that species departs by $1.00 per cubic meter or more from the selling price last used to determine the existing stumpage price. The entire difference in the selling price is used in the recalculation of the stumpage price adjustment.

B. *Annual Stumpage Price Reappraisal.* A full reappraisal, allowing for changes to product prices, logging costs, milling costs and profit ratio, is made annually at the anniversary date of the contract or cutting permit. Again, the entire difference in the selling price is used in the recalculation of the stumpage price adjustment.

C. *Credits to Stumpage.* Section 88 of the Forest Act stipulates that licensee expenditures for the construction of a logging access road, or the application of reforestation or other silvicultural treatment on Crown land, not considered in the stumpage appraisal system, shall be credited against total stumpage payable. The stumpage appraisal system makes allowances for estimated costs for the construction of roads essential to the actual cutting and removal of timber from the licensed cutting permit area, and for the performance of basic silviculture treatments required under the license agreement. These cost components (estimated cost allowances in the appraisal) are considered to be normal operating costs of an efficient logger and any costs exceeding the allowance given in the stumpage appraisal must be absorbed by the permittee. The work must be agreed upon, approved in advance, and completed to the satisfaction of the BC regional forest manager.

Manitoba

Background

Manitoba is a farm-oriented province with its timber resources in the north. Most of its timber (89 percent) is not very large (10" or less in diameter). Forest harvesting operations are small and include a fair proportion of part-time operators.

Stumpage Rights and Payments

Prior to 1965, timber rights were allocated through a competitive process, by auction or sealed tender, for one to five years. In 1965, the Timber Quota System was introduced. This system provided long-term (15 years) fixed allocations to established operators at set (regulation) stumpage rates. Surplus timber was advertised and sold competitively.

The Timber Quota System was revised in 1980 to continue for another ten years. Stumpage rates were increased and set to be revised annually thereafter according to the national forest product price indices for lumber and paper and pulp companies, weighted as they are produced in Manitoba.

Uncommitted surplus timber is either offered for sale at established stumpage rates plus a lump sum bid, or available for development and allocation on a negotiable basis for companies with sufficient capital to undertake the commitments involved.

Cutting rights for Manitoba Crown timber are allocated by the Forestry Branch, and are classified as "major" or "minor." "Minor" allocations are based on volume and area where mature timber is ready for harvest. They run for a 10-year period, renewable depending on performance of the licensee. Prices are based on regulation rates (mentioned above), reviewed and indexed annually to reflect product price increases. Prices also reflect location of timber relative to mill and distance of mill from market.

For "major" licenses an initial rate is negotiated at the start of the contract (contracts run for 20 years with a renew option). The initial rate takes into account geography, timber supply and demand, and basic (regulation) stumpage rates. Prices are adjusted according to dates and indices specified in each contract.

The province of Manitoba is responsible for timberland management and silviculture. One Forest Management License company does its own silviculture but is reimbursed for its expenditures. All licensees use public roads, but are responsible for all cost of timber extraction roads. Manitoba is responsible for forest fire protection, but licensees must have a fire protection plan for initial fire suppression within their area. Additionally, licensees are held responsible for the cost of fire suppression in instances where it is demonstrated that a fire resulted from company negligence.

New Brunswick

Background

The three categories of ownership of timberland in New Brunswick are: the province (Crown lands—48.5 percent), the "forest industry" (industrial holdings—21.0 percent), and individual (non-industrial—30.5 percent).

The products under investigation are all manufactured from the primary product, softwood logs. Over half of these logs have come from the private sector during the past five years. The actual breakdown is: Crown lands, 46.6 percent; company-owned lands, 30.4 percent; and private lands, 23.0 percent.

New Brunswick has no surplus timber to allocate to new plants or for expansion. The current annual supply of softwood species is 7.6 million cubic meters. This accounts for 80 percent of the industrial timber requirement for softwood species. Of the 7.6 million cubic meters harvested, only 5.5 million cubic meters are reforested naturally. The deficiency is made up by silviculture inputs.

The province has undergone a major restructuring of its forest management policy. The change was instituted in March 1982. The purpose of the change was to effect the organizational structure of the licensing system. The previous 85 licensees were divided into 6 licensees and 79 sub-licensees which were issued 10 licenses and 105 sub-licenses, respectively.

Stumpage Allocation under Old System

Stumpage rights were allocated by area-based licenses under the old system. The issuance varied from 1 to 50 years and 250 to 450,000 hectares. The licenses were renewable upon satisfactory review. The differences in the licenses were a result of fluctuating supply and applicant's demand.

The licensee was responsible for operational costs, including operational cruising, inventories, and some management planning. The province retained overall responsibility for forest management, including silviculture and reforestation. Areas of dual responsibility were pest control and, through the application of a fee, fire protection. Road construction and maintenance were the responsibility of the licensee.

Stumpage Allocation under New System

Under the new system, there is a license and sub-license classification. The license is area-based and conveys responsibility for many of the duties previously carried out by the province. The sub-license is volume-based, and is issued to parties either not wanting to carry out, or incapable of carrying out, the forest management duties.

The license is a 25-year renewable license, with five-year reviews. The licensee must submit a 25-year forest management plan and is responsible for forest management. This includes: Road construction and maintenance planning; inventory and records; specified silviculture; boundary lines maintenance; management activities, including sub-license obligations; fire protection of harvest operation; submission of management plans for private lands; and payment of stumpage royalties.

The sub-license is issued for five years and is renewable depending upon satisfactory performance. The sub-licensee must submit a ten-year operating plan and must maintain and operate a processing plant as specified in the plan. Other responsibilities include submission of a plan for private lands, cooperation with the licensee and payment for his services, and payment of royalty on stumpage harvested.

Newfoundland

Background

The sawmill industry in Newfoundland is very small and the great majority of sawmills is not mechanized. Newfoundland's only lumber exports are approximately 100 MBF/yr. of dunnage, which is rough-sawn softwood lumber used for blocking (i.e., as packing material) in shipments of rolls of newsprint. This production is only about 0.19 percent of the total harvest or two percent of the total lumber production.

Stumpage Rights and Payments

Stumpage rights are allocated on the basis of an annual permit, which is renewable. A sawmill permit costs $20, and a cutting permit

costs $10. A sawmill applies to the Province for stumpage rights, specifying the volume and location of timber required (in accordance with established regulations). Rights are granted depending on availability of timber and previous performance of the applicant. Anyone is eligible to apply.

Stumpage fees are paid to the Department of Forest Resources and Lands on the basis of harvested volume, currently $7 per MBF. The price is set legislatively and, as of January 1983, is indexed annually to the implicit price index of government goods and services and selling price index of lumber. The price is lower in designated salvage areas, or higher where government-built roads are used for harvesting sawlogs (see below). No stumpage is sold through competitive sale.

The government assumes responsibility for the construction of main roads, as well as for forest management, silviculture, fire and disease protection, etc. The roads become public upon their completion with unrestricted access. Where these roads are used for harvesting sawlogs, the stumpage rate is 40 percent higher than in areas where the operator provides his own access.

Stumpage and tenure rights differ for pulpwood, but the same formula is used for setting stumpage rates for both pulpwood and lumber.

Nova Scotia

Background

Nova Scotia is the second smallest province in Canada. About 25 percent of all forested area is Crown land. Average annual harvest for the province over the last five years has been slightly in excess of 3.3 million cubic meters of softwood timber. The sawmilling industry is of the small, local variety. About 73 percent of the annual harvest is used in the production of pulp and paper; 27 percent is used for sawlogs.

Stumpage Rights and Payments

Prior to 1970, Crown timber was allocated by means of long-term licenses (40 years or more). Under such licenses, mills have the right to harvest standing timber within certain defined areas, up to annual allowable limits set by the provincial government. Pulp and paper companies were the only applicants for these licenses. Although no long-term licenses have been issued since 1970, the province may issue new ones.

Under these licenses, the province is responsible for fire prevention and suppression, as well as insect and disease protection (although licensees share the cost of the latter). Licensees perform silviculture, regeneration, and reforestation, and build roads. They are reimbursed for forest management work at rates set by the province, based on known industry and past departmental costs for such work. Stumpage rates are negotiated between the province and the licensee, and reflect the quality and accessibility of the timber involved. The timber harvested must be used in the mill(s) operated by the licensee, unless otherwise approved by the Ministry.

Durign the 1970's, the province inaugurated shorter-term licenses to harvest Crown timber. These licenses run for ten years (with an option to renew for ten years), and the province retains forest management responsibilities. the licensees pay for road construction and maintenance, and for the preparation of management plans.

Base softwood stumpage rates are determined by the province when the license is issued, taking into account tender sales prices in the area and the rate accorded under similar agreements elsewhere in the province. Provisions for regular review and adjustment are included in the agreements; adjustments are based on an indexing mechanism which relates to the market price for softwood lumber of various sizes. The Nova Scotia government responds to applications for license agreements on a "first-come first-served" basis. One agreement was awarded in 1981, and one in 1982. All stumpage fees are collected by the Nova Scotia Department of Lands and Forests.

In addition to long-and shorter-term licenses, the province disposes of small lots of sawlogs by public tender, either as standing timber or as logs piled at road side. These sales involve a small amount of timber, with the volume and location set by the province. Prices are established under a competitive bidding system, with an upset price based on the knowledge of prevailing rates in the area.

Ontario

Licensing System

The primary type of timber cutting license in Ontario traditionally has been the Order-in-Council License (OCL). OCL's were introduced in the 1920's to accommodate the timber needs of scattered pulp and paper mills in northern Ontario. During the 1940's and 1950's, sawmill operators began using the system, first for salvage operations and then increasingly for undamaged timber. Technological advances during the 1960's and 1970's led to higher volume demand by sawmill operators, until most of the available yield in the province's forest land was alloted.

OCL's are being replaced gradually by Forest Management Agreements (FMA), which cover large areas and convey many forest management responsibilities to the licensee. Other types of licenses in Ontario are Salvage Licenses, which permit expedient harvesting of damaged timber; District Cutting Licenses, which are issued primarily to individuals; and a few competitively bid Sale Licenses, which are awarded to the highest tendered bidder in small areas of high demand.

To acquire stumpage rights on Crown lands in Ontario, an applicant must be incorporated to carry on timber harvesting activities in the province, or own and operate a mill, or have a contract to supply wood to a mill. Stumpage licenses are managed by the Ministry of Natural Resources of Ontario.

Ontario identifies 12 criteria used by the Ministry to evaluate license applications. These fall under three paramount factors, which are timber and land characteristics, viability of the applicant, and impact on the provincial economy. The province usually re-issues licenses to companies already operating mills in a given area.

In Ontario, the Crown approves management and operating plans which specify the volume to be cut annually on each license. These plans also allow provincial direction of all forest management activities. The extent to which the province also performs these activities depends on the license type or the amount of area which has been licensed to one company within a management unit. The Ministry has divided the provincially owned forest into Crown or Company Management Units to administer its forest management policies.

Stumpage rights in Ontario are granted under equal terms to Canadian and non-Canadian companies, although exports of logs are banned by the province. A study in 1972 indicated that approximately 40 percent of the total area under license was granted to non-Canadian controlled companies, and the province estimates that this percentage is still accurate.

Payment for Stumpage

The payment system for stumpage in Ontario is also managed by the Ministry of Natural Resources, which maintains procedures for wood measurement and financial services. Stumpage fees consist of an area charge, Crown dues, a bonus price, and, in the case of sale licenses, a tendered bid. Interest is charged at one percent per month for all overdue stumpage payments.

The area charge in Ontario is rent for ground used and is not related to the volume of timber cut. It is designed to cover fire protection and other management costs. The charge is uniform and increases by 10 percent a year; it is currently $60.60 per square mile.

Crown dues cover most of the total stumpage fees. They are calculated pursuant to the regulations of the Crown Timber Act of 1980, broken down into major species and product categories, which take into account differences in species and products manufacturered from the timber. Ontario states that the dues are designed to provide a fair return to the province and are based on past provincial costs to maintain, improve, and regenerate the resource.

The Crown Timber Act specifies two sets of Crown dues. The first set, with a bonus price added on, is used as a minimum price for the competitively bid sale licenses and also applies to district cutting licenses. The second set applies to OCL's and FMA's.

Regulation 234 of the Crown Timber Act sets out the schedule for the two sets of Crown dues. The second set of dues consists of a base rate which is adjusted in proportion to one of four six-month, rolling-average Commodity Selling Price Indices produced by Statistics Canada, a federal agency. The base rate for non-integrated producers is set at 90 percent of the base rate for integrated producers. The rates were set in July, 1978 based on the old Crown dues, which were also set administratively. The rolling average is updated quarterly, so the second set of Crown dues change with it on a quarterly basis. The first set of Crown dues is not indexed and is reset by the province on an annual basis.

The bonus price is a negotiated payment in addition to Crown dues. It is expected to take

into account material differences in the location and quality of stumpage obtained by a firm. It is updated much less frequently than Crown dues, ranging in review period from one to five years depending on the license type.

Order-in-Council Licenses

Order-in-Council Licenses, originating in the 1920's, are still the most widespread vehicle for stumpage allocation in Ontario. OCL's currently cover 74 percent of timber area under license and represent 83 percent of licenses in issuance. 398 OCL's are outstanding, but most are expected to be phased out in favor of Forest Management Agreements during the 1980's.

The duration and the area of coverage of OCL's vary widely and are at the discretion of the Ministry of Natural Resources. Other terms and conditions of OCL's are negotiated, but they tend to be consistent from one license to the next. Renewals are permitted on OCL's only to complete the harvesting intended for the original term. OCL's may be transferred, but not for the profit of the original licensee.

Forest management activities under OCL's are managed by the Crown through the negotiation of long-term and annual operating and management plans, paid for by the companies. Normally, the province supervises the harvesting and is responsible for the renewal and improvement of the forest. Fire prevention and insect and disease protection are also largely performed by the Crown. Some forest management activities may be performed by the company, with reimbursement by the Crown at administrative rates based on past provincial costs. All roads are constructed and maintained by the companies at their expense.

Stumpage fees for OCL's consist of the basic Crown dues and the negotiated bonus price. The bonus price is reviewed every three years, unless otherwise specified in the license.

Forest Management Agreements

After all softwood in Ontario became fully committed in the 1960's, the province made plans to intensify forest management. Such extensive improvements were needed that major responsibilities had to be assigned to timber licensees. Thus, FMA's were developed to replace existing licenses.

Currently these agreements have been reached primarily with pulp and paper manufacturers, but anyone is eligible to apply for stumpage rights under an FMA. The province expects to extend FMA coverage to all Crown forest areas over the next 10 years.

FMA holders perform various forest management activities at reimbursement rates identical to those described above, under OCL's. Unlike OCL holders, these licensees are also reimbursed for the costs of building primary and secondary roads, up to a set maximum. The province requires public access for these roads and dictates the standards to which they are built. FMA holders pay for other roads and pay maintenance costs for all their roads, as do OCL holders. FMA holders fund the preparation of four types of management plans for their operation: a 20-year management plan, a five-year operating plan, annual cutting plans and annual silvicultural plans.

Stumpage fees under FMA's consist of Crown dues and the negotiated bonus price. The bonus price is reviewed at five-year intervals only.

Other Licenses

Ontario issues Salvage Licenses to hasten harvesting of damaged timber. Fifty Salvage Licenses are outstanding, covering less than one percent of the total area under license. They are issued normally for one-year periods and generally convey no management responsibilities to the license. Stumpage fees are negotiated and may be less than the applicable Crown dues.

District Cutting Licenses are issued in Ontario to cover very small areas for one year. Roughly 20,000 of these licenses are issued annually to individual or small commercial operators. The total area under these licenses is less than one percent of the area under license.

Forest management responsibilities under District Cutting Licenses are retained by the Crown. Stumpage fees are comprised of the first set of Crown dues and a bonus price set by the province.

Ontario also issues about 15 competitively bid Sale Licenses per year which cover less than one percent of the total area under license. These are used for the sale of small areas of timber in locations where demand exceeds available supply, usually in high quality hardwood stands. Sale Licenses are normally issued for one or two years and convey no forest management responsibility to the licensee.

For Sale Licenses, the Crown dues and a bonus price set by the district office form the starting bid price. Sealed tender offers above the starting price become the basis for issuance of the license.

Prince Edward Island

Background

There are approximately 20.9 million cubic meters of standing timber in Prince Edward Island, most of which is generally poor quality. The province owns about 10 percent of the total volume. Many of the 50 small mills comprising the lumber industry are part-time operations supplementing other sources of income.

Most of the lumber is not graded according to official standards and is of non-exportable quality. The response shows that none of the lumber produced was exported during 1981 and 1982. No shakes, shingles or fence were exported from Prince Edward Island.

Stumpage Rights and Payments

There is no allocation process. Stumpage rights and prices for standing timber on Crown land are determined through a competitive bid process. The Crown advertises "stump tenders" (offers of blocks of standing timber) once a year. Advertisements appear in provincial newspapers at least three weeks prior to closing date, and bids are opened at a public meeting. The highest bidder is normally awarded the contract, except where that bidder's record of past performance is demonstrably poor. Stumpage prices are in effect for one year; *i.e.*, the duration of the contract.

A minimum base price ("upset price") may be established by the provincial Forest Service to ensure that bids do not come in below known stumpage rates in the industry. Estimation of expected stumpage values are based on the Forest Service staff estimations of the volume of logs, pulpwood, etc. which could be removed. The price of finished products, transport costs, recovery factor, or mill costs are not used in setting stumpage upset prices.

Rights do not differ between millers and pulpwood contractors. The P.E.I. Forest Service establishes the volume of timber allowed to be cut under the contracts. Once the timber has been paid for and removed, the contractor may dispose of it within any market at will.

Quebec

Background

Québec's supply of standing timber is a mixture of deciduous and coniferous species, generally sparsely scattered and consisting of rather small trees. The vast majority of these timber resources (approximately 90 percent) is located on Crown lands. Until the early 1970's, the relatively poor quality of Québec's timber combined with inadequate technology, made it inefficient and uneconomical for use in the sawmill industry. Consequently, most of Québec's timber was used by the pulp and paper industry, and the only timber allocation system in the province—the timber limit (also known as the forest concession)—had been set up with the needs of that industry for long-term timber supplies in mind.

Early in the 1970's, however, technological advances in the sawmill industry in the form of sophisticated, computerized machinery, made it possible to process this timber into lumber and its by-products. As a result of these changes Québec started to allocate stumpage under a new system—supply agreements from domanial forests—whose purpose was to increase the profits dereived from provincial timberlands and to make the the timber resource more accessible to other possible users, including the sawmill industry.

Accordingly, no additional timber limits have been awarded since 1969; all new concessions since then have been in the form of supply agreements from domanial forests. The province, through the retrocession or outright revocation of timber limits as they come up for renewal, aims to make domanial forests the only form of tenure and supply agreements the sole form of allocation of stumpage.

Under both systems, all fees and dues are administratively set by the province through Orders-in-Council, sometimes through negotiation. There is no system of competitive bidding for stumpage in Québec. The specific features of both allocation systems are described below.

Timber Limits

Under the timber limit system, "limit holders" are assigned all rights to standing

timber in a given area. Limit holders are responsible for forest management and silviculture within their respective areas. Accordingly, they must submit on a regular basis a forest management plan to the provincial authorities. The government grants an annual cutting license to each limit holder, based on its estimate of the concession's sustained yield possibilities.

The various fees paid by the timber limit holders to the province of Québec for stumpage are as follows:

- The *purchase price* of a timber limit, which has varied between $500 and $1500 per square mile depending on the location of the concession and the quality of the timber thereon;
- The cutting license, renewable annually, which is contingent upon payment of a *ground rent* (currently $15.40 per square kilometer); and
- The *stumpage dues*, which vary according to species and end use, currently amounting to:

—pulpwood (softwood): $3.36 per cubic meter;

—sawlogs (softwood): $0.77 per cubic meter.

The stumpage dues for pulpwood are based on a percentage of the price per ton of newsprint delivered in New York; the basis of the stumpage dues for sawlogs is undocumented.

In addition to the payments and fees listed above, the limit holders also bear a number of additional costs, *i.e.*:

- *Road building and maintenance:* the limit holders build all their forest roads. They bear 100 percent of the cost of secondary roads, but only 50 percent of the cost of main access roads on the grounds that they are intended for common use. All these roads remain the province's property and are accessible to the public.
- *fire prevention and suppression:* this is carried out by private, non-profit forest protection agencies created by the industry.
- *Insect and disease protection:* limit holders pay a calculated percentage depending on area and circumstances.

Supply Agreements (Domanial Forests)

Domanial forests are public lands managed by the provincial government of Québec. The province enters into supply agreements for standing timber from these forests with any interested company. For sawmills, the duration of these agreements varies from five to twenty years, depending on each mill's size. In effect, these are fixed-term timber purchase agreements in which the holder's rights to timber are limited to areas specified by the province. This contrasts with the earlier system, whereby the holder could select the areas to be harvested each year within the concession area up to the total amount specified by the cutting license. Another difference between the two systems is that under supply agreements, timber cut from a domanial forest can be used only to supply the holder's mills and cannot be resold.

A supply agreement always specifies an annual maximum authorized consumption of wood for each mill covered by the agreement. This amount, expressed in cubic meters, also appears on the mill's annual operating license. Renewal of supply agreements depends on the yield and performance of the agreement holders. The province is responsible for devising and implementing forest management plans. Agreement holders prepare an annual logging plan for submission to the provincial authorities, who then issue annual cutting permits for a specific volume of wood defined by species.

Although agreement holders pay no fee *per se* to acquire their contracts, they must pay the provincial government the following fees for each cubic meter harvested:

- *Stumpage fees* based on the following factors:

—Location of forest,

—Product cut by species,

—Size of standing timber,

—Density of timber,

—Logging difficulties;

- *Road building costs* (same as under the timber limit system);
- *Management costs*, $0.09 per cubic meter;
- *Fire prevention costs*, $0.13 per cubic meter;
- *Fire suppression costs*, $0.04 per cubic meter; and
- *Insect and disease protection costs*, $0.05 per cubic meter;.

In addition, agreement holders are responsible for scaling costs and for specific silvicultural activities, such as reforestation, in the amount of at least $0.05 per cubic meter harvested in any given year.

Deferral, Suspension or Waiver of Stumpage Payments

The province of Québec does not allow the deferral, suspension, or waiver of any stumpage payments.

Saskatchewan

Background

Saskatchewan's major industries are farming and mining. Its industrial usage of forest products is underdeveloped, and its softwood timber is small and scattered. In order to attract mills, long-term agreements with negotiable conditions were initiated.

Stumpage

In Saskatchewan, stumpage rights are allocated in two ways: (1) under a timber permit, which is granted annually; and (2) under Forest Management License Agreements (FMLA's). About 13 percent of the production in Saskatchewan of the softwood industry under investigation is allocated by permit, and the balance by FMLA's.

A timber permit authorizes the holder to harvest a stated volume of timber, is valid for one year, and is renewable. Because FMLA's are negotiated separately with each company, their terms vary. Stumpage rights can be awarded for up to 20 years, with an option to renew. Under both arrangements, the Forestry Branch of the provincial government specifies the AAC. The area to be harvested is selected by the permittee or company, subject to government approval.

For timberland under the permit system, the province is responsible for management, silviculture, main road construction, reforestation, fire and disease prevention, etc. In contrast, under FMLA's, the company is completely responsible for forestry management, but other services may be carried out by the province with the company paying partial costs, according to the individual agreement; *e.g.*, the company might pay $0.20 per cord on all timber harvested toward the costs of reforestation. The province is always responsible for fire and disease protection. Main roads are constructed by the province up to a negotiated quantity specified in each contract. A company may construct additional roads at its own expense.

Stumpage fees are paid on a monthly (or sometimes quarterly) basis to the Forestry Branch. Timber permit allocations pay on the lumber out-turn of the mill. Rates take into account timber quality. FMLA's are of two types: volume agreements and area agreements. Volume agreement stumpage dues are paid on the mill out-turn and can be renegotiated periodically. Area agreement fees are paid on scaled volume delivered to the mill yard and are indexed.

Federal Stumpage

Federal Crown lands represent 11 percent of productive timberlands in Canada. Of that, 90 percent is too inaccessible to economically supply North American timber markets. In fiscal year 1981–82, 0.8 percent of total Canadian timber (hardwoods plus softwoods) harvested from Crown lands was cut in small quantities from tracts of federal lands in five provinces and two territories. Most of the volume was cut on Indian Reserves. Stumpage from federal lands is usually allocated according to "volume agreements," whereby an allowable cut is specified. The particular volume agreement procedures of the province in which the timber is located generally apply.

Four federal agencies, none of which has land management as a primary function, have jurisdiction over different portions of federal lands.

Some Department of National Defence (DND) land is used for forest research. Environment Canada administers all DND land, and any timber sales tend to be inspired by the need to clear areas rather than to generate revenue. An individual or company may hold only one annual permit at a given time. Each permit is issued to cut timber up to a volume valued at not more than $2,000 based on prevailing local rates.

The Department of Parks Canada (DPC) reserves most of its land for recreational use. Logging is prohibited with one exception: when the Wood Buffalo Park was created in 1956 in northern Alberta, a pre-existing sawmill situated there was granted a license for long-term cutting rights. The license runs through May 2002 and will not be renewed.

About 95 percent of all federal Crown lands fall under the jurisdiction of the Department of Indian and Northern Affairs (DINA), which is the combination of two agencies with quite separate functions. The Department of Northern Development has administrative responsibility for the territories. Timber in the territories is remote and scattered; nevertheless, the supply is much greater than can be used by the sparse

population. Annual cutting permits are granted on a small-volume basis according to the Territorial Lands Act. Approximately 50,000 m^3 of cut timber comes from the territories annually, and none is exported.

The other agency of DINA is the Department of Indian Affairs, which governs the 1,500 existing Indian Reserves in Canada. Timber sales on Indian lands are conducted by local band councils according to the federal Indian Timber Regulations. The Regulations provide for small-volume annual cutting permits as well as licenses for "larger" volume supply (volume cut cannot exceed a value of $2,500 based on prevailing local rates). All revenue is returned by the federal government to the Indians.

Many permittees on federal timber are harvesters only, who in turn sell the logs to small non-commercial operators or individuals requiring fuelwood. Indians often cut very small amounts of timber for their own use.

Appendix C—Issues and Comments

Petitioner's Comments

Comment 1. Petitioner contends that the Department, in determining that stumpage programs are generally available because they are provided to all potential users without government limitation, has created an unfounded distinction between *de jure* availability and *de facto* availability.

DOC Position. The statute requires that a countervailable domestic subsidy be provided to a specific industry, or group of industries. The DOC determined that the industries using stumpage are not a "specific industry or group of industries" within the meaning of the law (see Section 771(b)(B) of the Act). While it is true that not all industries currently use stumpage, this is not the result of any governmental action. The government of Canada is not limiting the users of stumpage, either *de facto* or *de jure*. Under our interpretation of the statute, we would not, for example, find generally available a program which on its surface appeared to have broad eligibility criteria, but which was administered by government in such a manner as to benefit a particular industry group. *See, e.g., Certain Steel Products from France*, 47 FR 39332, 39334 (Sept. 7, 1982).

Comment 2. Petitioner contends the Department incorrectly defined the users of stumpage as many groups of industries without support in the record. Petitioner specifically argues that:

- The Department found the Act's requirement that a domestic subsidy be provided to a specific industry or group of industries to be met where subsidies were provided to the "steel industry," subsidies fall within more than one major industry group in both the European Communities and the United States classification systems (as do the users of stumpage in these investigations).
- The Department mischaracterized as "a list of products produced by industries holding stumpage permits," a list of products made from stumpage submitted by the government of Canada.

DOC Position. Concerning the "steel industry," our investigations of certain carbon steel products from various countries covered forged as well as rolled steel, which are included in two major industry groups. Yet the forged steel involved was insignificant amounts of forged bar and structurals. Certain size ranges of these products can only be made through the forged process as opposed to a rolled process. Since the *Tariff Schedules of the United States, Annotated* (TSUSA) do not differentiate between the forged and rolled process, these could not be separated out.

Concerning petitioners second argument, the Canadian government did submit lists of products of different industries holding stumpage rights, and we verified that producers of products classified in a number of different industry groups hold stumpage rights.

Comment 3. Petitioner contends that the Department refused to acknowledge the existence of a "commonly recognized Canadian forest products industry."

DOC Position. While it is true that one often sees references to a so-called "forest products industry" or "forest products sector," use of such terms for convenience is not controlling for purposes of the countervailing duty statute. Significantly, the ITC, in its preliminary determinations, found that lumber, shakes and shingles, and fencing constitute three distinct industries. Moreover, under the Canadian and United States industrial classification systems, lumber, shakes and shingles, veneer and plywood, furniture, sashes and doors, and pulp and paper are identified as separate industries and are listed under several major industry groups.

Comment 4. Petitioner contends that the Department's treatment of "the forest products industry" as "a group of * * * industries" for purposes of non-stumpage programs is inconsistent with its finding that stumpage programs are generally available.

DOC Position. The non-stumpage programs which the Department has found to be countervailable involve benefits which would be of use to all or to a large number of industries, not merely to those industries manufacturing products from stumpage. Therefore, the governments of Canada have targeted these programs to benefit certain industries. In our opinion, it is appropriate to take into account the distinction between these programs and stumpage practices in terms of targeting. Otherwise, these targeted programs and stumpage practices in terms of targeting. Otherwise, these targeted programs would escape the purview of the countervailing duty law, because they arguably are provided to more than one group of industries.

Comment 5. Petitioner contends that using cut data instead of bid data does not make a significant difference in the calculation of subsidies. They further state that the Department ignored significant information on the record that most United States stumpage sales are of private timber which is not sold significantly in advance of use.

DOC Position. First, as described in the section entitled "Stumpage Programs of the Canadian Federal and Provincial Governments," it is not the Department's policy to make cross-border comparisons in determining whether, or to what extent, subsidies are conferred. Second, it would be inappropriate in these investigations to compare United States and Canadian stumpage prices in view of *inter alia*, the significant differences in quality and accessibility of stumpage and 7 of the requirement frequently imposed in Canada but not in the United States that in-kind services be performed by companies allowed to harvest stumpage. Third, even if we were to compare United States and Canadian stumpage prices, some information on the record indicates that such prices do not significantly vary when appropriately adjusted for the above-described differences. In any event, in recent years, bid prices in the United States have usually been higher than cut prices. (Such data is not available for private sales of United States timber. Indeed, petitioner has presented and relied on United States public sales data.) Therefore, United States prices would not be a reasonable assessment of current prices paid. Our review of data compiled by the United States Forest Service for forest regions 6 and 9, the Pacific Northwest and the Eastern regions of the United States show that significantly lower cut prices (16 to 60 percent) are paid for softwood timber when compared to bid prices, except in the case of White Mountain Forest. As petitioner argues, the record in these investigations reflects that only sales of timber on national forest lands have recently been bid significantly in advance of use. The record does not contain such information concerning private United States sales.

Comment 6. Petitioner contends that the Department's intepretation of subsection 771(5)(B)(iv) is arbitrary and not in accordance with laws. Petitioner argues that the statutory language covers any governmental action which reduces an industry's raw material acquisition costs.

DOC Position. As stated in our preliminary determinations and in these final determinations, we maintain that the best interpretation of subsection (iv) is that it covers the relief by a government of a pre-existing statutory or contractual obligation. While these investigations represent the first time the DOC has construed subsection (iv) definitively, we think that our interpretation is supported by prior precedent, the legislative history of the Act, and basic rules of statutory construction. While counsel has cited cases involving the European Communities Common Agricultural Policy (CAP), those cases involve cash payments which we would not consider to be the assumption of costs under subsection (iv).

From the evidence on the record, the Canadian governments do not, through their stumpage programs, relieve a specific group of industries of any pre-existing statutory or contractual obligations.

Comment 7. Petitioner argues that the Department should use competitively set United States stumpage prices to establish a commercial benchmark for Canadian stumpage.

DOC Position. It is not the DOC's policy to use cross-border comparisons in establishing commercial benchmarks, because such comparisons fail to account for differences in

comparative advantage between countries. Futhermore, such comparisons would be particularly inappropriate in these investigations because of differences in such factors as species combination, density, qualitry, size, age, accessibility, terrain and climate between standing timber in different areas. Moreover, there is evidence in the record that the United States government restricts supply of publicly-owned timber, thereby increasing the price of such timber in the United States.

Respondent's Comments

Comment 1. Respondent contends that RDIP is not targeted to any specific industry or group of industries, but rather is available to all industries throughout the vast majority of Canada, with the boundaries of DREE eligibility serving to implement geographically neutral criteria.

DOC Position. We find RDIP to be targeted to specific regions because the criteria for designation of areas eligible for assistance from DREE are not objective, identifiable criteria. The use of subjective criteria leaves the designation of eligible areas to the discretion of national and provincial DREE ministers.

Comment 2. Respondent contends that the amount of RDIP grant payments to producers of the products under investigation which subsequently went bankrupt, were closed or were sold in arm's length transactions provide no current benefit to the production of softwood lumber, and should not be countervailed because they provide no current benefit.

DOC Position. We agree in principle, but we could not verify the amounts of grants given to firms which went bankrupt, were closed, or were sold in arm's length transactions.

Comment 3. Respondent argues that we improperly allocated as untied grants funds that were explicitly provided by the government of Québec to REXFOR to cover losses sustained in previous years by Samoco, one of REXFOR's subsidiaries.

DOC Position. We allocate the subsidy benefit of funds generally provided to cover losses to the year of receipt to reflect the nature of the liabilities giving rise to the loss. These liabilities are the basic costs of operations (*e.g.*, wages, materials, certain overhead expenses), which are generally expensed in the year incurred. To the contrary, we allocate any countervailable funds provided to cover losses in multiple previous fiscal years over a broader period of time. Any losses incurred previously by Samoco had already been written off by REXFOR. In addition, allocating funds for multi-year loss coverage solely to the year of their receipt, as respondent advocates, would open a loophole in the countervailing duty law. Funds could be provided allegedly for this purpose, but intended to have a long lasting future effect.

Comment 4. The Special ARDA grants made to native bands located in isolated areas were used to produce softwood products for non-commercial use. This production is not included in the official shipment figures for the industry and would not be included in the denominator used in the subsidy calculation.

DOC Position. During verification we determined that some Special ARDA funds made to native bands were used commercially. Grants were used to acquire logging equipment, to perform subcontracting work, and to establish a shake and shingle operation to supply local markets.

Comment 5. There is no justification for aggregating Special ARDA and General ARDA assistance in calculating benefits. The programs have different purposes and different legal bases.

DOC Position. While the General ARDA is a rural development program, and the Special ARDA is an ongoing program which seeks to improve employment and income opportunities for Canada's native population, both were created under the federal Agriculture and Rural Development Act. In any event all benefits are aggregated in calculating the final amount of the subsidies.

Numerically Controlled Machine Tool Technical Advisory Committee; Partially Closed Meeting

A meeting of the Numerically Controlled Machine Tool Technical Advisory Committee will be held June 21, 1983, at 10:00 a.m., Herbert C. Hoover Building, Room 3708, 14th Street and Constitution Avenue, N.W., Washington, D.C. The Committee advises the Office of Export Administration with respect to technical questions which affect the level of export controls applicable to numerically controlled machine tools or technology.

General Session:

1. Opening remarks by the Chairman.
2. Presentation of papers of comments by the public.
3. Nomination and election of a new chairman.
4. New Business.

Executive Session:

Discussion of matters properly classified under Executive Order 12356, dealing with the U.S. and COCOM control program and strategic criteria.

The general session will be open to the public with a limited number of seats available. A Notice of Determination to close meetings or portions of meetings of the Committee to the public on the basis of 5 U.S.C. 552b(c)(1) was approved on September 29, 1981, in accordance with the Federal Advisory Committee Act.

A copy of the Notice is available for public inspection and copying in the Central Reference and Records Inspection Facility, Room 6628, U.S. Department of Commerce, (202) 377-4217.

For further information or copies of the minutes contact Margaret Cornejo, (202) 377-2583.

Dated: May 25, 1983.

Milton Baltas,

Director of Technical Programs, Office of Export Administration.

BILLING CODE 3510-25-M

Viscose Rayon Staple Fiber From Sweden; Preliminary Results of Administrative Review of Countervailing Duty Order

AGENCY: International Trade Administration, Commerce.

ACTION: Notice of preliminary results of administrative review of countervailing duty order.

SUMMARY: The Department of Commerce has conducted an administrative review of the countervailing duty order on rayon staple fiber from Sweden. The review covers the period October 1, 1980 through September 30, 1981. As a result of the review, the Department has preliminarily determined the net subsidy to be 7.32 percent *ad valorem* for both modal and regular fiber. Interested parties are invited to comment on these preliminary results.

EFFECTIVE DATE: May 31, 1983.

FOR FURTHER INFORMATION CONTACT: Bernard Carreau or Joseph Black, Office of Compliance, International Trade Administration, U.S. Department of Commerce, Washington, D.C. 20230; telephone: (202) 377-2786.

SUPPLEMENTARY INFORMATION:

Background

On December 10, 1981, the Department of Commerce ("the Department" published in the **Federal Register** (46 FR 60486) the final results of its last administrative review of the countervailing duty order on viscose rayon staple fiber from Sweden (44 FR 28319) and announced its intent to conduct the next administrative review. As required by section 751 of the Tariff Act of 1930 ("the Tariff Act"), the Department has now conducted that administrative review.

Scope of the Review

The merchandise covered by the review is regular viscose rayon staple fiber and high-wet modulus ("modal") viscoe rayon staple fiber, imported directly or indirectly from Sweden. Such merchandise is currently classifiable under items 309.4320 and 309.4325 of the Tariff Schedules of the United States Annotated.

The review covers the period October 1, 1980 through September 30, 1981 and

the following programs: (1) Capital loans/grants and (2) elderly employment compensation. The sole known Swedish producer of the merchandise is Svenska Rayon AB.

Analysis of Programs

The Swedish government and Svenska did not respond to our questionnaire on the status of benefits during the review period.

Therefore, we have used the information provided during our previous review as the best information available to calculate the benefits received during the current review period.

(1) Interest-free government loans/grants. For the purpose of national defense, the Swedish government subsidizes the establishment of productive capacity for modal rayon staple fiber. Accordingly, the government lent to Svenska, on an interest-free basis, investment capital needed to establish productive capacity for modal fiber. The loans were to be forgiven if Svenska maintained these production facilities for ten years. The loans provided to Svenska under this first agreement, referred to as Project 77, totaled 14 million kroner.

Government bill 1977/78: 125, adopted on March 16, 1978, approved a second larger investment loan program, referred to as Project 81, under which Svenska has received additional interest-free loans for the development of its modal fiber plant. Under this latter program, the government authorized a 67.3 million kroner loan and, by the end of September 1981, Svenska had received the total budgeted amount. In February 1979 the Swedish government provided separately an additional 1.8 million kroner loan to Svenska for environmental improvements to the plant.

We concluded in our last review that the Swedish government forgave 10 percent per year of Svenska's obligation of 14 million kroner under Project 77 in 1978, 1979, and 1980. As best evidence, we preliminarily conclude that Svenska maintained its modal production facilities in 1981 and that the government forgave in 1981 another 10 percent of the project 77 loans. We are therefore treating 10 percent of the Project 77 funds as a grant during the review period. Additionally, we are considering the unforgiven portion of the Project 77 funds together with the 67.3 million kroner that Svenska received under Project 81 as interest-free loans during the period of review. We have calculated the subsidy on the relevant Project 77 and Project 81 funds on the basis of the interest Svenska would have paid if it had borrowed the money commercially at the time that the loans were granted. We have used as the benchmark rates the Swedish prime rates in 1975 (for Project 77 funds) and 1978 (for Project 81 funds) and added to that the difference between prime and the average rate paid by Svenska on other commercial loans. We then calculated the present value of the payment differentials in each year of the loans using as the discount rate the "risk-free" rates for long-term government debt that were available during the relevant periods. This amount was then allocated evenly over the life of each loan using the same discount rates to yield the annual subsidy amounts. For the period of review, we preliminarily determine that the net subsidy under the interest-free government loans/grants program is 3.88 percent *ad valorem.*

Absent a response to our questionnaire, we are assuming that the forgiveness period for Project 81 loans, which were fully disbursed by September of 1981, began in 1982 at the rate of 10 percent per year. We are therefore treating 10 percent of these funds as a grant in calculating future cash deposits of estimated countervailing duties. Accordingly, we preliminarily determine, for purposes of cash deposits of estimated countervailing duties, that the net subsidy attributable to this program is 6.96 percent *ad valorem.*

In our last administrative review, we assumed that the assets purchased through Project 77 and Project 81 funds were not convertible to the production of regular fiber. We therefore determined that the net subsidy should apply only to modal fiber. However, we have received new information indicating that Svenska, by no later than the end of 1982, had achieved the capacity to utilize the modal plant for the production of "non-modal improved-type fibers". When combined with the failure to respond to our questionnaire (which also addresses the issue of convertibility), we preliminarily conclude that the one net subsidy rate will apply to both modal fiber and regular fiber.

(2) Elderly Employment Program. The Swedish government provides a subsidy to certain companies within the textile industry through a special employment contribution by the government for older workers. This program was established by Swedish government bill 1976/77: 105, adopted on March 3, 1977. While the program is designed to encourage the retention of redundant employees, compensation is provided to a company based upon the number of hours worked by employees over 50 years of age. A company participating in the program must agree not to dismiss or release redundant employees of any age for any reason other than normal attrition. The payments can total up to 15 percent of the company's total labor cost. Svenska participated in this program. For this review, we have preliminarily used the same rate determined in our previous review, 3.44 percent *ad valorem, as the best information available.*

Preliminary Results of Review

As a result of our review, we preliminarily determine that the aggregate net subsidy conferred by the Government of Sweden on the production of both modal and regular viscose rayon staple fiber during the period October 1, 1980 through September 30, 1981 is 7.32 percent *ad valorem.*

Accordingly, the Department intends to instruct the Customs Service to assess countervailing duties of 7.32 percent of the f.o.b. invoice price on all shipments of regular and modal fiber exported on or after October 1, 1980 and entered, or withdrawn from warehouse, for consumption on or before October 29, 1980.

On October 30, 1980, the International Trade Commission ("the ITC") notified the Department that the Swedish government had requested an injury determination for this order under section 104(b) of the Trade Agreements Act of 1979. On March 15, 1983, the ITC notified the Department of its determination that an industry in the United States would be materially injured or threatened with material injury if the order were revoked. As a result, the Department will instruct the Customs Service to assess countervailing duties, in the amount of the prevailing deposit rate at the time of entry, on all unliquidated entries of this merchandise entered, or withdrawn from warehouse, for consumption on or after October 30, 180 and on or before March 15, 1983.

Further, as provided for by section 751(a)(1) of the Tariff Act, the Department intends to instruct the Customs Service to collect a cash deposit of estimated countervailing duties of 10.40 percent of the f.o.b. invoice price on all shipments of regular or modal fiber entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of the current review. This deposit requirement shall remain in effect until publication of the final results of the next administrative review.

Interested parties may submit written comments on these preliminary results within 30 days of the date of publication of this notice and may request disclosure and/or a hearing within 10 days of the date of publication. Any hearing, if requested, will be held 45 days after the date of publication or the first workday thereafter. Any request for an administrative protective order must be made no later than 5 days after the date of publication. The Department will publish the final results of this administrative review including the results of its analysis of issues raised in any such written comments or at a hearing.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)), section 104(b)(4)(A) of the Trade Agreements Act (19 U.S.C. 1671 note) and section 355.41 of the Commerce Regulations (19 CFR 355.41).

Dated: May 24, 1983.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510-25-M

Stanford University; Decision on Application for Duty-Free Entry of Scientific Instrument

The following is a decision on an application for duty-free entry of a scientific instrument pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued pursuant thereto (15 CFR Part 301 as amended by 47 FR 32517).

A copy of the record pertaining to this decision is available for public review between 8:30 AM and 5:00 PM in Room 1523, Statutory Import Programs Staff, U.S. Department of Commerce, 14th and Constitution Avenue, N.W., Washington, D.C. 20230.

Docket No.: 82-0026R. Applicant: Stanford University, 851 Welch Road, Stanford, CA 94305. Instrument: Excimer Laser, TE-861T with Stanford Electrodes and Model 525 Capacitor and Accessories. Original notice of this resubmitted application was published in the **Federal Register** of September 8, 1982.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign instrument, for such purposes as this instrument is intended to be used, was being manufactured in the United States at the time the foreign instrument was ordered (June 24, 1982).

Reasons: This application is a resubmission of Docket Number 82-00267 which was denied without prejudice to resubmission on January 11, 1983 for informational deficiencies. The foreign instrument provides a pulse energy of at least ten millijoules with repetition rates greater than 150 pulses per second. The National Bureau of Standards advises in its memorandum dated April 12, 1983 that: (1) The capability of the foreign instrument described above is pertinent to the applicant's intended purpose and (2) it knows of no instrument or apparatus of equivalent scientific value to the foreign instrument for the applicant's intended use which was being manufactured in the United States at the time the foreign instrument was ordered.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign instrument, for such purposes as this instrument is intended to be used, which was being manufactured in the United States at the time the foreign instrument was ordered.

(Catalog of Federal Domestic Assistance Program No. 11.105, Importation of Duty-Free Educational and Scientific Materials.)

Stanley P. Kramer,

Program Manager, Florence Agreement Program, Statutory Import Programs Staff.

BILLING CODE 3510-25-M

Syracuse University; Decision on Application for Duty-Free Entry of Scientific Instrument

The following is a decision on an application for duty-free entry of a scientific instrument pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued pursuant thereto (15 CFR Part 301 as amended by 47 FR 32517).

A copy of the record pertaining to this decision is available for public review between 8:30 AM and 5:00 PM in Room 1523, Statutory Import Programs Staff, U.S. Department of Commerce, 14th and Constitution Avenue, NW., Washington, D.C. 20230.

Docket No.: 82-00075R. Applicant: Syracuse University, Department of Chemistry, Bowne Hall, Syracuse, NY 13210. Instrument: Superconducting Fourier NMR Spectrometer, Model WM-360 WB and Components. Original notice of this resubmitted application was published in the **Federal Register** of February 2, 1982.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign instrument, for such purposes as this instrument is intended to be used, was being manufactured in the United States at the time the foreign instrument was ordered (November 13, 1980).

Reasons: This application is a resubmission of Docket Number 82-00075 which was denied without prejudice to resubmission on September 29, 1982 for informational deficiencies. The foreign instrument provides data acquisition in any of the three memory areas of its computer. The Department of Health and Human Services advises in its memorandum dated April 7, 1983 that: (1) the capability of the foreign instrument described above is pertinent to the applicant's intended purpose and (2) it knows of no instrument or apparatus of equivalent scientific value to the foreign instrument for the applicant's intended use which was being manufactured in the United States at the time the foreign instruement was ordered.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign instrument, for such purposes as this instrument is intended to be used, which was being manufactured in the United States at the time the foreign instrument was orderded.

National Voluntary Laboratory Accreditation Program; Preliminary Finding of Need To Accredit Laboratories That Test Government Procurred Commercial Items

Correction

In FR Doc. 83-13602, beginning on page 22771 in the issue of Friday, May 20, 1983, make the following corrections:

1. On page 22772, second column, in the third line under the heading "Preliminary Finding of Need," the phrase "there is no need" should read, "there is a need".

2. On page 22772, second column, in the ninth line under the heading "**Preliminary Finding of Need,**" the

letters "MVLAP" should read, "NVLAP".

3. On page 22772, third column, in the third line under the heading *"Basis of Need (§ 7a.4(b)(4)),"* the letters "NVLP" should read, "NVLAP".

4. In the table on page 22774, the ninth, tenth and sixty-fourth designations under the heading, "Paint and Related Coatings and Materials—Paint," should read, "ASTM B117–73 (1979)", "ASTM D34–73 (1979)," and "ASTM D1397–80" respectively.

Receipt of Application for Permit; LGL Ltd.

Notice is hereby given that an Applicant has applied in due form for a Permit to take marine mammals as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 216), the Endangered Species Act of 1973 (16 U.S.C. 1531–1544), the National Marine Fisheries Service regulations governing endangered fish and wildlife permits (50 CFR Parts 217–222).

1. Applicant: LGL Ltd., Suite 414, 44 Eglinton Avenue, West, Toronto, Canada M4R 1A1.

2. Type of Permit: Scientific Research/ Scientific Purposes.

3. Name and Number of Animals: Bowhead whales (Balaena mysticetus) 200.

4. Type of Take: Potential harassment by sound and aircraft during studies of seismic exploration sounds affecting bowhead whales.

5. Location of Activity: Canadian Beaufort Sea.

6. Period of Activity: Two (2) years.

Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data or views, or requests for a public hearing on this application should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, Washington, D.C. 20235, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documents submitted in connection with the above application are available for review in the following offices:

Assistant Administrator for Fisheries, National Marine Fisheries Service, 3300 Whitehaven Street NW., Washington, D.C.; and

Regional Director, Alaska Region, National Marine Fisheries Service, P.O. Box 1668, Juneau, Alaska 99802.

Dated: May 24, 1983.

DEPARTMENT OF ENERGY

Economic Regulatory Administration

Arcata Graphics—Buffalo; Application for Certification of the use of Natural Gas to Displace Fuel Oil

[ERA Docket No. 83-Cert-095]

Arcata Graphics-Buffalo (ARCATA), T. C. Industrial Park, Depew, New York 14043, filed an application on May 16, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its facility in Depew, New York, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, ARCATA indicates that the volume of natural gas for which it requests certification is approximately 1,273 Mcf per day. This volume is estimated to displace the use of approximately 8,375 gallons of No. 6 fuel oil (1.7 percent sulfur) per day.

The eligible seller is American Penn Energy, P.O. Box 443, Fredonia, New York 14063. The gas will be transported by National Fuel Gas Supply Corporation, 308 Seneca Street, Oil City, Pennsylvania 16301; and by National Fuel Gas Distribution Corporation, 10 Lafayette Square, Buffalo, New York 14203, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest, and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to ARCATA and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

James W. Workman,

Director, Office of Fuels Programs, Economic Regulatory Administration.

[FR Doc. 83-14464 Filed 5-27-83; 8:45 am]

BILLING CODE 6450-01-M

[ERA Docket No. 83-Cert-068]

A. W. Breidenbach Environmental Research Center, U.S. Environmental Protection Agency; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

A. W. Breidenbach Environmental Research Center (AWBERC), U.S. Environmental Protection Agency, 26 West St. Clair Street, Cincinnati, Ohio 45268, filed an application on May 5, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its environmental research facility in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00

a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, AWBERC indicates that the volume of natural gas for which it requests certification is approximately 220,500 Mcf per year. This volume is estimated to displace the use of approximately 1,631,700 gallons of No. 3 fuel oil (0.25 percent sulfur) per year.

The eligible sellers are Exxon USA, P.O. Box 2810, Houston, Texas 77001; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by the Cincinnati Gas and Electric Company, P.O. Box 960, Cincinnati, Ohio 45202, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest, and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to AWBERC and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

James W. Workman,

Director, Office of Fuels Programs, Economic Regulatory Administration.

Capitol Products Corp.; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

Capitol Products Corporation (CAPITOL), P.O. Box 3070, Harrisburg, Pennsylvania 17105, filed an application on May 13, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its manufacturing facility in Mechanicsburg, Pennsylvania, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, CAPITOL indicates that the volume of natural gas for which it requests certification is approximately 525,600 Mcf per year. This volume is estimated to displace the use of approximately 3,100,000 gallons(74,000 barrels) of No. 2 fuel oil (0.05 percent sulfur) per year.

The eligible seller is Exxon USA, P.O. Box 2180, Houston, Texas 77001. The gas will be transported by Columbia Gas Transmission Corporation, 1700 MacCorkle Avenue S.E., Charleston, West Virginia 25314; and by UGI Corporation (Gas Utility Division), 225 Morgantown Road, Reading, Pennsylvania 19611, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to CAPITOL and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

James W. Workman,

Diretor, Office of Fuels Programs, Economic Regulatory Administration.

[ERA Docket No. 83–Cert–044]

Emery Realty, Inc.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

Emery Realty, Incorporated (EMERY), 2400 Carew Tower, P.O. Box 447, Cincinnati, Ohio 45201, filed an application on May 5, 1983 with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its Carew Tower Boiler Plant in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). The application was amended on May 7, 1983, to add an eligible supplier and on May 11, 1983, to clarify the volumes of gas requested. More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its amended application, EMERY indicates that the volume of natural gas for which it requests certification is approximately 82,500 Mcf per year. This volume is estimated to displace the use of approximately 580,800 gallons of No. 2 fuel oil (0.23 percent sulfur) per year.

The eligible sellers are Exxon USA, P.O. Box 2810, Houston, Texas 77001; Texas Gas Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 45302; and Ohio Gas Marketing Corporation, 3933 Price Road, Newark, Ohio 43055. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by the Cincinnati Gas and Electric Company, P.O. Box 960, Cincinnati, Ohio 45202, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest, and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to EMERY and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

Great Lakes Carbon Corp.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

Great Lakes Carbon Corporation (GLCC), P.O. Box 667, Niagara Falls, New York 14302, filed an application on May 7, 1983, and amended it on May 20, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its carbon products manufacturing facility in Niagara Falls, New York, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, GLCC indicates that the volume of natural gas for which it requests certification is approximately 1,000 Mcf per day., This volume is estimated to displace the use of approximately 7,140 gallons of No. 2 fuel oil (1.0 percent sulfur) per day.

The eligible sellers are U.S. Energy Development Corporation, 610 Statler Building, Buffalo, New York 14202; Envirogas, Inc., One Grimsby Drive, Hamburg, New york 14075; Goetro, Inc., Route #1, Albion, Pennsylvania 16401; and P & S Drilling, Inc., 10305 Main Street, Clarence, New York 14031. The gas will be transported by National Fuel Gas Supply Corporation, 308 Seneca Street, Oil City, Pennsylvania 16301; and National Fuel Gas Distribution Corporation, 10 Lafayette Square, Buffalo, New York 14203, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by an interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to GLCC and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

Ramco/Fitzsimons Steel Co.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

Ramco/Fitzsimons Steel Company (RAMCO/FSC), P.O. Box 399, Buffalo, New York, 14240, filed an application on May 6, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its steel processing plant in Buffalo, New York 14220, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, RAMCO/FSC indicates that the volume of natural gas for which it requests certification is approximately 600 Mcf per day. This volume is estimated to displace the use of approximately 4,000 gallons of No. 6 fuel oil (1.0 percent sulfur) per day.

The eligible seller is Midwest Exploration, Inc., 1401 Park Harvey Center, 200 North Harvey, Oklahoma City, Oklahoma 73120. The gas will be transported by National Fuel Gas Supply Corporation, 308 Seneca Street, Oil City, Pennsylvania 16301; and by National Fuel Gas Distribution Corporation, 10 Lafayette Square, Buffalo, New York 14203, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing the ten (1) day comment period. The request should state the person's interest, and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the

proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to RAMCO/FSC and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 24, 1983.

Schoenling Brewing Co.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

Schoenling Brewing Company (SCHOENLING), 1625 Central Parkway, Cincinnati, Ohio 45214, filed an application on May 9, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its brewery facility in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, SCHOENLING indicates that the volume of natural gas for which it requests certification is approximately 5,000 Mcf per month. This volume is estimated to displace the use of approximately 35,000 gallons of No. 2 fuel oil (0.49 percent sulfur) per month.

The eligible sellers are Exxon U.S.A., P.O. Box 2810, Houston, Texas 77001; Texas Gas Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 45302; and Ohio Gas Marketing Corporation, 3933 Price Road, Newark, Ohio 43055. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by The Cincinnati Gas & Electric Company, P.O. Box 960, Cincinnati, Ohio 45202; and The Union Light, Heat & Power Company, P.O. Box 32, Covington, Kentucky 41012, local distribution companies.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to SCHOENLING and any person filing comments and will be published in the **Federal Register.**

Shepherd Chemical Co.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

The Shepherd Chemical Company (SHEPHERD), 4900 Beech Street, Cincinnati, Ohio 45212, filed an application on May 9, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its chemical manufacturing facility in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Division Docket Room, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, SHEPHERD indicates that the volume of natural gas for which it requests certification is approximately 100 million cubic feet per year. This volume is estimated to displace the use of approximately 17,000 barrels of No. 2 fuel oil (Max. 0.5 percent sulfur) per year.

The eligible sellers are Exxon U.S.A., P.O. Box 2810, Houston, Texas 77001; and Ohio Gas Marketing Corporation, 3933 Price Road, Newark, Ohio 43055. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by The Cincinnati Gas & Electric Company, P.O. Box 960, Cincinnati, Ohio 45202, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to SHEPHERD and any person filing comments and will be published in the **Federal Register.**

Textile Printing & Finishing Co., Inc.; Application for Certification of the Use of Natural Gas to Displace Fuel Oil

Textile Printing & Finishing Company, Inc. (TPFC), 120 North 25th Street, P.O. Box 209, Lebanon, Pennsylvania 17042, filed an application on May 9, 1983 with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its screen printing facility in Lebanon, Pennsylvania, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, TPFC indicates that the volume of natural gas for which it requests certification is approximately 84,000 Mcf per year. This volume is estimated to displace the use of approximately 559,440 gallons of No. 6 fuel oil (2.8 percent sulfur) per year.

The eligible seller is Exxon USA, P.O. Box 2180, Houston, Texas 77001. The gas will be transported by Columbia Gas Transmission Corporation, 1700 MacCorkle Avenue, S.E., Charleston, West Virginia 25314; and by UGI Corporation (Gas Utility Division), 225 Morgantown Road, Reading, Pennsylvania 19611, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register**.

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest, and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to TPFC and any person filing comments and will be published in the **Federal Register**.

Issued in Washington, D.C. on May 24, 1983.

BILLING CODE 6450-01-M

Pittston Petroleum Inc.; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Notice of action taken on Consent Order.

SUMMARY: The Economic Regulatory Administration ("ERA") of the Department of Energy ("DOE") announces that it has adopted a Consert Order with Pittston Petroleum Inc. as a final order of the Department.

EFFECTIVE DATE: May 31, 1983.

FOR FURTHER INFORMATION CONTACT:

Robert J. McKee, Jr., Director, Philadelphia Field Office, ERA, 1421 Cherry Street, Philadelphia, Pennsylvania 19102 (215-597-4550).

SUPPLEMENTARY INFORMATION: On April 5, 1983, Vol. 48, No. 66, **Federal Register** 14740, the ERA published a notice in the **Federal Register** that on March 22, 1983 it had executed a Proposed Consent Order with Pittston Petroleum Inc. ("Pittston"), which would not become effective sooner than thirty (30) days after publication of that notice. Pursuant to 10 CFR 205.199J(c), interested persons were invited to submit comments concerning the terms and conditions of the Proposed Consent Order.

As the notice of April 5, 1983 stated, the remedial aspect of the Proposed Consent Order required Pittston to refund an aggregate amount of $1,150,000 to identified No. 2 heating oil reseller customers of Pittston by check or credit memorandum within twenty-five (25) calendar months. The Proposed Consent Order provided other pertinent details, including general procedures to identify those customers eligible to receive refunds and that the amount of the refund was subject to the approval of DOE. Those customers and amounts have been identified and approved by DOE.

Only three comments about the Proposed Consent Order were received, two of which were claims by specific Pittston customers of No. 2 oil for refund. One comment was submitted on behalf of the State of Oregon.

The comment from the State of Oregon did not criticize any aspect of the Proposed Consent Order except the form of relief. The comment suggested that the states should be the recipients of certain funds obtained by the Department of Energy in Consent Orders. While the states may be recipients or relief in appropriate cases, the comment made no indication of why this particular Proposed Consent Order was similar to any other case. Indeed, the Proposed Consent Order terms provided for identification of the particular eligible customers to receive the entire refund of $1,150,000 and the amount of refunds per customer subject to DOE approval. There was no indication by the State of Oregon of involvement by purchase directly or indirectly by that state. The comment did not identify what Oregon end-users purchased directly or indirectly from Pittston, if any (and DOE believes there are none) and the comment did not identify what portion of the refund Oregon or any state should receive.

As stated previously, a specific class of purchaser has already been identified as being eligible to receive the refunds of $1,150,000 and DOE received two notices of claim by putative Pittston customers. Of the two claimants/comments, one is an eligible refund recipient and the other is not.

The Proposed Consent Order is therefore made final and effective on the date of publication of this Notice.

Issued in Philadelphia, Pennsylvania on this 11th day of May, 1983.

Robert J. McKee, Jr.,

Director, Philadelphia Field Office, Economic Regulatory Administration.

[ERA Docket No. 83-Cert-080]

Georgia-Pacific Corp., Application for Certification of the Use of Natural Gas To Displace Fuel Oil

The Georgia-Pacific Corporation (G-P), 133 Peachtree St. N.E. (30303), Atlanta, Georgia 30348, filed an application on May 9, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its labelling plant in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed

information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, G-P indicates that the volume of natural gas for which it requests certification is approximately 70 million cubic feet per year. This volume is estimated to displace the use of approximately 12,000 barrels of No. 2 fuel oil (0.20 percent sulfur) per year.

The eligible sellers are Exxon U.S.A., P.O. Box 2810, Houston, Texas 77001; Texas Gas Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 45302; and Ohio Gas Marketing Corporation, 3933 Price Road, Newark, Ohio 43055. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by the Cincinnati Gas and Electric Company, P.O. Box 960, Cincinnati, Ohio 45202; and The Union Light, Heat & Power Company, P.O. Box 32, Covington, Kentucky 41012, local distribution companies.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory 'Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to G-P and any person filing comments and will be published in the **Federal Register**

Issued in Washington, D.C., on May 24, 1983.

BILLING CODE 6450–01–M

Langham Petroleum & Development, Inc.; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Notice of action taken on consent order.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) announces that it has adopted a Consent Order with Langham Petroleum & Development, Inc. as a final order of the Department.

EFFECTIVE DATE: May 26, 1983.

FOR FURTHER INFORMATION CONTACT: Sandra K. Webb, Director, Houston Office, Economic Regulatory Administration, One Allen Center, 500 Dallas Avenue, Suite 660, Houston, Texas 77002; (713) 229–3715.

SUPPLEMENTARY INFORMATION: On April 22, 1983, the ERA published a notice in the **Federal Register** that it had executed a proposed Consent Order with Langham Petroleum & Development, Inc. (Langham) which would not become effective sooner than 30 days after publication of the notice. 48 FR 17371. Pursuant to 10 CFR 205.199J(c), interested persons were invited to submit comments concerning the terms and conditions of the proposed Consent Order.

The Consent Order resolves Langham's potential civil liability arising out of the Mandatory Petroleum Allocation and Price Regulations and related regulations, 10 CFR Parts 205, 210, 211 and 212, in connection with the firm's transactions involving the resale of crude oil and refined petroleum products during the period December 1, 1977 through January 27, 1981. The Consent Order requires Langham to remit $32,000,000 to DOE in installments as follows: $5,000,000 within 180 days of the effective date of the Consent Order and the balance in 15 annual installments of $1,800,000 each. Langham further agrees that to the extent that its actual net revenues exceed net revenues reported in its Form ERA–69 filings by more than 3 percent, Langham will pay $1,000,000 for each full percentage point above 3 percent.

Comments from 14 states were received. None of the states contested the validity of the proposed Consent Order, but addressed the question of the ultimate disposition of the funds to be paid by Langham. The commenters proposed that the funds be distributed to the states for energy-related projects.

Because the comments addressed only the disposition of the funds, the ERA has decided to make the proposed Consent Order final without modification. The ultimate disposition of the funds will depend upon several factors, such as the type of alleged violations underlying the Consent Order and the ability of ERA to identify the persons who ultimately bore the burden of the alleged violations. The states' suggestions regarding the distribution of the funds will be considered in determining the appropriate ultimate disposition.

The proposed Consent Order with Langham Petroleum & Development, Inc., therefore, was made final and effective on May 26, 1983.

Issued on the 26th day of May 1983.

Sandra K. Webb,

Director, Houston Office Economic Regulatory Administration.

[FR Doc. 83–14589 Filed 5–27–83; 8:45 am]

BILLING CODE 6450–01–M

Robert Stephen Langham; Action Taken on Consent Order

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Notice of action, on consent order.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) announces that it has adopted a Consent Order with Robert Stephen Langham as a final order of the Department.

EFFECTIVE DATE: May 26, 1983.

FOR FURTHER INFORMATION CONTACT: Sandra K. Webb, Director, Houston Office, Economic Regulatory Administration, One Allen Center, 500 Dallas Avenue, Suite 660, Houston, Texas 77002; (713) 229–3715.

SUPPLEMENTARY INFORMATION: On April 22, 1983, the ERA published a notice in the **Federal Register** that it had executed a proposed Consent Order with Robert Stephen Langham (R. S. Langham) which would not become effective sooner than 30 days after publication of the notice. 48 FR 17372. Pursuant to 10 CFR 205.199J(c), interested persons were invited to submit comments concerning the terms and conditions of the proposed Consent Order.

The Consent Order resolves R. S. Langham's potential civil liability arising out of the Mandatory Petroleum

Allocation and Price Regulations and related regulations, 10 CFR Parts 205, 210, 211, and 212, during the period December 1, 1977 through January 27, 1981. The Consent Order requires R. S. Langham to pay an amount up to $10,000,000 based upon the after-tax income of R. S. Langham and certain related entities. The amount to be paid will be one-third of the amount by which such income exceeds $13,500,000 over the five year period following the effective date of the Consent Order.

Comments from 12 states were received. None of the states contested the validity of the proposed Consent Order, but addressed the question of the ultimate disposition of the funds to be paid by R. S. Langham. The commenters proposed that the funds be distributed to the states for energy-related projects.

Because the comments addressed only the disposition of the funds, the ERA has decided to make the proposed Consent Order final without modification. The ultimate disposition of the funds will depend upon several factors, such as the type of alleged violations underlying the Consent Order and the ability of ERA to identify the persons who ultimately bore the burden of the alleged violations. The states' suggestions regarding the distribution of the funds will be considered in determining the appropriate ultimate disposition.

The proposed Consent Order with Robert Stephen Langham, therefore, was made final and effective on May 26, 1983.

Issued on the 26th day of May 1983.

Sandra K. Webb,

Director, Houston Office, Economic Regulatory Administration.

[FR Doc. 83-14589 Filed 5-27-83; 8:45 am]

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket Nos. CP81-107-002 and CP81-108-002]

Boundary Gas, Inc.; Second Amendment to Applications

May 24, 1983.

Take notice that on May 2, 1983, Boundary Gas, Inc. (Boundary), 110 Tremont Street, Boston, Massachusetts 02108, filed in Docket Nos. CP81-107-002 and CP81-108-002 a second amendment to its pending applications in Docket Nos. CP81-107-000 and CP81-108-000 pursuant to Sections 3 and 7 of the Natural Gas Act so as to reflect, *inter alia*, a reduction in the quantity of natural gas to be purchased from TransCanada Pipelines Limited (TransCanada) and to be resold to the fourteen Boundary customers an agreement to phase the proposed deliveries of Canadian gas, a reallocation of volumes among the Boundary customers, and corporate name changes affecting two Boundary customers, all as more fully set forth in the second amendment which is on file with the Commission and open to public inspection.

Boundary states that, as a result of the January 27, 1983 decision of the National Energy Board of Canada (NEB) reducing the quantity of gas authorized for export for sale to Boundary, Boundary has amended its precedent agreement with TransCanada and the *pro forma* gas purchase contract and gas sales agreement to reflect the reduced volumes. Boundary states that the total quantity of gas originally sought to be imported was approximately 675,254,000 Mcf to be delivered at a daily rate of 185,000 Mcf per day and that the NEB decision only authorized the exportation of 330,070,000 Mcf of gas to be delivered at a maximum daily rate of 92,500 Mcf.

Boundary further states that, due to anticipated limitations on pipeline capacity at the time the Boundary imports are scheduled to commence (i.e., November 1, 1984), Boundary and TransCanada have agreed that deliveries of gas would commence at reduced quantities and would remain at reduced levels until sufficient pipeline capacity is available to deliver the full amounts authorized. The quantity of gas agreed to be delivered by TransCanada during the initial phase commencing on or about November 1, 1984, is 40,000 Mcf per day, it is said. Further, it is submitted that due to limitations on pipeline capacity in the United States, the 40,000 Mcf per day initial quantity purchased by Boundary would be resold to four Boundary customers as follows: The Brooklyn Union Gas Company (14,721 Mcf per day), New Jersey Natural Gas Company (10,558 Mcf per day), Bay State Gas Company (9,814 Mcf per day) and The Connecticut Light and Power Company (4,907 Mcf per day). It is asserted that at such time as sufficient pipeline capacity is available, deliveries would increase to the full level of 92,500 Mcf per day. Boundary advises that the precedent agreement with TransCanada, *pro forma* gas purchase contract, *pro forma* gas sales agreement, and the memorandum of agreement among the Boundary stockholders have been amended to reflect the aforementioned phased deliveries.

Boundary further states that the allocation of gas among the fourteen Boundary customers during the full delivery phase has been amended as follows:

	New percentage entitlement	Old percentage entitlement	New volumes [1]
The Brooklyn Union Gas Co	.2240	.2254	20,970
Bay State Gas Co	.1351	.1027	12,500
New Jersey Natural Gas Co	.1163	.5765	10,760
Boston Gas Co	.1131	.0752	10,460
The Connecticut Light & Power Co	.1023	.0511	9,460
Consolidated Edison Co. of New York, Inc	.0540	.2254	5,000
National Fuel Gas Supply Corp	.0486	.0487	4,500
Long Island Lighting Co	.0270	.1297	2,500
Essex County Gas Co	.0174	.0174	1,610
Manchester Gas Co	.0168	.0116	1,550
Gas Service, Inc	.0108	.0057	1,550
Valley Gas Co	.0115	.0115	1,060
Berkshire Gas Co	.0114	.0114	1,050
Fitchburg Gas & Electric Light Co	.0057	.0057	530
Total	1.0000	1.0000	92,500

[1] Million cubic feet per day.

Boundary states that this reallocation is based, among other things, upon a greater relative need for the Boundary gas in the New England region and New Jersey in the time frame of the Boundary project. Boundary advises that the *pro forma* gas sales agreement and the Boundary stockholders' memorandum of agreement have been amended to reflect this reallocation.

Finally, Boundary states that the corporate name of Connecticut Gas Company has been changed to The Connecticut Light and Power Company and that the corporate name of Haverhill Gas Company has been changed to Essex County Gas Company. Bay State Gas Company intends to assign its entire interest in the Boundary project to its affiliated company, Granite State Transmission, Inc., which, pursuant to Commission order issued January 11, 1982, in Docket No. CP80-426, is the sole purchaser of natural gas supplies and long-term transportation services from Tennessee Gas Pipeline Company, a Division of Tenneco Inc., for the Bay State group. Boundary states that no name change has any substantive effect on its applications.

Pursuant to the Further Procedural Schedule established by the Presiding Administrative Law Judge at a prehearing conference held on May 9, 1983, in *Boundary Gas, Inc.*, Docket No. CP81-107, *et al.*, hearings on the initial phase of Boundary deliveries will commence on June 28, 1983, at 10:00 a.m.

Any person desiring to be heard or to make any protest with reference to said second amendment to Boundary's applications should on or before June 8, 1983, file with the Federal Energy

Regulatory Commission, Washington, D.C. 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.213 or 385.211) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules. Persons who have previously intervened in this proceeding need not file a new motion to intervene.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6717-01-M

[Project No. 4219-002]

City of Albuquerque, New Mexico; Surrender of Preliminary Permit

May 24, 1983.

Take notice that the City of Albuquerque, New Mexico, Permittee for the proposed Abiquiu Project No. 4219 has requested that its preliminary permit be terminated. The permit was issued on July 15, 1981, and would have expired on June 30, 1983. The project would have been located on the Rio Chama in Rio Arriba County, New Mexico.

The City of Albuquerque through studies, has found, the development of hydropower at Abiquiu to be marginally advantageous. The Permittee has therefore elected not to proceed further.

Permittee filed its request on May 3, 1983. The surrender of the preliminary permit for Project No. 4219 will become effective thirty days from the date of issuance of this notice.

Kenneth F. Plumb,

Secretary.

[FR Doc. 83-14391 Filed 5-27-83; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. CP83-306-000

Columbia Gas Transmission Corp.; Application

May 24, 1983.

Take notice that on May 3, 1983, Columbia Gas Transmission Corporation (Applicant), 1700 MacCorkle Avenue, S.E. Charleston, West Virginia 25314, filed in Docket No. CP83-306-000 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas for The New Jersey Zinc Company, Inc. (NJZ), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant proposes to transport up to 3,700 dt equivalent of natural gas per day for NJZ on an interruptible basis for six months. Applicant proposes to receive the gas at an existing point of interconnection with the facilities of Atlas Resources, Inc. in Green Township, Indiana County, Pennsylvania, and deliver it to Transcontinental Gas Pipe Line Corporation (Transco) for the account of NJZ at an existing point of delivery in Chapmen Township, Clinton County, Pennsylvania. It is stated that Transco would thereafter deliver the gas to Union Gas Company for the account of NJZ with ultimate delivery to NJZ at or near its plant site in Palmerton, Pennsylvania. Applicant also states that the gas to be transported would be purchased by NJZ from Industrial Energy Services Company in order to resume operation of NJZ's Palmerton, Pennsylvania, ammonia plant.

It is further stated that Applicant's transportation charge for the proposed service is its average system-wide unit storage and transmission costs, exclusive of company-use and unaccounted-for gas, as reflected in Applicant's rate filings which charge is presently 40.11 cents per dt equavalent with retainage for company-use and unaccounted-for gas of 2.85 percent of the total quantity of gas received for the account of NJZ. Applicant's transportation charge is subject to adjustment to reflect revised average system-wide unit storage and transmission costs, exclusive of company-use and unaccounted-for gas, contained in future rate filings by Applicant.

Any person desiring to be heard or to make any protest with reference to said application should on or before June 14, 1983, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will unnecessary for Applicant to appear or be represented at the hearing.

Kenneth F. Plumb,

Secretary.

[FR Doc. 83-14392 5-27-83; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. ER83-516-000]

Connecticut Light and Power Co.; Notice of Filing

May 24, 1983.

The filing Company submits the following:

Take notice that on May 18, 1983, the Connecticut Light and Power Company (CL&P) tendered for filing as an initial rate schedule and agreement (the Agreement) between CL&P, Western Massachusetts Electric Company (WMECO, and together with CL&P, the NU Companies) and Pennsylvania Power and Light Company (PP&L). The Agreement, dated as of March 1, 1983, provides for the NU Companies to sell the PP&L power from the systems of the Northeast Utilities Companies (system power) that may be available on a daily basis (a transaction). CL&P states that the timing of transactions cannot be accurately estimated but that the NU Companies would offer to sell system power to PP&L only when it was economic to do so. PP&L would only accept such offer if it was economical to do so.

PP&L will pay an energy reservation charge to the NU Compaines for each transaction in an amount equal to the megawatthours of system power reserved for PP&L by the NU Companies during each hour of a transaction

multiplied by the energy reservation charge rate which is negotiated prior to each transaction. PP&L will pay any energy charge to the NU Companies for each transaction in an amount equal to the megawatthours delivered by the NU Companies during such transaction times an energy charge rate. The energy charge rate is based on the heat rate and the replacement fuel price of the generating unit(s) which the NU Companies determine to be available to provide energy at the time of a transaction.

CL&P requests an effective date of May 16, 1983, and therefore requests waiver of the Commission's notice requirements.

Copies of this filing have been mailed to WMECO and PP&L.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before June 9, 1983. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[Project No. 3375-001]

Continental Hydro Corp.; Notice of Surrender of Preliminary Permit

May 24, 1983.

Take notice that Continental Hydro Corporation, Permittee for the proposed East Fork Dam Project No. 3375, has requested that its preliminary permit be terminated. The permit was issued on June 9, 1981, and would have expired on May 31, 1983. The project would have been located on the East Fork of the Little Miami River near Batavia, Clermont County, Ohio.

The Permittee filed its request on April 28, 1983, and the surrender of the preliminary permit for Project No. 3375 is deemed accepted 30 days after issuance of this notice.

BILLING CODE 6717-01-M

[Docket No. ER83-517-000]

Detroit Edison Co.; Notice of Filing

May 24, 1983

The filing Company submits the following:

Take notice that Detroit Edison (Detroit Edison), on May 18, 1983, tendered for filing a letter agreement dated April 18, 1983, between Detroit Edison and General Public Utilities which constitutes a redetermination of the fixed charge rate applicable to transactions under Amendment No. 6 among Consumers Power Company, The Detroit Edison Company and the Toledo Edison Company, dated June 1, 1982, for the sale of Specific Capacity Power to General Public Utilities. This Amendment has been denoted as The Detroit Edison Company Rate Schedule FERC No. 11. Detroit Edison states that the redetermination of the fixed charge rate was made pursuant to the terms of Amendment No. 6.

Detroit Edison states that the letter agreement establishes the fixed charge rate at 16.325 percent for service provided on and after April 1, 1983, and is subject to redetermination during the term of Amendment No. 6 in accordance with Section 7.12. Detroit Edison states that the redetermination reflects the currently authorized return on equity contained in the Michigan Public Service Commission Order No. U-6949, dated March 31, 1983. This determination will increase the monthly demand charge from $1,173,673 to $1,194,154 in accordance with Sections 7.11 and 7.12(b) of Service Schedule G.

Detroit Edison requests waiver of the notice requirements to permit an effective date of April 1, 1983.

Copies of the filing were served upon Consumers Power Company, the Cleveland Electric Illuminating Company, General Public Utilities Corporation, the Toledo Edison Company, and the Michigan Public Service Commission.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before June 9, 1983. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Docket No. ER83-515-000]

Minnesota Power & Light Co.; Notice of Filing

May 24, 1983.

The filing Company submits the following:

Take notice that Minnesota Power & Light Company (Minnesota Power) on May 17, 1983, tendered for filing an executed Amendment to Interchange Service Agreement (Rate Schedule FERC No. 118 as supplemented) between Minnesota Power and Superior Water, Light & Power Company (SWL&P).

Minnesota Power states that the executed Amendment provides an administrative clarification as to non-assignment of losses to the SWL&P system relating to regional power pool transactions in which Minnesota Power utilizes SWL&P transmission lines.

Minnesota Power requests an effective date of October 25, 1982, and

therefore requests waiver of the Commission's notice requirements.

Copies of the filing were served upon SWL&P, the Minnesota Public Utilities Commission and the Wisconsin Public Service Commission.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such motions or protests should be filed on or before June 9, 1983. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Project No. 5868-000]

Partnership of Cohen, Romano and Rice; Surrender of Preliminary Permit

May 24, 1983.

Take notice that the Partnership of Cohen, Romano and Rice, Permittee for the Old Forge Project No. 5868 located on the Middle Branch of the Moose River in Herkimer County, New York, has requested that its preliminary permit be terminated. The preliminary permit was issued on June 7, 1982, and would have expired on December 31, 1983. The Permittee states that it does not intend to proceed with the feasibility investigations leading to the development of this project.

The Permittee's request was filed on May 2, 1983. The surrender of the permit for Project No. 5868 is in the public interest and is effective 30 days from the date of issuance of this notice.

BILLING CODE 6717-01-M

[Docket No. RP83-86-000]

Public Service Company of Colorado; Notice of Complaint

May 24, 1983.

In the matter of Public Service Company of Colorado, Western Slope Gas Company and Cheyenne Light, Fuel and Power Company v. Colorado Interstate Gas Company, Respondent.

Take notice that on May 16, 1983, Public Service Company of Colorado, 550 15th Street, Denver, Colorado 80202; Western Slope Gas Company, One Park Central, Denver, Colorado 80202; and Cheyenne Light, Fuel and Power Company, 108 West 18th Avenue, Cheyenne, Wyoming 82003 (Complainants), filed in the above-captioned docket, pursuant to Section 5(a) of the Natural Gas Act and Commission Rule 206, a Complaint against Colorado Interstate Gas Company (CIG).

In their Complaint, Complainants state that CIG's rates to them are unjust and unreasonable, because they include systemwide storage and transmission costs which should be, but are not, allocated to CIG's customers taking service under CIG's FERC Rate Schedules F-1 and F-2, as well as certain direct industrial sales. Complainants aver that CIG's failure to allocate systemwide storage and transmission costs properly results in CIG's current rates to Complainants and CIG's other transmission system customers being excessive by $14,888,081.00 annually.

The procedures applicable to complaints before the Commission are found in Rule 206 of the Commission's Rules of Practice and Procedure (18 CFR 385.206).

Any person desiring to be heard or to protest said complaint should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such petitions or protests should be filed on or before June 23, 1983. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this complaint are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 83-14399 Filed 5-27-83; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. CP81-296-003]

Tennessee Gas Pipeline Co., a Division of Tenneco Inc.; Amendment to Application

May 24, 1983.

Take notice that on May 2, 1983, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), P.O. Box 2511, Houston, Texas 77001, filed in Docket No. CP81-296-003 an amendment to its pending application filed in Docket No. CP81-296-000, as amended, pursuant to Section 7(c) of the Natural Gas Act so as to reflect certain changes in the original proposals in this proceeding, all as more fully set forth in the amendment which is on file with the Commission and open to public inspection.

Tennessee states that in its pending application, as amended, Tennessee requested authority to render a transportation service for fourteen gas companies (Boundary gas customers) which are shareholders of Boundary Gas, Inc. (Boundary), and to construct and operate certain pipeline loop, compression, and measurement facilities to enable Tennessee to transport up to 185,000 Mcf of natural gas per day which Boundary proposed to import from Canada at a point near Niagara Falls, New York, less fuel and shrinkage, to the Boundary gas customers and to receive up to 609,000 Mcf per day of gas Tennessee proposed to import from Canada at Niagara Falls, New York, for its own system supply in Docket Nos. CP81-298-000 and CP81-470-000.

Tennessee states that the instant amendment is filed to reflect the reduced quantities of gas which the National Energy Board of Canada (NEB) has authorized for exportation in its Decision issued January 27, 1983, and the filing with the Commission of an application by Niagara Interstate Pipeline System (NIPS) in Docket No. CP83-170-000, as amended, in Docket No. CP83-170-001, for authorization pursuant to Section 7 of the Natural Gas Act to construct and operate a pipeline system extending from an interconnection with TransCanada Pipelines Limited (TransCanada) near Niagara Falls, New York, to Tamarack, Pennsylvania, which would transport gas received from Canada for Tennessee and others.

Tennessee further states that the NEB authorized, *inter alia*, the exportation of a maximum daily quantity of 92,500 Mcf of gas to be delivered to Boundary, rather than the maximum daily quantity of 185,000 Mcf that had been requested

for export; that Tennessee has entered into a precedent agreement with NIPS for the transportation of up to 500,000 Mcf of gas per day from the Canadian border near Niagara Falls, New York, to the proposed points of interconnection between the NIPS system and Tennessee's system near East Aurora, New York, and Coudersport, Pennsylvania. Tennessee states that such agreement is sufficient to cover the volumes proposed to be imported by Tennessee and Boundary and, if authorized, would eliminate the need for the facilities previously proposed to be constructed in the instant proceeding on Tennessee's Niagara Spur extending from the Canadian border near Niagara Falls, New York, to East Aurora, New York, as well as certain other facilities.

Tennessee states that, in view of the above developments, the facilities downstream of the proposed interconnections with NIPS have been modified to reflect the reduced volumes required to be transported for the Boundary gas customers. Accordingly, by its amendment, Tennessee requests authority to construct and operate the following facilities located in New York, Pennsylvania, New Jersey, Connecticut, Massachusetts, and New Hampshire:

MAIN LINE LOOP

Location	Original loop No.	Size (inches)	Miles
MLV 239+4.2 to MLV 240	2	30	8.0
MLV 243 to MLV 243+5.7	3	30	5.7
MLV 246+4.9 to MLV 247	4	30	8.9
MLV 250+3.9 to MLV 251	5	30	8.8
MLV 254+4.5 to MLV 255	6	30	5.0

White Plains Meter Station (Upgrade)
New Jersey Natural Meter Station (New)
Regulation at MLV 325

Tennessee states that the total estimated cost of the above facilities, based on 1983 dollars, is $126,143,000.

Tennessee also requests authority to transport gas for the Boundary gas customers pursuant to the *pro forma* transportation agreements and tariff in the amended application, involving the maximum daily volumes as follows:

Company	Maximum transportation volume[1] (Mcfd at 14.73 psia)
Redelivered on Tennessee's Niagara Spur: National Fuel Gas Supply Corporation	4,446
Redelivered in Tennessee's Canadian Gas Transportation New York Rate Zone:	
The Brooklyn Union Gas Co	29,119
Consolidated Edison Co of New York, Inc	4,558
Long Island Lighting Co	2,429
New Jersey Natural Gas Co	10,454
Subtotal, New York Rate Zone	46,560
Redelivered in Tennessee's Canadian Gas Transportation New England Rate Zone:	
Granite State Gas Transmission, Inc.[2]	11,879
The Berkshire Gas Co	998
Boston Gas Co	9,040
Connecticut Light & Power Co.[3]	8,099
Fitchburg Gas & Electric	504
Gas Service, Inc	1,473
Essex County Gas Co.[4]	1,530
Manchester Gas Co	1,473
Valley Gas Co	1,007
Subtotal, New England Rate Zone	37,794
Total Daily Transportation Volume	89,100

[1] These volumes reflect the maximum daily volume which Tennessee proposes to transport and deliver for each Boundary gas customer after deduction of a volume required by Tennessee for fuel and use requiremetns in connection with the proposed transportation.
[2] Formerly Bay State Gas Company.
[3] Formerly named the Connecticut Gas Company.
[4] Formerly named Haverhill Gas Company.

Tennesse further states that, because of the present status of the applications before the Commission and the Economic Regulatory Administration (ERA) related to the NIPS project and the lead times required to complete all of the facilities related to the NIPS and the instant application, it is very unlikely that those projects can be completed in time for service to commence with the 1984–85 winter season. Tennessee states that it has, therefore, been requested by four of the Boundary gas customers to render a transportation service commencing with the 1984–85 winter season (referred to as firm initial service) by means of Tennessee's existing facilities and the construction of a portion of the proposed facilities in the instant proceedings.

In order to render the firm initial service commencing with the 1984–85 winter season, Tennessee requests that a certificate of public convenience and necessity be issued by the early fall of 1983 authorizing Tennessee to construct, operate, and lease the following facilities:

MAIN LINE LOOP

Location	Original loop No.	Size (inches)	Miles
MLV 239+4.2 to MLV 240	2	30	8.0
MLV 243 to MLV 243+5.7	3	30	5.7

Measurement

Location

White Plains Meter Station (Upgrade)
New Jersey Natural Meter Station (New)

Tennessee avers that, if a certificate is issued by the early fall of 1983, the above facilities can be completed and ready for service by the 1984–85 winter season. Tennessee states that the estimated cost of the above facilities is $42,812,000 stated in 1983 dollars. Tennessee also states that the above facilities would enable Tennessee to render a maximum daily transportation service of 38,400 Mcf of gas per day. Tennessee states that it would use it existing Niagara Spur facilities to receive gas from TransCanada and that TransCanada has advised Tennessee that, if authorizations are issued by the fall of 1983, TransCanada would be able to install the necessary facilities to provide the firm daily volumes of gas proposed for the interim service.

Tennessee proposes and requests authorization to render the firm initial service to the following customers:

Maximum transportation volumes [1]

[Mcfd at 14.73 psia]

The Brooklyn Union Gas Co	14,132
New Jersey Natural Gas Co	10,136
Granite State Gas Transmission Inc	9,421
Connecticut Light & Power Co	4,711
Total	38,400

[1] These volumes reflect the maximum daily volumes which Tennessee proposes to transport and deliver for each Boundary gas customer after deduction of a volume required by Tennessee for fuel and use requirements in connection with the proposed transportation.

Tennessee further states that the two skid-mounted compressors which it proposes to install in connection with the rendition of the firm initial service would no longer be needed upon completion of the facilities for the proposed service to the Boundary gas customers. Accordingly, Tennessee requests authority pursuant to Section 7(b) of the Natural Gas Act to abandon the above-described skid-mounted compressors upon completion of the facilities required for the proposed service to the fourteen Boundary gas customers.

At a pre-hearing conference held on May 9, 1983 before Presiding Adminstrative Law Judge Bruce L. Birchman in *Boundary Gas Inc.*, Docket Nos. CP81–107, *et al.*, it was decided to set the firm initial service for hearing in accord with a procedural schedule which includes a hearing commencing June 28, 1983.

Any person desiring to be heard or to make any protest with reference to said amendment should on or before June 8, 1983, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 and 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Except for these persons that have previously been permitted to intervene in this proceeding, any person wishing to become a party herein as to participate in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

[FR Doc. 83–14400 Filed 5–27–83; 8:45 am]

BILLING CODE 6717–01–M

[Docket No. CP81–298–001]

Tennessee Gas Pipeline Company, a Division of Tenneco Inc.; Amendment to Application

May 24, 1983.

Take notice that on May 2, 1983, Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), P.O. Box 2511, Houston, Texas 77001, filed in Docket No. CP81–298–001 an amendment to its pending application filed in Docket No. CP81–298–000 pursuant to Section 3 of the Natural Gas Act so as to reflect a change in the maximum daily quantity of natural gas proposed to be imported from Canada to the United States from 300,000 Mcf to 150,000 Mcf, all as more fully set forth in the amendment which is on file with the Commission and open to public inspection.

Tennessee states that due to export licenses issued by the National Energy Board of Canada (NEB), TransCanada Pipe-Lines Limited (TransCanada) is authorized to export for delivery to Tennessee a total daily maximum quantity of natural gas of only 150,000 Mcf pursuant to the two precedent agreements. Therefore, Tennessee is amending its import applications to reflect this lower quantity.

Tennessee seeks to recover the cost of the gas which it would import under the authorizations requested in its instant application by means of its purchased gas adjustment provision in Article XXIII of the General Terms and Conditions of its FERC Gas Tariff and by means of a waiver of Section 154.38(d)(4) of the Commission's Regulations to the extent that the Commission determines that such waiver is necessary.

Any person desiring to be heard or to make any protest with reference to said amendment should on or before June 8, 1983, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 and 385.211). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Except for those persons that have previously been permitted to intervene, any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6717–01–M

Southeastern Power Administration

Revised Proposed Rate Adjustment, Public Forum, and Opportunities for Public Review and Comment

AGENCY: Southeastern Power Administration (Southeastern), DOE.

ACTION: Notice of revised proposed rate adjustment for Georgia-Alabama Systems of Projects, cancellation of public forum on original proposed rates, notice of public forum and opportunity for review and comment.

SUMMARY: Southeastern proposes to revise existing schedule of rates and charges applicable to the sale of power from the Georgia-Alabama System of Projects effective for a one-year period, October 1, 1983, through September 30, 1984.

Opportunities will be available for interested persons to review the present rates, the revised proposed rates and supporting studies, to participate in a forum and to submit written comments. Southeastern will evaluate all comments received in this process.

DATES: Written comments are due on or before July 22, 1983. A public information and comment forum will be held in Atlanta, Georgia, on July 7, 1983. Persons desiring to speak at the forum should notify Southeastern at least 4 days before the forum is scheduled, so that a list of forum participants can be prepared. Others may speak if time permits.

The public information and comment forum scheduled for June 2, 1983, is cancelled.

ADDRESSES: Five copies of written comments should be submitted to: Administrator, Southeastern Power Administration, Department of Energy, Samuel Elbert Building, Elberton, Georgia 30635. The public information and comment forum for the Georgia-Alabama System of Projects will begin at 10 a.m. on July 7, 1983, in the Hartsfield Conference Room at the Holiday Inn, North-Airport, 1380 Virginia Avenue, Atlanta, Georgia 30320.

FOR FURTHER INFORMATION CONTACT: Leon Jourolmon, Jr., Chief, Division of Fiscal Operations, Southeastern Power Administration, Department of Energy, Samuel Elbert Building, Elberton, Georgia 30635; (404) 283–3261.

SUPPLEMENTARY INFORMATION: The Federal Energy Regulatory Commission (FERC) by order issued April 8, 1981, in Docket No. EF79–3011, confirmed and approved Wholesale Power Rate Schedules GAMF–1–B, GAMF–2–B, ALA–1–B, MISS–1–B, SC–1–B, SC–2–B, CAR–1–B, and CAR–2–B applicable to Georgia-Alabama System of Projects' power for a period ending September 30, 1983. The FERC by order issued April 9, 1982, in Docket No. EF82–3011, confirmed and approved Rate Schedules CAR–1–C as a replacement for CAR–1–B for a period ending September 30, 1983 and eliminated CAR–2–B.

Additional time is needed to negotiate contracts to implement the new written power marketing policy for the Georgia-Alabama System of Projects. Therefore, Southeastern is proposing to establish short-term rates to allow time to negotiate contracts and permit development of appropriate rates applicable to the new policy.

Discussion

Existing rate schedules are predicated upon a March 1979 repayment study and other supporting data all of which are contained in FERC Docket No. EF79–3011, and upon a September 1981 repayment study and other supporting data all of which are contained in FERC Docket No. EF82–3011. The current repayment study prepared in March of 1983 shows that existing rates are not adquate to recover all costs required by present repayment criteria.

On April 18, 1983, SEPA published notice of proposed rate adjustment on the Georgia-Alabama rates. Subsequent to that date, it was determined that the wheeling costs estimated in the repayment study to the Georgia, Alabama, Mississippi, and Gulf Power companies were not adequate.

A revised repayment study with a $6,279,000 revenue increase in each future year over the current repayment study and a $563,000 increase over the repayment study used to support the original proposed adjustment demonstrates that all costs are paid within their repayment life. Therefore, Southeastern is proposing to revise existing rates so as to recover that additional $6,279,000. The increase is primarily due to escalated costs at the generating projects and increased wheeling costs. The overall increase amounts to a 19.1 percent increase in rates, and Southeastern is proposing to increase all applicable rates in the system uniformly by 17.5 percent and to provide a $.06/kw/month additional wheeling charge to the customers directly effected by the increased wheeling charge. It is proposed that revised rate schedules applicable to Customers purchasing power from the Georgia-Alabama System of Projects contain the following unit rates:

PROPOSED UNIT RATES

Dependable capacity/mo-except preference customers Duke area	$1.20
Dependable capacity/mo-preference customers Duke area	2.73
Delivered energy/kwh (mills)	4.29
Energy at projects/kwh (mills)	3.53
Dump and excess energy/kwh (mills)	2.64
Standby capacity/kw/mo	0.33
Standby Use charge/kw/day	0.041
Additional Wheeling charge to preference customers served by Georgia, Alabama, Mississippi, Gulf Power Companies/kw/mo	0.06

The referenced March 1983 current repayment study along with revised repayment study dated May 1983 and previous system repayment studies are available for examination at the Samuel Elbert Building, Elberton, Georgia 30635. Proposed Rate Schedules GAMF–1–C, GAMF–2–C, ALA–1–C, MISS–1–C, SC–1–C, SC–2–C, CAR–1–D, and CAR–2–C (a replacement rate schedule for CAR–2–B, which was eliminated in rate filing contained in FERC Docket No. EF82–3011) are also available.

Issued in Elberton, Georgia, May 18, 1983.

Harry C. Geisinger,

Administrator.

ENVIRONMENTAL PROTECTION AGENCY

[OPRM–FRL 2372–6]

Agency Forms Under OMB Review

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 3507(a)(2)(B) of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.) requires the Agency to publish in the **Federal Register** a notice proposed information collection requests that have been forwarded to the Office of Management and Budget (OMB) for review. The information collection requests listed are available to the public for review and comment.

FOR FURTHER INFORMATION CONTACT: David Bowers; Office of Standards and Regulations; Information Management Section (PM–223); U.S. Environmental Protection Agency; 401 M Street, SW.; Washington, D.C. 20460; telephone (202) 382–2742 or FTS 382–2742.

SUPPLEMENTARY INFORMATION:

Air Programs

• Title: Environmental Radiation Ambient Monitoring System (ERAMS) (EPA ID 0877).

Abstract: The Environmental Radiation Ambient Monitoring System is the only nationwide radiation monitoring network. This system is designed to monitor radioactive fallout, assess population exposure, and take public health actions when necessary. Air, milk and water are analyzed from samples obtained for EPA by state agencies.

Respondents: State and local governments.

Emergency Response Programs

• Title: Spill Prevention Control and Countermeasure Plan and Review (EPA ID 0328).

Abstract: All facilities storing oil in excess of amounts specified in the Clean Water Act must maintain a Spill Prevention Control ans Countermeasure Plan (SPCCP). Facilities experiencing one oil spill of 1,000 gallons or more, or two spills of any size, into navigable waters within 12 months must send their SPCCP to EPA for review for adequacy.

Respondents: Facilities storing oil.

Agency Forms Cleared By OMB Between April 18 and May 18, 1983

EPA ID 0827, Construction Grants Program Information, was cleared on April 18 (OMB #2040–0027).

EPA ID 1014, Certification for Exemption from Effluent Monitoring

Requirements, was cleared on May 18 (OMB #2040–0033).

EPA ID 1015, Certification of Sulfide Pretreatment Standard Applicability, was cleared on May 18 (OMB #2040–0033).

EPA ID 1016, Survey of Nonferrous Metals Manufacturing Industry, Phase 2, was cleared on April 19 (OMB #2040–0035).

EPA ID 1033, State Reports Evaluating Progress in the Clean Water Program, was cleared May 5 (OMB #2040–0036).

Comments on all parts of this notice should be sent to:

David Bowers, U.S. Environmental Protection Agency, Office of Standards and Regulations (PM–223), 401 M Street, SW., Washington, D.C. 20460, or

Anita Ducca, Office of Management and Budget, Office of Information and Regulatory Affairs, New Executive Office Building (Room 3228), 726 Jackson Place, NW., Washington, D.C. 20503.

Dated: May 23, 1983.

John Warren,

Acting Chief, Statistical Policy Staff.

BILLING CODE 6560–50–M

FEDERAL HOME LOAN BANK BOARD

[No. 83–277–A]

Biscayne Federal Savings and Loan Association; Trading Suspension Order

Dated: May 16, 1983.

AGENCY: Federal Home Loan Bank Board.

ACTION: Notice of trading suspension order.

SUMMARY: The Federal Home Loan Bank Board, pursuant to section 12(k) of the Securities Exchange Act of 1934, has temporarily suspended exchange and over-the-counter trading in the securities of Biscayne Federal Savings and Loan Association, Miami, Florida, ("Biscayne Federal"), which is a federally-chartered institution under the receivership of the Federal Savings and Loan Insurance Corporation. The order of trading suspension was adopted pursuant to the Board's subsequent announcement that it is considering the terms and possible effects of bids received for New Biscayne Federal Savings and Loan Association, Miami, Florida, including whether any of the bids will have an effect on the shareholders of Biscayne Federal.

EFFECTIVE DATE: May 16, 1983.

FOR FURTHER INFORMATION CONTACT: John P. Harootunian, Attorney, Securities and Corporate Analysis Division, Office of General Counsel, Federal Home Loan Bank Board, 1700 G Street, NW., Washington, D.C. 20552, at 202–377–6415.

SUPPLEMENTARY INFORMATION: The Federal Home Loan Bank Board ("Board"), pursuant to section 12(k) of the Securities Exchange Act of 1934 ("Exchange Act"), Has temporarily suspended exchange and over-the-counter trading in the securities of Biscayne Federal Savings and Loan Association, Miami, Florida ("Biscayne Federal"), a federally-chartered insured institution in receivership, with its principal executive offices located at 1790 Biscayne Boulevard, Miami, Florida, 33132, for a ten-day period commencing at 2:00 p.m. (e.d.s.t.) on May 16, 1983, and terminating at midnight (e.d.s.t.) on May 25, 1983.

The Federal Savings and Loan Insurance Corporation ("FSLIC") was appointed as the receiver of Biscayne Federal on April 6, 1983. The Board suspended for a ten-day period trading in the securities of Biscayne Federal pending a regulatory announcement. Immediately following the Board's issuance of the order of trading suspension, the Board announced that it is considering the terms and possible effects of bids received for New Biscayne Federal, Miami, Florida, including whether any of the bids will have an effect on the shareholders of Biscayne Federal.

The Board cautions broker-dealers, shareholders and prospective purchasers that they should carefully consider the foregoing information along with all other currently available information and any information subsequently issued by Biscayne Federal.

Furthermore, brokers and dealers should be alert to the fact that, pursuant to Rule 15c2–11 under the Exchange Act, at the termination of the trading suspension, no quotation may be entered unless and until they have strictly complied with all of the provisions of such rule. If any broker or dealer has any questions as to whether or not he has complied with such rule, he should not enter any quotations but immediately contact the staff of the Board's Office of General Counsel, Division of Securities and Corporate Analysis, in Washington, D.C. If any broker or dealer is uncertain as to what is required by Rule 15c2–11, he should refrain from entering quotations relating to the securities in question until such time as he has familiarized himself with such rule and is certain that all of its provisions have been met. If any broker or dealer enters any quotation which is in violation of such rule, the Board will consider the need for prompt enforcement action.

Any broker-dealer or other person who has any information which may relate to this matter is encouraged to call the Board's Office of General Counsel, Divsion of Securities and Corporate analysis, at (202) 377–6415.

In the matter of trading in the securities of Biscayne Federal Savings and Loan Association, Miami, Florida, FHLBB No. 5999, Securities Exchange Act of 1934 Section 12(k). Order of trading suspension; Federal Home Loan Bank Board, Re: Resolution No. 83–277, dated May 16, 1983.

The Federal Home Loan Bank Board ("Board") intends to make a regulatory announcement which will relate to the securities of Biscayne Federal Savings and Loan Association, Miami, Florida ("Biscayne Federal"), an association for which the Federal Savings and Loan Insurance Corporation is the receiver. The Board is of the opinion that the public interest and the protection of investors require a summary suspension of trading in the securities of Biscayne Federal.

Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that exchange trading and over-the-counter trading in the securities of Biscayne Federal are suspended, for a period of ten days, from 2:00 p.m. (e.d.s.t.) on May 16, 1983, and terminating at midnight (e.d.s.t.) on May 25, 1983.

By the Federal Home Loan Bank Board.

Gregory B. Smith,

Acting Secretary.

BILLING CODE 6720–01–M

FEDERAL RESERVE SYSTEM

Acquisition of Bank Shares by Bank Holding Companies; Financial Growth Systems, Inc. et al.

The companies listed in this notice have applied for the Board's approval under section 3(a)(3) of the Bank Holding Company Act (12 U.S.C. 1842(a)(3)) to acquire voting shares or assets of a bank. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application may be inspected at the offices of the Board of Governors, or at the Federal Reserve Bank indicated for that application. With respect to

each application, interested persons may express their views in writing to the address indicated for that application. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

A. **Federal Reserve Bank of Atlanta** (Robert E. Heck, Vice President) 104 Marietta Street, NW., Atlanta, Georgia 30303:

1. *Financial Growth Systems, Inc.*, Inverness, Flordia; to acquire 100 percent of the voting shares or assets of Citizens First National Bank of Hernando County, Hernando County, Florida. Comments on this application must be received not later than June 23, 1983.

2. *SouthTrust Corporation*, Birmingham, Alabama; to acquire 80 percent of the voting shares or assets of The First Bank of Alabaster, Alabaster, Alabama. Comments on this application must be received not later than June 23, 1983.

Board of Governors of the Federal Reserve System, May 24, 1983.

James McAfee,

Associate Secretary of the Board.

[FR Doc. 83-14386 Filed 5-27-83; 8:45 am]

BILLING CODE 6210-01-M

Bank Holding Company; Proposed de Novo Nonbank Activities; BankAmerica Corp. et al.

The organization identified in this notice has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(1) of the Board's Regulation Y (12 CFR 225.4(b)(1)), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirectly, solely in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to the application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any comment on the application that requests a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may by inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writing and received by the appropriate Federal Reserve Bank not later than the date indicated.

A. **Federal Reserve Bank of San Francisco** (Harry W. Green, Vice President) 400 Sansome Street, San Francisco, California 94120:

1. *BankAmerica Corporation*, San Francisco, California (securities brokerage and incidental activities; *de novo* offices; all fifty (50) states and the District of Columbia): To engage, through its indirect subsidiary, Charles Schwab & Co., Inc., in the activities of securities brokerage, consisting principally of buying and selling securities solely upon the order and for the account of customers, and of extending margin credit in conformity with Regulation T. These activities will be conducted from five *de novo* offices located in Bakersfield, Fresno, Modesto and Stockton, California and New York, New York; each of the five proposed offices will be serving all fifty (50) states and the District of Columbia. Comments on this application must be received not later than June 22, 1983.

James McAfee,

Associate Secretary of the Board.

Formation of Bank Holding Companies; First Lacon Corp. et al.

The companies listed in this notice have applied for the Board's approval under section 3(a)(1) of the Bank Holding Company Act (12 U.S.C. 1842(a)(1)) to become bank holding companies by acquiring voting shares or assets of a bank. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application may be inspected at the offices of the Board of Governors, or at the Federal Reserve Bank indicated for that application. With respect to each application, interested persons may express their views in writing to the address indicated for that application. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

A. **Federal Reserve Bank of Chicago** (Franklin D. Dreyer, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. *First Lacon Corp.*, Lacon, Illinois; to become a bank holding company by acquiring 80 percent of the voting shares of The First National Bank of Lacon, Lacon, Illinois. Comments on this application must be received not later than June 22, 1983.

2. *Halbur Bancshares, Inc.*, Halbur, Iowa; to become a bank holding company by acquiring 90 percent or more of the voting shares of Farmers Savings Bank, Halbur, Iowa. Comments on this application must be received not later than June 20, 1983.

3. *Illini Financial Corp.*, Galesburg, Illinois; to become a bank holding company by acquiring 90 percent of the voting shares of Community Bank of Galesburg, Galesburg, Illinois. Comments on this application must be received not later than June 22, 1983.

B. **Federal Reserve Bank of St. Louis** (Delmer P. Weisz, Vice President) 411 Locust Street, St. Louis, Missouri 63166:

1. *Webster Bancorp, Inc.*, Clay, Kentucky; to become a bank holding company by acquiring 80 percent of the voting shares of The Farmers Bank, Clay, Kentucky. Comments on this application must be received not later than June 23, 1983.

Board of Governors of the Federal Reserve System, May 24, 1983.

James McAfee,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 75N-0184; DESI 597]

Certain Drug Products Containing an Anticholinergic in Combination With a Barbiturate; Drugs for Human Use; Drug Efficacy Study Implementation; Revocation of Exemption; Opportunity for Hearing

Correction

In FR Doc. 83-12136 beginning on page 20495 in the issue of Friday, May 6, 1983, make the following corrections:

1. On page 20496, middle column, second complete paragraph, second line, "43 FR 27490" should have read "43 FR 28490".

2. Same page, third column, sixth paragraph, fifth line, "Warton Laboratories, Inc." should have read "Wharton Laboratories, Inc.".

3. On page 20500, first column, in the table for Epigastric Pain, footnote 2, the symbol used is "≦".

4. On the same page, middle column, twenty seven lines from the bottom of the page, the equation should have read "P>.01".

BILLING CODE 1505-01-M

[Docket No. 82N-0373]

Clinical Studies of Effects of Orphan Products; Grants

Correction

In FR Doc. 83-12445, beginning on page 20992 in the issue of Tuesday, May 10, 1983 make the following correction.

On page 20993, first column, the first word of the second complete paragraph reading "Ward" should read "Award".

BILLING CODE 1505-01-M

[Docket No. 83N-0081]

Codex Standard for Dried Edible Fungi

Correction

In FR Doc. 83-12245 beginning on page 20994, in the issue of Tuesday, May 10, 1983, make the following correction.

On page 20994, third column, directly above paragraph "3.1", the heading "*Essential Quality Factors*" should read "*3. Essential Quality Factors*".

BILLING CODE 1505-01-M

Advisory Committee; Meeting

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). This notice also sets forth a summary of the procedures governing committee meetings and methods by which interested persons may participate in open public hearings conducted by the committees and is issued under section 10(a) (1) and (2) of the Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770-776 (5 U.S.C. App. I)), and FDA regulations (21 CFR Part 14) relating to advisory committees. The following advisory committee meeting is announced:

Pulmonary-Allergy Drugs Advisory Committee

Date, time, and place. June 20, 8 a.m., Conference Rm. D, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD.

Type of meeting and contact person. Open public hearing, 8 a.m. to 9 a.m.; open committee discussion, 9 a.m. to 12 m.; closed committee deliberations, 1 p.m. to 4 p.m.; Conrad J. Ledet, National Center for Drugs and Biologics (HFN-160), Food and Drug Administration; 5600 Fishers Lane, Rockville, MD 20857, 301-443-3500. Any special arrangements or accommodations should be made with the contact person listed above by June 10.

General function of the committee. The committee reviews and evaluates available data concerning the safety and effectiveness of marketed and investigational prescription drugs for use in the treatment of pulmonary disease and diseases with allergic and/or immunologic mechanisms.

Agenda—open public hearing. Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee.

Open committee discussion. The committee will discuss sulfiting agents used as antioxidants in drug products.

Closed committee deliberations. The committee will discuss pharmacokinetics and labeling of 24-hour sustained release theophylline preparations. Trade secret and confidential commerical information relevant to pending new drug applications for 24-hour sustained release theophylline preparations will be reviewed. This portion of the meeting will be closed to permit discussion of this information (5 U.S.C. 552b(c)(4)).

Each public advisory committee meeting listed above may have as many as four separable portions: (1) An open public hearing, (2) an open committee discussion, (3) a closed presentation of data, and (4) a closed committee deliberation. Every advisory committee meeting shall have an open public hearing portion. Whether or not it also includes any of the other three portions will depend upon the specific meeting involved. The dates and times reserved for the separate portions of each committee meeting are listed above.

The open public hearing portion of each meeting shall be at least 1 hour long unless public participation does not last that long. It is emphasized, however, that the 1 hour time limit for an open public hearing represents a minimum rather than a maximum time for public participation, and an open public hearing may last for whatever longer period the committee chairman determines will facilitate the committee's work.

Meeting of advisory committees shall be conducted, insofar as is practical, in accordance with the agenda published in this Federal Register notice. Changes in the agenda will be announced at the beginning of the open portion of a meeting.

Any interested person who wishes to be assured of the right to make an oral representation at the open public hearing portion of a meeting shall inform the contact person listed above, either orally or in writing, prior to the meeting. Any person attending the hearing who does not in advance of the meeting request an opportunity to speak will be allowed to make an oral presentation at the hearing's conclusion, if time permits, at the chairman's discretion.

Persons interested in specific agenda items to be discussed in open session may ascertain from the contact person the approximate time of discussion.

A list of committee members and summary minutes of meetings may be requested from the Dockets Managment Branch (HFA-305), Food and Drug Administration, Rm. 4-62, 5600 Fishers Lane, Rockville, MD 20857, between 9 a.m. and 4 p.m., Monday through Friday. The FDA regulations relating to public advisory committees may be found in 21 CFR Part 14.

The Commissioner, with the concurrence of the Chief Counsel, has determined for the reasons stated that those portions of the advisory committee meetings so designated in this notice shall be closed. The Federal Advisory Committee Act (FACA), as amended by the Government in the Sunshine Act (Pub. L. 94-409), permits such closed advisory committee meetings in certain circumstances. Those portions of a meeting designated as closed, however, shall be closed for the shortest possible time, consistent with the intent of the cited statutes.

The FACA, as amended, provides that a portion of a meeting may be closed where the matter for discussion involves a trade secret; commerical or financial information that is privileged or confidential; information of a personal nature, disclosure of which would be a clearly unwarranted invasion of personal privacy; investigatory files compiled for law enforcement purposes; information the premature disclosure of which would be likely to significantly frustrate implementation of a proposed agency action; and information in certain other instances not generally relevant to FDA matters.

Examples of portions of FDA advisory committee meetings that ordinarily may be closed, where necessary and in accordance with FACA criteria, include the review, discussion, and evaluation of drafts of regulations or guidelines or similar preexisting internal agency documents, but only if their premature disclosure is likely to significantly frustrate implementation of proposed agency action; review of trade secrets and confidential commercial or financial information submitted to the agency; consideration of matters involving investigatory files compiled for law enforcement purposes; and review of matters, such as personnel records or individual patient records, where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Examples of portions of FDA advisory committee meetings that ordinarily shall not be closed include the review, discussion, and evaluation of general preclinical and clinical test protocols and procedures for a class of drugs or devices; consideration of labeling requirements for a class of marketed drugs or devices; review of data and information on specific investigational or marketed drugs and devices that have previously been made public; presentation of any other data or information that is not exempt from public disclosure pursuant to the FACA, as amended; and, notably deliberative sessions to formulate advice and recommendations to the agency on matters that do not independently justify closing.

Dated: May 24, 1983.

Mark Novitch,

Acting Commissioner of Food and Drugs.

[FR Doc. 83-14412 Filed 5-27-83; 8:45 am]
BILLING CODE 4160-01-M

Blood Products Advisory Committee; Request for Nominations for Representatives of Consumer and Industry Interests

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is requesting nominations for one consumer and one industry representative to serve on the Blood Products Advisory Committee of the National Center for Drugs and Biologics when it serves as a medical device panel under the Medical Device Amendments of 1976 (21 U.S.C. 360c–360k). Nominations are requested for these newly authorized positions under the revised charter of the committee. FDA has a special interest in ensuring that women, minority groups, the physically handicapped, and small businesses are adequately represented on advisory committees and therefore extends particular encouragement to nominations for appropriately qualified female, minority, and physically handicapped candidates, and for nominations from small businesses that manufacture medical devices subject to the regulations.

DATE: Nominations by July 15, 1983.

ADDRESS: All nominations and curricula vitae for the consumer representative must be submitted in writing to Naomi Kulakow, Office of Consumer Affairs (HFE–40), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857.

All nominations and curricula vitae, which should include nominee's office address and telephone number, for the industry representative must be submitted in writing to Mary Ann Tourault, National Center for Drugs and Biologics, Office of Biologics (HFN–830), 8800 Rockville Pike, Bethesda, MD 20205.

FOR FURTHER INFORMATION CONTACT: For consumer interests: Naomi Kulakow, at the address above (301–443–5006).

For industry interests: Mary Ann Tourault at the address above (301–496–5241).

SUPPLEMENTARY INFORMATION: FDA is requesting nominations for members representing consumer and industry interests for the Blood Products Advisory Committee when it serves as a medical device panel under the Medical Device Amendments of 1976. The revised charter of the committee was signed by the Secretary of health and Human Services on March 11, 1983. Devices that may come before the committee are those dedicated systems for use in collecting, processing, or administering licensed biologicals such as blood bank products and also unlicensed in vitro diagnostic devices (reagents) intended for use in the processing or administration of licensed biologicals. The function of the committee when serving as a medical device panel is to: (1) Review and evaluate available data concerning the safety and effectiveness of devices currently in use, (2) advise the Commissioner of Food and Drugs on recommended classification of these devices into one of three regulatory categories, (3) recommend the assignment of a priority for the application of regulatory requirements for devices classified in the standards or premarket approval category, (4) advise on any possible risks to health associated with the use of devices, (5) advise on formulation of product development protocols and review premarket approval applications for these devices classified in the premarket approval category, (6) review classification of devices to recommend changes in classification as appropriate, (7) recommend exemption to certain devices from the application of portions of the act, (8) advise on the necessity to ban a device, and (9) respond to requests from the agency to review and make recommendations on specific issues or problems concerning the safety and effectiveness of devices.

Consumer and Industry Representation

Section 513 of the act (21 U.S.C. 360c) provides that each medical device panel include as members one nonvoting representative of consumer interests and one nonvoting representative of interests of the device manufacturing industry.

Nomination Procedure

Any interested person may nominate one or more qualified persons to represent consumer interests as identified in this notice. To be eligible for selection, applicants' experience and/or education will be evaluated against Federal Civil Service criteria for the position to which they will be appointed.

Any organization in the medical device manufacturing industry ("industry interests") wishing to participate in the selection of an appropriate member of a particular committee, panel, or section may nominate one or more qualified persons to represent industry interests. Persons who nominate themselves as industrial representatives will not participate in the selection process. Therefore, it is recommended that all nominations be made by an organization or firm. Nominations shall include a complete curriculum vitae of each nominee and shall state that the nominee is aware of the nomination, is willing to serve as a member, and in the case of the consumer representative, appears to have no conflict of interest. The term of office is 4 years.

Selection Procedure

Selection of members representing consumer interests is conducted through procedures developed under 21 CFR 14.84(c). The procedures include use of a consortium of consumer organizations that recommends two candidates to the agency for the agency's selection.

Regarding nominations for members representing the interests of the device manufacturing industry, a letter will be

sent to each organization that has made a nomination and to those organizations indicating an interest in participating in the selection process, together with a complete list of all such organizations and the nominees. This letter will state that is it each organization's responsibility to consult with the others in selecting a single member representing industry interests for that particular committee within 60 days after receipt of the letter.

This notice is issued under the Federal Advisory Committee Act (Pub. L. 92–463), 86 Stat. 770–776 (5 U.S.C. App. I) and 21 CFR Part 14, on advisory committes.

Dated: May 23, 1983.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 83-14413 Filed 5-27-83; 8:45 am]

BILLING CODE 4160-01-M

[Docket No. 83m–0061]

C. C. Kelly Enterprises; Premarket Approval of Eyerisol Salt Capsule System™

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing its approval of the application for premarket approval under the Medical Device Amendments of 1976 of the EYERISOL Salt Capsule System™ for use in heat disinfection of all soft (hydrophilic) contact lenses, sponsored by C. C. Kelly Enterprises, Huntington Beach, CA. The EYERISOL Salt Capsule System™ is intended for use in the preparation of 200 milliliters (mL) of normal saline (0.9 percent) solution to be used in heat disinfection of all soft (hydrophilic) contact lenses. After reviewing the recommendation of the Ophthalmic Device Section of the Ophthalmic; Ear, Nose, and Throat; and Dental Devices Panel, FDA notified the sponsor that the application was approved because the device had been shown to be safe and effective for use as recommended in the submitted labeling.

DATE: Petitions for administrative review by June 30, 1983.

ADDRESS: Requests for copies of the summary of safety and effectiveness data and petitions for administrative review may be sent to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Charles H. Kyper, National Center for Devices and Radiological Health (HFK–402), Food and Drug Administration, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7445.

SUPPLEMENTARY INFORMATION: On May 18, 1982, C. C. Kelly Enterprises, Huntington Beach, CA, submitted to FDA an application for premarket approval of the EYERISOL Salt Capsule System™ for use in heat disinfection of all soft (hydrophilic) contact lenses. The application was reviewed by the Ophthalmic Device Section of the Ophthalmic; Ear, Nose, and Throat; and Dental Devices Panel, an FDA advisory committee, which recommended approval of the application. On February 23, 1983, FDA approved the application by a letter to the sponsor from the Associate Director for Device Evaluation of the Office of Medical Devices. FDA determined that sale and distribution of the device to patients through eye care practitioners was necessary to provide reasonable assurance of the safe and effective use of the device. Therefore, as a condition of approval, FDA restricted the device to sale and distribution through eye care practitioners.

Before enactment of the Medical Device Amendments of 1976 (the amendments) (Pub. L. 94–295, 90 Stat. 539–583), lens care solutions and related products for preparing such solutions for use in heat disinfection of soft (hydrophilic) contact lenses were regulated as new drugs. Because the amendments broadened the definition of the term "device" in section 201(h) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 321(h)), such products are now regulated as class III devices (premarket approval). As FDA explained in a notice published in the **Federal Register** of December 16, 1977 (42 FR 63472), the amendments provide transitional provisions to ensure continuation of premarket approval requirements for class III devices formerly considered new drugs. Furthermore, FDA requires, as a condition to approval, that sponsors of applications for premarket approval of soft contact lenses and accessory lens care products comply with the records and reports provisions of Subpart D of Part 310 (21 CFR Part 310) until these provisions are replaced by similar requirements under the amendments.

A summary of the safety and effectiveness data on which FDA's approval is based is on file in the Dockets Management Branch (address above) and is available upon request from that office. A copy of all approved final labeling is available for public inspection at the Office of Medical Devices—contact Charles H. Kyper (HFK–402), address above. Requests should be identified with the name of the device and the docket number found in brackets in the heading of this document.

The labeling of the EYERISOL Salt Capsule System™ states that the solution prepared from the salt capsules is designed for use in heat disinfection of all soft (hydrophilic) contact lenses. Sponsors of any soft (hydrophilic) contact lenses that have been approved for marketing and whose approved labeling provides for the use of heat disinfection are advised that whenever FDA publishes a notice in the **Federal Register** of the agency's approval of a new solution for use with an approved soft contact lens, the sponsor of each lens shall correct its labeling to refer to the new solution at the next printing or at such other time as FDA prescribes by letter to the sponsor. A sponsor who fails to update the restrictive labeling may violate the misbranding provisions of section 502 of the act (21 U.S.C. 352) as well as the Federal Trade Commission Act (15 U.S.C. 41–58), as amended by the Magnuson-Moss Warranty-Federal Trade Commission Improvement Act (Pub. L. 93–637). Furthermore, failure to update the restrictive labeling to refer to new salt capsules that may be used with an approved lens may be grounds for withdrawing approval of the application for the lens under section 515(e)(1)(F) of the act (21 U.S.C 360e(e)(1)(F)). The corrected labeling shall state that the EYERISOL Salt Capsule System™ is sold only through eye care practitioners.

Opportunity for Administrative Review

Section 515(d)(3) of the act (21 U.S.C. 360e(d)(3)) authorizes any interested person to petition, under section 515(g) of the act (21 U.S.C. 360e(g)), for administrative review of FDA's decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR Part 12) of FDA's administrative practices and procedures regulations or a review of the application and of FDA's action by an independent advisory committee of experts. A petition is to be in the form of a petition for reconsideration of FDA action under § 10.33(b) (21 CFR 10.33(b)). A petitioner shall identify the form of review requested (hearing or independent advisory committee) and shall submit with the petition supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing the petition, FDA will decide whether to grant or deny the petition and will publish notice of its decision in the

Federal Register. If FDA grants the petition, the notice will state the issues to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may, at any time on or before June 30, 1983, file with the Dockets Management Branch (address above) two copies of each petition and supporting data and information, identified with the name of the device and the docket number found in brackets in the heading of this document. Received petitions may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

Dated: May 23, 1983.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 83-14414 Filed 5-27-83; 8:45 am]

BILLING CODE 4160-01-M

Health Care Financing Administration

Medicaid Program; Medicaid Management Information Systems; Performance Standards

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: General notice.

SUMMARY: The purpose of this notice is to respond to the comments we received on the Medicaid Management Information Systems Performance Standards that we published in a notice with comment period on June 30, 1981 (46 FR 33653).

FOR FURTHER INFORMATION CONTACT: Newton Dikoff, (301) 594–8190.

SUPPLEMENTARY INFORMATION: Section 1903(a)(3) of the Social Security Act (42 U.S.C. 1396b(a)(3)) authorizes Federal matching funds at 75 percent for the operation by States of approved Medicaid Management Information Systems (MMIS), which are mechanized claims processing and information retrieval systems designed in accordance with basic Federal guidelines. The purpose of these systems is to provide more efficient, economical and effective administration of State Medicaid plans.

On March 5, 1980, we published amendments to regulations (42 CFR Part 433, Subpart C) to implement section 1903(a)(3) of the Act (45 FR 14211). Those regulations require us to publish for public comment in the **Federal Register** changes we make in the conditions used for approval and periodic reapprovals of systems, including new performance standards. We then must issue the final requirement in the State Medicaid Manual (SMM) (referred to as the Medical Assistance Manual in 42 CFR 433.115), and allow an appropriate period for the State agencies to meet the requirement.

Section 1903(r) of the Social Security Act, 42 U.S.C. 1396b(r), as enacted by section 901 of the Mental Health Systems Act, Pub. L. 96–398 (October 7, 1980), requires us to review each system yearly to determine whether it meets performance standards and system requirements. Changes to performance standards and system requirements must be published at least one quarter before the fiscal year in which we conduct each yearly systems review. We must reduce Federal financial participation (FFP) if standards or system requirements are not met. The requirements of that legislation provide for incremental reductions of FFP in State expenditures for operating an MMIS from 75 percent to 50 percent if a State MMIS does not meet the performance standards or system requirements. (The law requires FFP to be reduced by no less than 5 percent and by no more than 25 percent. Further, a State's FFP may not be reduced by more than 10 percent in any one-year period.) We published a notice of proposed rulemaking on this subject (reduction of FFP) on March 3, 1983 (48 FR 9038).

On June 30, 1981, we published performance standards to be used during the reapproval process starting in fiscal year 1982 (46 FR 33653). We solicited comments on those standards. The purpose of this notice is to respond to the comments we received.

Analysis and Response to Comments

We received 31 comments from nine entities: eight States and one hospital. A number of comments concerned the system performance review (SPR) materials as published in the SMM, rather than the material published in the notice. The SPR materials were developed to implement the reapproval process and are the materials from which the MMIS performance standards in the **Federal Register** were derived. Those comments were directed at specific methodological issues on conducting the MMIS system performance review. We have relayed the concerns expressed in those comments to the HCFA Regional Offices and to the State advisory groups and have modified the system performance review for fiscal year 1983 as appropriate. Those modifications were sent to the States on June 24, 1982, meeting the requirement that States must be notified of changes in conditions of reapproval at least three months before the beginning of the fiscal year 1983 review period. Thus, we already have acted on many of the concerns submitted by the commenters through modifications that have been made to the SPR materials currently in use for fiscal year 1983.

The standards, elements and factors are very technical in nature and we believe there is no need to repeat them in this notice in detail as the affected sector has a working knowledge of them. Anyone interested in reviewing all the standards, elements and factors may obtain a copy of Part 11 of the SMM by telephoning the Inquiries Staff of the Bureau of Program Operations at (301) 594–8715. Individuals with questions concerning the performance standards should call Newton Dikoff at (301) 594–8190.

Below is a discussion of the comments. The order of the comments is based on the number of the standard at which the comment was directed.

1. Standard 1—Recipient Eligibility Information

a. Two commenters were concerned that failure to meet the requirements for making accurate eligibility determinations would result in the State being penalized twice for the same failure (once under the Medicaid quality control program and a second time under the MMIS review). One of the commenters stated that the State should be accountable only to the extent that the MMIS recipient eligibility data base reflects accurate eligibility data and the application of that data to the entire MMIS process is accurate.

With respect to the latter comment, we view the accurate determination of individual eligibility as critical to the proper payment of Medicaid claims. As the basic, initial step in claims processing and a highly frequent cause of inappropriate payments, eligibility determinations are a key element in the effective administration of State medical assistance programs. We do not consider an MMIS burdened by a seriously flawed eligibility process to be capable of quality operations deserving 75 percent FFP. Therefore, this impact has convinced us of the need to include eligibility case error rates in the SPR.

Concerning the issue of a double penalty, we believe there is a need for certain key activities to be included in multiple HCFA evaluation processes. When the activities have broad effects on both the administrative and program aspects of medical assistance, it would be inappropriate to ignore their total program impact. In the specific case of

potential penalties under Medicaid quality control (MQC) and SPR for poor eligibility determinations, MQC is restricted to medical assistance payments, while SPR is limited to MMIE operational administrative funding. Therefore, failure to meet the reqirements for making accurate eligibility determinations would not result in a State's being subjected to the same penalty twice for the same failure. The different impacts of the State deficiency are therefore appropriately addressed by the different evaluation programs.

b. One commenter noted that the law in his State prohibits the release of eligibility data except to county hospitals, making it impossible to comply with the factor requiring timely responses to provider requests for eligibility data. The commenter requested we change the factor so that the State could comply; otherwise, it would have to seek a specific exemption from it.

If a State law or policy forbids an activity assessed by the SPR but not required *per se* as a condition for Federal funding, we will consider the State's performance acceptable. There is no need for a State to seek a formal waiver of the requirement. However, a State should inform the servicing HCFA regional office of its law or policy that prohibits the activity that is subject for review by the SPR. This should be done as early as possible in the review period so that the activity can be removed from consideration before the review of the activity in question begins.

c. One commenter stated that there is a potential conflict between Standard 1, Element A and Standard 7, Element O. The former requires responsiveness to provider requests for eligibility data; the latter requires adequate internal system integrity and safeguards for information on recipients. The commenter recommended that Element A incorporate a reference to Element O and provide for a clear and distinct compatibility between the two elements. Also, HCFA should provide technical assistance to the States so that they are not in the untenable position of trying to comply with potentially conflicting standards.

We have eliminated the SPR factors under Standard 1, Element A, which measured timely and accurate response to provider requests for eligibility data.

This change was due, in part, to the comment received. Also, it proved quite difficult to assess performance under those factors and the results indicated that no significant problems existed in that area. The requirements remain concerning safeguards and limitations related to disclosing information on recipient eligibility data.

d. One commenter stated that if HCFA insists on using the Medicaid quality control (MQC) eligibility error rates as a standard, the acceptable performance level should be comparable to that of MQC; i.e., the error rate should be no greater than the 4 percent error rate required under the Michel Amendment to the Department of Health and Human Resources appropriations act, the Fiscal Year 1980 Labor-HEW Appropriation bill (Pub. L. 96–123). (Note: The MQC error rate was changed to 3 percent by section 133 of the Tax Equity and Fiscal Responsibility Act of 1982 (Pub. L. 97–248, enacted September 3, 1982); that section is effective for periods beginning April 1, 1983. This change does not affect the comment.)

We do not agree. The MMIS performance standards are designed to improve overall performance of mechanized claims processing systems and to encourage States to achieve savings in the Medicaid program. It is appropriate to treat MQC differently from MMIS because although Congress has mandated that there be a fixed eligibility error rate in MQC, Congress also gave the Department the discretion to establish the performance standards it uses for MMIS in section 1903(r) of the Act without mandating that a fixed error level be used. The absolute cutoff used by MQC is approprite for reviewing eligibility as an isolated activity. SPR, however, views eligibility in a systems context. The SPR process recognizes a broad range of performance. In any given functional area performance can fall below the normal level without necessarily resulting in failure. In applying the MQC error rate, the SPR uses a sliding scale, recognizing that higher error rates progressively undermine the MMIS's value. By contrast, MQC does not provide for a flexible range of performance. In line with the Department's commitment to maximize State flexibility, we believe it is appropriate to use a floating (not fixed) error rate as the method most responsive to State conditions and most consistent with State flexibility. In the absence of a statutory requirement or compelling reason, we have taken this approach to provide the desired flexibility in deriving the appropriate level for proper performance.

e. Two commenters suggested that the review requirement for factors 1B1 and 1B2 should be changed to require review of the entire universe only when it is less than eight items.

We agree with this comment. The review requirement for factors 1B1 and 1B2 was changed from a review of the entire universe to a sample of the universe. If the universe is eight or less, all items in the universe must be reviewed.

2. Standard 3—Timely Claims Processing

a. One commenter stated that the word "timely," used in several places in Standard 3, should be further defined to specify the average time periods by which the systems must comply.

The SPR materials already contain the time periods by which the system must comply and the States have this information. The notice published on June 30, 1981 contained illustrative factors that also included specifications on average time periods by which the systems must comply.

b. One commenter stated that he believed that Element F of Standard 3 should use the word "provider" rather than "practitioner".

We do not agree. In this instance we have made the SPR consistent with the regulations at 42 CFR 447.45. The regulations explain the use of the word "practitioner" and specifically exlude, at § 447.45(b)(4), providers, health maintenance organizations, hospital cooperative shared services organizations, and any public entities.

c. One commenter stated that clean claims should be paid or denied, as appropriate, within 15 days of receipt, rather than within 30 days of receipt.

We have retained the 30-day requirement, based upon the fact that Congress established this as the standard for the State plan requirement (42 U.S.C. 1396a(a)(37)). We believe that our experience with those requirements and our review procedures has shown that this continues to be a reasonable time period for use in the standard for the payment or denial of clean claims.

3. Standard 4—Accurate Claims Processing and Review

One commenter was concerned about the extent of the definition of a provider "signature or certification", especially now that there is a movement toward magnetic tape and electronic claims submittal. The commenter assumed that provider certifications are acceptable in the absence of hard copy submittals containing signatures.

We believe the commenter's concerns are settled by the SPR and existing regulations. Current regulations (42 CFR 455.18 and 455.19) are specific about what can be considered "signature or certification". All provider claims forms must be imprinted with a statement of certification and signed by the provider. An acceptable alternative method is to

imprint the wording on the provider's check or warrant above the space where the provider endorses the check or warrant. In the case of magnetic tape and electronic claims submittal, this alternative is appropriate in establishing the required link between claim submission and payment. In addition, the SPR requires written agreements between States and providers or their billing services regarding the specific requirements for acceptable electronic billing.

4. Standard 5—Management and Administrative Reporting Subsystem

a. One commenter suggested that the requirement for the HCFA–80 (Quarterly Report on Sterilization and Hysterectomies) be modified to allow changes or that the requirement for the report be deleted because of possible changes in the sterilization regulations.

The HCFA–80 report was removed as a reporting requirement from the SPR and from the Medicaid program in general for fiscal years 1982 and 1983. If it is used again, we will review it carefully to ensure it does not conflict with current regulations.

b. One commenter believed that because of potential postal delays, the postmark date on a required report should be used instead of the date of receipt to measure timely submission of reports.

Use of the postmark date has sometimes been found to be unreliable, as in the case of metered mail, when used to determine timely submission of reports. The existing method of evaluation of timely submission of reports is reasonable; it includes a five-day tolerance following the established due date for the reports in order to allow for postal delays. We believe that this method will adequately handle situations in which delivery is delayed. Therefore, we are not adopting the suggestion in lieu of our own method of dealing with postal delays because we believe the five-day tolerance to be sufficient. If extraordinary conditions can be documented by the States, they would be taken into consideration in establishing the actual SPR performance levels.

c. One commenter desired the evaluation of the HCFA–156 (Quarterly Child Health Status Report) be postponed until the State finishes automating its case management and data system, which will result in an automated HCFA–156.

The HCFA–156 report has been discontinued as a reporting requirement from the SPR and from the Medicaid program in general for fiscal years 1982 and 1983.

d. One commenter expressed problems with the term "missing signature" in the instructions in the SPR because many reports no longer require signatures.

We agree with this comment and have revised the current SPR and clarified the instructions so that only in the cases where a signature is required will the term "missing signature" apply.

e. Two commenters believed that a review of an ongoing use of a Management and Administrative Reporting Subsystem (MARS) by State management staff for third party collection was inappropriate.

We agree with this comment. This review factor has been revised. The current SPR requires that the State demonstrate that management staff utilize the MARS capabilities to perform 10 of 21 functions as specified in the MMIS General Systems Design (GSD). Thus, the State is not restricted to demonstrating the capability to perform only certain specified functions, but is given a choice. It can demonstrate adequate use of any 10 of the 21 functions for a satisfactory performance result.

f. Another commenter suggested that the review of State use of MARS by State management staff should be limited to the use of MARS reports for policy/action implications.

We accept this comment. Earlier, HCFA required specific applications for the individual MARS reports. Subsequently, HCFA changed the requirement and gave States the opportunity to use the reports as specified within the context of the functions set out in the MMIS GSD. In the GSD are 21 functions that represent the policy/action implications. The use of the MARS report for policy/action implications is tantamount to the State's analysis of the reports to determine the impact the data have upon a State's current policies. The report analysis of selected functions will enable the State to decide if any action should be taken to make its policies more efficient and effective. The current SPR materials require that the State demonstrate that management staff perform the 10 of 21 specified functions. These functions, generally, are analysis-type functions; e.g., analysis of various areas of expenditure to determine the greatest areas of cost in comparison to the return in services and providing data essential to the development and formulation of program policies. The changed requirement permits HCFA to limit its evaluations. The change also allows States to use the MARS to support the specified functions in order to provide greater flexibility in the use of those reports for policy/action implications.

5. Standard 6—Requirements for a Surveillance and Utilization Review Subsystem (S/URS)

a. One commenter believed it was inequitable to apply a quarterly provider report cycle standard for some States and a monthly cycle standard for others. The commenter requested that the same standard be applied to all States regardless of the original MMIS certification basis. Another commenter wanted to know how a State knows whether its original MMIS certification was based on a requirement to produce the reports on a monthly or quarterly basis.

Our response to these comments was to change the requirement in the SPR. It is now only necessary to generate provider reports on at least a quarterly cycle. This requirement is now the same for all States.

b. One commenter wanted clarification of the term "exception process". He requested that this term be defined to relate to the Exception Ranking Report.

We do not agree with the latter part of this comment, but we will clarify the term. The term "exception process" refers to identification of potential misutilizers of the State's Medicaid program through reports. The process and reports may vary from State to State and it would be confusing to be more detailed in relating the term "exception process" to a specifically titled report.

c. One commenter wanted clarification of how to determine the number of minimum reviews of active recipients for S/URS as indicated in factor 6K1 of the SPR. He stated that we needed to clarify to which quarter or to which run the number of reviews relate.

We agree with this comment. We have clarified in the current SPR that a State must review each quarter at least .0001 (.01%) of the total body of active recipients but not less than 25. The value should be computed from the State's most recent eligibility data showing a total of active recipients that does not duplicate any recipients.

d. One commenter requested a definition of what is meant by statistical factors and what is meant by medical factors as they affect case review in factor 6K1(d).

Statistical factors involve the analysis of the data relating to cases previously identified as potentially fraudulent or abusive. The analysis should take into consideration the quantitative factors concerning patterns of care for recipients and provider utilization.

Statistical factors also involve analyzing patterns of care and utilization (such as the number of office visits, or the number of prescribed drugs).

Medical factors are those that take into consideration the qualitative factors regarding acceptable medical practices and their relation to recipient and provider activity. Medical factors involve qualitative reviews to determine if the activities or services were necessary and appropriate.

e. Two commenters suggested that we change the classification and definition of provider services in the SPR to conform to those in the GSD. The commenters requested that we clarify the service type grouping for outpatient hospital services.

We do not agree with these comments. The data elements and design of the GSD are intended as a guide and States are not required to design systems that are identical to the GSD. States have the flexibility to design their systems to fit the needs of their particular State's operational circumstances. The SPR definitions, appearing in Appendix A of the instructions to State Medicaid agencies for completion of Federal reports (HCFA–AT–79–76, dated August 31, 1979), are designed to take into consideration all of the system differences nationwide. That material is more recent than the GSD and is considered the most important source for definitions on all Medicaid activities. Those definitions include outpatient hospital services and outpatient clinics under the Physician Services and Clinic Services classification (service type groupings).

f. One commenter pointed out that the wording in 6K2(d) needed clarification. The language leads one to believe that States need only identify Inpatient Hospital Services and Long Term Care Service providers for case review, when the intention was to review a given number of cases in those areas.

We agree with this comment. The wording in the most recent SPR specifies the number of Inpatient Hospital reviews that must be conducted in individual States and the language for the Long Term Care providers states specifically that "the State must review annually at least .005 (.5%) but not less than 10 of the active institutional providers of Long Term Care Services".

g. One commenter stated they had very tight pre-payment utilization and quarterly controls on Long Term Care Services and believed that S/URS reviews are unnecessary for this type of provider.

We do not agree with this comment. Long Term Care costs account for the largest single component in Medicaid program expenditures. Because of this, we believe that States should use all available management tools to assure that payments are appropriate and to detect potentially abusive or fraudulent utilization patterns. S/URS provides valuable information capabilities not otherwise available to the States.

h. One commenter requested a clarification of Item (6) in factor 6K3(b), which refers to ongoing monitoring as a follow-up action on any problems discovered through S/URS reviews. The commenter requested examples of what should be done, when, and by whom.

We agree with this request for clarification. "Ongoing monitoring" refers to a continuous type of review of certain cases that may not merit more punitive action without further evidence of fraud or abuse. This activity should be conducted by S/URS or claims processing staff. Typically, State staff monitors the provider's billing activity utilizing the capabilities and information provided by S/URS, as the information becomes available, to detect additional indications of inappropriate service delivery.

i. One commenter requested a clarification of Item (8) in factor 6K3, which refers to Suspensions and Terminations as followup actions on problems discovered through S/URS reviews. The commenter requested clarification as to whether this mechanism pertains to recipients or providers, because the mechanism has implications affecting the laws and regulations of the State as they relate to Medicaid recipients.
The Suspension and Termination followup actions pertain exclusively to Medicaid providers.

j. One commenter stated that the timeliness requirement for S/URS Summary Profile Report production was more stringent for larger States because of the amount of data to be analyzed (15 months' history). The commenter suggested that timeliness requirements should take into consideration the review and action phases, because producing reports is of little concern if the reports are not utilized timely.

We do not agree with this comment. First, the amount of data to be analyzed has been reduced to a maximum of 9 months. Second, larger States should have greater resources to handle the larger workload. However, we agree that production of the reports is of little concern if the reports are not utilized, but we believe that both production and utilization activities are equally important.

k. One commenter requested that the term "reports from current histories" be more specifically defined as reports related to the current processing cycle. The term "reports from purge history" could also be more clearly defined. Another commenter requested a clarification of "intent" and a definition of "purge history".

These comments are no longer relevant to the current SPR. We have eliminated from the review reports the term "reports from purge history". Thus, there is no longer a need to define the difference between those two former sources for the reports, and a further clarification of "intent" and definition of "purge history" is also unnecessary.

l. One commenter stated that a qualitative review of Summary Profile Reports and Management Summary Reports requires each report cycle to contain all GSD-defined minimum report items. The commenter also said that this conflicts with another requirement that states "Report production without clear indication of use of any major component is deemed to be a major problem."

We do not agree with these comments. The GSD requires defined minimum report items that are necessary to support the S/URS function. All required report items are usable S/URS for analysis. If there is no indication of use of reports that only reflect minimum data requirements, there could be a question of the quality of the S/URS reviews. Therefore, there is no conflict.

m. One commenter requested a clarification of 6M1(c). This item concerned the meaning of "patterns of care and rates of institutional care". The commenter also requested examples of which S/URS reports should be used in this area and exactly how they are to be used.

We agree that the language to which the commenter referred was unclear and we have eliminated this language from the method of evaluation for factor 6M1. However, we are not providing the requested examples because when States are approved for MMIS operation, they are not required to have a specified format for all reports produced by the MMIS. Consequently, reports for each State MMIS are designed specifically for the State's particular circumstances. There is no uniformity of approach on a national level. Therefore, it is not possible to have a single explanation of reports utilization for this factor. The HCFA reviewer determines from each State's current S/URS report set which reports are applicable for the current year's review. States that want information or

assistance can contact their appropriated regional office.

6. Standard 7—Effectiveness in Administrative Responsibilities, Element N

One commenter suggested that it is not necessary to require a written agreement for an emergency backup computer as compliance is impractical in his State's case.

We have accepted this suggestion after reevaluating the benefits of requiring a written agreement for an emergency backup computer. Because we determined the requirement to be both unenforceable and impractical, we have deleted the requirement. Currently, a State's capability to deal with emergency situations is measured in terms of its control (arranged according to State needs) over staff, facilities, equipment and funds.

7. Application of Performance Standards to Overall Factors

Three commenters remarked that the SPR goes beyond internal system components and includes for evaluations overall factors not affecting the MMIS *per se*. One commenter said the performance standards, to be effective, must be applicable only to internal system components. Another commenter objected to having the 75 percent FFP jeopardized by failure to meet standards for systems not covered under the GSD for MMIS. The third commenter suggested that those standards the States must meet that go beyond those used to approve the MMIS initially should be funded at 90 percent FFP for corrective action. These comments are similar to but broader than those at 1a. above.

We do not agree with these comments. Among the comments we received, this was a major issue. Because section 1903(a) of the Social Security Act authorizes enhanced FFP only for MMIS systems that the Secretary determines are likely to provide more efficient, economical and effective administration of the State medical assistance plan, we regard the MMIS as being integrated into the total plan operation. This concept is reflected in the SPR design.

It was Congress' intention that the effective operation of an MMIS fully realize its cost savings potential (125 Cong. Rec. 29511–29514 (1979) and 126 Cong. Rec. S9725–S9726 (daily ed. July 24, 1980)). Certain activities outside the MMIS affect the system's ability to achieve this statutory goal. Thus, if high eligibility error rates inevitably lead to inappropriate payments, we would find it impossible to conclude that the system could significantly contribute to more cost-effective State operations.

Further, Congress specifically intended that the performance standards assure that MMIS systems meet certain broad program objectives (125 Cong. Rec. 29511–29514 (1979) and 126 Cong. Rec. S9725–S9726 (daily ed. July 24, 1980)) and in no way limited the Secretary's authority to establish performance standards, system requirements, or other conditions of reapproval to narrow technical issues of system capability.

Therefore, the performance standards, to be effective, must apply beyond the internal system components; i.e., those within the MMIS GSD, the files, and MMIS processes. Given the impact of overall influences (i.e., the resource data going into the system and the use made of the data that is generated by it) on the effectiveness of the operations and performance of State MMIS systems, it would not be prudent for us to ignore their existence either in assessing or funding the MMIS, or both. If the State Medicaid program operations outside the MMIS subsystems were not operating properly, then the State's MMIS would likely be unable to overcome those defects and, thus not be able to produce the results that Congress intended when it provided for enhanced FFP at 75 or 90 percent. Therefore, we must look at the overall situation when evaluating an MMIS in order to accurately determine its worthiness.

The authority to refund changes (i.e., at 75 or 90 percent FFP) in those are areas outside the MMIS subsystems is not covered by the statute on MMIS. We have recognized the concern that the SPR evaluates State performance in areas not explicitly within the MMIS GSD. We have worked extensively with State representatives to assure that the SPR requirements are equitable and administrable.

B. State Medicaid Manual Requirements

One commenter recommended that HCFA eliminate 42 CFR 433.112(b)(2), which requires State systems to meet performance standards and system requirements in the State Medicaid Manual, and let States have the flexibility to follow the performance standards in any manner that they determine to be effective and efficient. He further stated that if HCFA cannot accept the States' ability to meet MMIS performance standards, then the requirements should be properly promulgated in regulatory form consistent with the Administrative Procedure Act.

We do not agree with the comment to let States follow performance standards in any manner they determine to be effective and efficient. The performance standards address themselves to operation and program safeguards, effective management and use of system's capabilities, and the meeting of broad program goals in accordance with the intent of Congress as expressed in the statute (section 1903(r)(6) of the Act). The current performance standards do indeed recognize the joint concern of Congress (section 1903(r)(6) of the Act) and HCFA that State systems have the flexibility to address the unique needs of each of the particular States. In addition, we conducted a dry run to assure that the performance standards met the criterion of flexibility while assuring effective State system operations. Our ongoing standards development process with extensive consultations with State program and systems experts further acts to assure that any performance standards allow for State flexibility and are otherwise reasonable.

Throughout the history of the MMIS, we have recognized the concept of "demonstrable conceptual equivalence", which permits a State's system to perform certain functions in ways quite different from those set forth in the GSD. However, these are ways that achieve the same purpose and therefore are considered to meet the conditions of approval or reapproval. This concept enables the States to have a functionally equivalent system permitting sufficient flexibility to allow for the differing administrative needs of the various State programs. The performance standards do not require absolute adherence to the GSD.

We believe that these performance standards and the process for their development and implementation more than adequately meet Congress' and the States' concerns for the preservation of State flexibility. However, inasmuch as they are standards, their uniform application to all States appears to be the only effective and reasonable process by which the Congressional mandate to assure effective State operation of the system can be conducted. Thus, while States do have the flexibility to conduct their system operations in various ways to maximize their effectiveness and efficiency, the performance standards assess whether those chosen ways do indeed meet reasonable expectations for effectiveness and efficiency.

We do not agree with the commenter's belief that we should publish the performance standards in regulatory form. The performance standards have

been published as a notice for comment in the **Federal Register** as required by regulation. The States participate in the standards development process through various technical advisory groups and have actual notice of the standards before the period in which they are used. These procedures that we have followed are in accordance with the Administrative Procedure Act and established regulations. Also, under section 1903(r) of the Act, we are required to inform the States of conditions of reapproval at least three months before the beginning of the review period in which the procedures, standards and other conditions will be used. Although we might publish changes in performance standards several times during the year, they would not be effective until the next fiscal year's review and then only if they are published at least three months before the fiscal year begins.

The performance standards for reapproval (including their factors and elements) have been added as Chapter 4 to Part 11 of the SMM (the successor to Part 7 of the Medical Assistance Manual). We will publish changes in performance standards and other conditions for reapproval in the SMM after first publishing a Notice in the **Federal Register** advising the public of the changes and inviting comments.

Due to the technical nature of the MMIS performance standards, however, and our belief that MMIS is of interest only to a very limited audience, we do not intend to publish in the **Federal Register** the text of the proposed changes or the changes which are finally adopted. As we did when proposing the standards in the June 1981 notice, we intend to summarize changes to be made in the **Federal Register** notice and make the text available to the States and to any other interested parties who request it. HCFA's response to any comments received would be the subject of a subsequent **Federal Register** notice if there are any modifications in the changes originally proposed. Of course, the text of the changes would be available to the public.

Impact Analyses

Executive Order 12291

As a result of the public comments we received on the notice we published on June 30, 1981, we have made several changes to the material in the standards, elements and factors. All of these changes are technical and have very little impact on the program. All of them together do not have an economic impact that meets the threshold criteria of section 1(b) of the Executive Order 12291.

Regulatory Flexibility Act

The Secretary certifies under 5 U.S.C. 605(b), enacted by the Regulatory Flexibility Act (Pub. L. 96-354), that this notice will not result in a significant impact on a substantial number of small entities.

This notice contains several technical changes concerning State MMIS activity. As States are not considered "small entities" and these changes are not significant, an analysis is not required.

(Catalog of Federal Domestic Assistance Program No. 13.714, Medical Assistance Program)

Dated April 25, 1983.

Carolyne K. Davis,

Administrator, Health Care Financing Administration.

[FR Doc. 83-14442 Filed 5-27-83; 8:45 am]

BILLING CODE 4120-03-M

Office of Human Development Services

Privacy Act of 1974—Deletion of a System of Records Notice

AGENCY: Office of Human Development Services (HDS), HHS.

ACTION: Notification of deletion of system of records notice 09-80-0009, "ACYF Mailing List. HHS/HDS/ACYF."

SUMMARY: In accordance with the requirements of the Privacy Act, the Office of Human Development Services is publishing a notice of deletion of a system of records notice that had been maintained by the Administration for Children, Youth and Families (ACYF): 09-80-0009, "ACYF Mailing List. HHS/HDS/ACYF."

FOR FURTHER INFORMATION CONTACT: Willie Etheridge, HDS Privacy Act Coordinator, Hubert H. Humphrey Building, Room 338-F 200 Independence Avenue, S.W., Washington, D.C. 20201; (202) 245-2892.

SUPPLEMENTARY INFORMATION: Effective with this publication, we are deleting the notice for system of records 09-80-0009, "ACYF Mailing List, HHS/HDS ACYF" which was last published in the **Federal Register** on October 13, 1982 (47 FR 45403). This system contained records of the names and addresses of Head Start grantees. The system notice has been deleted because, on review, we determined that it should be subsumed into the HDS mailing list system of records notice for efficiency of administration and cost containment.

Thus, records and all pertinent information that were in the ACYF mailing list system have been transferred to and are now covered by: 09-80-0020, "HDS Publication Distribution Mailing List. HHS/HDS/OPA" for which a notice was last published in the **Federal Register** on October 13, 1982 (47 FR 45403-45404). (See notice below).

Dated: May 25, 1983.

Jaime L. Manzano,

Acting Assistant Secretary for Human Development Service.

09-80-0020

SYSTEM NAME:

HDS Publications Distribution Mailing List. HHS/HDS/OPA.

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

Room 356G, Hubert Humphrey Bldg., Washington, D.C. 20201.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

State and local governmental units, organizations, individuals and grantees who ask to receive HDS publications.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, title, address interest in HDS programs, addressee's field of activity, type of organization, scope of organization, whether provide information or services or both, and media affiliation, if applicable.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Titles IV-B, IV-E, and XX of the Social Security Act; Developmental Disabilities Assistance and Bill of Rights Act, Pub. L. 94-103, as amended by Pub. L. 95-602; Title VIII of Pub. L. 93-644, as amended, Native American Programs; Pub. L. 95-266, The Child Abuse Prevention and Treatment Act; Children's Bureau Act of 1912; Pub. L. 93-644, as amended, Headstart—Follow Through Act; Pub. L. 97-35, Omnibus Budget Reconciliation Act; 42 U.S.C. 5701, Runaway and Homeless Youth Act; and Older Americans Act of 1965, as amended.

PURPOSE(S):

To assist HDS programs in carrying out their responsibilities to disseminate program information.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

1. Disclosure may be made to a congressional office from the record of

an individual in response to an inquiry from the congressional office made at the request of that individual.

2. In the event of litigation where the defendant is (a) the Department, any component of the Department, or any employee of the Department in his or her official capacity; (b) the United States where the Department determines that the claim, if successful, is likley to directly affect the operations of the Department or any of its components; or (c) any Department employee in his or her individual capacity where the Justice Department has agreed to represent such employee. The Department may disclose such records as it deems desirable or necessary to the Department of Justice to enable that Department to present an effective defense, provided such disclosure is compatible with the purpose for which the records were collected.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Computer tape.

RETRIEVABILITY:

Addresses will be retrieved by name, interest in HDS programs, field of activity, type of organization or level of government, scope of organization, whether the addressee provides information or services or both, or type of media.

SAFEGUARDS:

Access by authorized personnel only.

RETENTION AND DISPOSAL:

List is annually circularized as required by the Joint Committee on Printing and those not responding are dropped from the list.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Division of Publication and Graphic Services, Office of Public Affairs, HDS, 329D, Hubert Humphrey Bldg., Washington, D.C. 20201.

NOTIFICATION PROCEDURE:

Any inquires regarding this system of records should be in writing and should be addressed to the System Manager.

RECORD ACCESS PROCEDURES:

Same as notification procedure. Requesters should also reasonably specify the record contents being sought.

CONTESTING RECORD PROCEDURES:

Contact the official at the address specified under notification procedure above, and reasonably identify the record and specify the information to be contested. State the corrective action sought and your reason(s) for requesting the correction, with supporting evidence to justify it.

RECORD SOURCE CATEGORIES:

Response to canvass form letters, grant applications, individuals, and governmental units.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 4130-01-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

[Docket No. N-83-1245]

Submission of Proposed Information Collections to OMB

AGENCY: Office of Administration, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirements described below have been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposals.

ADDRESS: Interested persons are invited to submit comments regarding these proposals. Comments should refer to the proposal by name and should be sent to: Robert Neal, OMB Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, D.C. 20503.

FOR FURTHER INFORMATION CONTACT: David S. Cristy, Acting Reports Management Officer, Department of Housing and Urban Development, 451 7th Street SW., Washington, D.C. 20410, telephone (202) 755-5310. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposals described below for the collection of information to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).

The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the agency form number, if applicable; (4) how frequently information submissions will be required; (5) what members of the public will be affected by the proposal; (6) an estimate of the total number of hours needed to prepare the information submission; (7) whether the proposal is new or an extension or reinstatement of an information collection requirement; and (8) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

Copies of the proposed forms and other available documents submitted to OMB may be obtained from David S. Cristy, Acting Reports Management Officer for the Department. His address and telephone number are listed above. Comments regarding the proposals should be sent to the OMB Desk Officer at the address listed above.

The proposed information collection requirements are described as follows:

Notice of Submission of Proposed Information Collection to OMB

Proposal: Statement/Application and Reports for CDBG Jobs Act.

Office: Community Planning and Development.

Form Nos.: SF-424, HUD-4121, HUD-4124, HUD-4125, and HUD-4950.

Frequency of Submission: Single-Time and Annually.

Affected Public: State or Local Governments.

Estimated Burden Hours: 94,720.

Status: New.

Contact: James Broughman, HUD, (202) 755-9287 (Entitlement); James Forsberg, HUD, (202) 755-6322 (States and Small Cities); Roy Gonnella, HUD, (202) 755-6092 (Indians); or Robert Neal, OMB, (202) 395-7316.

Authority: Sec. 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Sec. 7(d) of the Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated May 18, 1983.

Proposal: Property Disposition Handbook—Reconditining Acquired Properties.

Office: Housing.

Form No.: None.

Frequency of Submission: On Occasion.

Affected Public: Individuals or Households, Businesses or Other For-Profit, and Small Businesses or Organizations.

Estimated Burden Hours: 157,800.

Status: New.

Contact: Freeman Grote, HUD, (202) 755-5740, or Robert Neal, OMB, (202) 395-7316.

Authority: Sec. 3507 of the Paperwork Reduction Act, 44 U.S.C. 3507; Sec. 7(d) of the Deparment of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Dated: May 18, 1983.

Lea Hamilton,

Director,

Office of Information Policies and Systems.

[FR Doc. 83-14407 Filed 5-27-83; 8:45 am]

BILLING CODE 4210-01-M

[Docket No. D-83-69]

Supplementary Grants; Delegation of Authority

AGENCY: Department of Housing and Urban Development (HUD).

ACTION: Delegation of authority.

SUMMARY: This delegation of authority delegates the power and authority of the Secretary of Housing and Urban Development with respect to supplementary grants under section 412 of the New Communities Act of 1968 (Title IV of the Housing and Urban Development Act of 1968) and section 718 of the National Urban Policy and New Community Development Act of 1970 (Title VII of the Housing and Urban Development Act 1970) to the Assistant Secretary for Administration. This supersedes the pevious delegation of authority with respect to supplementary grants.

EFFECTIVE DATE: May 31, 1983.

FOR FURTHER INFORMATION CONTACT: Grant E. Mitchell, Assistant General Counsel, New Communities Division, Office of General Counsel, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, D.C. 20410; 202-755-6550. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: Accordingly, the Secretary delegates as follows:

Section A. *Authority Delegated.* The Assistant Secretary for administration is authorized to exercise the power and authority of the Secretary of Housing and Urban Development with respect to supplementary grants under section 412 of the New Communities Act of 1968 (Title IV of the Housing and Urban Development Act of 1968) and section 718 of the National Urban Policy and New Community Development Act of 1970 (Title VII of the Housing and Urban Development Act of 1970).

Section B. *Authority to Redelegate.* The Assistant Secretary for Administration is authorized to redelegate to any of the employees of the Department the authority delegated in Section A.

Section C. *Supersedure.* This delegation supersedes the delegation of authority published March 19, 1971 at 36 FR 5304, to the extent such delegation concerns delegation of supplementary grant authority, otherwise the delegation remains unchanged.

(Sec. 7(d), Department of Housing and Urban Development Act, 42 U.S.C. 3535(d))

Dated: May 23, 1983.

Samuel R. Pierce, Jr.,

Secretary of Housing and Urban Development.

BILLING CODE 4210-01-M

[Docket No. D-83-697]

Section 414 Surplus Land Program; Delegation of Authority

AGENCY: Department of Housing and Urban Development (HUD).

ACTION: Delegation of authority.

SUMMARY: This delegation of authority transfers responsibility for management and disposition of surplus Federal real property under HUD's jurisdiction pursuant to section 414 of the Housing and Urban Development Act of 1969 from the General Manager of the New Community Development Corporation to the Assistant Secretary for Housing—Federal Housing Commissioner.

EFFECTIVE DATE: May 31, 1983.

FOR FURTHER INFORMATION CONTACT: Grant E. Mitchell, Assistant General Counsel, New Communities Division, Office of the General Counsel, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, D.C. 20410, (202) 755-6550. (This is not a toll-free number).

SUPPLEMENTARY INFORMATION: Since its inception in 1969, the Surplus Land Program pursuant to section 414 of the Housing and Urban Development Act of 1969 has been administered by the New Communities staff. Responsibility for the Program was delegated on February 7, 1970 from the Secretary to the Assistant Secretary and Deputy Assistant Secretary for Metropolitan Planning and Development (35 FR 2745); it was the redelegated on October 14, 1970 to the Director, Office of New Communities Development (35 FR 16102). The Department was reorganized in 1971 and the Secretary delegated the responsibility for the Surplus Land Program to the Assistant Secretary and Deputy Assistant Secretary for Community Planning and Management (36 FR 5004). In 1973, the Department formed the new position of Assistant Secretary for Community Planning and Development to asume former responsibilities (including Surplus Land Program) of the Assistant Secretary and Deputy Assistant Secretary for Community Planning and Management and Assistant Secretary for Community Development (38 FR 8011). When New Communities was made a separate administration in 1973, the delegation of authority for the Surplus Land Program was inadvertently left with its former parent organization, the Office of Community Planning and Development. In the 1978 reorganization of the New Community Development Corporation, a new Office of Surplus Land was authorized. In a delegation of authority published September 24, 1980 at 45 FR 63360, the Secretary delegated the responsibility for the Surplus Land Program to the General Manager of the New Community Development Corporation.

The New Community Development Corporation's Office of Surplus Land is being reorganized under the authority of the Assistant Secretary for Housing—Federal Housing Commissioner. This delegation of authority establishes where the responsibility for administration of the program now lies. Accordingly, the Secretary delegates as follows:

Section A. *Authority Delegated.* The Assistant Secretary for Housing—Federal Housing Commissioner is authorized to:

1. Exercise the power and authority of the Secretary of Housing and Urban Development with respect to surplus Federal real property under Section 414 of the Housing and Urban Development Act of 1969 (83 Stat. 379; 40 U.S.C. 484(b)), as amended.

2. Issue rules and regulations as necessary or desirable in order to carry out such power and authority.

Section B. *Authority Excepted.* The power to sue and be sued is excepted from the authority delegated under Section A.

Section C. *Authority to Redelegate.* The Assistant Secretary for Housing—Federal Housing Commissioner is authorized to redelegate to any of the employees of the Department the authority delegated in Section A, except the authority to issue rules and regulations.

Section D. *Supersedure.* This delegation supersedes the September 24, 1980 delegation of the authority specified in Section A to the General Manager for the New Community Development Corporation (45 FR 63360). All redelegations previously made by the General Manager are valid and remain in effect, including the redelegation of authority by the General Manager (47 FR 41868) with respect to Montauk Air Force Station, Family Housing Area, Montauk, New York to the Regional Administrator and Deputy Regional Administrator, Region II (New York) and the Area Manager and Deputy Area Manager, New York Area Office, which has not yet been implemented.

(Sec. 7(d), Department of Housing and Urban Development Act, 42 U.S.C. 3535(d))

Dated: May 23, 1983.

Samuel R. Pierce, Jr.,

Secretary of Housing and Urban Development

BILLING CODE 4310-84-M

[ES 32452, Survey Group 503]

Minnesota; Filing of Plat of Survey

1. On April 6, 1983, the plat representing the survey of two islands in Hanrahan Lake, T. 115 N., R. 21 W., Fifth Principal Meridian, Minnesota, was accepted. It will be officially filed in the Eastern States Office, Alexandria, Virginia, at 7:30 a.m. on July 15, 1983.

The lands listed below describe the islands omitted from the original survey.

Fifth Principal Meridian, Minnesota

T. 115 N., R. 21 W.,
Tracts 37 and 38.

2. The island Tracts 37 and 38 are composed of sandy loam. The islands range 12 feet above the mean high water line of Hanrahan Lake. The timber consists of upland hardwoods, including basswood, oak, and cottonwood with a maximum age of over 100 years old. The ground cover is of various species of shrubs, including willow, prickly pear, and ash along with native grasses and forbs.

3. The present water level of the lake compares very favorably with the original meander line; therefore, the elevation and the upland character of the islands and the depth and width of the channel between the upland and islands are considered evidence that the islands did exist in 1858, the year Minnesota was admitted into the Union. The original survey in 1854 did not note the presence of these islands.

4. Tracts 37 and 38 were found to be over 50 percent upland within the purview of the Swamp Lands Act of September 28, 1850 (9 Stat. 519). Therefore, they are held to be public land.

5. All inquires relating to these lands should be sent to the Deputy State Director for Lands and Minerals Operations, 350 South Pickett Street, Alexandria, Virginia 22304 on or before (45 days from date of publication).

Jeff O. Holdren,

Deputy State Director for Lands and Minerals Operations.

BILLING CODE 4310-84-M

Salt Wells-Pilot Butte Grazing Draft Environmental Impact Statement (DEIS), Sweetwater and Uinta Counties, Rock Springs District, Wyoming; Hearing

AGENCY: Bureau of Land Management (BLM), Interior.

ACTION: Notice of availability of draft environmental impact statement and public hearing schedule.

SUMMARY: Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969, Notice is hereby given that the Bureau of Land Management, U.S. Department of the Interior, has prepared a draft environmental impact statement for a livestock grazing management program in the Salt Wells-Pilot Butte area, Sweetwater and Uinta Counties, Wyoming, and has made copies available for public review and comment.

The Bureau of Land Management proposes to implement a grazing management program based on the land use planning for the area and in accordance with the Bureau's Rangeland Management Policy and Rangeland Improvement Policy. The proposed livestock grazing management program includes "improvement" management for eighteen allotments totalling 1,006,929 acres; "maintenance" management for five allotments totalling 2,166,010 acres; and "custodial" management for seven allotments totalling 9,343 acres. Proposed range improvements include water developments, vegetation treatment, and some new fences. Other major components of the program include wild horse management, provisions for wildlife habitat, and range monitoring.

The draft environmental impact statement analyzes the projected environmental consequences of implementing the proposed action or any of four alternatives, specifically titled: Continuation of the Existing Situation (No Action); Emphasize Livestock Production; Emphasize Watershed, Wildlife Habitat, and Soil Stability; and License No Livestock Use on Pubic Lands. These alternatives portray the range of options available for managing the livestock use in the area.

DATES: Written comments on the grazing management proposal and alternatives contained within the draft environmental impact statements will be accepted through the close of business (4:30 p.m., m.s.t.) July 31, 1983. Oral testimony will be received at a public hearing to be held at 7:00 p.m., Wednesday, July 13, 1983, in Room C-204, Western Wyoming College, 2500 College Drive, Rock Springs, Wyoming.

ADDRESSES: Written comments are to be addressed to: Jim Cagney, Grazing EIS Team Leader, Bureau of Land Management, Salt Wells Resource Area, U.S. Highway 191 North, P.O. Box 1869, Rock Springs, Wyoming 82901 (307) 382-5350.

Persons wishing to testify at the public hearing should contact Mr. Cagney at the above address prior to the hearing. One representative should be designated by each organization wishing to present testimony.

A limited number of the draft environmental impact statements are available and may be obtained at the above address. The draft environmental impact statement is available for inspection at the following locations:

Bureau of Land Management, Salt Wells and Big Sandy Resource Areas, U.S. Highway 191 North, Rock Springs, Wyoming; or

Bureau of Land Management, Wyoming State Office, Public Information Desk, 2515 Warren Avenue, Cheyenne, Wyoming.

SUPPLEMENTARY INFORMATION: Oral testimony of ten (10) minutes will be accepted from each witness at the hearing. The ten-minute limitation will be strictly enforced by the presiding officer. Written texts of prepared speeches may be filed at the hearing whether or not the speaker has been able to complete oral delivery in the allotted ten minutes.

Speakers will be heard in the order established on the witness register. After the last registered witness has

been heard, the presiding officer will consider the request of any other person present who wishes to testify. Any person present at the hearing may testify; however, only one witness will be allowed to present the viewpoints of an organization.

Persons wishing to testify may preregister by submitting a written request to the Salt Wells or Big Sandy Resource Area Office of the Bureau of Land Management at the above address prior to the close of business on July 13, 1983. Requests should identify the organization represented by the individual (if any); and should be signed by the prospective witness. Individuals who do not preregister may register at the hearing location prior to the hearing.

Comments on the grazing management proposal and on the environmental impact statement, whether written or oral, will receive equal consideration in preparation of a final environmental impact statement.

Donald H. Sweep,

Rock Springs District Manager.

Agatha L. Mergenovich,

Secretary.

[No. MC–F–15114]

Adrian Carriers, Inc.—Purchase Exemption—Spector Red Ball, Inc. (Debtor-in-Possession)

ADDRESSES: Send pleadings to:
(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: James M. Hodge, Issacon, Clarke, Vernon & Hodge, 3730 Ingersoll, Des Moines, IA 50312.

Pleadings should refer to No. MC–F–15114.

Decided: May 20, 1983.

Under 49 U.S.C. 11343(e), the Interstate Commerce Commission exempts from the requirement of prior review and approval under 49 U.S.C. 11343(a)(2), the purchase by Adrian Carriers, Inc. (No. MC–146553) of that portion of the operating rights of Spector Red Ball, Inc. (No. MC–2229) set forth in the appendix below, which authorizes generally the transportation of general and specific commodities over regular, irregular and alternate routes in IL, WI, IA, CO, NE, IN, KS and MO.

By the Commission, Division 2, Commissioners Gradison, Taylor, and Sterrett. Commissioner Taylor is assigned to this Division for the purpose of resolving tie votes. Since there was no tie in this matter, Commissioner Taylor did not participate.

Appendix

Certificate No. MC–2229 as follows: Sub-No. 246F; Sub-No. 253 sheet 2 (in part); sheets 3–27 (entirety), and sheet 28 (in part); Sub-No. 254 sheets 3 and 4 (both in part); Sub-No. 258 sheet 4; Sub-No. 259 sheets 2 and 6 (both in part); Sub-No. 260 sheet 2 (in part); Sub-No. 261 sheets 2, 3, and 4 (entirety), sheets 9 and 14 (both in part); Sub-No. 264 sheet 3 (in part); Sub-No. 267 sheets 2 and 3 (both in part), sheet 4 (entirety), and sheet 5 (in part); and Sub-No. 269 sheets 3 and 4 (both in part).

[No. MC–F–15120]

All Freight Transportation, Inc.—Control Exemption—Overland Transportation, Inc.

ADDRESSES: Send pleadings to:
(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: Timothy R. Stivers, P.O. Box 1576, Boise, ID 83701

Pleadings should refer to No. MC–F–15120.

Decided: May 19, 1983.

Under 49 U.S.C. 11343(e), the Interstate Commerce Commission exempts from the requirement of prior review and approval in 49 U.S.C. 11343(a)(3) the acquisition by All Freight Transportation, Inc. (No. MC–152671), of control, through the purchase of outstanding common stock, of Overland Transportation, Inc., (No. MC–143570).

By the Commission, Division 2, Commissioners Gradison, Taylor, and Sterrett. Commissioner Taylor is assigned to this Division for the purpose of resolving tie votes. Since there was no tie in this matter, Commissioner Taylor did not participate.

[No. MC–F–15140]

Cates Trucking Inc.—Purchase Exemption—Sawyer Transport, Inc. (Nathan Yorke, Trustee-In-Bankruptcy)

ADDRESSES: Send pleadings to:
(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: Donald W. Smith, P.O. Box 40248, Indianapolis, IN 46240

Pleadings should refer to No. MC–F–15140.

Decided: May 20, 1983.

Under 49 U.S.C. 11343(e), the Interstate Commerce Commission exempts from the requirement of prior review and approval under 49 U.S.C. 11343(a), the purchase by Cates Trucking, Inc. (MC–138562), of a portion of Sawyer Transport Inc. (MC–123407 (Sub-No. 611)), authorizing the transportation of (1) containers, container ends, and container closures, and (2) materials equipment and supplies used in the manufacture and distribution of the commodities in (1) above (except commodities in Bulk), between points in the United States (except Alaska and Hawaii).

By the Commission, Division 2, Commissioners Gradison, Taylor, and Sterrett. Commissioner Taylor is assigned to this Division for the purpose of resolving tie votes. Since there was no tie in this matter, Commissioner Taylor did not participate.

[No. MC–F–15153]

Walter R. Key, William P. Fallon, Charles Fallon, Robert Sweeney, Richard White, and Douglas Peterson—Continuance in Control Exemption—Thermo Transport, Inc., Peterson Express, Inc., and F & F Transport, Inc.

ADDRESSES: Send pleadings to:
(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: Donald W. Smith, P.O. Box 40240, Indianapolis, IN 46240

Pleadings should refer to No. MC–F–15153.

Decided: May 23, 1983.

Under 49 U.S.C. 11343(e), the Interstate Commerce Commission exempts from the requirement of prior review and approval under 49 U.S.C. 11343, the continuance in control of F & F Transport, Inc. (MC–164522) by Walter R. Key, William P. Fallon, Charles Fallon, Robert Sweeney, Richard White, and Douglas Peterson, who jointly or separately control Thermo Transport Inc. (MC–145359) and Peterson Express Inc. (MC–162104).

By the Commission, Division 1, Commissioners Andre, Taylor, and Sterrett. Commissioner Taylor is assigned to this Division for the purpose of resolving tie votes. Since there was no tie in this matter, Commissioner Taylor did not participate.

[No. MC–F–15163]

Russ Transport, Inc.—Purchase Exemption—Producers Transport Co.

ADDRESSES: Send pleadings to:

(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: Leonard A. Jaskiewicz, 1730 M Street NW., Suite 501, Washington, D.C. 20036

Pleadings should refer to No. MC–F–15163.

Decided: May 23, 1983.

Under 49 U.S.C. 11343(e), the Interstate Commerce Commission exempts from the requirement of prior review and approval under 49 U.S.C. 11343(a), the purchase by Russ Transport, Inc. (MC–116459), of the operating authorities of Producers Transport Co. set forth in Certificate No. MC–124835 and subnumbers thereunder, authorizing the transportation of cement, asphalt, and clay, concrete, glass, or stone products, from, to, and between various points in eight southeastern States, and commodities in bulk and chemicals and related products, radially between various points in Georgia and Tennessee and points named southern and eastern States. Both vendor and vendee are controlled by Liquid Transporters, Inc., which holds authority in No. MC–112617.

By the Commission, Division 2, Commissioners Andre, Taylor, and Sterrett. Commissioner Taylor is assigned to this Division for the purpose of resolving tie votes. Since there was no tie in this matter, Commissioner Taylor did not participate.

Motor Carriers; Proposed Exemptions

AGENCY: Interstate Commerce Commission.

ACTION: Notices of Proposed Exemptions.

SUMMARY: The motor carriers shown below seek exemptions pursuant to 49 U.S.C. 11343(e), and the Commission's regulations in Ex Parte No. 400 (Sub-No. 1), *Procedures for Handling Exemptions Filed by Motor Carriers of Property Under 49 U.S.C. 11343, 367 I.C.C. 113 (1982), 47 FR 53303 (November 24, 1982).*

DATE: Comments must be received within 30 days after the date of publication in the **Federal Register.**

FOR FURTHER INFORMATION CONTACT: 0Warren C. Wood (202) 275–7977.

SUPPLEMENTARY INFORMATION: Please refer to the petition for exemption, which may be obtained free of charge by contacting petitioner's representative. In the alternative, the petition for exemption may be inspected at the offices of the Interstate Commerce Commission during usual business hours.

Decided: May 24, 1983.

By the Commission, Heber P. Hardy, Director, Office of Proceedings.

Agatha L. Mergenovich,

Secretary.

Volume OP3–239

J. T. I. Transportation Co.—Purchase Exemption—Andrews Van Lines, Inc.

[No. MC–F–15234]

J. T. I. Transportation Co. (J.T.I.) (No. MC–159331 and sub-numbers thereunder) seeks an exemption from the requirement under section 11343 of prior regulatory approval for its purchase of a portion of the motor carrier operating rights of Andrews Van Lines, Inc., specifically those rights in No. MC–26825 (Sub-No. 68), authorizing the transportation of general commodities (with exceptions), radially between points in Nebraska, and points in the United States.

Send comments to:

(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, DC 20423
and
(2) Petitioner's Representative: Jack L. Shultz; P.O. Box 82028; Lincoln, NE 68501–2028

Comments should refer to No. MC–F–15234.

FCS Industries, Inc.—Control Exemption—Russ's Motor Service Inc.

[No. MC–F–15267]

FCS Industries Inc. seeks an exemption from the requirement under section 11343 of prior regulatory approval for its acquisition of control of Russ's Motor Service, Inc. FCS is a non-carrier which owns B & W Cartage Co. Inc. (No. MC–12094), a motor common carrier with authority to transport general commodities, with exceptions, between points in 34 States. Russ's Motor Service is authorized to conduct operations as a motor carrier of general commodities, and certain specified commodities, on a radial basis between Chicago, IL and points in 5 named States under its Certificate No. MC–145574 (Sub-Nos. 1F and 3).

Send comments to:

(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: Carol L. Steiner, 135 South LaSalle St., Chicago, IL 60603

Comments should refer to No. MC–F–15267.

Wetterau, Incorporated—Continuance in Control Exemption—Trans Continental Leasing, Ltd., and Foxtran, Inc.

[No. MC–F–15271]

Wetterau, Incorporated, a non-carrier, seeks an exemption from the requirement under 49 U.S.C. 11343 of prior approval and authorization for its continuance in control of Foxtran, Inc. (MC–151854). Wetterau also controls Trans Continental Leasing, Ltd. (MC–145925).

Send comments to:

(1) Motor Section, Room 2139, Interstate Commerce Commission, Washington, D.C. 20423
and
(2) Petitioner's representative: George Williams, Wetterau, Incorporated, 8920 Pershall Road, Hazelwood, MO 63042

Comments should refer to No. MC–F–15271.

Motor Carriers; Finance Applications; Decision Notice

As indicated by the findings below, the Commission has approved the following applications filed under 49 U.S.C. 10924, 10926, 10931 and 10932.

We find:

Each transaction is exempt from section 11343 of the Interstate Commerce Act, and complies with the appropriate transfer rules.

This decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975

Petitions seeking reconsideration must be filed within 20 days from the date of this publication. Replies must be filed within 20 days after the final date for filing petitions for reconsideration; any interested person may file and serve a reply upon the parties to the proceeding. Petitions which do not comply with the relevant transfer rules at 49 CFR 1161.4 may be rejected.

If petitions for reconsideration are not timely filed, and applicants satisfy the conditions, if any, which have been imposed, the application is granted and they will receive an effective notice. The notice will recite the compliance requirements which must be met before the transferee may commence operations.

Applicants must comply with any conditions set forth in the following decision-notices within 20 days after publication, or within any approved extension period. Otherwise, the decision-notice shall have no further effect.

It is ordered:

The following applications are approved, subject to the conditions stated in the publication, and further subject to the administrative requirements stated in the effective notice to be issued hereafter.

By the Commission, Review Board Number 2, Members Carleton, Williams, and Ewing.

Agatha L. Mergenovich,

Secretary.

Please direct status inquiries to Team 3, (202) 275–5223.

Volume No. OP3–FC–225

MC–FC–81324. By decision of May 19, 1983, issued under 49 U.S.C 10926 and the transfer rules at 49, CFR 1161, Review Board Number 2 approved the transfer to CONTINENTAL FREIGHTLINES, INC., Columbus, IN, of Certificate No. MC–20824, issued 9/7/79, and (Sub 12), issued 6/28/57, (Sub 13), issued 5/3/63, (Sub 14), issued 2/29/60, (Sub 16), issued 10/27/60, (Sub 17), issued 1/11/61, (Sub 19), issued 3/5/62, (Sub 20), issued 7/30/62, (Sub 22), issued 2/21/68, (Sub 23), issued 11/10/66, (Sub 24), issued 10/18/67, (Sub 26), issued 9/9/68, (Sub 27), issued 4/25/69, (Sub 28), issued 7/8/70, (Sub 30), issued 6/11/73, (Sub 31), issued 12/22/78, (Sub 32), issued 11/17/76, (Sub 33), issued 6/9/77, (Sub 34), issued 2/8/77, (Sub 35), issued 6/1/79, (Sub 36), issued 7/12/79, (Sub 37), issued 6/1/79, (Sub 38), issued 6/1/79, (Sub 39), issued 7/10/79, (Sub 40), issued 1/26/81, (Sub 42), issued 10/27/80, (Sub 44), issued 12/18/80, (Sub 45), issued 3/26/81, (Sub 47), issued 12/5/80, (Sub 48), issued 3/18/81, (Sub 49), issued 4/3/81, (Sub 50), issued 3/5/82, and (Sub 51), issued 3/10/83 to COMMERCIAL MOTOR FREIGHT, INC., (GILBERT L. BATES, DEBTOR-IN-POSSESSION), Indianapolis, IN, authorizing the transportation of general commodities, with exceptions, over various routes, between points in IN, OH, KY, IL, MO, TN, and MI. Representative: Michael E. McCormick, 1301 Merchants Plaza, Indianapolis, IN 46204.

Volume No. OP3–MCFC–237

MC–FC–81309. By decision of May 19, 1983, issued under 49 U.S.C. 10926 and the transfer rules at 49 CFR 1161, Review Board Number 2 approved the transfer to M.A.S. SERVICES, INC., of Certificate No. MC–1335 Sub 6, issued May 19, 1982, MC–1335 Sub 7X, issued May 19, 1982, and its underlying MC–1335, issued September 24, 1980, and MC–1335 Sub 1, issued May 13, 1981, authorizing the regular, alternate, and irregular route transportation of general commodities between points generally in New Jersey, New York and Pennsylvania, and (2) such commodities as are dealt in or used by food business houses, between points in Erie and Niagara Counties, NY, on the one hand, and, on the other, points in MD and PA. Applicant's representative: Robert D. Gunderman, Can-Am Bldg., 101 Niagara Street, Buffalo, NY 14202.

Note.—Pursuant to transferor's request, Certificate No. MC–1335 Sub 2, MC–1335 Sub 3, MC–1335 Sub 4, and MC–1335 Sub 5 will be cancelled concurrently with the issuance to the transferee of a new certificate as a result of this transaction.

BILLING CODE 7035–01–M

Motor Carriers; Permanent Authority Decisions; Decision–Notice

Motor Common and Contract Carriers of Property (fitness-only); Motor Common Carriers of Passengers (fitness-only); Motor Contract Carriers of Passengers; Property Brokers (other than household goods). The following applications for motor common or contract carriage of property and for a broker of property (other than household goods) are governed by Subpart A of Part 1160 of the Commission's General Rules of Practice. See 49 CFR Part 1160, Subpart A, published in the **Federal Register** on November 1, 1982, at 47 FR 49583, which redesignated the regulations at 49 CFR 1160.251, published in the **Federal Register** on December 31, 1980. For compliance procedures, see 49 CFR 1160.19. Persons wishing to oppose an application must follow the rules under 49 CFR Part 1160, Subpart B.

The following applications for motor common or contract carriage of passengers filed on or after November 19, 1982, are governed by Subpart D of the Commission's Rules of Practice. See 49 CFR Part 1160, Subpart D, published in the **Federal Register** on November 24, 1982, at 49 FR 53271. For compliance procedures, see 49 CFR 1160.86. Persons wishing to oppose an application must follow the rules under 49 CFR Part 1160, Subpart E.

These applications may be protested *only* on the grounds that applicant is not fit, willing, and able to provide the transportation service or to comply with the appropriate statutes and Commission regulations.

Applicant's representative is required to mail a copy of an application, including all supporting evidence, within three days of request and upon payment to applicant's representative of $10.00

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.g., unresolved common control, fitness, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated that it is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. This presumption shall not be deemed to exist where the application is opposed. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient opposition in the form of verified statements filed on or before 45 days from date of publication (or, if the application later becomes unopposed) appropriate authorizing documents will be issued to applicants with regulated operations (except those with duly noted problems) and will remain in full effect only as long as the applicant maintains appropriate compliance. The unopposed applications involving new entrants will be subject to the issuance of an effective notice setting forth the compliance requirements which must be satisfied before the authority will be issued. Once this compliance is met, the authority will be issued.

Within 60 days after publication an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

Agatha L. Mergenovich,

Secretary.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce, over irregular routes unless noted otherwise. Applications for motor contract carrier authority are those where service in for a named shipper "under contract."

Please direct status inquiries to Team Three at (202) 275–5223.

BILLING CODE 7035–01–M

Motor Carriers; Permanent Authority Decisions, Decision-Notice

Motor Common and Contract Carriers of Property (except fitness-only); Motor Common Carriers of Passengers (public interest); Freight Forwarders; Water Carriers; Household Goods Brokers.—The following applications for motor common or contract carriers of property, water carriage, freight forwarders, and household goods brokers are governed by Subpart A of Part 1160 of the Commission's General Rules of Practice. See 49 CFR Part 1160, subpart A, published in the **Federal Register** on November 1, 1982, at 47 FR 49583, which redesignated the regulations at 49 CFR 1100.251, published in the **Federal Register** December 31, 1980. For compliance procedures, see 49 CFR 1160.19. Persons wishing to oppose an application must follow the rules under 49 CFR Part 1160, Subpart B.

The following applications for motor common carriage of passengers, filed on or after November 19, 1982, are governed by Subpart D of 49 CFR Part 1160, published in the **Federal Register** on November 24, 1982 at 47 FR 53271. For compliance procedures, see 49 CFR 1160.86. Carriers operating pursuant to an intrastate certificate also must comply with 49 U.S.C. 10922(c)(2)(E). Persons wishing to oppose an application must follow the rules under 49 CFR Part 1160, Subpart E. In addition to fitness grounds, these applications may be opposed on the grounds that the transportation to be authorized is not consistent with the public interest.

Applicant's representative is required to mail a copy of an application, including all supporting evidence, within three days of a request and upon payment to applicant's representative of $10.00.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority

Findings

With the exception of those applications involving duly noted problems (e.g., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated that it is fit,

willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations.

We make an additional preliminary finding with respect to each of the following types of applications as indicated: common carrier of property—that the service proposed will serve a useful public purpose, responsive to a public demand or need; water common carrier—that the transportation to be provided under the certificate is or will be required by the public convenience and necessity; water contract carrier, motor contract carrier of property, freight forwarder, and household goods broker—that the transportation will be consistent with the public interest and the transportation policy of section 10101 of chapter 101 of Title 49 of the United States Code.

These presumptions shall not be deemed to exist where the application is opposed. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient opposition in the form of verified statements filed on or before 45 days from date of publication (or, if the application later becomes unopposed), appropriate authorizing documents will be issued to applicants with regulated operations (except those with duly noted problems) and will remain in full effect only as long as the applicant maintains appropriate compliance. The unopposed applications involving new entrants will be subject to the issuance of an effective notice setting forth the compliance requirements which must be satisfied before the authority will be issued. Once this compliance is met, the authority will be issued.

Within 60 days after publication an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

Agatha L. Mergenovich,

Secretary.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract." Applications filed under 49 U.S.C. 10922(c)(2)(B) to operate in intrastate commerce over regular routes as a motor common carrier of passengers are duly noted.

BILLING CODE 7035–01–M

[Volume No. OP3–238]

Motor Carriers; Permanent Authority Decisions; Restriction Removals; Decision-Notice

Decided: May 23, 1983

The following restriction removal applications, are governed by 49 CFR Part 1165. Part 1165 was published in the **Federal Register** of December 31, 1980, at 45 FR 86747 and redesignated at 47 FR 49590, November 1, 1982.

Persons wishing to file a comment to an application must follow the rules under 49 CFR 1165.12. A copy of any application can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the restriction removal applications are not allowed.

Some of the applications may have been modified prior to publication to conform to the special provisions applicable to restriction removal.

Findings

We find, preliminarily, that each applicant has demonstrated that its requested removal of restrictions or broadening of unduly narrow authority is consistent with the criteria set forth in 49 U.S.C. 10922(h).

In the absence of comments filed with 25 days of publication of this decision-notice, appropriate reformed authority will be issued to each applicant. Prior to beginning operations under the newly issued authority, compliance must be made with the normal statutory and regulatory requirements for common and contract carriers.

By the Commission, Review Board No. 2, Members Carleton, Williams, and Ewing.

Agatha L. Mergenovich,

Secretary.

Please direct status inquiries to Team 3, at (202) 275–5223.

MC 21244 (Sub-4X), filed May 2, 1983. Applicant: WESTERN EXPRESS, INC., 5635 Furnace Ave., Baltimore, MD 21227. Representative: Edward N. Button, 635 Oak Hill Ave., Hagerstown, MD 21740, (301) 739–4860. MC 21244 Certificate: Expand such articles as are purchased at auction sales, bankrupts' sales, or sales of merchants' surplus stock in trade to "general commodities (except classes A and B explosives, household goods, and commodities in bulk)".

BILLING CODE 7035–01–M

[Ex Parte No. 387]

Rail Carriers; Exemptions for Contract Tariffs

AGENCY: Interstate Commerce Commission.

ACTION: Notice of provisional exemptions.

SUMMARY: Provisional exemptions are granted under 49 U.S.C. 10505 from the notice requirements of 49 U.S.C. 10713(e), and the below-listed contract tariffs may become effective on one day's notice.[1] These exemptions may be revoked if protests are filed.

DATE: Protests are due within 15 days of publication in the **Federal Register**.

ADDRESS: An original and 6 copies should be mailed to: Office of the Secretary, Interstate Commerce Commission, Washington, D.C. 20423.

FOR FURTHER INFORMATION CONTACT: Douglas Galloway (202) 275–7278.

SUPPLEMENTARY INFORMATION: The 30-day notice requirement is not necessary in these instances to carry out the transportation policy of 49 U.S.C. 10101a or to protect shippers from abuse of market power; moreover, the transaction is of limited scope. Therefore, we find that the exemption requests meet the requirements of 49 U.S.C. 10505(a) and are granted subject to the following conditions:

These grants neither shall be construed to mean that the Commission has approved the contracts for purposes of 49 U.S.C. 10713(e) not that the Commission is deprived of jurisdiction to institute a proceeding on its own initiative or on complaint, to review these contracts and to determine their lawfulness.

DEPARTMENT OF JUSTICE

Agency Forms Under Review

May 26, 1983.

OMB has been sent for review the following proposals for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35) since the last list was published. The list has all the entries grouped into new forms, revisions, or extensions. Each entry contains the following information:

(1) The name and telephone number of the Agency Clearance Officer (from whom a copy of the form and supporting documents is available); (2) The office of the agency issuing this form; (3) The title of the form; (4) The agency form number, if applicable; (5) How often the form must be filled out; (6) Who will be required or asked to report; (7) An estimate of the number of responses; (8) An estimate of the total number of hours needed to fill out the form; (9) An indication of whether Section 3504(H) of Pub. L. 96–511 applies; (10) The name and telephone number of the person or office responsible for OMB review.

Copies of the proposed forms and supporting documents may be obtained from the Agency Clearance Officer whose name and telephone number appear under the agency name. Comments and questions about the items on this list should be directed to the reviewer listed at the end of each entry and to the Agency Clearance Officer. If you anticipate commenting on a form but find that time to prepare will prevent you from submitting comments promptly, you should advise the reviewer and the Agency Clearance Officer of your intent as early as possible.

Department of Justice

Agency Clearance Officer Larry E. Miesse—202–633–4312.

EXTENSION (No Change in Substance or Method of Collection)

- Office of Juvenile Justice and Delinquency Prevention

Department of Justice
Compliance Monitoring Report
State or local governments
Section 223(a)(15) of the Juvenile Justice Delinquency Act requires states which receive formula grant awards to develop a system of monitoring juvenile and correctional facilities to ensure that three legislative requirements are met and requires states to annually report the results of this monitoring. The results are used to determine State eligibility to continue participation in the JJDA Act:
52 respondents; 7,800 hours; not applicable under 3504(h).

BILLING CODE 4410–01–M

Drug Enforcement Administration

[Docket No. 83–5]

Anthony J. Crisanti, D.D.S., Chicago, Illinois; Hearing

Notice is hereby given that on January 5, 1983, the Drug Enforcement Administration, Department of Justice, issue to Anthony J. Crisanti, D.D.S., an Order To Show Cause as to why the Drug Enforcement Administration should not revoke his DEA Certificate of Registration, AC7813860, and deny his application, executed on August 4, 1982, for registration as a practitioner under 21 U.S.C. 823(f).

Thirty days having elapsed since the said Order To Show Cause was received by Respondent, and written request for a hearing having been filed with the Drug Enforcement Administration, notice is hereby given that a hearing in this matter will be held on Tuesday, June 7, 1983, commencing at 9:30 a.m. in the Occupational Safety and Health Review Commission Hearing Room, Room 1530, 55 East Monroe Street, Chicago, Illinois.

Dated: May 23, 1983.

Francis M. Mullen, Jr.,

Acting Administrator, Drug Enforcement Administration.

BILLING CODE 4410–09–M

Importation of Controlled Substances; Philadelphia Seed Co.; Application

Pursuant to Section 1008 of the Controlled Substances Import and Export Act (21 U.S.C. 958(h)), the Attorney General shall, prior to issuing a registration under this section to a bulk manufacturer of a controlled substance in Schedule I or II and prior to issuing a regulation under Section 1002(a) authorizing the importation of such a substance, provide manufacturers holding registrations for the bulk manufacture of the substance an opportunity for a hearing.

Therefore, in accordance with § 1311.42 of Title 21, Code of Federal Regulations (CFR), notice is hereby given that on February 15, 1983, Philadelphia Seed Company, Division of Stanford Seed Company, Muddy Creek Road, Lancaster County, Denver, Pennsylvania 17517, made application to the Drug Enforcement Administration to be registered as an importer of Marihuana (7360), a basic class controlled substance in Schedule I.

As to the basic class of controlled substance listed above for which application for registration has been made, any other applicant therefor, and any existing bulk manufacturer registered therefor, may file written comments on or objections to the issuance of such registration and may, at the same time, file a written request for a hearing on such application in accordance with 21 CFR 1301.54 in such form as prescribed by 21 CFR 1316.47.

Any such comments, objections or requests for a hearing may be addressed to the Deputy Assistant Administrator, Drug Enforcement Administration, United States Department of Justice, 1405 I Street, NW., Washington, D.C. 20537, Attention: DEA Federal Register Representative (Room 1203), and must be filed no later than June 30, 1983.

This procedure is to be conducted simultaneously with and independent of the procedures described in 21 CFR 1311.42 (b), (c), (d), (e) and (f). As noted in a previous notice at 40 FR 43745–46

(September 23, 1975), all applicants for registration to import a basic class of any controlled substance in Schedule I or II are and will continue to be required to demonstrate to the Deputy Assistant Administrator of the Drug Enforcement Administration that the requirements for such registration pursuant to 21 U.S.C. 958(a), 21 U.S.C. 823(a), and 21 CFR 1311.42 (a), (b), (c), (d), (e) and (f) are satisfied.

Dated: May 20, 1983.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

Dated: May 20, 1983.

BILLING CODE 4410-09-M

Importation of Controlled Substances; Sigma Chemical Co.; Application

Pursuant to Section 1008 of the Controlled substances Import and Export act (21 U.S.C. 958(h)), the Attorney General shall, prior to issuing a registration under this Section to a bulk manufacturer of a controlled substance in Schedule I or II, and prior to issuing a regulation under Section 1002(a) authorizing the importation of such a substance, provide manufacturers holding registrations for the bulk manufacture of the substance an opportunity for a hearing.

Therefore, in accordance with § 1311.42 or Title 21, code of Federal Regulations (CFR), notice is hereby given that on February 1, 1983, sigma Chemical Company, 3500 Dekalb Street, St. Louis, Missouri 63118, made application to the Drug Enforcement Administration to be registered as an importer of the basic classes of controlled substances listed below:

Drug	Schedule
Marihuana (7360)	I.
Tetrahydrocannabinols (7370)	I.
Mescaline (7381)	I.
Morphine-3-Gluronide (9329)	III.

As to the basic classes of controlled substances listed above for which application for registration has been made, any other applicant therefore, and any existing bulk manufacturer registered therefore, may file written comments on or objections to the issuance of such registration and may, at the same time, file a written request for a hearing on such application in accordance with 21 CFR 1301.54 in such form as prescribed by 21 CFR 1316.47

Any such comments, objections or requests for a hearing may be addressed to the Deputy Assistant administrator, Drug Enforcement Administration, United States Department of Justice, 1405 I Street, N.W., Washington, D.C. 20537, Attention: DEA Federal Register Representative (Room 1203), and must be filed no later that June 30, 1983.

This procedure is to be conducted simultaneously with and independent of the procedures described in 21 CFR 1311.42 (b), (c), (d), (e) and (f). As noted in a previous notice at 40 FR 43745-46 (September 23, 1975), all applicants for registration to import a basic class of any controlled substance in Schedule I or II are and will continue to be required to demonstrate to the Deputy Assistant Administrator of the Drug Enforcement Administration that the requirements for such registration pursuant to 21 U.S.C. 958(a), 21 U.S.C. 823(a), and 21 CFR 1311.42 (a), (b), (c), (d), (e) and (f) are satisfied.

Dated: May 20, 1983.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

BILLING CODE 4410-09-M

DEPARTMENT OF LABOR

Employment and Training Administration

Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for adjustment assistance issued during the period May 16, 1983—May 20, 1983.

In order for an affirmative determination to be made and a certification of eligibility to apply for adjustment assistance to be issued, each of the group eligibility requirements of Section 222 of the Act must be met.

(1) That a significant number or proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated,

(2) That sales or production, or both, of the firm or subdivision have decreased absolutely, and

(3) That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, toand the the absolute decline in sales or production.

Negative Determinations

In each of the following cases the investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA-W-13,854; Sanyo Manufacturing Corp., Forrest City, AR

TA-W-13,663; Mardan Corp., DBA C.G. Conn Limited, Abilene, TX

TA-W-13,826; International Hat Co., Oran, MO

TA-W-13,936; General Electric Co., LST Foundry, Erie, PA

TA-W-13,835; Aarving Displays, Inc., Linden, NJ

TA-W-13,898; Conaway-Winter, Inc., Mountain View, MO

In the following cases the investigation revealed that criterion (3) has not been met. Increased imports did not contribute importantly to workers separations at the firm.

TA-W-14,163; Kay-Fries, Inc., Stony Point, NY

TA-W-14,370; Midway Manufacturing & Supply, Inc., Odessa, TX

TA–W–14,217; RCA Corp., Consumer Electronics Div., Monticello, IN
TA–W–14,404; Anaconda Minerals Co., Butte, MT
TA–W–13,743; Occidental Minerals Corp., Candelaria Partners Mine, Hawthorne, NV
TA–W–13,872; GTE Products Corp., Circuit Products Div., Muncy, PA
TA–W–14,226; The Kentland Elkhorn Coal Corp., Pike County, KY

In the following cases the investigation revealed that criterion (3) has not been met for the reasons specified.

TA–W–14,161; Great Western Sugar Co., Bayard, NE
Aggregate U.S. imports of beet sugar did not increase as required for certification.
TA–W–14,485; Harsco Corp., Heckett Div., Plant #42, Fontana, CA
Aggregate U.S. imports of scrap are negligible.
TA–W–13,939; RMI Co., Ashtabula, OH
Aggregate U.S. imports of titanium mill products did not increase as required for certification.
TA–W–14,174: RMI Co., Niles, OH
Aggregate U.S. imports of titanium mill products did not increase as required for certification.
TA–W–13,987; ALU Textile Combining Corp., Hoboken, NJ
The workers' firm does not produce an article as required for certification under Section 222 of the Trade Act of 1974.

Affirmative Determinations

TA–W–14,171; Clark Equipment Co., Benton Harbor, MI
A certification was issued covering all worker engaged in the production of front-end loaders separated on or after October 1, 1982 and before February 1, 1983.
TA–W–13,972; Boart Hardmetals, Inc., Myerstown, PA
A certification was issued covering all workers of the firm separated on or after November 9, 1981.
TA–W–13,845; Washington Garment Co., Washington, PA
A certification was issued covering all workers separated on or after September 22, 1981 and before December 31, 1982.
TA–W–13,941; Wheaton Glass Co., Millville, NJ
A certification was issued covering all workers of the firm separated on or after December 1, 1981.
TA–W–13,782; Bata Shoe Co., Inc., Elkins Div., Elkins, WV
A certification was issued covering all workers of the firm separated on or after March 12, 1982.
TA–W–13,866; Bethlehem Steel Corp., Los Angeles Plant, Vernon, CA
A certification was issued covering all workers producing carbon and alloy steel bars and basic and semifinished steel separated on or after October 15, 1981.
TA–W–13,981; Stackpole Components Co., Lumberton, NJ
A certification was issued covering all workers of the firm separated on or after January 1, 1982.
TA–W–14,191; Jondel Industries, Inc., New York NY
A certification was issued covering all workers of the firm separated on or after November 1, 1982.
TA–W–14,164; Levi Strauss & Co., Beaufort, SC
A certification was issued covering all workers of the firm separated on or after December 1, 1981 and before March 15, 1983
TA–W–13,605; Joseph Love, Inc., College Point, NY
A certification was issued covering all workers separated on or after June 1, 1981 and before June 1, 1982.
TA–W–13,632; Marsh Instrument Co., A Div. of General Signal Corp., Skopie, IL
A certification was issued covering all workers of the firm producing vaccum and pressure gauges and thermometers who became separated on or after June 24, 1981.
TA–W–14,208; Monessen Works, Wheeling-Pittsburgh Steel Corp., Monessen, PA
A certification was issued covering all workers engaged in employment related to the production of basic and semifinished steel separated on or after January 4, 1982.
TA–W–13,851; International Harvester Co., Springfield, OH
A certification was issued covering all workers separated on or after September 26, 1981.
TA–W–14,179; E-Systems, Inc., Memcor Div., Huntington, IN
A certification was issued covering all workers of the firm separated on or after December 3, 1982.
TA–W–13,699; Ely and Walker, Inc., Kennett, MO
A certification was issued covering all workers separated on or after September 15, 1981 and before January 15, 1983.
TA–W–13,796; Ely and Walker, Inc., Heber Springs, AR
A certification was issued covering all workers separated on or after September 15, 1981 and before January 15, 1983.
TA–W–13,678; Hartford Special, Inc., Simsbury, CT
A certification was issued covering all workers separated on or after January 1, 1982.
TA–W–13,709; Gulf & Western Manufacturing Co., Monroe Steel Casting Div., Monroe, MI
A certification was issued covering all workers separated on or after July 28, 1981 and before July 1, 1982.
TA–W–14,196; Weather Wise, Inc., New York, NY
A certification was issued covering all workers of the firm separated on or after September 30, 1982.
TA–W–14,197; Mickey Blumfield, Inc., New York NY
A certification was issued covering all workers of the firmseparated on or after September 30, 1982.
TA–W–13,715; Cooper-Wiss, Newark, NJ
A certification was issued covering all workers engaged in employment related to scissors and shears separated on or after January 1, 1982.
TA–W–13,715A; Cooper Wiss, Statesboro, GA
A certification was issued covering all workers engaged in employment related to scissors and shears separated on or after January 1, 1982.

I hereby certify that the aforementioned determinations were issued during the period May 16, 1983—May 20, 1983. Copies of these determinations are available for inspection in Room 9120, U.S. Department of Labor, 601 D Street, N.W., Washington, D.C. 20213 during normal business hours or will be mailed to persons who write to the above address.

Dated: may 24, 1983.

Marvin M. Fooks,
Director, Office of Trade Adjustment Assistance.

BILLING CODE 4510–30–M

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to Section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations

will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 10, 1983.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 10, 1983.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, 601 D Street, N.W., Washington, D.C. 20213.

Signed at Washington, D.C. this 23rd day of May 1983.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

BILLING CODE 4510-30-M

[TA-W-13,487]

Lello Fashions, North Bergen, New Jersey; Revised Determination on Reconsideration

On April 28, 1983, the Department made an Affirmative Determination Regarding Application for Reconsideration for workers and former workers at Lello Fashions, North Bergen, New Jersey. This determination was published in the **Federal Register** on May 5, 1983 (48 FR 20525).

A company official of Lello Fashions claims that their major manufacturer in 1980 closed in 1981 and the Department certified those workers for trade adjustment assistance.

The Department's review of the initial investigation showed that the Department's Notice of Negative Determination was based on the fact that the "contributed importantly" test of Section 222 of the Trade Act of 1974 was not met.

On reconsideration, the Department found that Lello Fashions' major manufacturer in 1980 closed in 1981 with the Department certifying those workers for trade adjustment assistance, TA-W-12,491.

Production of ladies' coats at Lello Fashions is equal to sales. Sales decreased in 1981 compared to 1980 and in every quarter of 1981 compared to the same quarter in 1980. Average employment decreased in 1981 compared to 1980 and in the second, third and fourth quarters of 1981 compared to the same quarters in 1980.

U.S. imports of women's, misses', and children coats and jackets increased absolutely and relative to domestic production in 1981 compared to 1980 and absolutely in the first nine months of 1982 compared to the same period in 1981. The ratio of U.S. imports to domestic production in 1981 was 98.4 percent.

Conclusion

After careful review of the facts obtained on reconsideration, it is concluded that increased imports of articles like or directly competitive with ladies' coats produced at Lello Fashions, North Bergen, New Jersey contributed importantly to the decline in sales or production and to the total or partial separation of workers and former workers of Lello Fashions, North Bergen, New Jersey. In accordance with the provisions of the Trade Act of 1974, I make the following revised determination: "All workers of Lello Fashions, North Bergen, New Jersey who became totally or partially separated from employment on or after May 13, 1981 are eligible to apply for adjustment under Section 223 of the Trade Act of 1974."

Signed at Washington, D.C., this 20th day of May 1983.

Robert O. Deslongchamps,

Acting Deputy Administrator, Unemployment Insurance Service.

[FR Doc. 83-14485 Filed 5-27-83; 8:45 am]

BILLING CODE 4510-30-M

[TA-W13,978]

Mountain States Mineral Enterprises, Inc., Tucson, Arizona; Affirmative Determination Regarding Application for Reconsideration

By an application dated May 5, 1983, company officials requested administrative reconsideration of the Department of Labor's Negative Determination Regarding Eligibility to Apply for Worker Adjustment Assistance on behalf of workers and former workers of Mountain States Mineral Enterprises, Inc., Tucson, Arizona. The determination was published in the **Federal Register** on April 19, 1983 (48 FR 16779).

The application for reconsideration claims that the workers do, in fact, produce an article. About half of their sales resulted from the manufacture of fabricating machinery for beneficiating ore, i.e. heavy duty separators and sink/float vessels.

Conclusion

After careful review of the application, I conclude that the claims are of sufficient weight to justify reconsideration of the Department of Labor's prior decision. The application is therefore, granted.

Signed at Washington, D.C., this 20th day of May 1983.

Harold A Bratt,

Deputy Director, Office of Program Management, Unemployment Insurance Service.

[FR Doc. 83-14484 Filed 5-27-83; 8:45 am]

BILLING CODE 4510-30-M

Occupational Safety and Health Administration

Washington State Standards; Approval

1. *Background.* Part 1953 of Title 29, Code of Federal Regulations prescribes procedures under section 18 of the Occupational Safety and Health Act of 1970 (hereinafter called the Act) by which the Regional Administrator for Occupational Safety and Health (hereinafter called Regional Administrator) under a delegation of authority from the Assistant Secretary of Labor for Occupational Safety and Health (hereinafter called the Asistant Secretary) (29 CFR 1953.4) will review and approve standards promulgated pursuant to a State plan which has been approved in accordance with section 18(c) of the Act and 29 CFR Part 1902. On January 26, 1973, notice was published in the **Federal Register** (38 FR 2421) of the approval of the Washington plan and the adoption of Subpart F to Part 1952 containing the decision.

The Washington Plan provides for the adoption of State standards which are at least as effective as comparable Federal standards promulgated under section 6 of the Act. Sections 1952.120–124 of Subpart F set forth the State's schedule for the adoption of Federal standards.

By letters dated November 19, 1980 and June 19, 1981 from James P. Sullivan, Assistant Director, to James W. Lake, Regional Administrator, and incorporated as part of the plan, the State submitted State-initiated amendments to WAC 296–24–045—Safety and Health Committee Plan, WAC 296–24–060—First Aid Training and Certification, and WAC 296–24–070—First Aid Room. These amendments, which are contained in WAC 296–24—General Safety and Health standards, expand the scope with the addition of standards which are more stringent than the comparable Federal standards, 29 CFR 1910.151 Medical Services and First Aid. These standards were promulgated by the State pursuant to 34.04 RCW and of the Open Public Meetings Act of 1971, Chapter 42.30 following public hearings and were held on September 18, 1980 and April 23, 1981. The standards became effective December 12, 1980 and July 17, 1981.

2. *Decision.* Having reviewed the State submission in comparison with Federal standards, it has been determined that the State standards continue to be at least as effective as the comparable Federal standards and accordingly should be approved. The differences in the State standards are: (a) The provisions for detailed requirements for safety and health committees, (b) requirements for specific persons who are required to have first aid instructions and certificates, and (c) requirements for first aid rooms.

3. *Location of supplement for inspection and copying:* A copy of the standards supplement, along with the approved plan, may be inspected and copied during normal business hours at the following locations: Office of the Regional Administrator, Occupational Safety and Health Administration, Room 6003, Federal Office Building, 909 First Avenue, Seattle, Washington 98174; Department of Labor and Industries, General Administration Building, Olympia, Washington 98501; and the Office of State Programs, Room N3613, 200 Constitution Avenue NW., Washington, D.C. 20210.

4. *Public participation.* Under 29 CFR 1953.2(c) the Assistant Secretary may prescribe alternative procedures to expedite the review process or for other good cause which may be consistent with applicable laws. The Assistant Secretary finds that good cause exists for not publishing the supplement to the Washington State Plan as a proposed change and making the Regional Administrator's approval effective upon publication for the following reasons:

1. The standards are as effective as the Federal standards which were promulgated in accordance with Federal law including meeting requirements for public participation.

2. The standards were adopted in accordance with the procedural requirement of State law and further participation would be unnecessary.

This decision is effective May 31, 1983.

(Sec. 18, Pub. L. 91–596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Seattle, Washington this 2d day of March 1982.

James W. Lake,

Regional Administrator.

[FR Doc. 83-14382 Filed 5-27-83; 8:45 am]

BILLING CODE 4510-26-M

MERIT SYSTEMS PROTECTION BOARD

Penalties for Violations of the Hatch Act by Federal Employees

AGENCY: Merit Systems Protection Board.

ACTION: Notice of hearing and the opportunity to participate in oral argument in the case of *Special Counsel* v. *Jim J. Dukes,* Docket No. HQ120600020.

SUMMARY: On June 23, 1983 at 10:00 a.m. in Room 801, 1120 Vermont Avenue, N.W., Washington, D.C., the Board will hear oral argument in the case of *Special Counsel* v. *Jim J. Dukes,* Docket No. HQ120600020. At issue in that case and in others pending before the Board is the question of whether 5 U.S.C. 7325 permits the Board to impose a penalty of less than 30 days suspension on a federal employee found to have violated that section's provisions concerned with taking an active part in a partisan political campaign in violation of 5 U.S.C. 7324.

In addition to the parties to the *Dukes* case, the Board invites participation by interested persons, agencies and labor organizations. Requests to participate in the argument must be made in writing and received by the General Counsel of the Board on or before June 15, 1983. They should be accompanied by a brief or other legal argument indicating the position the requestor is expected to take at the hearing and the legal reasons therefor. Interested parties who do not wish to participate in the oral argument may file amicus briefs by the same date. In order to eliminate duplicative argument, the Board may limit participation in the oral argument. All written matters received will, however, be considered by the Board.

The Board believes the following questions may be relevant to ultimate resolution of the underlying issue:

1. Does the Board have inherent or specific authority to determine the appropriate penalty for a violation by a Federal employee of the Hatch Act?

2. To what extent are the provisions of 5 U.S.C. 1505 relating to state and local government employees relevant to determining this question?

3. If the Board imposes the statutory minimum penalty, may it suspend or

remit all or a portion of it during good behavior by the employee?

4. Can the Board impose alternative sanctions which result in a monetary loss to the employee equal to the statutory minimum penalty: For example, a suspension totaling 30 days but running one day a pay period, or a forfeiture of accrued annual leave, or some combination of the above?

5. Whether the Special Counsel's prosecutorial discretion in these matters creates an appropriate mechanism for treating technical violations of the Hatch Act such that modification of the statutory minimum penalty is unnecessary? In this regard, is the Special Counsel authorized to charge an employee occupying a position in the competitive service with violation of 5 CFR 4.1 in lieu of a charge of violation of the Hatch Act?

6. May the employee and the agency, with agreement of the Special Counsel, settle a Hatch Act case with the result that 5 U.S.C. 7503 may be used to effect a suspension of less than 30 days?

DATE: Request to participate should be made on or before June 15, 1983.

ADDRESSES: The original and one copy of each amicus brief submitted in response to this notice shall be filed with the Office of the General Counsel of the Board and addressed as follows: Kenneth W. Goshorn, Office of General Counsel, Merit Systems Protection Board, 1120 Vermont Avenue, NW., Washington, D.C. 20419.

FOR FURTHER INFORMATION CONTACT: Kenneth W. Goshorn, Merit Systems Protection Board, (202) 653–7171, 1120 Vermont Avenue, NW., Washington, D.C. 20419.

SUPPLEMENTARY INFORMATION: The recommended decision of the Administrative Law Judge in the *Dukes* case provides as follows:

This proceeding arose as a result of a Complaint for disciplinary action against Respondent, Jim J. Dukes, filed on July 9, 1980 by the Office of Special Counsel. The Complaint charged Respondent with taking an active part in a political campaign in violation of 5 U.S.C. 7324(a), the Hatch Political Activities Act ("the Hatch Act"). Pursuant to a request of the parties, the Administrative Law Judge to whom this matter had been initially referred issued a decision recommending that the Board accept and approve a Joint Motion for Acceptance of Settlement Agreement. The Board declined to adopt the Recommended Decision and remanded the case for further proceedings. On September 28, 1982, a hearing was held before me in Brownsville, Texas.

Written briefs were timely filed by the parties and have been considered. However, Respondent's Motion to Strike that portion of Petitioner's Memorandum of Points and Authorities in Support of Proposed Findings of Fact and Conclusions of Law, found at page 2, paragraphs 2 and 3, is hereby granted inasmuch as the offending portion refers to the substance of a stipulation which was voided when the settlement agreement was rejected by the Board. Upon the record of the hearing considered as a whole, I make the following recommended findings and conclusions:

Findings of Fact

The Respondent, Jim J. Dukes, has been employed since 1975 as a Customs Patrol Officer with the United States Customs Service in Brownsville, Texas. In September, 1978, Respondent enrolled in an undergraduate course entitled "American Political Parties" at Pan American University where he was a candidate for a Master's Degree in Government. The course required students to become involved in a political campaign to the extent necessary to prepare a paper describing the mechanics of conducting a political campaign. Prior to that time, Respondent had never participated in a partisan political election. Aware that the Hatch Act restricted the types of political activity in which federal employees can engage, Respondent informed his instructor that his involvement with a campaign would be limited.

Before becoming involved in Senator John Tower's reelection campaign,[1] Respondent made several efforts to determine exactly what activities the Hatch Act proscribes. He researched the applicable federal regulations at a local college library. Using the phone number provided by his instructor, Respondent next contacted a Harvey Littrell, Brownsville campaign manager for the reelection of Senator Tower. Littrell, in turn, sought the advice of an attorney at Tower Campaign Headquarters in Austin, Texas. The attorney, whose name neither Littrell nor Respondent can recall, purportedly told both men that involvement in "behind-the-scenes" activities, including telephone polling, was permissible under the Act. Respondent also discussed the situation in general with his supervisor, Alton Gammon. However, Respondent did not seek official guidance from the Merit Systems Protection Board regarding prohibited and permissible activity under the Act.

Over a period of three or four weeks, Respondent contributed a total of 10–20 hours as a volunteer at Tower's Brownsville campaign office, limiting his involvement in accordance with his research and the advice he received from Tower Headquarters. In addition to observing, Respondent occasionally answered telephones when no one else was at the office, a situation which occurred because the demands of full time employment and graduate school made it impossible for him to volunteer time during regular campaign office hours. On one such occasion, Littrell had to leave the office when no other campaign workers were present; Respondent was given a key to the office and asked to lock it when he left. On another occasion, Respondent participated in a voter identification survey designed to determine voter preference in the election. This activity involved telephoning registered voters listed on a computer printout and delivering a "canned speech" which required Respondent to identify himself as a Tower volunteer and ask if the person was going to vote for the Senator. The purpose of the poll was limited to determining Tower's support among local voters and to aiding in the development of campaign strategy. No attempts were made in this poll to solicit support for Senator Tower nor were any campaign issues discussed.

Respondent made telephone calls on election eve to remind previously identified Tower supporters to vote. Respondent refused when asked to drive voters to the polls, believing such activity to be violative of the Hatch Act. After the election, Respondent aided Littrell in tabulating the telephone poll results to compare it to the actual voting.

In fulfillment of this course requirement, Respondent subsequently wrote a facetious account of his observations and campaign activities, knowing that his instructor, a personal friend, would appreciate a humorous rendition of how little impact Respondent's involvement and the small Brownsville office actually had on the campaign. Although Respondent considers himself a Republican, and admittedly desired the election of Senator Tower over his opponent, Respondent's sole reason for becoming involved in Tower's campaign was to fulfill a college course requirement and his involvement with that campaign was limited to activities which he in good

[1] Respondent's choices of which campaign to work for were limited to two: the reelection of Senator John Tower (R–TX), and the campaign of Tower's Democratic opponent, Bob Kruger. The course instructor provided students with telephone numbers of the local campaign managers for both candidates.

faith believed to be permissible under the Hatch Act.

Conclusions of Law

It is undisputed that inasmuch as Respondent is an employee of the U.S. Customs Service, he is subject to the Hatch Act prohibitions against federal employees taking an active part in partisan political management or campaigns. 5 U.S.C. 7324(a)(2). Special Counsel contends that Respondent's activities in connection with the Tower campaign constitute a violation of the statute as interpreted by 5 CFR 733.122(b) (5) and (7).[2] As a threshold matter, Respondent urges that the charge in the instant case be found to be unconstitutionally vague and thus violative of Respondent's right to procedural due process. (Respondent's Brief at 1–3.) Relying on dicta contained in *In re McDuffie*, 1 MSPB 7, 8 n.4 (1979),[3] Respondent avers that "Special Counsel has applied the [Hatch Act] in an unconstitutional manner by its failure in either the Complaint or hearing to tie the allegations against Respondent to one of the specific regulatory prohibitions" found in 5 CFR 733. (Respondent's Proposed Conclusions of Law at 6, paragraph 3.)

Respondent has raised an appealing argument, but I cannot conclude as a matter of law that his constitutional right to procedural due process has been violated. The concept of procedural due process implies that official action must meet minimum standards of fairness to the individual, which encompass the right to adequate notice and a meaningful opportunity to be heard before a decision is made. In the context of Hatch Act complaints, this notion is generally interpreted as adopting the philosophy of "Notice Pleading": A Complaint is sufficiently detailed if it provides the Respondent with enough information to enable him to understand the charges and raise a proper defense. *In re Wiles*, 1 P.A.R. 865, 866 (1963). Although the Complaint in this action does not specifically refer to the regulatory authority upon which Special Counsel relies, the charges make clear that disciplinary action is being sought because of "a variety of tasks" Respondent performed "in Senator Tower's Brownsville, Texas, campaign headquarters," (Complaint at paragraph 5), and that Special Counsel is relying on Respondent's account of his activities in connection with the partisan political campaign, as detailed in his term paper, to support the theory that such participation constitutes a violation of 5 U.S.C. 7324(a)(2). (Complaint at paragraphs 7–9). A cursory glance at the pertinent regulatory authority clearly suggests that the charge is tied to 5 CFR 733.122(b) (5) and (7) which interpret the substance of the prohibitions declared in section 7324(a)(2). Furthermore, the record as a whole amply shows that Respondent was sufficiently apprised of the charges against him to allow his able counsel to present a defense. Thus, the due process safeguards which caused concern in *McDuffie* have been met.

The sole question, then, is whether Respondent's participation in the voter preference poll, the telephoning to remind previously identified Tower supporters to vote, and the so-called "caretaker activities" in which Respondent engaged constitute "an active part in political management or in [a] political campaign" in violation of the Hatch Act as interpreted by 5 CFR 733.122(b) (5) and (7). Or, alternatively, whether, as Respondent claims, his activities "in connection with the re-election campaign of Senator Tower were so minimal as to fail to rise to the level of an 'active part' in a political campaign." (Respondent's Proposed Conclusions of Law at paragraph 4). Although I can hardly conclude that Respondent's activities rose to the managerial level, I am constrained to conclude that Respondent's activities nevertheless constitute a violation of the Hatch Act as interpreted by 5 CFR 733.122(b)(7).

The meaning of taking an "active part" in a political campaign may properly be the subject of a semantic debate, but the legal standard is clear: any activity directed toward the success of any partisan political party or its candidate is in contravention of the Hatch Act. *United Pub. Workers of Am.* v. *Mitchell*, 330 U.S. 75, 100 (1947); *In re Osheim*, 2 P.A.R. 734, 738 (1966), *aff'd sub nom. U.S. Civil Service Commission* v. *Osheim*, 299 F.Supp. 317 (E. D. Wis. 1969). In this regard, Respondent's participation in both the voter preference survey and his telephone calls to previously identified Tower supporters are clearly prohibited activities. Furthermore, based on legislative history and statutory construction, this latter activity must be viewed as giving rise to a direct violation of subsection (b)(7). In 1940 when the Hatch Act was extended to cover employees of state and local agencies, Senator Hatch inserted into the Congressional Record a card listing 18 rules which were described as embodying the Civil Service Commission's construction of Civil Service Rule 1, the original proscription of active participation by federal employees in political management or political campaigns. 86 Cong. Rec. 2943. In pertinent part, Rule 8 provided: "Employees may vote as they please, but they must not solicit votes; mark ballots for others; help to get out votes; * * *" It is within this context that subsection (b)(7) must be construed since the administrative restatement of Civil Service Rule 1 law was intended by Congress to serve as its definition of proscribed partisan activity. *See generally, CSC* v. *Letter Carriers*, 413 U.S. 548 (1973). To be sure, regulations promulgated under the Hatch Act should be narrowly construed because they restrict the right of individuals to participate in the political process. *See United States* v. *Rumely*, 345 U.S. 41, 47 (1973). Under a properly narrow construction of subsection (b)(7), telephone calls made for the purpose of reminding identified Tower supporters to vote is tantamount to solicitation of support. A voter may be identified as a supporter of one particular nominee, but that support is not assured until he actually casts his ballot. Thus, reminding him to do so is indistinguishable from solicitation. And the initial determination of a voter as a campaign supporter is merely the first step in the process. Nowhere in the legislative history of the Hatch Act does there appear to have been an attempt to differentiate between degrees of political involvement. *See generally, CSC* v. *Letter Carriers, supra*. If a line is to be drawn at all, it must be along the lines of the type of conduct undertaken. Had Respondent's involvement been limited to the role of passive observer—much like that of a reporter, for instance—, there would be little

---

[2] The pertinent regulations appearing in 5 CFR 733.122 provide as follows:

§ 733.122 Political management and political campaigning; prohibitions.

(b) Activities prohibited by paragraph (a) of this section include but are not limited to—

(5) Taking an active part in managing the political campaign of a partisan candidate for public office or political party office;

(7) Soliciting votes in support of or in opposition to a partisan candidate for public office or political party office.

[3] In a footnote, the Board stated as following:

Reliance upon the general language of 5 U.S.C. 7324(a)(2) without reference to a particular regulation would be questionable and was not urged by the Government in this case. In fact, the Government relied particularly on 5 CFR 733.122(b)(6). Section 7324(a)(2) was challenged as being unconstitutionally vague and overbroad in *C.S.C.* v. *Letter Carriers*, 413 U.S. 548 (1973). It survived the challenge largely because of the specific regulations promulated in 5 CFR Part 733. *See id.* at 571.81. Thus, it is possible that failure to tie a charge to a specific regulatory provision would be an unconstitutional application of the statute, even though the statue is valid on its face. *Id.* at 8–9 n.4.

VOL 48 ISS 105 MAY 31 1983 UMI

question as to whether or not the Act had been violated.

Respondent draws attention to case support for the proposition that campaign activities of a *de minimus* nature are not unlawful. (Respondent's Brief at 5, *citing Gray* v. *Macy*, 358 F.2d 742 (9th Cir. 1966)). Whatever might be the precedential value of that decision, I am convinced that it can not be applied as determinative of the instant action. Respondent's case requires independent consideration inasmuch as the *Gray* opinion contains only bald conclusions of law with no exposition of the factual detail relied upon in reaching those *Pfitzenmeyer*, 1 P.A.R. 628 (1952)[4] and *In re Olsen*, 1 P.A.R. 816 (1960) support the theory that imposition of a penalty is not required where violations are of a *de minimus* nature and for unwitting violations. (Respondent's Brief at 8–10). While such an approach in situations such as this one may be desirable, those cases are clearly distinguishable. In *Pfitzenmeyer*, the employee had requested permission from his supervisors to run as the Democratic candidate for the Office of Justice of the Peace. The case was closed inasmuch as the employee had received erroneous permission from his superiors. Although Respondent discussed with his supervisor to some extent his involvement with the Tower campaign, there is no evidence in the record that Respondent actually sought Gammon's official permission. In contrast with Respondent's activities, the employee in *Olsen* did not intend the results of his actions. He did not intend to allow use of his name, nor did he know it would be used, in a partisan advertisement.

The violation in this case took place under extremely mitigating circumstances and is certainly a technical one. However, despite the fact that Respondent's campaign activities were minimal, that he intended no wrongdoing, and that he affirmatively acted to avoid a violation of the Hatch Act, the fact that he undertook the activity in pursuit of an academic endeavor is of no consequence. While his professor may have presented him with somewhat of a Hobson's choice, the Hatch Act cannot be so loosely construed so as to permit indirectly that which he cannot do directly. It would appear that in cases like this one the only avenue to avoid the imposition of a penalty which is arguably excessive in relation to the violation is that of prosecutorial discretion. Accordingly, I am constrained to recommend that the minimum penalty of a 30-day suspension from work be imposed * * *.

Dated: May 24, 1983.

For the Board.

———,

Chairman.

[4] However, a reading of the District Court Decision in *Gray*, 239 F.S. pp. 658 (1965), and the cases cited therein, gives the impression that the Court of Appeals was distinguishing "active participation" from freedom of expression and was not attempting to fashion a *de minimus* rule.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 82–52]

Intent To Grant an Exclusive Patent License; John W. Lowrey III

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of intent to grant and exclusive patent license.

SUMMARY: NASA hereby gives notice of intent to grant to John W. Lowrey, III of Mansfield, Louisiana, a limited, exclusive royalty-bearing, revocable license to practice the invention described in U.S. Patent No. 3,412,729 for a "Method and Apparatus for Continuously Monitoring Blood Oxygenation, Blood Pressure, Pulse Rate, and the Pressure Pulse Curve Utilizing and Ear Oximeter as Transducer" which issued on November 26, 1968, to the Administrator of the National Aeronautics and Space Administration on behalf of the United States of America. The proposed exclusive license will be for a limited number of years and will contain appropriate terms and conditions to be negotiated in accordance with NASA Patent Licensing Regulations, 14 CFR Part 1245, Subpart 2. NASA will negotiate the final terms and conditions and grant the exclusive license unless, within 60 days of the date of this Notice, the Director of Patent Licensing receives written objections to the grant, together with supporting documentations. The Director of Patent Licensing will review all written responses to the Notice and then recommend to the Assistant General Counsel for Patent Matters whether to grant the exclusive license.

DATE: Comments to this notice must be received by August 1, 1983.

ADDRESS: National Aeronautics and Space Administration, Code GP–4, Washington, D.C. 20546.

FOR FURTHER INFORMATION CONTACT: Mr. John G. Mannix, Director of Patent Licensing, (202) 755–3954.

Dated: May 20, 1983.

S. Neil Hosenball,

General Counsel.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Humanities Panel Meetings

AGENCY: National Endowment for the Humanities, NFAH.

ACTION: Notice of meetings.

SUMMARY: Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92–463, as amended), notice is hereby given that the following meetings of the Humanities Panel will be held at 1100 Pennsylvania Avenue, NW., Old Post Office, Washington, D.C. 20506.

Date: June 22, 1983.
Time: 8:00 a.m. to 5:30 p.m.
Room: 430.
Program: This meeting will review applications submitted to the Research Resources: Publications Panel, Division of Research Programs, for projects beginning after October 1, 1983.

Date: June 24, 1983.
Time: 8:00 a.m. to 5:30 p.m.
Room: 430.
Program: This meeting will review applications submitted to the Research Resources: Publications Panel, Division of Research Programs, for projects beginning after October 1, 1983.

The proposed meetings are for the purpose of Panel review, discussion, evaluation and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended including discussion of information given in confidence to the agency by grant applicants. Because the proposed meetings will consider information that is likely to disclose: (1) Trade secrets and commercial or financial information obtained from a person and privileged or confidential; (2) information of a personal nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy; and (3) information the disclosure of which would significantly frustrate implementation of proposed agency action; pursuant to authority granted me by the Chairman's Delegation of Authority to Close Advisory Committee Meetings, dated January 15, 1978, I have determined that these meetings will be closed to the public pursuant to subsections (c) (4), (6) and (9)(B) of section 552b of Title 5, United States Code.

Further information about these meetings can be obtained from Mr. Stephen J. McCleary, Advisory Committee Management Officer, National Endowment for the Humanities, Washington, D.C. 20506, or call (202) 786–0322.

Stephen J. McCleary,

Advisory Committee Management Officer.

BILLING CODE 7536–01–M

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Subcommittee on Metal Components; Meeting

The ACRS Subcommittee on Metal Components will hold a meeting on June 14 and 15, 1983, at the American Museum of Science and Energy, 300 South Tulane Avenue, Oak Ridge, TN.

In accordance with the procedures outlined in the **Federal Register** on October 1, 1982 (47 FR 43474), oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittees, their consultants, and Staff. Persons desiring to make oral statements should notify the Designated Federal Employee as far in advance as practicable so that appropriate arrangements can be made to allow the necessay time during the meeting for such statements.

The entire meeting will be open to public attendance except for those sessions during which the Subcommittee finds it necessary to discuss proprietary information. One or more closed sessions may be necessary to discuss such information. (Sunshine Act Exemption 4). To the extent practicable, these closed sessions will be held so as to minimize inconvenience to members of the public in attendance.

The agenda for subject meeting shall be as follows:

Tuesday, June 14, 1983—8:30 a.m. until the conclusion of business

The Heavy Section Steel Technology (HSST) research site will be visited and the mid-year review of the HSST program will be discussed.

Wednesday, June 15, 1983—8:30 a.m. until the conclusion of business

The Subcommittee will review the status of the pressurized thermal shock (PTS) program.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC Staff, its consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the cognizant Designated Federal Employee, Mr. Elpidio Igne (telephone 202/634–1414) between 8:15 a.m. and 5:00 p.m., e.d.t.

I have determined, in accordance with Subsection 10(d) of the Federal Advisory Committee Act, that it may be necessary to close some portions of this meeting to protect proprietary information. The authority for such closure is Exemption (4) to the Sunshine Act, 5 U.S.C. 552b(c)(4).

Dated: May 25, 1983.

John C. Hoyle,

Advisory Committee Management Officer.

[FR Doc. 83–14482 Filed 5–27–83; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 50–289]

Metropolitan Edison Co., et al., Issuance of Amendment to Facility Operating License and Proposed no Significant Hazards Consideration Determination and Opportunity for Hearing

In the matter of Metropolitan Edison Company, Jersey Central Power & Light Co., Pennsylvania Electric Co., and GPU Nuclear Corp.

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR–50, issued to Metropolitan Edison Company, Jersey Central Power and Light Company, Pennsylvania Electric Company, and GPU Nuclear Corporation (the licensees), for operation of the Three Mile Island Nuclear Station, Unit No. 1 (the facility) located in Dauphin County, Pennsylvania.

The amendment requested would revise the Technical Specifications to recognize steam generator tube repair techniques, other than plugging, provided such techniques are approved by the Commission.

The licensees' application, dated May 9, 1983, further requested that the Commission approve, within the provisions of the proposed Technical Specification revision, the kinetic expansion steam generator tube repair technique used at the facility, thus permitting subsequent operation of the facility with the as-repaired steam generators.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not: (1) Involve a significant incease in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The Commission has provided guidance concerning the application of these standards by providing certain examples, published in the **Federal Register** on April 6, 1983 (48 FR 14870). None of the examples, relating to whether significant hazards considerations are likely or unlikely, appear to be directly applicable to this amendment. The Commission, however, proposes to determine that the application does not involve a significant hazards consideration because compensatory measures will be employed to provide a level of safety in operation with the repaired steam generators commensurate with that anticipated of the facility had it not experienced the need to repair steam generators.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Comments should be addressed to the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attn: Docketing and Service Branch.

By June 27, 1983, the licensees may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written petition

for leave to intervene. Request for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR Part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If a hearing is requested, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment involves a significant hazards consideration, any hearing held would take place before the issuance of any amendment.

Normally, the Commission will not issue the amendment until the expiration of the 30-day notice period. However, should circumstances change during the notice period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 30-day notice period, provided that its final determination is that the amendment involves no significant hazards consideration. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish a notice of issuance and provide for opportunity for a hearing after issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C., by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commision by a toll-free Telephone call to Western Union at (800) 325–6000 (in Missouri (800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John F. Stolz: petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this Federal Register notice. A copy of the petition should also be sent to the Executive Legal Director, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, and to Shaw, Pittmen, Potts & Trowbridge, 1800 M Street, N.W., Washington, D.C. 20036, attorney for the licensees.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer of the Atomic Safety and Licensing Board designated to rule on the petition and/or request, that the petitioner has made a substantial showing of good cause for the granting of a late petition and/or request. That determination will be based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

For further details with respect to this action, see the application for amendment which is available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C., and at the Government Publications Section, State Library of Pennsylvania, Education Building, Commonwealth and Walnut Streets, Harrisburg, Pennsylvania 17126.

Dated at Bethesda, Maryland, this 24th day of May 1983

For the Nuclear Regulatory Commission.

John F. Stolz,

Chief, Operating Reactors Branch #4, Division of Licensing.

BILLING CODE 7590–01–M

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket S–736]

Delta Steamship Lines, Inc.; Section 605(c) of the Merchant Act, 1936, as Amended

Notice is hereby given that, by application dated April 13, 1983, as amended, Delta Steamship Lines, Inc. (Delta) has requested all the necessary approvals and consents to acquire from American President Lines, Ltd. (APL) two C6 container vessels with a capacity of 1012 TEUs and possibly a third container vessel of approximately 1100 TEUs from APL or elsewhere. Delta proposes to remove from subsidized service three C3 vessesl, the *Del Valle, Del Viento* and *Del Monte,* and to substitute the two or three container vessels on a one-for-one basis for two or three of six C4 Lucia-class vessels presently operating on Delta's Line A service on Trade Route 2 (TR 2) under Delta's Operating-Differential Subsidy

Agreement (ODSA), Contract No. MA/MSB–425.

Pursuant to its ODSA, Delta is required to provide on its Line A service a minimum of 48 and a maximum of 62 sailings annually, with required service on TR 2 between U.S. Altantic ports and a port or ports in the former Panama Canal Zone and West Coast of South America. On this service, Delta has the privilege of calling at certain ports on TR 4 (North Coast of Colombia; the Atlantic Coast Republic of Panama; the Dominican Republic; Maracaibo, Puerto Cabello, and La Guaira, Venezuela; Jamaica; the Netherlands West Indies; and Cuba (excluding Guantanamo Bay), provided that no more than 25 annual sailings may call at the ports of Maracaibo, Puerto Cabello, and La Guaira, Venezuela, and the North Coast of Colombia).

Delta presently operates six C4 Lucia-class vessels on its Line A service. Three of these vessels provide approximately bi-weekly service as far south as Ecuador and the remaining three provide approximately bi-weekly service as far south as Chile. Delta's vessels operating on this service also call at Caribbean ports on TR 4.

Delta proposes to operate the three container vessels it acquires on a basic fortnightly schedule on TR 2 as far south as Chile, substituting them for three Lucia-class vessels which presently provide this service. If Delta should only acquire two container vessels, fortnightly service will be provided with these vessel and one Lucia-class vessel. While the actual scheduling for all vessels deployed may vary according to market conditions, total sailings will not exceed contract authority.

Total liner traffic on TR 2 in 1982 amounted to 1,092,000 long tons, with exports totaling 370,000 tons and imports totaling 722,000 tons. In 1982, U.S.-flag liner ships carried 135,000 tons or 36 percent of the export trade and 160,000 tons or 22 percent of the import trade. The following table shows the number of long tons of export and import cargo carried on TR 2 during the period 1975–1982, and the U.S.-flag share:

TRADE ROUTE 2

	Liner Exports (long tons)			Liner Imports (long tons)		
	Total	U.S. Flag	Percent U.S.	Total	U.S. Flag	Percent U.S.
1982	370,000	135,000	36	722,000	160,000	22
1981	480,000	175,000	36	739,000	156,000	21
1980	506,000	180,000	35	674,000	115,000	17
1979	427,000	140,000	33	660,000	137,000	21
1978	311,000	94,000	30	645,000	119,000	18
1977	392,000	106,000	26	592,000	139,000	23
1976	336,000	104,000	31	657,000	144,000	22
1975	358,000	122,000	34	519,000	145,000	28

The table shows that during the eight-year period 1975–1982 U.S.-flag participation in the outbound liner trade on TR 2 ranged from a low of 30 percent in 1978 to a high of 36 percent in each of three years including 1982. The table also shows that U.S.-flag participation in the inbound liner trade did not exceed 28 percent during the period and ranged from a low of 17 percent in 1980 to a high of 28 percent in 1975.

Total liner traffic on TR 4 in 1982 amounted to 2,034,000 long tons, with exports totaling 1,644,000 tons and imports totaling 390,000 tons. In 1982, U.S.-flag liner ships carried 308,000 tons or 19 percent of the export trade and 88,000 tons or 23 percent of the import trade. The following table shows the number of long tons of export and import cargo carried on TR 4 during the period 1975–1982, and the U.S.-flag share:

TRADE ROUTE 4

	Liner Exports (long tons)			Liner Imports (long tons)		
	Total	U.S.-Flag	Percent U.S.	Total	U.S.-Flag	Percent U.S.
1982	1,644,000	308,000	19	390,000	88,000	23
1981	1,783,000	306,000	17	418,000	99,000	24
1980	1,814,000	273,000	15	456,000	86,000	19
1979	1,775,000	323,000	18	500,000	124,000	25
1978	1,522,000	322,000	21	490,000	110,000	22
1977	1,320,000	363,000	28	330,000	74,000	22
1976	1,557,000	449,000	29	532,000	118,000	22
1975	1,356,000	388,000	28	512,000	94,000	18

The table shows that U.S.-flag participation in the outbound liner trade on TR 4 declined from 28 percent in 1975 to 19 percent in 1982. On the other hand, U.S.-flag participation in the inbound liner trade increased from 18 percent in 1975 to 23 percent in 1982.

For information purposes it is noted that Trade Routes 2 and 4 have become increasingly containerized in recent years, and that Delta's C4 Lucia-class ships operating on its Line A service on TR 2, including TR 4 ports, have been operating at full capacity with respect to containerized cargo.

In addition to its Line A service, Delta is also authorized to provide separate subsidized services on TR 4 (U.S. Atlantic/Caribbean) and Trade Routes 23–24–25 (U.S. Pacific/Caribbean, East and West Coast South America). Delta requests that the container vessels it proposes to acquire be included in its existing transfer and interchange (substitution) privileges among TRs 2, 4 and 23–24–25. Delta's Lucia-class vessels presently have full transfer and interchange (substitution) privileges among these services. The container vessels are larger than the C4 Lucia-class vessels in terms of deadweight tonnage. However, Lucia-class vessels offer approximately 1,001,000 cubic feet

of cargo space, 753,000 cu. ft. of under deck space and 249,000 cu. ft. in the 226 on-deck containers. The container vessels offer an equivalent of approximately 1,113,000 cu. ft. of cargo space in the 1012 TEU container capacity. The applicant considers that the container vessels and the Lucia-class vessels are comparable in capacity so that no notice under section 605(c) as a legal matter is required.

Any person, firm, or corporation having an interest in the application who desires to submit comments thereon is invited to file a written statement in triplicate, with the Secretary, Maritime Subsidy Board, Maritime Administration, Room 7300, Department of Transportation, 400 Seventh Street, S.W., Washington, D.C. 20509 by the close of business on June 10, 1983.

The Board specifically invites comments on the following issues: (1) Whether the service with two or three C6 vessels in an existing or additional service, and whether the relevant trade is liner, containerizable or some other trade, (2) whether granting Delta's request to operate two or three C6 container vessels on TRs 2 and 4 with subsidy will give undue advantage or be unduly prejudicial as between U.S. citizens operating vessels on TRs 2 and 4, (3) whether U.S.-flag service on TRs 2 and 4 is and will be inadequate, and (4) whether it would be in the accomplishment of the purposes and policy of the Act for Delta to operate on TRs 2 and 4 as proposed.

Any party requesting a hearing under Section 605(c) of the Merchant Marine Act, 1936, as amended, is to indicate the basis for any such hearing by addressing the issues on which comments are specifically invited. Unless the parties provide such specifics the Board may determine there is an insufficient basis to order a hearing on Delta's application. Any specifics will be considered in determining whether a hearing is required. In any event, the Board will consider the submissions of all interested parties and will determine the disposition to be made of the matters hereby noticed.

(Catalog of Federal Domestic Assistance Program No. 11.504, Operating-Differential Subsidy (ODS))

Dated May 24, 1983.

By Order of the Maritime Subsidy Board.

Georgia P. Strmas,

Secretary.

BILLING CODE 4910-81-M

Urban Mass Transportation Administration

Section 15 Reporting System Advisory Committee; Meeting

AGENCY: Urban Mass Transportation, DOT.

ACTION: Notice of Section 15 Reporting System Advisory Committee meeting.

SUMMARY: In this Notice, the Urban Mass Transportation Administration (UMTA) announces the first meeting of the Section 15 Reporting System Advisory Committee. The Committee will provide advice concerning the quality and usefulness of the Section 15 Reporting System.

DATE: June 16–17, 1983.

FOR FURTHER INFORMATION CONTACT: Ronald J. Fisher, Office of Information Services, Room 6419, 400 Seventh Street, SW., Washington, D.C. 20590, (202) 426–9157.

SUPPLEMENTARY INFORMATION:

Background

On August 27, 1981, UMTA issued a Notice in the **Federal Register** (46 FR 43352) announcing the establishment of the Section 15 Reporting System Advisory Committee. Section 15 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1611) requires the development of a national reporting system for public mass transportation financial and operating data. The Committee will act in an advisory capacity to UMTA. The Committee shall investigate the quality and usefulness of the Section 15 Reporting System with respect to its performance in providing meaningful information for the analysis of the transit industry.

All Committee meetings are open to the public. With the Chairman's approval, members of the public may speak at meetings in accordance with procedures established by the Committee. A written statement may be filed with the Committee at any time.

Location

Dates: Thursday, June 16, and Friday, June 17, 1983.

Time: 8:30 a.m.–4:00 p.m.

Place: Room 10214, Department of Transportation, 400 7th Street, SW., Washington, D.C. 20590.

Issued on May 24, 1983.

Arthur E. Teele, Jr.,

Administrator, Urban Mass Transportation Administration.

DEPARTMENT OF THE TREASURY

Bureau of Alcohol, Tobacco and Firearms

[Notice No. 467]

Winegrape Varietal Names Advisory Committee; Open Meeting

AGENCY: Bureau of Alcohol, Tobacco and Firearms, Treasury.

ACTION: Notice of advisory committee meeting.

SUMMARY: An open meeting of the Winegrape Varietal Names Advisory Committee will be held at 9:00 am on June 16, 1983, in Room 3517, 525 Market Street, San Francisco, California.

SUPPLEMENTARY INFORMATION: At this meeting the Committee will continue its efforts toward compiling a complete listing of the names used for grapes now being commercially grown in the United States, and identifying those winegrape varietal names which may be incorrect, confusing, or deceptive. Reports will be received from subgroups on the questions of what the Committee should recommend concerning names now being used on wine labels which are not proper varietal names, and guidelines or procedures for the future addition of names to the varietal list which is now being developed.

The meeting will be open to the public. Any person who wishes to furnish written information or to address the Committee should submit the information or the request to appear to the Committee Manager at the address shown below. Requests to appear before the Committee should specify the purpose of the presentation, the subject matter to be covered, and the amount of time desired.

FOR FURTHER INFORMATION CONTACT: Melvin T. Bruce, Manager, Winegrape Varietal Names Advisory Committee, Room 6230, Bureau of Alcohol, Tobacco and Firearms, 1200 Pennsylvania Avenue, NW, Washington, DC 20226; (202–566–7568).

Signed: May 24, 1983.

W.T. Drake,

Acting Director.

Department of Housing and Urban Development

Solar Energy and Energy Conservation Bank

Financial Assistance Program; Interim Rule

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Solar Energy and Energy Conservation Bank

24 CFR Part 1600

[Docket No. R-83-1053]

Financial Assistance Program

AGENCY: Solar Energy and Energy Conservation Bank, HUD.

ACTION: Interim rule.

SUMMARY: The Solar Energy and Energy Conservation Bank (the Bank), was established by the Energy Security Act of 1980. This interim rule sets forth the requirements for implementation of the Bank's program. Following the effective date of this rule, participating States will activate programs to provide financial assistance to individuals for eligible energy conservation measures on residential buildings of any size and passive solar energy measures on one- to four-family residential buildings.

Dates: Effective Date: May 31, 1982.

Comment Due Date: August 1, 1983.

ADDRESS: Interested persons are invited to submit comments regarding this rule to the Office of General Counsel, Rules Docket Clerk, Room 10278, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, D.C. 20410.

Communications should refer to the above docket number and title. A copy of each communication submitted will be available for public inspection and copying during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Dr. Richard Francis, Manager, Solar Energy and Energy Conservation Bank, Room 2244, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, D.C. 20410. Telephone: 202–755–7166 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

Summary of Act: Subtitle A of Title V of the Energy Security Act, 12 U.S.C. 3601 *et seq.*, established the Bank within the Department of Housing and Urban Development (HUD). The purpose of the Bank is to encourage energy conservation and the use of solar energy, and thereby reduce the nation's dependence on foreign sources of energy supplies. The Bank is governed by a Board of Directors, consisting of the Secretaries of HUD (Chairperson), Energy, Treasury, Agriculture, and Commerce.

The statute (12 U.S.C. 3607) provides that, subject to other statutory provisions, the Bank may make payments to financial institutions for the purpose of providing financial assistance: (a) To owners of and tenants in existing one- to four-family and multifamily (more than four units) residential buildings for the purchase and installation of residential energy conserving improvements; (b) to owners who occupy and tenants in existing commercial and agricultural buildings for the purchase and installation of commercial energy conserving improvements; (c) to owners of one- to four-family and multifamily residential, commercial and agricultural existing buildings for the purchase and installation of solar energy systems; (d) to builders of newly constructed or substantially rehabilitated residential buildings for the purchase and installation of solar energy systems; and (e) to purchasers of new or substantially rehabilitated one- to four-family and multifamily, commercial and agricultural buildings containing solar energy systems. The financial assistance for residential or commercial energy conserving improvements (collectively referred to as "energy conservation measures" in this interim rule) or solar energy systems may be in the form of a reduction in the principal obligation of a loan or the qualifying portion of a loan, or a prepayment of the interest otherwise due on such loan or portion of such loan provided by one or more types of financial institutions. In the case of an owner of an existing one- to four-family residential building or a tenant in an existing one- to four-family or multifamily residential building, the assistance for energy conservation measures may also be in the form of grants.

The Bank's enabling statute provides for a wide range of possible forms and objectives of financial assistance to be delivered through one or more types of "financial institutions." This interim rule has been approved by the Board of Directors of the Bank in order to specify both the permissible uses of financial assistance and the system of delivering financial assistance.

Solicitation of Proposals

The Board determined that since State programs are within the parameters permitted by the statute and are based on the experience derived from on-going energy related activities influenced by regional and local needs and priorities, they provide the best method for an efficient and responsive delivery of the Bank's funds to financial institutions which assist persons to undertake energy conservation and solar energy measures. States were invited to submit proposals to the Bank for their participation in the program based on a Notice of Funding Availability which was published in the **Federal Register** on August 27, 1982. As used in the Notice, States included the District of Columbia, Puerto Rico, Guam, the Northern Mariana Islands, the Virgin Islands, American Samoa, and the Trust Territory of the Pacific Islands. An amendment to the Notice was published on October 15, 1982, which extended the period for State responses until November 15, 1982.

Through its selection of State proposals, the Bank planned to implement its program by interrelating its funding with on-going State energy programs, focusing on low-to-moderate income persons, for: 1) urgently needed energy conservation measures in residential buildings of any size completed prior to January 1, 1980; and 2) passive solar energy systems in newly constructed or substantially rehabilitated one- to four-family residential buildings.

In considering which energy conservation and solar energy measures would be eligible for financial assistance under the Bank's program, the Board has given preference to the more conventional, cost-effective, and reliable of those permitted by statute. Those selected as eligible include various energy conservation measures and passive solar energy systems. The rationale for these selections is derived from work accomplished by the U.S. Department of Energy in the Residential Conservation Service Program (the program described in 10 CFR Part 456 as amended by amendments published at 47 FR 27752 and 47 FR 53224). Information contained in a Table of Program Measures included in the RCS Program rules identifies the eligible measures based on cost-effectiveness in which a measure has a calculated simple payback of seven years or less. The Table indicates that active solar measures are much less cost-effective than general conservation and passive solar measures. In addition, the Bank found that active solar energy systems also are not as reliable and present some rather complicated maintenance requirements which are not experienced with passive systems. The results of the many projects of HUD's residential solar heating and cooling demonstration program support this conclusion. The Bank further observes that the monetary value of energy tax credits available for active solar system applications are comparable to the maximum subsidy that would be provided by the Bank. Hence, the Bank subsidy would offer no

significant advantage over this tax credit in most cases. The converse is true for energy conservation where the Bank subsidy can be much higher than the available tax credit for eligible recipients. Therefore, the Bank concludes that a basic objective of serving low and moderate income persons would be best met by concentrating on the more cost-effective and reliable energy conservation and solar energy measures in which there is a distinct advantage for the Bank's subsidy to the consumer over other forms of available Federal assistance.

Federal tax credits are unavailable for expenditures made with financial assistance under the program of the Bank. The Bank has supplemented this statutory provision with additional provisions in the interim rule designed to maximize the leveraging of non-Federal funds by funds provided by the Bank; for example, loans from tax-exempt funds may not be subsidized by the Bank (§ 1800.31) and Bank funds are not available in combination with various Federal housing or energy programs (§§ 1800.43 and 1800.63). While there is no absolute bar to combination of Bank funds with funds under Federal programs not named in the interim rule, the Bank has given preference to State proposals which do not depend on other Federal funds. For example, a State proposal under which Bank funds would subsidize loans made from Community Development Block Grant (CDBG) funds was considered less attractive than a State proposal under which the loan funds were derived from State, local, or private sources, other factors being equal.

In preparing this interim rule, the Bank took into consideration the information contained in the proposals received from the States submitted in response to the August 27, 1982 Notice of Funding Availability. In this way, the Bank intends that this rule be compatible with State programs selected for participation under the Bank's program so that participating States may implement activities as soon as possible after the effective date of this rule.

Proposals were received from 53 of 57 eligible States (as defined). Awards to 51 States aggregating $30,430,000 were publicly announced on January 18, 1983. The awards are contingent upon the effectiveness of the interim rule and the execution of cooperative agreements between the Bank and the grantee States.

The aggregate amount of awards made represents the Bank's full appropriation of $21.85 million for FY 1982, plus so much of the Bank's appropriation of $20 million for FY 1983 as was available for obligation by the Bank at the time of the award pursuant to the apportionment of appropriated funds made by the Office of Management and Budget. The Bank anticipates that the balance of its FY 1983 appropriation, to the extent that it remains available for obligation by the Bank, will be awarded to States based upon proposals already received and progress in utilizing such awards. (The Administration has proposed to Congress that the balance of the Bank's appropriation for Fiscal Year 1983 be transfered to the Low-Income Home Energy Assistance program administered by the Department of Health and Human Services. At the time of publication of this interim rule, Congress has not acted on this proposal.)

Development of Interim Rule

This interim rule has been based on the Appendix to the August 27, 1982 Notice of Funding Availability, which was entitled "Terms and Conditions for Financial Assistance for Planning and Pre-Implementation Purposes." Certain changes to the program as described in the Appendix were made in response to comments from interested States and from Members of Congress.

Changes proposed by States in response to the Notice of Funding Availability fell into three categories: (1) Additional types of buildings which should be eligible: (2) additional types of energy conservation and solar energy measures which should be made eligible; and (3) changes to program administration provisions. In the first category, multifamily residential, commercial, and agricultural buildings were identified, of which multifamily residential was most frequently proposed. The Bank agrees with those proposals to include multifamily residential buildings as eligible buildings since this building category can potentially reach many lower income individuals not receiving energy related assistance by other programs. The multifamily residential building category would include public housing authorities as identified in at least one proposal. Commercial and agricultural buildings are not as likely to benefit lower income individuals, a principal objective of the Bank, and have not been included as eligible for funding unless, as discussed below, the Bank issues a specific future notice of eligibility.

In the second category of changes proposed by responding States, a number of energy conservation and solar energy measures in addition to those specified in the Notice were suggested which have a reasonable potential for meeting the cost-effective criterion with high confidence for trouble-free operation. The proposed measures incorporated in this interim rule consist of replacement air conditioners, meter conversion and retrofit passive water heaters. Other measures proposed but not incorporated include active solar systems, biomass and photovoltaic systems, heat pumps, cultivators, planning and technical services, and retrofit passive space heating systems. Wood stoves were also proposed but not incorporated as the Bank continues to feel wood stoves are sufficiently cost-effective to require no financial assistance incentive.

In the third category of proposed changes, responding States requested some program administration changes which the Bank considers unnecessary or undesirable. These consist of provisions for builder assistance, direct transfer of Bank funds to local entities within a State, secondary market financing, and alternative income eligibility limits. A few requests for more than the 2 percent limit on administrative expenses were made. Inasmuch as most proposers did not request more than 2 percent of funds for administrative expenses, and many requested less than 2 percent, the Bank concludes that the 2 percent limit should be sufficient for the financial assistance programs proposed. Also, a few States indicated that loan origination fees of lenders would be paid or subsidized with Bank funds. Loan origination fees cannot be paid or subsidized with Bank funds. A few requests were made to permit the use of tax-exempt borrowings in providing loans to be subsidized by Bank funds. This change was not adopted in keeping with general Department of Treasury policy. Some proposers requested that Bank funds be provided to the States in advance of the grants or loans to the grantees or borrowers. The Bank has determined that such advance funding is unnecessary since it will use the Department of Treasury electronic funds transfer system, which is designed to provide funds to a State within 24 hours of request. Therefore, §1800.109 prohibits requests for advance funding.

Also in the third category, one State proposed that no energy audit be required in determining eligible energy measures, as a cost saving item. The Bank agrees that requiring energy audits adds costs but continues to believe that such costs are generally minimal and provide the needed assurance that the cost-effectiveness criterion of the rule can be met. Energy audits are generally available under provisions of the

Residential Conservation Service (under the rule cited above) at $15 maximum. Audits other than RCS audits are also acceptable if they meet the minimum requirements set forth in the definition of "energy audit" (§ 1800.3).

On November 30, 1982, a proposed interim rule was transmitted to the Chairman and Ranking Minority Members of the Senate Committee on Banking, Housing and Urban Affairs, and the House Committee on Banking, Finance and Urban Affairs. Section 7(o)(2) of the Department of HUD Act (42 U.S.C. 3535(o)(2)), which is applicable to the Bank pursuant to Section 506(e) of the Energy Security Act (12 U.S.C. 3604(e)), required such transmittal before publication of the interim rule in the **Federal Register.**

The Chairman and Ranking Minority Member of the House Committee on Banking, Finance and Urban Affairs recommended certain changes to the interim rule. Following consideration of the recommended changes by the Board of Directors of the Bank, this revised interim rule was transmitted to the Committees pursuant to Section 7(o)(2) on April 12, 1983, together with an explanation of the Board's response to the recommendations made.

Two of the recommended changes pertained to the requirement that an applicant obtain an energy audit prior to receipt of any financial assistance under the Bank program. The Congressmen recommended that energy audits not be required for individual apartment units or single-family homes unless they are low-cost audits, and that the cost of an audit be eligible for financial assistance. A particular concern was that many potential low- and moderate-income applicants live in areas where audits are not available under the Residential Conservation Service program of the Department of Energy (which limits audit costs to $15 per unit). As originally transmitted, the interim rule permitted use of non-RCS audits satisfying minimum requirements (definition of "energy audit" appears in § 1800.3). The revised interim rule now also includes any audit cost in excess of $15 per unit as an energy conservation measure eligible for assistance if the audit is followed by use of the Bank's programs for one or more other eligible energy conservation measures (§ 1800.65 (a)(10) and (b)(10)).

It was also recommended that metropolitan cities and urban counties eligible for entitlement grants under HUD's Community Development Block Grant program be eligible to submit proposals in response to any subsequent solicitations covering funds not already awarded. Following the Notice of Funding Availability, the interim rule limits eligibility to States (§ 1800.91).

A similar request that eligibility for application for Bank awards be extended to cities and other units of local government had been made by several Members of Congress following publication of the Bank's Notice of Funding Availability. However, the Board sought to take advantage of existing energy auditing and assistance programs at the State level and to be able to disburse available funds with minimal administrative expense by dealing with a limited number of States rather than the much larger universe of cities. The proposals received, and upon the basis of which awards were made, indicated an intention on the part of many States to tie in directly with city programs. A further consideration was the Board's desire to obtain as wide a geographic distribution of Bank funds as possible. On the basis of this objective, all acceptable proposals received were funded to some extent. At the same time, the Board determined that no single grant of less than $100,000 could be made and still be feasible, either from the viewpoint of Bank administration or from the viewpoint of a grantee. In fact, six applicant States were funded at the minimum amount, and 31 awards were made in amounts of $500,000 or less. The Board believes that this demonstrates that it would not have been efficient or feasible to have invited application from a vastly larger universe of applicants.

The Board also does not believe that it would be practicable to invite application from cities and counties for participation in the balance of approximately $11 million of the Bank's current appropriation if, as discussed above, such amount remains available to obligation by the Bank.

Notwithstanding that the Administration has requested no further appropriations for the Bank, comment is solicited on the question of whether applications for future Bank funding, if any, should be invited from applicants other than States and, if so, under what circumstances? Should other categories of applicants compete in the same funding rounds with States or in separate rounds? What eligibility or priority criteria should be applied in the case of such different categories of applicants?

The Congressmen also recommended revision of proposed interim rule provisions which would have reduced allowable subsidy amounts for energy conservation measures with a simple payback period of more than three years and prohibited any subsidy in cases where the simple payback period exceeds seven years. The Board concluded that the limitation of assistance to measures with simple payback periods of seven years or less is supported by Department of Energy determinations for its RCS program and should be retained in order to exclude measures having only marginal cost-effectiveness (§ 1800.65(c)). As to the graduation of maximum subsidy amounts within the range of up to seven years, the Bank also received a number of negative comments on this provision from States which were aware of the Bank's transmittal to the Committees made in November, indicating that such a subsidy structure could discourage investments which they had anticipated as being particularly appropriate to low- and moderate-income owners and renters in their areas. Accordingly, the revised interim rule permits the maximum allowable subsidies for investments having simple pay-back periods of up to seven years.

Two other recommendations were considered but not adopted by the Board. The Board determined not to alter the provision prohibiting use of Bank assistance in conjunction with tax-exempt financing (§ 1800.31). This limitation is considered an appropriate means of directing limited Bank assistance to activities not already receiving the benefit of other Federal assistance, and should not unduly hinder States' use of the funds awarded to them. The Board also determined that provisions should not be included specifically requiring that not less than 15 percent of energy conservation funds be used to assist families with incomes not greater than 80 percent of area median income. Such a requirement was included in the Bank's original legislation which contained separate authorization for energy conservation and solar energy assistance. However, such separate authorizations were replaced by a single reduced, unsegregated authorization by the Omnibus Budget Reconciliation Act of 1981. Nevertheless, the Bank believes that the program as designed will result in well over 15 percent of energy conservation funds being used to assist families with incomes at or below 80 percent of the area median income. The States have shown strong interest in serving this income group in their submissions to the Bank.

Additional Features of Interim Rule

Some areas of assistance included within the coverage of the Act will be funded only if the Bank gives specific future notice to that effect; these areas are listed in § 1800.37 of the interim rule

and include all commercial and agricultural buildings, all solar energy systems in multifamily residential buildings and passive solar energy space heating systems in existing buildings. The Bank has no current plans to fund these areas.

The Bank has determined the importance of scaling the amount of assistance to be made available based on expected energy savings. Maximum assistance, to the limits prescribed by statute, should be available only for the more cost-effective measures. This is intended to encourage efficient use of funds and to discourage marginal applications. In general, a limit on the availability of assistance is based on cost-effectiveness using a simple payback calculation using data obtained from the energy audit. For certain passive solar energy systems, the level of assistance is based on estimated energy savings rather than using a cost/payback system due to the difficulty in estimating costs of passive measures which are integrated into new construction.

Under the statute and the interim rule, an applicant's income level (in relation to the median area income) is relevant for determining the amount of assistance available and for determining eligibility for grants. Annual income and median area income will be calculated in a manner consistent with the Section 8 Housing Assistance Payment Programs of HUD. The current rule for income calculation under Section 8 is 24 CFR 889.104. Relevant forms and instructions are available from HUD field offices.

The Bank believes that States selected for funding will enhance their capacity and experience to administer streamlined, cost-effective energy conservation and/or solar energy financial assistance programs as part of their overall community revitalization strategies, and will be likely to assume responsibility for the continuation of those programs without regard to the availability of future Bank funding.

As indicated above, the amounts granted to States include $21.85 million appropriated in FY 1982, which is available through FY 1983. Pursuant to a recent court order (*Dabney et al.* v. *Reagan et al.*, 82 Civ. 2231 CSH, S.D.N.Y., Order dated June 29, 1982), these appropriated funds must be made available for disbursement to qualified applicants as quickly as discharge of the Bank's responsibilities under its authorizing legislation will permit. The Secretary of HUD has therefore determined that delaying the effectiveness of this rule until receipt and consideration of public comment is contrary to the public interest and that good cause exists for making the rule effective as soon as possible.

The Secretary also has determined that for the reasons stated above, good cause exists for exempting this interim rule from the 30-day delay in effectiveness provided by the Administrative Procedure Act (5 U.S.C. 553(d)). In addition, the Chairman and Ranking Minority Members of the Senate Committee on Banking, Housing and Urban Affairs, and the House Committee on Banking, Finance, and Urban Affairs have, upon the Secretary's request, granted waivers of the requirements of section 7(o)(3) of the Department of HUD Act (42 U.S.C. 3535(o)(3)) which provides for a delay in effectiveness of rules for a period of 30 calendar days of continuous session of Congress after publication, unless so waived. Accordingly, the interim rule is being published for immediate effect. However, public comments are invited and will be considered in the adoption of a final rule.

The granting of waivers, as described above, does not indicate approval of the regulations by Congress or the Committees or individual members granting them. Under Section 7(o)(5) of the Department of HUD Act, "Congressional inaction on any rule or regulation shall not be deemed an expression of approval of the rule or regulation involved." The foregoing provision refers to inaction on a joint resolution of disapproval or other legislation which is intended to modify or invalidate the rule or regulation or any portion thereof, and the principal that such inaction does not imply Congressional approval applies, a *fortiori*, to a waiver of the nature requested and granted in this instance.

Regulatory Flexibility Act

Pursuant to 5 U.S.C. 605(b) (the Regulatory Flexibility Act), the Undersigned hereby certifies that this rule does not have a significant economic impact on a substantial number of small entities. The Bank's financial assistance program can be expected to concern a variety of small entities, including local lenders, energy auditors, and manufacturers, retailers, and installers of energy conservation and passive solar systems and components. The Bank, however, finds that there are no anticompetitive discriminatory aspects of the program with regard to small entities nor are there any unusual procedures that would need to be complied with in this rule by small entities.

Environmental Impacts

A Finding of No Significant Impact with respect to the environment has been made in accordance with regulations of the Council on Environmental Quality in 40 CFR 1500, which implement Section 102(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection and copying during regular business hours in the Office of the Rules Docket Clerk, Room 10278, 451 Seventh Street, SW., Washington, D.C. 20410.

OMB Control Number

The reporting or recordkeeping provisions that are included in this regulation (§§ 1800.107, 1800.123 and 1800.127(a)) have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–111) and have been assigned OMB control number 2535–0050.

Regulatory Impact Analysis

This interim rule does not constitute a "major rule" as that term is defined in Section 1(b) of the Executive Order on Federal Regulation issued by the President on February 17, 1981. Analysis of the interim rule indicates that it does not: (1) Have an annual effect on the economy of $100 million or more; (2) cause a major increase in costs for prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Semiannual Agenda of Regulations

This rule was listed at 47 FR 48431 as Item S–5–82 under Current and Projected Rulemakings/Priority in the Department's Semiannual Agenda of Regulations published on October 28, 1982, pursuant to Executive Order 12291 and the Regulatory Flexibility Act.

(Catalog of Federal Domestic Assistance: The Catalog of Federal Domestic Assistance program number is 14.506)

List of Subjects in 24 CFR Part 1800

Grant program—energy conservation. Loan program, Solar energy, Energy conservation.

Accordingly, 24 CFR Chapter X is amended by adding new Part 1800 reading as follows:

PART 1800—FINANCIAL ASSISTANCE PROGRAM OF THE SOLAR ENERGY AND ENERGY CONSERVATION BANK

Subpart A—Introduction

Sec.
1800.1 Scope of authority and purpose.
1800.3 Definitions.
1800.5 Bank organization.

Subpart B—Financial Assistance—General

1800.11 General.
1800.13 Types of assistance.
1800.15 Reduction of principal.
1800.17 Prepayment of interest.
1800.19 Grants.
1800.21 Repayment of loans.
1800.23 Combined loan applications.
1800.25 Limitations or retroactive assistance.
1800.27 Terms and conditions of loans similar to unassisted loans.
1800.29 Debarred contractors, suppliers and financial institutions.
1800.31 Limitation on proceeds of tax-exempt borrowings.
1800.33 Installation certificate.
1800.35 Energy audit or energy design analysis required.
1800.37 Financial assistance not available until notice.

Subpart C—Solar Energy Assistance

1800.41 General.
1800.43 Eligible recipients.
1800.45 Eligible solar energy systems.
1800.47 Levels of assistance.
1800.49 Warranties.
1800.51 Limitation on financial assistance by utilities.
1800.53 Limitation on assistance to residents of housing cooperatives.
1800.55 Standards.

Subpart D—Energy Conservation Assistance

1800.61 General.
1800.63 Eligible recipients.
1800.65 Eligible energy conservation measures.
1800.67 Levels of assistance.
1800.69 Warranties.
1800.71 Limitation on assistance to tenants.
1800.73 Limitation on assistance to residents of housing cooperatives.
1800.75 Minimum expenditures for energy conservation measures.
1800.77 Contractors and suppliers.
1800.79 Residential energy audit information.

Subpart E—Disbursement Procedures

1800.91 General.
1800.93 Cooperative agreements.
1800.95 Allocation of funds.
1800.97 Recapture and reallocation of funds.
1800.99 Authorized expenditures.
1800.101 Distribution of funds.
1800.103 Selection of financial institutions.
1800.105 Maximum levels of assistance.
1800.107 Reporting and recordkeeping requirements.
1800.109 Manner of payment.

Subpart F—Miscellaneous

1800.121 Penalties and remedies.
1800.123 Retention of records by financial institutions and recipients.
1800.125 Audit.
1800.127 Prohibition against tax credits and financial assistance for same expenditure.
1800.129 No gross income.
1800.131 No increase in basis.
1800.133 Waiver of regulations.
1800.135 Applicability of general HUD regulations.
1800.137 Other Federal requirements.
Appendix I—Climatic Factor for Passive Solar Energy Space Heating Systems.
Appendix II—Procedure for Calculating Subsidy and Reduced Interest Rate on Prepayment of Interest Loan Assistance.
Appendix III—Prepayment of Interest Loan Subsidy Examples.

Authority: Secs. 506(e) and 520, Solar Energy and Energy Conservation Bank Act (12 U.S.C. 3604(e) and 3618).

Subpart A—Introduction

§ 1800.1 Scope of authority and purpose.

The Solar Energy and Energy Conservation Bank was established in the Department of Housing and Urban Development by the Solar Energy and Energy Conservation Bank Act, Subtitle A, Title V of Public Law 96–294, 94 Stat. 611, 12 U.S.C. 3601 *et seq.*, enacted on June 30, 1980. The purpose of the Act is to encourage the use of solar energy and energy conservation, and thereby reduce the dependence of the United States on foreign sources of energy supplies.

§ 1800.3 Definitions.

"Act" means the Solar Energy and Energy Conservation Bank Act, 12 U.S.C. 3601 *et seq.*

"Agricultural building" means any building used exclusively in connection with the production, harvesting, storage, or drying of agricultural commodities.

"Annual income" has the meaning used for the Section 8 Housing Assistance Payment Programs of HUD, and means the total annual income of a family from all sources for the 12-month period following the date of determination of income, computed in accordance with the section of this title which prescribes the method of computation.

"Applicant" means any person applying for financial assistance.

"Bank" means the Solar Energy and Energy Conservation Bank established under the Act.

"Board" means the Board of Directors of the Bank.

"Contractor" means the installer of a solar energy system or energy conservation measure (other than the recipient) and includes the builder of a newly constructed one- to four-family or multifamily residential building.

"Cost-effective" means that an energy conservation measure or solar energy system is expected to result in a dollar savings that exceeds its costs over the life of the measure or system, without consideration of the financial assistance under the programs of the Bank, except that as otherwise specified in § 1800.45 and § 1800.65 of this part "cost-effective" has the meaning stated in that section.

"Commercial building" means any building other than a one- to four-family residential or multifamily residential building which is used primarily to carry on a business (including any nonprofit business) and is not used primarily for the manufacture or production of raw material, products, or agricultural commodities.

"Covered product" means:

(a) If the manufacturer provides a complete solar energy system to the supplier for installation by the contractor, then the system.

(b) In all other cases, all components of a solar energy system which are designed for use in solar energy systems and which are not ordinary building materials generally used for construction purposes.

"Date of completion of installation" means:

(a) The date of completion of performance by the contractor under its contract with the recipient,

(b) If the recipient performs the installation, the date the recipient completes the installation work, or

(c) If a one- to four-family or multifamily residential, commercial or agricultural building with an installed solar energy system is newly constructed or substantially rehabilitated and is purchased by the recipient, the date the recipient accepts title to the building.

"Dwelling unit" means any building (including a manufactured home) or part of a building designed for year-round non-transient residential use by one family.

"Energy audit" means: (a) An energy audit of a building or dwelling unit performed for purposes of Title VI or Title VII of the National Energy Conservation Policy Act, 42 U.S.C. 8216 *et seq.* and 8283 *et seq.*, respectively, or

(b) In the case of a one- to four-family or multifamily residential building or a dwelling unit in any such building, an on-site inspection of the building or dwelling unit using procedures approved by a State or Federal government entity (or performed by an energy auditor who is determined to be qualified by a State or local governmental entity) which

includes a determination of and provides information on:

(1) The type, quantity, and rate of energy consumption of such building or dwelling unit;

(2) Energy conserving maintenance and operating procedures which can be employed to significantly reduce the energy consumption of such building or dwelling unit;

(3) In the case of a one- to four-family residential building, a multifamily residential building which does not contain a central heating or cooling system, or a dwelling unit in such building, the cost of purchasing and installing appropriate energy conservation measures, a solar energy system, or both, and the savings in energy costs which are likely to result from the installation of such measures or system; and

(4) In the case of a multifamily residential building which contains a central heating or cooling system, or a dwelling unit in such building, the need, if any, for the purchase and installation of appropriate energy conservation measures, a solar energy system, or both; or

(c) In the case of a commercial or agricultural building, an on-site inspection of the building using procedures approved by a State or Federal governmental entity (or performed by an energy auditor who is determined to be qualified by a State or local governmental entity) which includes a determination of and provides information on:

(1) The type, quantity, and rate of energy consumption of such building;

(2) Appropriate energy conserving maintenance and operating procedures which can be employed to significantly reduce the energy consumption of such building; and

(3) The need if any, for the purchase and installation of energy conservation measures, a solar energy system, or both, in such building.

"Energy conservation measure" means a measure listed in § 1800.65.

"Energy design analysis" means a technical analysis performed on the design of a building to assess the cost-effectiveness of the energy conserving features and use of solar energy on an annual basis performed by a licensed engineer or architect qualfied to conduct such an analysis.

"Family" has the meaning used for lower-income housing programs of HUD as set forth in § 812.2(d) of this title, as it may be amended from time to time, or any replacement definition. It includes but is not limited to an elderly family as defined in § 812.2(c) of this title, a single person as defined in § 812.2(f) of this title, the remaining member of a tenant family, and a displaced person as defined in § 812.2(a) of this title, but excludes certain aliens.

"Financial assistance" means the three forms of financial assistance described in § 1800.13 of this part.

"Financial institution" means: (a) Any lender with a current contract of insurance under Section 2 of Title I of the National Housing Act, 12 U.S.C. 1703,

(b) Any utility providing financing for the purchase and installation of energy conservation measures or solar energy systems in accordance with the requirements of Title II of the National Energy Conservation Policy Act, 42 U.S.C. 8211 *et seq.*,

(c) Any unit of local government which receives a grant under Title I of the Housing and Community Development Act of 1974, 42 U.S.C. 4301 *et seq.*, in accordance with a statement of objectives and projected use of funds which includes lending activities to be undertaken by the unit of local government,

(d) Any public body for which a local loan approval agreement is in effect under the Section 312 Rehabilitation Loan program, 42 U.S.C. 1452(b),

(e) Any lender currently approved to participate in HUD mortgage insurance programs under Title II of the National Housing Act, 12 U.S.C. 1709(b)(1),

(f)(1) Any institution with the following characteristics:

(i) Any member of the Federal Reserve System or financial institution whose accounts are insured by the Federal Savings and Loan Insurance Corporation, the Federal Deposit Insurance Corporation or the National Credit Union Administration, or any depository institution which is subject to the inspection and supervision of a governmental agency which is required by law to make periodic examinations of its books and accounts; or

(ii) Any institution which has as its principal activity the lending or investment of funds in mortgages, consumer installment notes or similar advances of credit, or the purchase of consumer installment contracts, and is not subject to the inspection and supervision of a governmental agency as provided above in paragraph (f)(1)(i) of this section; and meets the following requirements:

(A) It shall have and maintain net worth of not less than $100,000 in assets acceptable to the State in which it will provide financial assistance,

(B) It shall have and maintain a reliable warehouse line of credit or other loan funding program acceptable to the State in which it will provide financial assistance, in an amount of not less than $250,000 available for use in loan financing, and

(C) It shall within 75 days of the close of its fiscal year and at such other times as may be requested, file with the State an audit report based on an audit performed by a Certified Public Accountant, or by an Independent Public Accountant licensed by a regulatory authority of the State or other political subdivision of the United States on or prior to December 31, 1970, which shall include a financial statement in a form acceptable to the State, including a balance sheet, and statement of operations and retained earnings; or

(iii) Any Federal, State or municipal governmental agency, a Federal Reserve Bank, a Federal Home Loan Bank, and a National Mortgage Association which is empowered to participate in a consumer installment lending operation.

(2) Any institution described in paragraphs (f)(1) (i), (ii) or (iii) of this section must also meet the following requirements:

(i) It is a chartered institution, a permanent organization having succession, or a trust, which agrees to notify the State of all corporated changes, including, but not limited to mergers, terminations, name, location, control of ownership, and character of business.

(ii) It employs trained personnel competent in all aspects of consumer lending activities and the State determines that it has adequate staff and facilities, and

(iii) It shall file a yearly report of its status and operations with the State and shall submit a copy of its latest financial statement or any other information upon request of the State, and

(g) Any other organization specifically approved by the Bank as a financial institution.

"HUD" means the Department of Housing and Urban Development.

"Improvement costs" means the actual costs of an energy conservation measure or passive solar energy system and, if installed by a builder or contractor, the actual costs to the recipient of the labor involved in the installation, as certified in the installation certificate required by § 1800.33 of this part.

"Manufacturer" means: (a) For the purposes of warranties for solar energy systems, the producer of any covered product, and

(b) For the purpose of warranties for energy conservation measures, the producer of any energy conservation measure.

"Median area income" means median annual income for an area as determined by the Bank based on the data used by HUD for establishing the median area income for use in the programs authorized under Section 8 of the United States Housing Act of 1937, 42 U.S.C. 1437(f).

"Multifamily residential building" means any building used as a residence which contains five or more dwelling units and has at least one system for heating or cooling or both.

"One-to four-family residential building" means any building used as a residence which contains at least one and not more than four dwelling units and has at least one system for heating or cooling or both.

"Passive solar energy system" means, with respect to a building, any component, addition, alteration or improvement which is designed to utilize solar energy for space or water heating or to provide space cooling based primarily on convective, conductive, or radiant energy transfer (or some combination of these types) to reduce the energy requirements of the building. In addition, such a system for space heating shall either contain the "five recognition factors" or shall be approved in writing by the Bank. The "five recognition factors" are: (a) A solar collection area, (b) an absorber, (c) a storage mass, (d) a heat distribution method, and (e) a heat regulation device. A "solar collection area" is a large area of transparent or translucent material, such as glass, positioned so that the rays of the sun directly strike an absorber. The collector area must be facing within 30° of south. An "absorber" is a surface, such as a floor, that is exposed to the rays of the sun. The absorber changes solar radiation into heat, and then transfers the heat to a storage mass. A "storage mass" is material, such as masonry, that receives and holds heat from the absorber and later releases the heat to the inside of the home. The storage mass must be large enough to store and deliver enough solar heat for the size of the home. Also, the storage mass must be located so that the stored heat is distributed directly to the living areas of the home through a heat distribution method. A "heat distribution method" is a system that releases radiant or convective heating from the storage mass to the living areas of the home. A "heat regulation device" is a shading or venting mechanism, such as awnings, of insulated drapes, to control the amount of solar heat admitted through the solar collection areas, and nighttime insulation or its equivalent to control the amount of heat permitted to escape from the inside of the home.

"Person" means an individual or any corporation, partnership, joint venture or other non-governmental entity.

"RCS" means the Residential Conservation Service program of the Department of Energy set forth in 42 U.S.C. 8201 *et seq.* and 10 CFR Part 456.

"Recipient" means a person receiving financial assistance under the Act.

"Solar energy system" means a system listed in § 1800.45 of this part.

"Standard loan" means a loan having over its amortization period a fixed rate of interest and level monthly payments.

"State" means any State (which includes the District of Columbia, Puerto Rico, Guam, the Northern Mariana Islands, the Virgin Islands, American Samoa and the Trust Territory of the Pacific Islands) which has been selected to participate in the Bank program in the manner described in subpart E of this part.

"Substantially rehabilitated" or "substantially rehabilitating" means that, with respect to an existing one- to four-family or multifamily residential building, a solar energy system is being installed and other improvements (costing at least $1,000 per dwelling unit) are being made by a builder who is offering the building for sale.

"Supplier" means: (a) For the purposes of warranties for solar energy systems, the supplier (other than the manufacturer) of any covered product, and

(b) For the purposes of warranties for energy conservation measures, the supplier (other than the manufacturer) of any energy conservation measure.

The term includes but is not limited to the person who supplies a covered product or energy conservation measure to the contractor or, if the recipient performs the installation, the recipient.

§ 1800.5 Bank organization.

The organization of the Bank is described in the bylaws of the Bank, which are published as Part 1895 of this Chapter. Amendments to the bylaws are effective when adopted by the Board and will be published in the **Federal Register** for information purposes.

Subpart B—Financial Assistance—General

§ 1800.11 General.

This subpart sets forth the conditions and requirments that are applicable to financial assistance for both solar energy systems and energy conservation measures.

§ 1800.1 Types of assistance.

(a) *General.* The Bank is authorized to make payments to financial institutions for use as financial assistance in the form of reductions of the principal obligations of loans or qualifying portions of loans, prepayments of the interest which would otherwise be due with respect to loans or qualifying portions of loans, and grants.

(b) *Forms of financial assistance for loans.* —(1) Except as specified in paragraph (b)(2) of this section, financial assistance used in connection with loans may be in the form of either reduction of principal or prepayment of interest, at the discretion of the financial institution.

(2) Reduction of principal shall be the only form of financial assistance used in connection with loans other than standard loans.

§ 1800.15 Reduction of principal.

When financial assistance is in the form of reduction of principal, the amount of financial assistance shall be subtracted from the principal amount of the loan and the recipient shall repay the difference between these amounts on the basis of a loan repayment schedule using the same interest rate as for comparable unassisted loans.

§ 1800.17 Prepayment of interest.

(a) *Form.* Prepayment of interest on a loan shall take the form of reduction of the interest rate which would otherwise have been charged.

(b) *Calculation.*—(1) The amount of the interest rate reduction will be calculated by taking into account the compounded growth of the value of the assistance over the term of the loan where the projected annual percentage growth rate is less than the interest rate of the unassisted loan. The projected annual percentage growth rate will be determined by applying a discount rate (determined in accordance with paragraph (b)(2) of this section) to the interest rate prevailing for comparable loans on the day the assisted loan is made. The projected annual percentage growth rate will equal one minus the decimal discount rate, multiplied by the prevailing interest rate and then rounded up to the nearest 0.25 percentage increment available.

(2) The Bank will prescribe the discount rate to be used in calculating prepayment of interest. The Bank may make adjustments to the discount rate, from time to time, as it deems appropriate or necessary by increasing or decreasing the maximum allowable discount rate. All such adjustments will be announced by notice in the **Federal**

Register. The initial discount rate for program implementation, and until revised, is 60 percent. A State may vary the discount rate below the 60 percent prescribed (or any subsequent maximum allowable discount rate) as market demand/response to programs implemented in the State may warrant.

(3) Appendix II to this part explains the calculation procedure for assistance in the form of prepayment of interest. Appendix III to this part presents examples of calculations for assistance in the form of prepayment of interest. States may adopt alternative procedures provided the subsidy amount determined from any alternative procedure does not exceed the subsidy determined by Appendix II.

(4) In the case of a loan for which only a portion qualifies for financial assistance, e.g., a home improvement loan of $2,000 which includes $1,000 for eligible conservation measures, the subsidy may be applied to reduce the interest rate of the entire loan when calculated in accordance with procedures contained in Appendix II.

§ 1800.19 Grants.

When financial assistance is in the form of a grant, the applicant shall certify to the financial institution that financial resources are available to the applicant which, when added to the grant, will be sufficient to pay the full improvement cost of the energy conservation measures to be purchased and installed. After receipt of the installation certificate required by § 1800.33 of this part, the financial institution may pay the grant directly to the applicant, the contractor, or the supplier (if the applicant performs the installation), at the discretion of the financial institution, unless a State prescribes a particular grant delivery system.

§ 1800.21 Repayment of loans.

(a) *No prepayment penalty.* There shall be no penalty imposed on the borrower if the loan is repaid before the end of the term of repayment.

(b) *Term of repayment.* Unless financial institutions establish shorter terms (but no less than one year) at the request of the borrower, financial assistance may be provided in connection with loans for:

(1) The purchase and installation of energy conservation measures only if the term of repayment of the loan is not less than five and not more than fifteen years,

(2) The purchase and installation of solar energy systems in one-to four-family or multifamily residential buildings, or the purchase of one to four-family or multifamily residential buildings with such systems, only if the terms of repayment of the loan is not less than five and not more than 30 years, or

(3) The purchase and installation of solar energy systems in commercial or agricultural buildings, or the purchase of commercial or agricultural buildings with such systems, only if the term of repayment of the loan is not less than five and not more than 40 years.

(c) *Repayment to Bank.* Subject to the qualifications set forth herein, financial institutions must repay to the Bank the portion of any prepaid interest which is in excess of the actual interest due on the loan at the time a recipient fails to meet his or her obligations on the loan. In calculating whether such excess interest exists, a financial institution shall determine the amount of interest it would normally have received on the loan at the prevailing interest rate to the time of default and subtract it from the sum of the actual interest received on the loan plus the amount of financial assistance provided in connection with the loan. If this amount is more than $100.00 and default occurs sooner than three years after the loan is made, the amount calculated is to be repaid by the financial institution to the State, which shall either repay the amount to the Bank or use the amount for other purposes permitted by its cooperative agreement with the Bank (described in § 1800.93 of this part).

§ 1800.23 Combined loan applications.

Recipients may receive financial assistance with respect to a single loan for a combination of eligible solar energy systems and/or energy conservation measures. The amount of financial assistance provided will be the sum of the amounts of financial assistance which would be available if all solar energy systems were financed by one loan and all energy conservation measures were financed by a separate loan.

§ 1800.25 Limitations on retroactive assistance.

(a) *Purchase and installation in existing buildings.* Financial assistance shall not be provided in connection with expenditures for purchase and installation of solar energy systems or energy conservation measures in existing buildings if the expenditures were made prior to the date of the application for financial assistance.

(b) *Purchase from builders.* Financial assistance shall not be provided in connection with a loan for the purchase of a building if permanent financing has been closed prior to the date of the application for financial assistance or if the expenditures were made by the applicant prior to the date this part becomes effective.

(c) *New construction by recipient.* Financial assistance shall not be provided in connection with expenditures for the purchase and installation of solar energy systems in a building which is newly constructed by the recipient, if the recipient has closed permanent financing of the expenditures prior to the date of the application for financial assistance or if the expenditures were made prior to the date this part becomes effective.

§ 1800.27 Terms and conditions of loans similar to unassisted loans.

Except as otherwise required by this part, the terms and conditions of loans proposed to be assisted under this part must be comparable to similar unassisted loans at the prevailing market rates provided by the financial institution. Terms and conditions include the interest rate, maturity and any required fees, points or security provisions.

§1800.29 Debarred contractors, suppliers and financial institutions.

(a) *Contractor's certification.* Contractors being paid in whole or in part with financial assistance provided under this part shall certify that neither they nor their suppliers (if any) are on (1) The Consolidated List of debarred, suspended and ineligible contractors prepared by the General Services Administration pursuant to the temporary rule published at 47 FR 43692 and any successor rule, or (2) HUD's list of debarred, suspended and ineligible participants, available from HUD field offices (see Part 24 of this title).

(b) *Financial institutions.* No financial institution may participate in the Bank's programs if it is on HUD's List of debarred, suspended and ineligible participants available from HUD field offices (see Part 24 of this title).

(c) *Alternative State procedures.* Paragraphs (a) and (b) of this section shall not apply for any State which has procedures for barring participation by contractors and financial institutions which the Bank has accepted as an alternative to the provisions of paragraphs (a) and (b).

§ 1800.31 Limitation on proceeds of tax-exempt borrowings.

Financial assistance shall not be provided for a loan made from the proceeds of borrowings, if the interest on such borrowings is exempt from Federal taxation.

§ 1800.33 Installation certificate.

(a) *Loans.* An applicant for financial assistance in the form of interest or principal reduction on a loan must agree to certify that the proceeds of the loan have been used to purchase and install a solar energy system or energy conservation measures, or to purchase a newly constructed or substantially rehabilitated building with a solar energy system. Such certification shall be made immediately after such purchase and installation or purchase of a building.

(b) *Grants.* An applicant for financial assistance in the form of a grant must agree to certify that the grant has been used to purchase and install energy conservation measures. Such a certification shall be made immediately after such purchase and installation.

(c) *Certification provided to Bank.* A certification shall be made available to the Bank by the financial institution upon request of the Bank.

§ 1800.35 Energy audit or energy design analysis required.

An applicant for financial assistance must submit to the financial institution a copy of an energy audit performed for the building or dwelling unit for which financial assistance is requested (or an energy design analysis, in the case of a newly constructed or substantially rehabilitated building) before the financial assistance is provided.

§ 1800.37 Financial assistance not available until notice.

Notwithstanding anything to the contrary in subparts C and D of this part, no financial assistance shall be provided in connection with the following unless the Bank has published a notice in the **Federal Register** specifically stating that such financial assistance may be provided for such purposes:

(a) *Agricultural or commercial buildings.* Energy conservation measures or solar energy systems of any kind in agricultural or commercial buildings.

(b) *Multifamily residential buildings.* Solar energy systems of any kind in multifamily buildings.

(c) *Existing one- to four-family residential buildings.* Solar energy systems (except passive solar domestic hot water systems) in existing one- to four-family residential buildings.

Subpart C—Solar Energy Assistance

§ 1800.41 General.

This subpart sets forth the conditions and requirements that are applicable only to financial assistance for solar energy systems.

§ 1800.43 Eligible recipients.

(a) *Existing buildings.* An owner of an existing one- to four-family or multifamily residential, commercial or agricultural building who purchases and installs a solar energy system in such building with the proceeds of a loan shall be eligible to receive financial assistance in connection with such loan.

(b) *Newly constructed or substantially rehabilitated buildings.* A purchaser of a newly constructed or substantially rehabilitated one- to four-family or multifamily residential, commercial or agricultural building with a solar energy system shall be eligible to receive financial assistance in connection with a loan for the purchase of the building.

(c) *Joint applications.* A joint owner of a dwelling unit or of a building may apply for assistance individually, together with other joint owners in a single application, or with other joint owners by separate application. If separate applications are made by two or more joint owners with respect to the same building or dwelling unit, such applicants collectively may not receive assistance exceeding the maximum level of assistance established under § 1800.47 of this part.

(d) *Relationship to other Federal programs.* An owner or purchaser is not an eligible recipient if the owner or purchaser has an outstanding commitment, or has received preliminary or final approval of his or her application, for assistance under any of the following Federal assistance programs with respect to which a solar energy system is to be installed:

(1) HUD.

(i) Section 235 Homeownership Assistance, 12 U.S.C. 1715z.

(ii) Section 8 Lower Income Rental Assistance for New Construction and Moderate and Substantial Rehabilitation, 42 U.S.C. 1437f.

(iii) Indian Housing, 42 U.S.C. 1437 *et seq.* and Part 805 of this title.

(iv) Section 312 Rehabilitation Loans, 42 U.S.C. 1452b.

(2) Farmers Home Administration. Section 515 Direct Loans, 42 U.S.C. 1485.

(3) Department of Energy. Institutional Conservation (Schools and Hospitals) Program, 42 U.S.C. 6371 *et seq.*

§ 1800.45 Eligible solar energy systems.

(a) *Eligible systems.* Only passive solar energy systems shall be eligible solar energy systems.

(b) *Cost-effectiveness.* A passive solar energy system shall not be eligible for assistance unless it has been found to be cost-effective as a result of an energy design analysis (in the case of a newly-constructed or substantially rehabilitated building) or an on-site energy audit (in all other cases). "Cost-effective" has the meaning specified in § 1800.3 except that in the case of passive solar domestic hot water systems in existing buildings, "cost-effective" means that the measures have a simple pay-back period of seven years or less as determined by an energy audit without consideration of the financial assistance of the programs of the Bank.

§ 1800.47 Levels of assistance.

Financial assistance shall not exceed the least of any applicable amounts determined under paragraphs (a), (b), and (c) of this section.

(a) *Fixed amount.*—(1) The maximum amount of assistance for passive solar space heating systems or any combination of space heating with passive space cooling and passive water heating shall be as follows:

(i) $5,000 for a one-unit residential building;

(ii) $7,500 for a two-unit residential building;

(iii) $10,000 for a three- or four-unit residential building;

(iv) For multifamily residential buildings, $2,500 multiplied by the number of units; and

(v) $100,000 for commercial or agricultural buildings.

(2) The maximum amount of assistance for passive solar domestic hot water systems shall be $1,000 or 40 percent of the improvement cost, whichever is less.

(3) The maximum amount of assistance for passive solar space cooling systems shall be $1,000 or 40 percent of the improvement cost, whichever is less.

(4) In the case of solar energy systems (except for passive solar domestic hot water systems and passive solar space cooling systems) which do not benefit all dwelling units within a building, the maximum dollar amounts listed above shall be reduced by the percentage of dwelling units in the building which do not benefit from the solar energy system. In order to determine the number of dwelling units in a building, the following principles shall be applied: (i) All units sharing a common living space conditioning system shall be considered part of the same building; and (ii) except in the case of a manufactured home park, all dwelling units located on or above land included in the most recent recorded deed shall be considered part of the same building, whether or not any space conditioning systems are shared.

(b) *Energy saved.* For passive solar space heating systems in one- to four-

family residential buildings, the maximum amount of assistance set forth in paragraph (a) of this section may be reduced on a relative energy savings basis by a climatic, or locational, factor and a design performance factor. The climatic factor takes into consideration the positive effect of the passive system on heating degree days in the winter period as well as the negative effect on cooling (air conditioning) requirements in the summer period. The combination of those effects over a complete year of heating and cooling determines the total net energy savings of the system based on its geographic location. The climatic factor is obtained by using the chart which appears as Appendix I to this Part. The design performance factor is based on the relationship between the solar collection area of the passive system and the total gross heated living floor area. This performance factor is determined by establishing the ratio between the solar collection area in square feet (less a threshold effective collection size of 40 square feet per dwelling unit) and the gross heated living area floor space in square feet. A ratio of less than zero provides a zero performance factor; for a ratio between 0.0 and 0.1, the factor is 10 times the ratio; for a ratio between 0.1 and 0.3, the factor is 1.0; for a ratio between 0.3 and 0.4, the factor is 4 minus 10 times the ratio; for a ratio more than 0.4 the factor is again zero. The subsidy is determined by multiplying the maximum subsidy set forth in paragraph (a) of this section by both the climatic and performance factors.

(c) *Interest prepaid.* Where the assistance to be provided is in the form of prepayment of interest, the amount of assistance shall not exceed the amount of funds necessary to prepay all interest on any portion of the loan finanacing eligible solar energy costs.

§ 1800.49 Warranties.

(a) *General.* The recipient shall provide the financial institution with either a written certification from the contractor (or the supplier, if the recipient performs the installation) that the warranty requirements of this section have been satisfied or with other evidence acceptable to the financial institution that the warranty requirements of this section have been satisfied.

(b) *Manufacturer's warranty.* The manufacturer shall warrant in writing that the recipient, the contractor who installs the covered products and the supplier of the covered products shall be entitled to obtain from the manufacturer within a reasonable period of time and at no charge appropriate replacement parts or materials for those covered products found within three years from the date of completion of installation to be defective due to materials, manufacturer or design. A recipient who finds an alleged defect shall give written notice of the alleged defect to the contractor, supplier or manufacturer within thirty days of his or her discovery thereof. If a defect exists, the manufacturer shall provide replacement parts or materials without charge for the parts or materials and for their transportation to the site of installation of the solar energy system.

(c) *Supplier's warranty.* The supplier shall provide to the recipient a written warranty equivalent to that required under paragraph (b) of this section. The supplier may satisfy this requirement by an assignment of the manufacturer's warranty required by paragraph (b) to the person to whom the covered product is supplied.

(d) *Contractor's warranty.* The contractor for the installation of a solar energy system shall warrant in writing to the recipient that any defect in materials, manufacture, design or installation found within one year from the date of completion of installation shall be remedied without charge and within a reasonable period of time. A recipient who finds an alleged defect shall give written notice of the alleged defect to the contractor within 30 days of his or her discovery thereof.

(e) *Other law.* This section shall not be deemed to relieve a warrantor under this section from full compliance with Federal and State law applicable to warranties, except to the extent that such law is inconsistent with the requirements of this section.

(f) *No conflict with RCS requirements.* In any State with a list of approved contractors and suppliers under State plans required by the RCS, warranties in compliance with the requirements of Section 542 of the Energy Security Act (42 U.S.C. 8213) and applicable regulations shall be considered in compliance with this section as applied to the purchase and installation of solar energy systems.

§1800.51 Limitation on financial assistance by utilities.

No financial assistance shall be provided under this part by a utility for the purchase and installation of a solar energy system in a new building.

§ 1800.53 Limitation on assistance to residents of housing cooperatives.

Financial assistance may be provided to residents of housing cooperatives only if the cooperative corporation has given prior written consent to the resident for installation of a solar energy system.

§ 1800.55 Standards.

In the case of a newly constructed or substantially rehabilitated one- to four-family or multifamily residential building, or in the case of added heated space in an existing one- to four-family or multifamily residential building, the purchaser must provide certification that the building meets or exceeds the standards contained in Paragraph 607–3, Building Insulation, of the HUD Minimum Property Standards for One and Two Family Dwellings, 4900.1, or Multifamily Housing, 4910.1, as appropriate.

Subpart D—Energy Conservation Assistance

§ 1800.61 General.

This part sets forth the conditions and requirements that are applicable only to financial assistance for energy conservation measures.

§ 1800.63 Eligible recipients.

(a) *General.* Subject to the provisions of this section, an owner of, or a tenant in, a one- to four-family or multifamily residential, commercial or agricultural building who purchases and installs energy conservation measures in such building with the proceeds of a loan shall be eligible to receive financial assistance in connection with such loan. An owner of, or tenant in, a one- to four-family residential building and a tenant in a multifamily residential building who purchases and installs energy conservation measures in such building shall be eligible to receive financial assistance in the form of a grant. All buildings in which energy conservation measures are installed must have been completed before January 1, 1980.

(b) *Income limitations—grants.* In order to receive financial assistance in the form of a grant, a recipient must be an individual whose family has an annual income not in excess of 80 percent of the median area income.

(c) *Income limitations—loan subsidies.* In order to receive financial assistance in the form of reduction of principal or prepayment of interest:

(1) An owner of a one- to four-family residential building or a condominium dwelling unit, a tenant in a one- to four-family or multifamily residential building, or a shareholder of a housing cooperative corporation must be an individual whose family has an annual income not in excess of 150 percent of the median area income.

(2) A housing cooperative corporation or a residential condominium

association must be the owner of a cooperative or condominium which is occupied by families with an average annual income per family not in excess of 150 percent of the median area income.

(3) An owner of a multifamily residential, commercial or agricultural building, or a tenant in a commercial or agricultural building, shall not be subject to any income requirement.

(d) *Sales limitations.* An owner of, or tenant in, a commercial or agricultural building cannot have had gross annual sales of more than $1,000,000 during the fiscal year of such owner or tenant preceding the fiscal year in which an assisted loan is made.

(e) *Owner-occupant.* An owner of a commercial or agricultural building must occupy the building in order to receive financial assistance in connection with the building.

(f) *Joint applications.*—(1) A joint owner of a dwelling unit or a building may apply for assistance individually, together with other joint owners in a single application, or with joint owners by separate application. If separate applications are made by two or more joint owners with respect to the same building or dwelling unit, such applicants collectively may not receive assistance which would exceed the maximum amount of assistance for which an applicant with an annual income equal to the average annual incomes of all joint owners of the dwelling unit or building would be eligible.

(2) A tenant jointly renting a dwelling unit or a building with other tenants may apply for assistance individually, together with other tenants in a joint application, or with other tenants by separate application. If separate applications are made by two or more tenants jointly renting a dwelling unit or building, such applicants collectively may not receive assistance which would exceed the maximum amount of assistance for which an applicant with an annual income equal to the average annual incomes of all tenants jointly renting the dwelling or building would be eligible.

(g) *Application on behalf of others.* Assistance may be provided to an applicant, which is not an owner or tenant but which is acting on behalf of owners of one- to four-family residential buildings, for use by the applicant in purchasing and installing energy conservation measures in such buildings pursuant to a program approved by the Bank. Where such assistance is provided, the income limitations in § 1800.63 shall apply to the owners of the buildings to be improved, and the assistance limitations in § 1800.67 shall be applicable to the improvement cost for each building. Under any such program, the requirements of § 1800.33 (Energy audits), § 1800.69 (Warranties) and other such provisions of this part pertaining to the qualification of individual buildings for financial assistance may be complied with by the applicant at the time that dwellings are selected for improvements.

(h) *Individually-metered tenants.* A tenant in a multifamily residential building is eligible for financial assistance only if the tenant will pay costs for space heating and cooling which are measured by an individual utility meter after all the energy conservation measures are installed.

(i) *Relationship to other Federal programs.* An owner or tenant is not an eligible recipient if the owner or purchaser has an outstanding commitment, or has received preliminary or final approval of his application, for assistance under any of the following Federal assistance programs with respect to which an energy conservation measure is to be installed:

(1) HUD.

(i) Section 8 Lower Income Rental Assistance for Moderate and Substantial Rehabilitation, 42 U.S.C. 1437f.

(ii) Flexible Subsidy (Troubled Projects), 42 U.S.C. 1715z–1a and Part 219 of this title.

(iii) Section 312 Rehabilitation Loans, 42 U.S.C. 1452b.

(2) Farmers Home Administration. Section 515 Direct Loans, 42 U.S.C. 1485.

(3) Department of Energy.

(i) Weatherization Program, 42 U.S.C. 6863.

(ii) Institutional Conservation (Schools and Hospitals) Program, 42 U.S.C. 6371 *et seq.*

§ 1800.65 Eligible energy conservation measures.

(a) *One- to four-family residential buildings.* The following shall be eligible energy conservation measures for one- to four-family residential buildings, subject to paragraph (c) of this section:

(1) Caulking and weatherstripping,

(2) Furnace efficiency modifications including: (i) Replacement burners, furnaces, boilers, or any combination thereof, which increases the energy efficiency of the heating system,

(ii) Devices for modifying flue openings which will increase the energy efficiency of the heating system, and

(iii) Electrical or mechanical furnace ignition systems which replace standing gas pilot lights,

(3) Clock thermostats,

(4) Ceiling, attic, wall, floor, and duct insulation,

(5) Water heater insulation,

(6) Storm windows and doors, multiglazed windows and doors, heat-absorbing or heat-reflecting window and door materials,

(7) Devices associated with load management techniques,

(8) Replacement air conditioners, and

(9) Conversion from master utility meters to individual utility meters, when directly related to and undertaken with the installation of any of the items specified in paragraphs (a)(2)–(8) of this section, and

(10) Energy audits (in excess of the first $15 in cost for each unit covered by the audit), when followed by installation of any of the items specified in paragraphs (a)(1)–(8) of this section.

(b) *Other buildings.* The following shall be eligible energy conservation measures for multifamily residential buildings, commercial buildings and agricultural buildings, subject to paragraph (c) of this section:

(1) Caulking and weatherstripping,

(2) The insulation of the building structure and any systems within the building,

(3) Storm windows and doors, multiglazed windows and doors, heat-absorbing or heat-reflecting window and door systems, glazing, reductions in glass area, and other window and door system modifications,

(4) Automatic energy control systems,

(5) Equipment, associated with automatic energy control systems, which is required to operate variable steam, hydraulic, and ventilating systems,

(6) Furnace, or utility plant and distribution system, modifications including:

(i) Replacement burners, furnaces, boilers, or any combination thereof, which increases the energy efficiency of the heating system,

(ii) Devices for modifying flue openings which will increase the energy efficiency of the heating system, and

(iii) Electrical or mechanical furnace ignition systems which replace standing gas pilot lights,

(7) Replacement or modification of a lighting system which increases the energy efficiency of the lighting system without significantly increasing the overall illumination of the building (unless such increase in illumination is necessary to conform to any applicable State or local law),

(8) Energy recovery systems, and

(9) Conversion from master utility meters to individual utility meters, when directly related to and undertaken with the installation of any of the items

specified in paragraph (b)(2)–(8) of this section, and

(10) Energy audits (in excess of the first $15 in cost for each unit covered by the audit), when followed by installation of any of the items specified in paragraph (b)(1)–(8) of this section.

(c) An energy conservation measure shall not be eligible for assistance unless it has been found to be cost-effective as a result of an energy audit. For purposes of this section only, "cost-effective" means that the measures have a simple pay-back period of seven years or less as determined by an energy audit, without consideration of the financial assistance of the programs of the Bank.

§ 1800.67 Levels of assistance.

Financial assistance shall not exceed the least of any applicable amounts determined under paragraphs (a) and (b) of this section.

(a) *Fixed amount and percentage of costs.*—(1) The maximum amount of assistance shall be determined according to the following chart (income limits are applied to the annual income of the family of the owner or tenant):

Building type	Assistance as percentage of improvement cost	Maximum assistance			
		1 unit	2 unit	3 unit	4 unit
(1) 1 to 4 unit residential buildings:					
Income of owner or tenant:					
Less than 80 pct of area median*	50 pct up to	$1,250	$2,000	$2,750	$3,500
80 to 100 pct of area median	35 pct up to	875	1,400	1,925	2,450
100 to 120 pct of area median	30 pct up to	750	1,200	1,650	2,100
120 to 150 pct of area median	20 pct up to	500	800	1,100	1,440
(2) Multifamily residential building	20 pct up to	(1)	(1)	(1)	(1)
(3) Agricultural or commercial building	20 pct up to	(2)	(2)	(2)	(2)

[1] $400 per dwelling unit.
[2] $5,000 per building.

(2) In the case of energy conservation measures which do not benefit all dwelling units within a building, any dwelling units in the building which do not benefit from the energy conservation measures shall be counted in determining the building type but shall not be counted in determining maximum assistance. In order to determine the number of dwelling units in a building, the following principles shall be applied: (i) All dwelling units sharing a common space conditioning system shall be considered part of the same residential building; and (ii) except in the case of a manufactured home park, all dwelling units located on or above land included in the most recent recorded deed shall be considered part of the same building, whether or not any space conditioning systems are shared.

(b) *Interest prepaid.* Where the assistance to be provided is in the form of prepayment of interest, the amount of assistance shall not exceed the amount of the funds necessary to prepay all interest on any portion of the loan financing eligible energy conservation measures.

§ 1800.69 Warranties.

(a) *General.* The recipient shall provide the financial institution with either a written certification from the contractor (or the supplier, if the recipient performs the installation) that the warranty requirements of this section have been satisfied or with other evidence acceptable to the financial institution that the warranty requirements of this section have been satisfied.

(b) *Manufacturer's warranty.* The manufacturer shall warrant in writing that the recipient, the contractor who installs an energy conservation measure and the supplier of the energy conservation measure shall be entitled to obtain from the manufacturer within a reasonable period of time and at no charge appropriate replacement parts or materials for those energy conservation measures found within one year from the date of completion of installation to be defective due to materials, manufacture or design. A recipient who finds an alleged defect shall give written notice of the alleged defect to the contractor, supplier or manufacturer within thirty days of his or her discovery thereof. If a defect exists, the manufacturer shall provide replacement parts or materials without charge for the parts or materials and for their transportation to the site of installation of the energy conservation measure.

(c) *Supplier's warranty.* The supplier shall provide to the recipient a written warranty equivalent to that required under paragraph (b) of this section. The supplier may satisfy this requirement by an assignment of the manufacturer's warranty required by paragraph (b) to the person to whom the energy conservation measure is supplied.

(d) *Contractor's warranty.* The contractor for the installation of an energy conservation measure shall warrant in writing to the recipient that any defect in materials, manufacture, design or installation found within one year from the date of completion of installation shall be remedied without charge and within a reasonable period of time. A recipient who finds an alleged defect shall give written notice of the alleged defect to the contractor within thirty days of his or her discovery thereof.

(e) *Other law.* This section shall not be deemed to relieve a warrantor under this section from full compliance with Federal and State law applicable to warranties, except to the extent that such law is inconsistent with the requirements of this section.

(f) *No conflict with RCS requirements.* In any State with a list of approved contractors and suppliers under State plans required by the RCS, warranties in compliance with the requirements of Section 542 of the Energy Security Act (42 U.S.C. 8213) and applicable regulations shall be considered compliance with this section as applied to the purchase and installation of energy conservation measures.

§ 1800.71 Limitation on assistance to tenants.

Financial assistance may be provided to tenants only if the owner of the tenant's building or dwelling unit has given written consent to the tenant for installation of the energy conservation measures.

§ 1800.73 Limitation on assistance to residents of housing cooperatives.

Financial assistance may be provided to a resident of housing cooperatives only if the cooperative corporation has given prior written consent to the resident for installation of energy conservation measures.

§ 1800.75 Minimum expenditures for energy conservation measures.

The total improvement cost for energy conservation measures purchased and installed with the assistance of a grant must exceed $250.

§ 1800.77 Contractors and suppliers.

All contractors and suppliers who install energy conservation measures or supply materials for them must appear on a list of approved contractors and suppliers provided under Section 213(a) of the National Energy Conservation Policy Act, 42 U.S.C. 8211, except that this requirement shall not apply in the case of loans in States without approved lists. This requirement shall not apply to a loan made to an owner of a multifamily residential building, or a housing cooperative corporation or a condominium association in the case of

a one- to four-family residential building.

§ 1800.79 Residential energy audit information.

Financial institutions must inform applicants for financial assistance for energy conservation measures in one- to four-family or multifamily residential buildings, no later than the time that the application is submitted, of the availability of energy audits.

Subpart E—Disbursement Procedures

§ 1800.91 General.

The financial assistance program of the Bank will be implemented through States that have been selected to participate in the program on the basis of proposals submitted in response to a solicitation of State proposals published in the **Federal Register**. Proposals will be selected on the basis of considerations stated in the solicitation.

§ 1800.93 Cooperative agreements.

Participating States will enter into cooperative agreements with the Bank which will form the legal framework for Bank/State relationships during program implementation. In addition to the matters covered in other sections of this subpart E, the cooperative agreements will cover such matters as the allocation and obligation of funds for the State, the responsibilities of the State for the administration of its approved programs, Federal requirements applicable to the administration of its approved programs, and procedures covering resolution of any disputes between the Bank and a State, suspension or termination of State's participation in programs of the Bank, and program closeout.

§ 1800.95 Allocation of funds.

Following selection of participating States, the Bank will allocate funds among the States based on the level and availability of appropriated funds and the specific programs proposed in the individual State proposals approved for funding by the Bank. Each State will be informed of its allocation and any conditions attached to the allocation. Such conditions will be designed to insure the expeditious obligation and expenditure of available funds. Each cooperative agreement shall require that the State obligate all funds allocated to it within one year (for Fiscal Year 1982 funds) or by the last date the funds are available under the terms of the applicable appropriation (for other Fiscal Years) to avoid recapture of funds by the Bank pursuant to §1800.97 of this part.

§ 1800.97 Recapture and reallocation of funds.

Upon program implementation, the Bank will monitor program progress in each State through periodic reporting as required by § 1800.107 of this part. Each cooperative agreement shall provide that funds allocated to a State may be recaptured by the Bank based on the results of program implementation activities in the State, market response to programs implemented in the State and other considerations to be set forth in the cooperative agreement. Recaptured funds will not be reallocated.

§ 1800.99 Authorized expenditures.

(a) *Permissible uses of funds.* Funds allocated by the Bank to States for implementing financial assistance programs shall be expended only for payments to financial institutions which have provided financial assistance in accordance with this part, or for administrative expenses or promotional expenses.

(b) *Administrative expenses.* A State may use funds received from the Bank to pay administrative expenses if such expenses have been authorized by the Bank and the payments do not exceed fifty percent of the total administrative expenses of the State or two percent of the total amounts of funds allocated to the State by the Bank, whichever is less. Administrative expenses shall not include the purchase of nonexpendable personal property (defined in Attachment N to OMB Circular A–102, "Uniform Administrative Requirements for Grants-in-Aid to State and Local Governments").

(c) *Promotional expenses.* A State may use funds received from the Bank to pay promotional expenses if such expenses have been authorized by the Bank and the payments do not exceed one percent of the total amounts of funds allocated to the State.

(d) *Principles for determining allowable expenses.* Administrative and promotional expenses must be allowable under the principles and standards established in OMB Circular No. A–87, "Cost Principles for State and Local Governments".

§ 1800.101 Distribution of funds.

There is no predetermined distribution of funds for energy conservation measures or solar energy systems nor for the type of financial assistance to be made. The approval of funding levels and specific programs for States by the Bank shall constitute an initial distribution of funds for the energy conservation measures or solar energy systems and the type of financial assistance described in the approved State programs. A State may make a redistribution of approved funds for different eligible measures or types of financial assistance only with specific written approval of the Bank.

§ 1800.103 Selection of financial institutions.

A State will select the financial institutions which will provide financial assistance within the State. A State may serve as a financial institution itself as long as it qualifies under the definition set forth in § 1800.3 of this part.

§ 1800.105 Maximum levels of assistance.

A State may establish maximum levels of financial assistance which are lower then the maximum levels set forth in this part.

§ 1800.107 Reporting and recordkeeping requirements.

(a) *Semi-annual State reports.* Each State shall submit reports to the Bank within 30 days of the six month periods ending June 30 and December 31 beginning with the first such period in which notice of selection is made and continuing until program closeout. The reports shall cover, as a minimum, the following:

(1) A summary of the overall program for the reporting period and overall results to date, including financial reports required by Attachment H of OMB Circular A–102, ("Uniform Administrative Requirements for Grants-in-Aid to State and Local Governments");

(2) Problems encountered and actions taken to resolve them;

(3) Acceptance/objections by industry, local governments, financial institutions, and the public;

(4) The numbers of applicants for and recipients of loans and grants by income category and type of building;

(5) Total costs of energy conservation and solar measures implemented and amounts of subsidies by type of measure;

(6) The estimated energy savings by income category of recipients, building type and type of measure;

(7) The cost-effectiveness of the program in terms of administrative costs, promotional costs, leveraging of funds, energy savings in terms of dollars per barrel of oil equivalent and other measures as may be appropriate; and

(8) Evaluation of the program in terms of achieving scheduled milestones and events and in meeting program goals and objectives.

(b) *Retention of records by States.* Each State shall retain all records pertaining to use of funds received from

the Bank, including all reports received from financial institutions, for a period of three years from the date of submission of the semi-annual State report for the period covered by such records, except that if any litigation, claim or audit is started before the expiration of the three-year period, all related records shall be retained for three years after final disposition of the litigation, claim or audit.

(Approved by the Office of Management and Budget under OMB control number 2535–0050)

§ 1800.109 Manner of payment.

Payments to States will be made by electronic funds transfer whenever possible, letter of credit, or other means, pursuant to the cooperative agreements and in compliance with the Intergovernmental Cooperation Act (42 U.S.C. 4201 *et seq.*) and Treasury Circular No. 1075 (31 CFR Part 205). States may request payments only for administrative and promotional expenses which have been incurred, or for payment to financial institutions in connection with financial assistance which has been provided. States will utilize appropriate procedures to minimize the time elapsing between the transfer of funds by the Treasury to the State and the disbursement of funds by the State to financial institutions.

Subpart F—Miscellaneous

§ 1800.121 Penalties and remedies.

(a) *General.* Any person (including an applicant or financial institution) who knowingly makes any false statement or misrepresents any material fact with respect to any financial assistance applied for or provided under this chapter, or fails to make any disclosure or statement required by this chapter, is subject to a fine of not more than $10,000, or imprisonment for not more than one year, or both, for each offense. Each false statement, material misrepresentation or failure to make a required disclosure or statement shall be a separate offense.

(b) *Penalties in this section not exclusive.* The penalties provided for in paragraph (a) of this section shall be in addition to any civil or criminal fines or penalties applicable under law, including Title 18 of the United States Code and any other applicable provisions of Federal, State or local law.

(c) *Other relief.* Nothing in this section shall limit any rights of the Bank to recover funds from financial institutions, recipients or any other persons or pursue any other remedies available under law.

§ 1800.123 Retention of records by financial institutions and recipients.

(a) *Financial institution.* Financial institutions (including States acting as financial institutions) shall retain all records related to applications for financial assistance for a period of three years from the date the financial assistance is provided (or the date of application, if never provided).

(b) *Recipients.* Recipients shall retain all records pertaining to the application, the assisted loan or grant, the solar energy system or energy conservation measures for which the loan or grant was sought, and warranties for a period of three years after the financial assistance is provided.

(Approved by the Office of Management and Budget under OMB control number 2535–0050)

§ 1800.125 Audit.

The Bank, the HUD Inspector General, the Comptroller General of the United States, or any duly authorized representative, shall have access to all records required to be retained by this part or by any agreement with the Bank for the purpose of audit or other examinations or copying.

§ 1800.127 Prohibition against tax credits and financial assistance for same expenditure.

(a) *Information provided to the Secretary of the Treasury.* As required by Section 506(f) of the Act, the Bank shall provide to the Secretary of Treasury such information as the Secretary of Treasury determines is necessary to insure that no person is allowed for the same expenditure both financial assistance under the Act and a credit against Federal income taxes under 26 U.S.C. 38 (investment credit) or 26 U.S.C. 44C (residential energy credit). Except as otherwise directed by the Secretary of the Treasury, the Bank intends to discharge this responsibility as well as the information return requirements of 26 U.S.C. 6050D by requiring either a State or financial institutions within a State to submit Internal Revenue Service Form 6497 ("Information Return of Nontaxable Energy Grants or Subsidized Energy Financing") or any replacement form duly approved by the Office of Management and Budget to the appropriate office of the Internal Revenue Service.

(b) *Information required from applicant.* As a condition of financial assistance, an applicant shall be required to provide to the financial institution:

(1) All information which the Secretary of Treasury determines is necessary under paragraph (a) of this section and which is possessed by the recipient, including the applicant's Social Security number or taxpayer identification number and other information required for Internal Revenue Service Form 6497 or any replacement form duly approved by the Office of Management and Budget,

(2) A certification that the applicant will not claim a Federal tax credit under 26 U.S.C. 38 or 44C for amounts expended for the assisted energy conservation measures or assisted solar energy system up to the amount used as the basis for determining the financial assistance, except as permitted by regulations or other legal interpretations of the Internal Revenue Service.

(Approved by the Office of Management and Budget under OMB control number 2535–0050)

§ 1800.129 No gross income.

The amount of any financial assistance provided under this chapter shall not be included in the gross income of any recipient for purposes of the Internal Revenue Code of 1954, 26 U.S.C. 1 *et seq.*

§ 1800.131 No increase in basis.

No recipient shall receive any increase in basis under the Internal Revenue Code of 1954, 26 U.S.C. 1 *et seq.*, which is attributable to the amount of any financial assistance provided under this chapter.

§ 1800.133 Waiver of regulations.

Upon determination of good cause, the President of the Bank may waive any provision of this part unless the provision is required by the Act. Each such waiver will be in writing and shall be supported by documentation of the pertinent facts and grounds for waiver. No person shall have a right to a hearing in connection with any waiver or refusal to waive by the President of the Bank.

§ 1800.135 Applicability of general HUD regulations.

(a) *Not subject to HUD regulations.* The Bank is not subject to the regulations of general applicability to HUD contained in this title and issued by the Secretary of HUD or a delegatee of the Secretary, except as expressly adopted by the Bank in this chapter or otherwise. Nothing in this section shall excuse the Bank from compliance with statutes or Executive Orders.

(b) *Regulations adopted.* The following provisions of this title, as they may be amended from time to time, are adopted by the bank and shall be binding as regulations of the Bank.

except as provisions of such regulations may be waived in accordance with § 1800.133 of this part: Part O (Standards of Conduct), Part 1 (Nondiscrimination), Part 2 (Hearing Practice and Procedures under Part 1), Part 7 (Equal Employment Opportunity), Part 10 (Rulemaking: Policy and Procedures), Part 15 (Production or Disclosure of Material or Information), Part 16 (Privacy Act), Part 17 (Administrative Claims), Part 20 (Board of Contract Appeals), Part 35, Subpart F (Lead-Based Paint) and Part 50 (Procedures for Protection and Enhancement of Environmental Quality). References to "the Secretary" in such provisions shall ordinarily be construed as including the Board. In conjunction with its adoption of Part 50 of this title, the Bank adopts a categorical exclusion from requirements for environmental clearances for approval by the Board of State programs and allocation of funds to the States, as well as for any actions taken by States or financial institutions in accordance with approved State programs.

(c) *Future HUD regulations.* The President of the Bank is authorized to subject the Bank to any regulations of general applicability to HUD which are added to this title in the future, by issuing a notice in the **Federal Register** to that effect.

§ 1800.137 Other Federal requirements.

(a) *General.* Financial assistance shall be provided by financial institutions in compliance with all applicable Federal statutes and regulations, as they may be amended from time to time including, but not limited to, those cited in this part and those generally applicable to "Federal financial assistance."

(b) *Non-discrimination.* Certain aspects of the Bank's programs are subject to Title VIII of the Civil Rights Act of 1968 (42 U.S.C. 3601 *et seq.*) and Executive Order 11063, and any regulations under these provisions.

(c) *Historic preservation.* No financial assistance shall be provided in connection with any energy conservation measure or solar energy system which would have an adverse effect on the historic aspect of any district, site, building, structure or object included in or eligible for inclusion in the National Register maintained by the Secretary of the Interior under 16 U.S.C. 470a, unless such financial assistance is in connection with an assistance program of a Federal agency other than the Bank and the assistance of the other agency is being provided in compliance with the procedures set forth in the regulations of the Advisory Council on Historic Preservation (36 CFR Part 800).

(d) *Floodplains and wetlands.* In order to carry out the Federal policies stated in Executive Orders 11988 ("Floodplain Management") and 11990 ("Protection of Wetlands"), no financial assistance shall be provided in connection with buildings located in 100-year floodplains or wetlands, unless such financial assistance is in connection with an assistance program of a Federal agency other than the Bank and the assistance of the other agency is being provided in compliance with the procedures set forth in Executive Order 11988 or 11990.

(e) *Flood insurance program.* No financial assistance shall be provided in connection with any building located in an area that has been identified by the Federal Emergency Management Agency as having special flood hazards unless the community in which the area is situated is participating in the National Flood Insurance Program and the regulations thereunder (44 CFR Parts 59–79) or less than a year has passed since FEMA notification regarding such hazards, and insurance on the structure is obtained in compliance with Section 102(a) of the Flood Disaster Protection Act of 1973 (Public L. 93–234, 42 U.S.C. 4001 *et seq.*).

(f) *Coastal barriers.* No financial assistance shall be provided in connection with any building located in an undeveloped coastal barrier (as defined in the Coastal Barriers Resources Act, Public L. 97–348).

(g) *Other laws.* Financial institutions shall ensure that all financial assistance is provided in accordance with the following statutes and regulations to the extent applicable:

(1) Truth-in-Lending Act (15 U.S.C. 1601 *et seq.* and 12 CFR Part 226 (Regulation Z)).

(2) Real Estate Settlement Procedures Act of 1974 (12 U.S.C. 2610 *et seq.* and Part 3500 of this title).

(3) Equal Credit Opportunity Act of 1976 (15 U.S.C. 1691 *et seq.* and 12 CFR Part 202).

Appendix I—Climatic Factor for Passive Solar Energy Space Heating Systems

HDD[1]	CH[2]			
	0–500	501–1,000	1,001–1,500	Over 1,500
Under 1,000	[illegible]	[illegible]	[illegible]	0
1,000–1,500	.2	[illegible]	[illegible]	0
1,501–2,000	.3	.2	.1	0
2,001–2,500	.4	.3	[illegible]	.1
2,501–3,000	.5	.4	.3	.2
3,001–3,500	.6	.5	[illegible]	.3
3,501–4,000	.7	.6	.5	.4
4,001–4,500	.8	.7	[illegible]	.5
4,501–5,000	[illegible]	.8	.7	.6
5,001–5,500	1.0	[illegible]	[illegible]	.7
5,501–6,000	1.0	1.0	[illegible]	.8
Over 6,000	1.0	1.0	1.0	.9

[1] HDD = Average annual heating degree days.
[2] CH = Cooling hours above 80°F.

Appendix II—Procedure for Calculating Subsidy and Reduced Interest Rate on Prepayment of Interest Loan Assistance

I. Energy conservation measures and retrofit passive solar water heating systems.

A. Determine amount of maximum subsidy based on recipient (borrower) income eligibility and limitation based on cost-effectiveness of measures as per § 1800.47 and/or 1800.67 as appropriate.

B. Category 1 loan: A predetermined interest rate reduction below prevailing market rate is to be made (e.g., 10% versus 15% conventional rate).

1. Subtract finance charge of loan at the reduced interest rate from the finance charge at the conventional rate.

2. Find the growth factor per dollar using monthly compounding financial tables at the Bank authorized discount rate of 60% of conventional interest rate, as per § 1800.17(b), rounding up to the nearest 0.25 percentage increment, for the loan repayment term.

3. Divide the amount from step B.1 by the growth factor in step B.2 above.

4. If the maximum subsidy amount available is equal to or greater than the amount in step B.3 above, then the step B.3 amount is the amount of the subsidy to be permitted. If the maximum subsidy amount available is less than the step B.3 amount, this Class loan cannot be made as there is insufficient subsidy available to "buy-down" the loan to 10%. Use Category 2 loan procedures.

C. Category 2 loan: Determine interest rate reduction based on amount of sudsidy available as per I.A. above.

1. Find the growth factor per dollar using monthly compounding financial tables at the Bank authorized discount rate of 60% of conventional interest rate, as per § 1800.17(b), rounding up to the nearest 0.25 percentage increment, for the loan repayment term.

2. Multiply the growth factor from step C.1 by the amount of subsidy available.

3. Subtract the amount from step C.2 above from the finance charge of the loan at the conventional interest rate.

4. If the result from step C.3 above is zero or greater, this result is the net finance charge of the loan. If zero, the result is a zero interest loan. If greater than zero, use a standard financial table or formula to find the interest rate needed to yield the net finance charge of the loan rounding up to the nearest percentage increment of interest rate available. This establishes the reduced interest rate of the loan and the entire amount of subsidy available is used.

5. If the result from step C.3 above is less than zero, meaning the subsidy available exeeds the amount required to "buy-down" the interest rate to zero percent, use the Category 1 loan procedure to determine the subsidy amount for any specific interest rate reduction down to zero percent.

II. Solar energy measures.

Category 3 loan: Passive solar energy systems in new or substantially rehabilitated residential buildings being financed.

1. Determine subsidy amount as follows:

A. For space heating systems:

1. Find climatic factor from Appendix I for specific site location of building. If zero, subsidy is zero.

2. Find performance factor for specific building and passive system as per § 1800.47(b). If zero, subsidy is zero.

3. Multiply climatic and performance factors together and multiply this product by the maximum subsidy available (e.g., $5,000 for a single dwelling unit building).

B. For water heating sytsems the subsidy is per § 1800.47(a)(2). For both a space and a water heating system the subsidy amounts would be combined, subject to the appropriate maximum amount in § 1800.47(a)(1).

2. Find the growth factor per dollar using monthly compounding financial tables at the Bank authorized discount rate of 60% of conventional interest rate as per § 1800.17(b), rounding up to the nearest 0.25 percentage increment, for the loan repayment term.

3. Multiply subsidy available from step 1, above by the growth factor from step 2 above.

4. Subtract the amount from step 3 above from the finance charge of the loan at the conventional interest rate. This is the net finance charge for the loan.

5. Find the interest rate required to yield the net finance charge, using a standard financial table or formula, rounding up to the nearest percentage increment of interest rate available. This establishes the reduced interest rate of the loan.

III. Portion of loan qualifies for a subsidy.

Category 4 loan: A portion of a loan is eligible for subsidized financial assistance.

1. Consider the entire loan as having two parts where one part (part A) represents the amount of the loan for which subsidized financial assistance is available. Part B is the balance of the loan amount.

2. Determine the amount of subsidy and the finance charge reduction for part A of the loan using procedures for Category 1, 2, or 3 loans, as applicable.

3. Subtract the finance charge reduction in step 2 above from the finance charge of the entire loan at the conventional interest rate. This is the net finance charge of the entire loan.

4. Use a standard financial table or formula to find the interest rate needed to yield the net finance charge of the loan rounding up to the nearest percentage increment of interest rate available. This is the reduced interest rate for the entire loan.

Appendix III—Prepayment of Interest Loan Subsidy Examples

Example 1, Category 1

It is desired to offer loans for energy conservation measures at 10% where the conventional rate is 15%. The applicant is the owner-occupant of a single-family dwelling and is at the 80-100% of median income level. Energy audit results show the cost of measures to be installed is $2,000 and estimated energy cost savings per year is $500. The loan will be for 5 years.

1. From the interim rule income limitation, the maximum level of assistance is $875 or 35% of $2,000, whichever is less. In this case the limit is $700 (35% of $2,000).

2. As per step B.1 of the procedure for Category 1 loans, the difference in finance charges from 15% to 10% for $2,000 is $304.80 ($854.80—$550.00).

3. From step B.2, the discounted rate growth factor at 6.0% for 5 years is 1.3489.

4. Per step B.3, the amount of subsidy required to reduce the interest rate to 10% is $225.96 ($304.80 divided by 1.3439). Since this amount is within the allowable subsidy of $700, the $225.96 is the subsidy amount.

Example 1 Summary

	Conventional	Bank subsidized
Principal	$2,000.00	$2,000.00
Interest rate (percent)	15	10
Term (years)	5	5
Monthly payment	$47.60	$42.40
Total payments	$2,856.00	$2,544.00

Example 2, Category 2:

It is desired to offer a reduced interest rate loan for energy conservation measures using the full amount of the subsidy available. The applicant is the owner-occupant of a single family dwelling and is at 140% of median income level. Energy audit results show the estimated cost of measures to be installed is $1,500 and the estimated energy cost savings is $300 per year. The loan will be for 5 years where the conventional interest rate is 16%.

1. From the interim rule income limitation, the maximum level of assistance is $500 or 20% of $1,500, whichever is less. In this case, the limit is $300 (20% of $1,500).

2. As per step C.1 of the procedure for Category 2 loans, the discounted rate growth factor is 1.3828 (6.5 for 5 years). Applying this to the allowable subsidy yield $414.84 ($300 × 1.3828) as per step C.2.

3. Per step C.3, the net finance charge of the loan is $273.81 (normal finance charge of $688.65—$414.84).

4. Using financial tables per step C.4, the interest needed to yield the net finance charge of the loan is found to be 7.0%, after rounding up the nearest .25% increment. The loan is thus reduced to a 7.0% rate with a subsidy of $400.

Example 2 Summary

	Conventional	Bank subsidized
Principal	$1,500.00	$1,500.00
Interest rate (percent)	16	7.0
Terms (years)	5	5
Monthly payment	$36.48	$29.70
Total payments	$2,188.80	$1,782.00

Note.— For a comparison of a reduction of principal type loan to example 2, the principal would be $1,200 at 16% interest for 5 years, the monthly payment would be $29.18 and the total payment would be $1,750.80.

Example 3, Category 3

A new single-family dwelling has a $70,000 sale price located in Greensboro, North Carolina. The solar collection area of the passive solar space heating system is 354 square feet and the gross heated living floor area is 1700 square feet. The passive system meets the five recognition factors defined in the interim rule. The mortgage will be $56,000 for 30 years where the conventional interest rate is 14%.

1. The climatic factor for Greensboro, NC is 0.6 from Appendix I based on a value of 3805 heating degree days and 916 cooling hours (from *Handbook of Air Conditioning Heating and Ventilating*, Third Edition, 1979). The performance factor is 1.0 as per § 1800.47(b). As per step 1.A of the procedures for Category 3 loans, the subsidy amount is $3,000 (0.6 × $5,000 maximum subsidy available).

2. From step 2, the growth factor is 5.5894 (5.75% for 30 years).

3. The amount of interest prepaid, per step 3, is $16,768.20 ($3,000 × 5.5894).

4. The net finance charge of the loan, per step 4, is $166,099.80 ($16,768.20 subtracted from $182,868, the finance charge at 14%).

5. Per step 5, the interest rate needed to yield the net finance charge, after rounding up to the nearest 0.25 percent increment, is 13%.

Example 3 Summary

	Conventional	Bank subsidized
Principal	$56,000.00	$56,000.00
Interest rate (percent)	14	13
Term (years)	30	30
Monthly payment	$663.53	$619.48
Total payments	$238,870.80	$223,012.80

Note.—If the subsidy had been the maximum allowable of $5,000 (for a more northerly climate) the interest rate would be 12.25%, the monthly payment $586.83 and the total payments $211,258.80.

Also, for a comparison to a reduction of principal loan at $3,000 sudsidy ($53,000 at 14% for 30 years) the monthly payment would be the same as the prepayment of interest example above.

Example 4, Category 4

A home improvement loan for $3,500 is being made which includes $1,500 of eligible energy conservation measures. The conditions for the loan are otherwise as for example 2 of this appendix.

1. The amount of subsidy and the finance charge reduction for the eligible portion of the loan is $300 and $414.84 respectively as determined in example 2.

2. The finance charge of the entire loan at the conventional interest rate is $1606.85 and the net finance charge of the entire loan is $1192.01 ($1606.85–$414.84).

3. Using financial tables, the interest needed to yield the net finance charge of the entire loan is 12.25% after rounding up to the nearest 0.25% increment. The loan is thus reduced to a 12.25% rate with a subsidy of $300.

UMI

Example 4 Summary

	Conventional	Bank subsidized
Principal	$3,500	$3,500
Interest rate (percent)	16	12.25
Term (years)	5	5
Monthly payments	$85.11	$78.30
Total payments	$5,106.60	$4,698.00

Note.—The calculations made for finance charges on loans and the interest rates needed to yield specific finance charges are based on tables in Thornton's Financial Encyclopedia. Monthly payments are rounded up to the next $0.01. This rounding up accounts for some differences in the finance charges expressed in the calculations compared to the total payments (principal plus finance charge) shown in the summary following each example.

Dated: April 11, 1983.

Department of Labor

Employment Standards Administration

Standards for Determining Coal Miner's Total Disability or Death Due to Pneumoconiosis; Final Rule

DEPARTMENT OF LABOR

Employment Standards Administration

20 CFR Parts 718 and 725

Standards for Determining Coal Miner's Total Disability or Death Due to Pneumoconiosis; Claims for Benefits Under Part C of Title IV of the Federal Mine Safety and Health Act, As Amended

AGENCY: Employment Standards Administration, Labor.

ACTION: Final rule.

SUMMARY: On January 1, 1982, the Black Lung Benefits Revenue Act of 1981 and the Black Lung Benefits Amendments of 1981 became effective. This legislation made numerous substantive changes in the Black Lung Benefits Act, Title IV of the Federal Mine Safety and Health Act. These final rules implement those changes in the law which are administered by the Department of Labor and make certain technical corrections in the implementing regulations as previously promulgated in 1978 and 1980.

DATES: Effective date: May 31, 1983, except § 725.533(a)(3) and 725.536 which contain information collection requirements which are under review at OMB.

FOR FURTHER INFORMATION CONTACT: James L. DeMarce, Executive Assistant to the Director, Office of Workers' Compensation programs, Employment Standards Administration, U.S. Department of Labor, 200 Constitution Avenue, N.W., Room S–3524, Washington, D.C., 20210; Telephone (202) 523–7503.

SUPPLEMENTARY INFORMATION: The Black Lung Benefits Revenue Act of 1981 and the Black Lung Benefits Amendments of 1981, Pub. L. 97–119, 95 Stat. 1635, became effective on January 1, 1982. This legislation amended various sections of the Black Lung Benefits Act, Title IV of the Federal Mine Safety and Health Act of 1977, 30 U.S.C. 901 et seq., and the Internal Revenue Code, 26 U.S.C. 1 et seq. Those amendments establish new criteria for determining entitlement for benefits on claims filed on and after January 1, 1982, under the Black Lung Benefits Act and alter the procedures applicable to the payment of such benefits. Major changes include the removal of restrictions previously applicable to the Secretary of Labor's use of certain X-ray evidence and the placing of new limitations on the use of certain affidavits. Three presumptions previously available in support of claims have also been eliminated. (30 U.S.C. 921 (c)(2), (c)(4), and (c)(5)). Following the death of a miner whose claim was filed on or after January 1, 1982, and who was found to be entitled to benefits under the Act, the miner's dependent survivors will be required to file a claim and to establish that the miner's death was due to pneumoconiosis in order to be found entitled to survivors' benefits under the Act. An excess earnings offset was also made applicable to miner's claims. Changes were also made in the rates of interest to be paid to and by the Black Lung Disability Trust Fund and to claimants. The rate of the excise tax on coal was temporarily doubled and the liability for the payment of certain claims was transferred from individual coal mine operators and/or their insurance companies to the Fund. Certain other technical changes were also made by the amendments.

A notice of proposed rulemaking was published in the **Federal Register** of May 25, 1982 (47 FR 22674). The primary purpose of those proposed rules was to amend the Department of Labor's regulations which were previously published on August 18, 1978 (43 FR 36772), and February 29, 1980 (45 FR 13678), to conform to and implement the 1981 Amendments to the Act. A second purpose of the proposed rules was to make certain technical corrections in the regulations as previously promulgated by correcting typographical and clerical errors, correcting erroneous cross-references, and making more uniform the language of certain provisions dealing with the same or similar subject matter. The notice of proposed rulemaking indicated that other substantive changes to the existing regulations which may be appropriate would be considered by the Department separately at a later date.

Comments were received from 16 sources including coal mine operator associations, an individual coal mine operator, an electric utility association, an insurance council, individual insurance companies, an insurance service agent, a coal miners' union, black lung claimants' associations, individual attorneys who represent claimants seeking black lung benefits, and a medical group.

The following summarizes the substantive comments which were received, states the Department's response to those comments, and indicates the changes which have been made in the proposed rules as a result of those comments. This summary deals with the comments received and the Department's responses to them on a section-by-section basis, except where clarity is better served by discussing separate subsections individually. Where the same or closely related subject matter is contained in several sections or subsections of these rules, the discussion is either consolidated under the first applicable section or subsection, or related material is indicated by appropriate cross-references. Wherever the term nonconforming is used in this preamble, it refers to medical evidence which is not in substantial compliance with the quality standards established in Part 718.

Discussion of Comments Received

Section 718.1 Statutory provisions

(a) Two commenters expressed concern that paragraph (a) of § 718.1 could be read to require the surviving dependents of a miner to file a claim and establish that the miner's death was due to pneumoconiosis in order to receive survivors' benefits even though the deceased miner had been receiving benefits under the Act based on a claim filed prior to the passage of the 1981 amendments. In any case in which the miner has been found entitled to benefits as a result of a claim filed prior to January 1, 1982, such an interpretation would be contrary to section 422(1) of the Act and its implementing regulations, especially §§ 725.1, 725.201, 725.212, 725.218, and 725.222. Those sections make clear that where the miner has been found entitled to benefits as a result of a claim filed prior to January 1, 1982, surviving dependents are not required to establish that the miner's death was due to pneumoconiosis in order to qualify for benefits under the Act. For such dependent survivors, the Act requires the payment of survivors' benefits upon receipt of information which confirms the miner's death and provides such additional data as is required to compute the appropriate benefits to be paid to the eligible survivors. This requirement is usually satisfied by the filing of a standard form (CM 1089).

(b) Only where the miner has not been determined to be eligible for benefits as a result of a claim filed prior to January 1, 1982, will his or her surviving dependents be required to establish that the miner's death was due to pneumoconiosis in order to qualify for benefits, if such survivors' claims are filed on or after January 1, 1982. The requirement that the miner's death was due to pneumoconiosis is also not applicable to those survivors whose entitlement is established under section 411(c)(5) of the Act and its implementing

regulation at § 718.306 on survivors' claims filed prior to June 30, 1982.

(c) In these final rules, the second sentence of paragraph (a) of § 718.1 has been clarified to eliminate the possible misinterpretation referred to in the comments received. No other comments were received concerning this section and no further changes have been made in it.

Section 718.2 Applicability of this part

One comment contended that this section should be amended to conform to a recent ruling by the Benefits Review Board in *Muncy v. Wolf Creek Collieries Coal Co., Inc.*, 3 BLR 1–627 (1981). Since the Department neither agrees with the result reached in the Board's decision nor concedes that the Board has authority to so amend the Secretary's regulations, no such change has been made in this section. No other comments were received concerning this section and no changes have been made in it.

Section 718.102 Chest roentgenograms (X-rays)

(a) Although the notice of proposed rulemaking included no changes to this section, one comment was received which proposed a change to paragraph (e) of this section. The comment proposed to exclude all nonconforming X-rays from consideration in cases involving deceased miners where the claim was filed on or after January 1, 1982. Such a change would not be consistent with the intent of Section 202(a) of the 1981 amendments. The intent of that amendment was to permit the full and complete evaluation of X-ray evidence rather than to restrict artificially the consideration of such relevant and probative evidence. The requested change would be particularly harsh and detrimental to informed claims adjudication because it could result in the exclusion of the only available evidence on the issue.

(b) This final rule does, however, contain a revision and clarification of the latter part of the first sentence of paragraph (e). This change was made to conform this paragraph to a similar change made in § 718.106(b). That change was made in response to a comment received concerning the proposed revision of that section. The basis for the parallel changes in both sections is discussed under § 718.106 and is also referred to under § 718.202.

Section 718.106 Autopsy; biopsy

(a) One comment noted that the phrase "special consideration" used in the second sentence of proposed paragraph (b) can be read to imply that preferential treatment is to be given to nonconforming biopsy or autopsy reports where the miner died prior to March 31, 1980. The comment correctly notes that the intended purpose of the regulation was only to render such nonconforming reports which were prepared prior to the adoption of the Part 718 regulations admissible as evidence. See 45 FR 13684 (February 29, 1980), § 718.106 Autopsy; biopsy. Discussion and changes, (b). The final rule has been revised to state its intended purpose more clearly. A similar revision was also made in §718.102(e) concerning the admissibility of nonconforming X-rays of deceased miners.

(b) One comment requested that the Department either publish standards for conducting autopsies at this time or establish a specific timetable for the publication of such standards. Section 202(e) of the 1981 amendments directed the Department, in consultation with the Secretary of Health and Human Services, to undertake a study of current medical methods for the diagnosis of pneumoconiosis. The results of the study, together with appropriate recommendations, are to be transmitted to the Congress. It would be premature to promulgate any standards for the conduct of autopsies until the results of that study and the related recommendations become available.

(c) No other comments were received concerning this section and no other changes were made in it.

Section 718.202 Determining the existence of pneumoconiosis

(a) Three comments were received concerning proposed paragraph (a)(1)(i). The first supported a revision of the proposed rule which would require the Department to: (1) Review all X-rays submitted in claims filed on or after January 1, 1982, to determine whether they provide adequate evidence of the existence of pneumoconiosis as provided in § 718.102 and Appendix A, (2) require additional X-rays in the case of living miners whose claims are filed on or after January 1, 1982, when the original X-ray submitted was not in compliance with those criteria, and (3) reject all inadequate or nonconforming X-rays submitted in survivors' claims filed on or after January 1, 1982. The Department does not believe that the incorporation of additional cross-references to § 718.102 and Appendix A are necessary in this paragraph since § 718.102(e) already provides that, "[n]o chest X-ray shall constitute evidence of the presence or absence of pneumoconiosis unless it is in substantial compliance with the requirements of this section and Appendix A, * * *." Similarly, §§ 725.406, 725.407, and 725.408 already provide the deputy commissioner with sufficient authority to require a living miner to submit to an additional X-ray when such evidence is necessary to the proper development and evaluation of the miner's claim. The Department does not agree that nonconforming X-rays must be excluded from consideration in survivors' claims when they may constitute the only such evidence available with regard to the deceased miner. Therefore, § 718.102(e) has been revised to clarify that such nonconforming X-rays shall be admissible as evidence with regard to survivors' claims and shall be accorded such weight and probative value as is appropriate under the circumstances of the individual case.

(b) The second comment received concerning proposed paragraph (a)(1)(i) opposes any change from the previous version and states that such a change is unnecessary. It further objects to any use of "B" readers which may be made by the Department under the proposed rule. Section 202(a) of the 1981 amendments expressly amended section 413(b) of the Act and eliminated certain previously applicable limitations upon the review of X-rays evidence for all claims filed on or after January 1, 1982. The proposed rule reflects this change in the Act. Nor can the Department agree that it should not, under appropriate circumstances, make use of "B" readers for the evaluation and interpretation of X-ray evidence.

(c) The third comment received concerning paragraph (a)(1)(i) recommends that all X-rays, regardless of the date of filing of the claim, should be reviewed by "B" readers. For claims filed prior to January 1, 1982, section 413(b) of the Act requires that, "the Secretary shall accept a board certified or board eligible radiologist's interpretation of a chest roentgenogram" where certain specified criteria are met. No such limitations are imposed with regard to claims filed on or after January 1, 1982. The Department agrees that "B" readers are highly qualified in the interpretation and evaluation of X-rays and will, within the limits imposed by the Act, continue to make use of that expertise. However, no change in the proposed rule is required to achieve that objective.

(d) Several comments were received concerning the second sentence of proposed paragraph (c) on the use of affidavit evidence in the establishment of the existence of pneumoconiosis in cases involving deceased miners. Those

comments focus upon two issues: (1) The purposes for which such affidavits shall be sufficient, and (2) the persons whose affidavits shall be sufficient.

(e) Concerning the first issue, one comment contends that lay affidavits may be used to establish the fact of total disability or death in a case involving a deceased miner but not to establish the cause of such disability or death. A second comment takes the position that, although lay affidavits could establish the existence of a condition which was presumed to be pneumoconiosis under the interim criteria (§ 727.203(a)(5)) and under the now repealed section 411(c)(2) and 411(c)(4) presumptions in a case involving a deceased miner, lay affidavits are no longer sufficient to establish the existence of pneumoconiosis under the Act, as now amended. Both comments contend that the existence of pneumoconiosis can only be established by expert medical evidence.

(f) The comments summarized in paragraph (e) above rely upon cases involving living miners in support of their contentions. The Department agrees that in cases involving living miners expert medical evidence is required. However, the Department can not concur with these interpretations as applied to certain cases involving deceased miners. Section 413(b) of the Act, as now amended, states in pertinent part: "Where there is no medical or other relevant evidence in the case of a deceased miner, such affidavits [of persons with knowledge of the miner's physical condition], from persons not eligible for benfits in such case with respect to claims filed on or after the effective date of the Black Lung Benefits Amendments of 1981, shall be considered to be sufficient to establish that the miner was totally disabled due to pneumoconiosis or that his or her death was due to pneumoconiosis." By its express terms, this provision dealing with the sufficiency of lay affidavit evidence is limited to those increasingly rare instances "where no medical or other relevant evidence" is available concerning the deceased miner. The proposed interpretations would require the presentation of medical evidence of the existence of pneumoconiosis before according any weight to lay affidavits concerning the deceased miner. Thus, they would defeat the purpose of the statutory provision which is intended to address precisely those few situations where no such medical evidence is available. Therefore, no change was made in the proposed rule as a result of the consideration of these comments.

(g) One comment notes that the instances in which widows were awarded survivors' benefits based solely on their own affidavits have been very rare in the past. It also states that the widow of a deceased miner may also be the one person most knowledgeable about the miner's physical condition. The comment requests, based on those two factors, that no new restrictions be placed on the use of such widows' affidavits in the future. The Department notes that the effect of the new amendment to section 413(b) of the Act is not to exclude the affidavits of widows and other family members from consideration but merely to render them insufficient to establish entitlement to benefits without the assistance of affidavits from third persons who are not themselves eligible to receive such benefits. The weighing of the knowledgeability of the affiant against the dangers associated with self serving affidavits and the definition of the weight to be accorded such affidavits is a function which the Congress exercised in the enactment of this amendment. The Department is no more free to ignor the determinations made by the Congress in the 1981 amendments which altered this rule than it was free to ignore the previous rule concerning the sufficiency of such widows' affidavits which was established by the 1977 amendments to the Act. Therefore, no change was made in the proposed rule in response to this comment.

(h) Two comments noted that the limitation language used in the second sentence of proposed paragraph (c) which defines the class of persons whose affidavits "shall be considered to be sufficient to establish that the miner was totally disabled due to pneumoconiosis or that his or her death was due to pneumoconiosis" was overbroad. The proposed language would have excluded affidavits from "any person or persons having any financial interest in the result of the adjudication of the claim." These comments point out that the proposed language was sufficiently board that it could arguably be interpreted to exclude the affidavits of any persons to whom the deceased miner or members of his or her family owed or owe money. In smaller coal mining communities, such a broad reading might be sufficient to exclude the affidavits of virtually all "persons with knowledge of the miner's physical condition." The Department agrees that such an interpretation would be inconsistant with the intended purpose of the amended language. The intended purpose of this amendment was stated in the Administration's description of the change. It was summarized as to "accept affidavits in such cases from third parties *who could not receive benefits.*" 127 *Cong. Rec.*, H9793 (daily ed. December 16, 1981) (emphasis added). One comment indicates that the exclusion should be limited to "immediate beneficiaries," including the claimant and any dependents. The Department agrees that such a limitation is appropriate and paragraph (c) has been revised to limit the exclusion to the claimant and his or her dependents who would be eligible for augmentation of the claimant's benefits.

(i) No other comments were received concerning this section and no other changes were made in it.

Section 718.204 Total disability defined. Criteria for determining total disability

(a) Review of the explanatory materials which accompanied the original promulgation of this regulation (45 FR 13688–13690 (February 29, 1980)) makes clear that the purpose of paragraph (c)(5) was to implement provisions of section 413(b) of the Act as amended in 1978. Although changes were made from the proposed version of that paragraph, see 43 FR 17725 (April 25, 1978), prior to its final promulgation, the language adopted in the final version and again contained in the proposed revision which was published on May 25, 1982, failed to reflect the full scope of the portion of section 413(b) of the Act which it sought to implement. That portion of section 413(b) speaks to all cases involving a "deceased miner" "where there is no medical or other relevant evidence." Thus, it applies not only to survivors' claims, but also to claims filed by miners which are not finally adjudicated until after the miner's death. To make this paragraph consistent with the quoted portion of section 413(b) and consistent with § 718.202(c), paragraph (c)(5) has been modified by inserting the words "a case involving a deceased miner" in place of the words "the case of a claim filed by a survivor of a miner" which were contained in the previous version of the regulation and also in the proposed revision which was published on May 25, 1982.

(b) Two comments were received which recommended that the word "shall" contained in the first sentence of the proposed paragraph (c)(5) should be changed to "may" to reflect legislative intent. The third sentence of Section 413(b) of the Act, as enacted in 1978 and as amended in 1981, contains the

express words "shall be considered to be sufficient"; therefore, it would be inappropriate to make the change recommended. However, the Department agrees that the Congressional intent was not that all such affidavits automatically be deemed sufficient for the indicated purpose. Clearly, the intent of the provision is that the affidavits (or equivalent sworn testimony) must be found to be both sufficiently credible and sufficiently detailed to permit the drawing of the conclusion that the miner was totally disabled or died due to pneumoconiosis as those terms are defined in the Act and its implementing regulations before they can be deemed to be sufficient. Those qualification are equally applicable to all forms of evidence and need not be made express in this context.

(c) One comment received suggested that paragraph (c) should be further revised or a new subsection be promulgated to make clear that the miner's total disability must be due to pneumoconiosis. Paragraphs (a) and (b) of this section already state that pneumoconiosis "as defined in § 718.201" must be the cause of the miner's total disability. No useful purpose would be served by reiterating the requirement again in paragraph (c) of this section. The same comment also suggests that paragraph (c) should further state that the pneumoconiosis must have arisen from employment in the nation's coal mines. That requirement is made express in § 718.203 and no useful purpose would be served in repeating it in other sections of the regulations which discuss other criteria for establishing eligibility for benefits. Finally, the same comment also suggests that language should be added to make clear that, except as provided in § 718.305 proof of a totally disabling respiratory or pulmonary impairment shall not by itself be sufficient to establish that the miner's impairment is due to pneumoconiosis. The Department agrees that such an addition would be helpful and paragraph (c) has been revised to incorporate that suggestion.

(d) One comment suggests that the use of lay affidavits should be totally banned for all claims filed which are subject to the 1981 amendments. The 1981 amendments to section 413(b) of the Act restricted, but did not abolish, the use of such affidavits. As noted in paragraph (g) of the discussion of comments received concerning § 718.202 above, the Department is not free to alter the rule which the Congress established concerning the use of such affidavits. Therefore, no change was made in the proposed rule in response to this comment.

(e) One comment suggests that the proposed rule should emphasize that the miner's total disability due to pneumoconiosis is not relevant to survivors' claims filed after January 1, 1982, except for those claims subject to § 718.306 which were filed prior to June 30, 1982. The Department agrees that this distinction is important and paragraph (c)(5) has been revised accordingly.

(f) One comment suggests that the second sentence of proposed paragraph (c)(5) should be broadened to include all survivors' claims filed on or after January 1, 1982. Such a change would serve no useful purpose. As noted in the preceding paragraph, the only survivors' claims filed on or after January 1, 1982, in which the fact of the miner's disability due to pneumoconiosis prior to death is relevant are those survivors' claims filed prior to June 30, 1982, which are subject to § 718.306. Therefore, no change has been made in the proposed regulation in response to this comment.

(g) Two comments argue that restrictions placed on the use of lay affidavits contained in the second sentence of proposed paragraph (c)(5) are overbroad and inconsistent with Congressional intent. The Department agrees. For the reasons stated above in paragraph (h) of the discussion of the comments received concerning § 718.202, that sentence has been revised to render it consistent with revised § 718.202(c).

(h) One comment raises objections to the second sentence of proposed paragraph (c)(5) similar to those summarized in paragraph (g) of the discussion of the comments received concerning § 718.202. For the reasons stated in response to that comment, no change can be made in response to this comment.

(i) No other comments were received concerning this section and no other changes were made in it.

Section 718.205 Death due to pneumoconiosis

(a) The notice of proposed rulemaking, 47 FR 22674 (May 25, 1982), particularly solicited comments concerning this section and the related legislative history. Thirteen of the comments received responded to that request. Most of them provided extended discussions of the proposed language in light of the legislative history. The Department appreciates the assistance which it has received from these comments.

(b) Generally, the comments received stress certain recurring themes: (1) Problems with the previous version of § 718.205, (2) whether any detailed regulations are necessary to implement the new requirements for survivors' claims, (3) the weight to be accorded various portions of the legislative history, (4) the specific language included in proposed paragraphs (c), (d) and (e), (5) proposals for restructuring the sequence of paragraphs within § 718.205, (6) the use of examples contained in the proposed paragraphs, (7) concerns that proposed paragraph (d) has created a new presumption of survivor entitlement and (8) concerns about the concept of aggravation as applied to survivors' claims. The comments received from employer and insurer groups tend to argue that the proposed criteria are too liberal to effectuate the intent of the 1981 amendments, whereas comments from the claimant community argue that the proposal is unnecessarily restrictive. However, there are significant variations within the comments received from each group.

(c) A finding that a deceased miner's was due to pneumoconiosis, whether based on direct proof or obtained by the aid of presumptions, has served as an alternative basis for the establishment of eligible dependent survivors' entitlement to benefits ever since the original passage of the Black Lung Benefits Act in 1969. The original version of the Act contained two presumptions, sections 411(c)(2) and 411(c)(3), which assisted survivors in obtaining such findings. The 1972 amendments added a third presumption, section 411(c)(4), which also assisted in making such a finding. The 1977 amendments liberalized other evidentiary rules which also facilitated reaching that result. Based upon the belief that relevant medical evidence is not more readily available in cases involving deceased miners, the 1981 amendments tightened those evidentiary rules and repealed the section 411(c)(2) and 411(c)(4) presumptions. However, none of the four versions of the Act has ever contained an express definition of the term "death due to pneumoconiosis." As a practical matter, prior to the passage of the 1981 amendments, the overwhelming majority of survivor entitlements were not based upon a finding of death due to pneumoconiosis but rather were based upon findings that the miner was totally disabled by pneumoconiosis prior to or at the time of death. The 1981 amendments which eliminated the unrelated death benefit for survivors' claims filed on or after

January 1, 1982 (except for a temporary extension of the section 411(c)(5) presumption which is implemented by § 718.306) thus gave an importance to the concept of death due to pneumoconiosis which it has never had in the prior history of the Act.

(d) The legislative history is clear that there was no intent to affect the rights of any persons where the miners' or the survivors' claims had been filed prior to January 1, 1982. Therefore, it must be concluded that the Congress intended to the previous version of these regulations to remain applicable to such claims.

(e) Among the many clear indications in the legislative history that section 203(a)'s elimination of unrelated death benefits was to be prospective only are the following. Robert B. Collyer, Deputy Under Secretary of Labor for Employment Standards, U.S. Department of Labor, testified in support of the proposed change before the Senate Labor Subcommittee on December 14, 1981. He stated, "Like other changes in the proposal, this change is prospective only." Committee Print, p. 17. Similarly, the administration's explanation of the bill was inserted into the *Congressional Record* at the request of Chairman Perkins immediately prior to the passage of the bill. It stated, "This section [203(a)] would, with respect to claims filed on or after the effective date of these amendments, limit survivors' entitlement to those cases where death resulted from black lung disease and not some unrelated event." 127 CONG. REC. H9793 (daily ed. December 16, 1981). A similar statement by Chairman Hatch appears at Id. at S15494. Congressman Erlenborn criticized the bill precisely because its operation was to be prospective only. He stressed "that none of those amendments will apply to pending claims, and there are tens of thousands of pending claims." He also pointed out that "this bill is prospective only. Every amendment to the black lung program as it affects eligibility applies only to those claims which are filed in the future." He concluded, "If this bill becomes law, there will be two 'classes' of claimants—those who filed before and those who filed afterwards." Id. at H9794, H9795 and H9796. See also the identical statements of Chairmen Hatch and Perkins, "We have been very concerned about the authority in current law to pay survivor's benefits in those situations [where the miner's death is unrelated to pneumoconiosis]. [The pending bill] reflects that concern by eliminating prospectively the authority to initiate benefit payments when that happens." Id. at S15494 and H9792.

(f) Two comments indicated that the proposed revisions to this section did not distinguish clearly enough between the criteria applicable to the two classes of claims, those filed before and those filed on or after January 1, 1982. The Department agrees. The final version of the regulation has been revised accordingly. Previously paragraphs (b) and (c) have been combined into a new paragraph (b). Former paragraph (c) has been redesignated as paragraph (b)(5). The new combined paragraph (b) has been revised to state that it is applicable only to claims filed before January 1, 1982. New paragraphs (c) and (d) define the eligibility criteria and procedures applicable to claims based on death due to pneumoconiosis filed on or after January 1, 1982. This restructuring and clarification of the regulation also eliminates the possibility which was pointed out by three comments that the proposed version of the regulation could have been read to produce the unintended result of establishing additional grounds for entitlement for claims filed prior to January 1, 1982.

(g) Several of the comments received suggest that the Department should take this opportunity to revise the previous regulatory definition of death due to pneumoconiosis. These comments tend to focus on the concept of aggravation as contained in former paragraph (c), now redesignated as paragraph (b)(5). They rely, in major part, upon decisions of the Benefits Review Board, especially *Ovies v. Director,* 3 BLR 1–610 (1981), rev'd on other grounds mem., 681 F. 2d 815 (4th Cir. 1982). The Department does not agree with the result reached by the Board in *Ovies.* Pending the result of further litigation on this issue, any change would be inappropriate. Moreover, in view of the clearly expressed legislative intent discussed in paragraphs (d) and (e) above that all changes were to be prospective only, the Department concludes that it would be improper to retroactively alter or amend the regulatory criteria applicable to claims filed prior to January 1, 1982. Therefore, no change has been made to those criteria in response to these suggestions.

(h) However, it is likewise clear that the prior regulatory definitions can no longer be applied to survivors' claims filed on or after January 1, 1982. This conclusion is mandated by two specific considerations. First, the regulations in existence at the time of the passage of the 1981 amendments incorporated elements of the now repealed presumptions. Second, statements were made in both houses of Congress during the floor debates immediately prior to the passage of the amendments which included interpretations to be given to the meaning of death due to pneumoconiosis under those amendments which were significantly divergent from the regulatory definitions then in effect.

(i) Several of the comments received suggest that no new regulatory definition is needed for the concept of "death due to pneumoconiosis" as applied to survivors' claims filed on and after January 1, 1982. The Department does not agree. The words do not speak clearly and unambiguously for themselves. The causal nexus of "due to" has been given a broad variety of meanings in the law ranging from sole and proximate cause at one end of the spectrum to contributing cause at the other. Therefore, some guidance is required as to the intended meaning of the words in this specific context. Without such a new interpretive statement, the prior definition, which was based in part on presumptions which are no longer applicable, may tend to continue to influence future claims adjudications. Clearly, that would not be consistent with the legislative intent. Nor would it be consistent with that intent to await the gradual emergence of a new definition as the result of a case-by-case adjudication process. The Department believes that crucial portions of the legislative history speak clearly as to the intended meaning to be given to the words "death due to pneumoconiosis" as applied to claims which are filed after December 31, 1981. Therefore, it is obligated to promulgate new regulations which are consistent with that intent.

(j) One comment suggests that the Hatch-Perkins statement was accorded undue weight in the preparation of the proposed version of this section. Although the Department agrees that the legislative history must be viewed as a whole in seeking to ascertain the intent of the legislation, it is nonetheless true that some portions of that history are entitled to greater weight than are others. As a general rule, statements by proponents of a legislative change are to be accorded greater weight than are statements by its opponents when seeking to define the intended purpose of the change. Similarly, detailed and comprehensive statements explaining the intended purpose of specific changes are to be given greater weight than are generalized statements referring to the intended purpose of the legislation as a whole. The familiarity of the speaker with the subject matter is also a relevant factor in determining the weight to be accorded individual expressions of

legislative intent. Finally, it is appropriate to accord special deference to the statements of individual members, especially to the ranking members and chairman, of committees which have institutional responsibility for the development of the legislation and oversight over its implementation. Preliminary consideration of these factors led to the decision to base the proposed version of this section primarily upon the Hatch-Perkins statement. After careful review of the numerous comments received concerning this statement and its relationship to the remainder of the legislative history relating to this provision of the 1981 amendments, the Department remains convinced of the correctness of that decision. This conclusion is reinforced by the express purpose of the statement which was to address "a question [which] has been raised regarding the proper interpretation of the provisions in the bill [which prospectively eliminated survivors' benefits in those cases where the miners' deaths were not due to pneumoconiosis]." Finally, it must be noted that the statement concludes with the chairman's "expectation that the Department of Labor would administer the new law in accordance with this explanation of the survivorship provisions." 127 CONG. REC. at S15494 and H9792 (daily ed.).

(k) Several of the comments received suggest that the definition of death due to pneumoconiosis applicable to claims filed on and after January 1, 1982, should include as an alternative basis for entitlement the words, "where competent medical evidence established that the miner's death was due to pneumoconiosis" or their equivalent. The regulation applicable to survivors' claims filed prior to January 1, 1982, already contains that provision at paragraph (b)(1). The Department agrees that it is equally applicable to survivors' claims filed subject to the new amendments and has, therefore, incorporated it into the criteria applicable to claims filed on and after January 1, 1982, at new paragraph (c)(1).

(l) Several comments received stress the importance of accurately incorporating the substance of the Hatch-Perkins explanation of the intended meaning of the new "death due to pneumoconiosis" requirement into the regulations. The Department agrees that the proposed version of the regulation did not achieve that result in a fully satisfactory manner. Paragraphs (c)(2) and (c)(4) as now promulgated are derived from the Hatch-Perkins statement. One significant change from the proposed version is the elimination of the words "significantly related to or aggravated by" as forms of causation which were included in the proposed version. This deletion is based upon a consideration of the comments discussed above in paragraph (g) and also upon the fact that those terms are not used in the Hatch-Perkins statement concerning the types of causal nexus which they intended to be compensable on survivors' claims filed after December 31, 1981.

(m) The Hatch-Perkins statement contains several key sentences explaining the intended future meaning of "death due to pneumoconiosis." They include, "I want to emphasize, however, that it is not the purpose of [the changes] to deny survivor's benefits when complications of pneumoconiosis have caused a miner's death or where pneumoconiosis was a substantially contributing factor to that death. For example pneumoconiosis may have been a substantially contributing cause of death where the principal cause of death was pneumonia." Two paragraphs later the statement continues, "Once the Labor Department has received medical evidence establishing that pneumoconiosis was the cause of death or a substantially contributing factor to the death, the survivor will receive benefits, unless the weight of the evidence developed by the Labor Department's Deputy Commissioner or by a responsible operator establishes that the death was unrelated to pneumoconiosis." Id. the quoted sentences refer to three possible relationships between the miner's death and pneumoconiosis, each of which is intended to be compensable. First is the situation in which "medical evidence establish[es] that pneumoconiosis was the cause of death." This basis for entitlement is discussed in paragraph (k) above and is now incorporated in paragraph (c)(1). The second situation is one in which "pneumoconiosis was a substantially contributing factor to [or cause of] that death." The third situation is where "complications of pneumoconiosis have caused a miner's death." These two additional bases for entitlement are now incorporated into paragraph (c)(2).

(n) Several comments objected to the inclusion in the proposed version of this regulation of the example quoted in paragraph (m) above. It is contended that the example is "general", "hypothetical", "of no value", "confusing", and capable of being seriously misinterpreted. The Department agrees that the example—viewed in isolation—can be misconstrued. However, the example which was used as an illustration of a potentially compensable claim, i.e., that "pneumoconiosis may have been a substantially contributing cause of death in a case where the principal cause of death was pneumonia," must be understood in the context of the Hatch-Perkins statement as a whole. In addition to the portions of the statement quoted in paragraph (m) above, the statement also includes the following statement of limitation, "Of course, survivors would not be eligible for benefits in those situations where death was caused by a traumatic injury or an unrelated medical condition." Taken as whole, the statement makes clear that no benefits are payable where the cause of the miner's death was unrelated to pneumoconiosis. However, the statement makes equally clear that pneumoconiosis need not the "principal", sole, primary or proximate cause of the miner's death in order for the survivor's claim to be compensable. Considered in this light, the example was intended to illustrate those basic concepts in the following manner: the survivor's claim is compensable if the evidence demonstrates that pneumoconiosis was a substantially contributing cause of death even though the principal cause of death was pneumonia. In order to avoid possible misinterpretations, such as death due to pneumonia is compensable if pneumoconiosis was found to be present at the time of death or even that pneumonia may be indicative of the presence of pneumoconiosis, the use of the pneumonia example has been deleted from the regulation as now promulgated. However, the basic concept which it illustrates has been incorporated into paragraph (c)(4).

(o) Several comments discussed the statement of limitation contained in the Hatch-Perkins statement which is quoted in paragraph (n) above. One comment suggested that it should be placed in a separate subsection. Paragraph (c)(4) as now promulgated responds to that suggestion. Another comment requested that the Department explain in this preamble that a party opposing benefits is not required to "absolutely rule out every conceivable relationship between death and pneumoconiosis in order to establish non-entitlement." The Department agrees, as explained more fully in the discussion of new paragraph (d) below, that the burden is upon the survivor to establish both initially and ultimately that the miner's death was due to pneumoconiosis, as defined in paragraph (c), before benefits are

payable. Unless the survivor has access to the irrebuttable presumption implemented by § 718.304, there is no presumption of compensability applicable to these cases. Two comments question the appropriateness of including "death * * * caused by a traumatic injury" as an example of when benefits are not payable. One of them criticizes it as "vague" and "unnecessary". The Department does not agree with this characterization of the example. Rather, it is believed that this example will be helpful in claims adjudication and its use is retained in paragraph (c)(4) as now promulgated. The other comment points out that there may be rare instances in which pneumoconiosis is a substantially contributing cause of death even though the immediate cause of death was a traumatic injury, such as a disabled miner collapsing from a lack of oxygen and falling and breaking his neck. The comment requests that such cases be recognized in the regulations. The Department agrees that, upon a proper evidentiary showing by the survivor, such a claim would be compensable. Paragraph (c)(4) has been revised to provide for such situations. Finally, one comment opposes the whole concept of making survivors' benefits dependent upon proof that the miner's death was due to pneumoconiosis. The Congress having clearly decided to adopt such a requirement, the Department is not free to eliminate it in the implementing regulations. Therefore, no change in the regulation has been made in response to this comment.

(p) Three comments were received which were supportive of paragraph (c) as originally proposed. One comment was received which opposed it in part. Although the reorganization of the final version of this regulation referred to in paragraph (f) above has rendered proposed paragraph (c) unnecessary, the issues addressed in these comments remain relevant. The proposed paragraph (c) was intended to serve two purposes: (1) To stress that the presumptions referred to in paragraph (b)(4) are inapplicable to survivors' claims filed on and after January 1, 1982, and (2) to make clear that the criteria contained in paragraph (b)(2) are also inapplicable to such claims. All four comments concur on the inapplicability of the repealed presumptions. However, one comment argues for the continued applicability of paragraph (b)(2). The language of paragraph (b)(2) is a modified version of the third sentence of 20 CFR 410.462(b). That regulation was originally promulgated by the Social Security Administration to implement the presumption contained at section 411(c)(2) of the Act. It was labelled, "Presumption relating to respirable disease." It was subsequently utilized by the Department of Labor for the same purpose. See § 718.303(a)(1). The Department cannot agree that this language has a basis in the Act independent of the presumption which it was used to implement. That presumption was made inapplicable to all claims filed on and after January 1, 1982, by the 1981 amendments. Therefore, no comparable language is included in the criteria applicable to such claims as now promulgated.

(q) One comment suggests that the definition of death due to pneumoconiosis in these regulations should be patterned after the criteria applicable under the Pennsylvania Workmen's Compensation Act. Although the legislative history is clear that one of the purposes of the amendments eliminating survivors' benefits where the miner's death was not due to pneumoconiosis was to make the federal statute consistent with traditional workers' compensation principles, there is no indication in that history that Congress had any specific state workers' compensation act in mind which was to provide a model for the new criteria. Throughout the legislative history, the various terms such as "due to", "caused by", "resulted from", "a causal connection" and "related to" are used interchangeably. Only the Hatch-Perkins statement provides a more detailed explanation of the intended meaning of the new requirement. That statement provides definitions significantly different from the judicial interpretations which have been applied to the relevant provisions of the Pennsylvania Act. Therefore, no change has been made as a result of this comment.

(r) One comment points out that proposed paragraph (e), now promulgated in revised form as paragraph (d), did not reflect the portion of the Hatch-Perkins statement which indicates that survivors' claims filed on and after January 1, 1982, were to be accorded "the highest priority in developing the evidence necessary to a prompt and fair decision." Id. The Department agrees that this is a serious omission. A new introductory sentence has been added to the subsection stating that such claims "shall be adjudicated on an expedited basis."

(s) Several comments criticized proposed paragraph (e) because it "suggested" that a rebuttable presumption is applicable to survivors' claims upon a *prima facie* showing of entitlement. These comments recommended either that the paragraph be eliminated entirely or that it be substantially revised and explained to avoid such a possible construction. As noted in the discussion in paragraph (o) above, there is no general presumption of compensability applicable to survivors' claims filed on or after January 1, 1982. To avoid any possible implication or inference that such a presumption was intended, this subsection has been substantially revised to make clear that the normal rules of proof are applicable to such claims. Specifically, the initial burden of proof is upon the claimant. If the claimant succeeds in establishing a *prima facie* case of entitlement, the burden then shifts to the party potentially responsible for payment of the claim to develop rebuttal evidence. The ultimate disposition of the claim is to be determined by the weight of the evidence. To further clarify that the normal rules concerning evidentiary development and burden of proof are applicable to these claims, the regulatory provisions defining them have also been cross-referenced in the revised version of this paragraph which is now promulgated as paragraph (d).

(t) One comment objects to the termination of benefits following the death of a miner who was found entitled to such benefits under the Act and their reinstitution only after the survivor has been found to be eligible for such benefits because the miner's death was due to pneumoconiosis. The comment suggests the establishment of "provisional interim benefits" to be paid during the period of the adjudication of survivors' claims filed after December 31, 1981. However, there is no provision in the Act for the institution of such an additional form of interim benefits. Indeed, the 1981 amendments significantly restricted the past practice of paying interim benefits prior to the final adjudication of a claim. In no event have interim benefits ever been paid under the Act on a claim involving a potentially responsible operator prior to the deputy commissioner's initial determination of eligibility (or its equivalent in the case of certain previously denied claims reviewed by the Social Security Administration under the 1977 amendments). See §§ 725.1(i) and 725.420. Therefore, no change can be made in the regulation in response to this comment. However, as noted in paragraph (r) above, a new sentence has been added to paragraph (d) as now promulgated which will require such survivors' claims to be adjudicated on an expedited basis in

order "to minimize the hardships to potentially entitled survivors due to the disruption of benefits upon the miner's death * * *".

(u) No other comments were received concerning this section and no other changes were made in it.

Section 718.303 Death from a respirable disease

One comment was received concerning proposed new paragraph (c). It suggests the addition of the phrase "regardless of any prior filings." Such a change, however, would be inconsistent with the merger provisions of § 725.309 which implement the incorporated provisions of section 22 of the Longshoremen's and Harbor Workers' Compensation Act, 33 U.S.C. 922, as construed by the courts. See *Intercounty Construction Corp. v. Walter*, 422 U.S. 1 (1974), and *Banks v. Chicago Grain Trimmers Ass'n*, 390 U.S. 459 (1965). Under those cases, a newly filed claim is to be treated as a request for an adjudication of a prior claim if such prior claim is still pending and unadjudicated or as a request for modification of the ruling on a prior claim, unless the one year period for seeking such modification of the previous ruling has expired. Therefore no change has been made in the proposed new paragraph (c).

Section 718.305 Presumption of pneumoconiosis

(a) One comment proposed that the words "regardless of any prior fillings" be added to proposed new paragraph (e). For the reasons stated in the discussion of the same proposal concerning § 718.303 above, the suggested change was not adopted.

(b) One comment states that although the proposed new paragraph (e) "arguably" accomplishes the intended result of implementing the inapplicability of the fifteen year presumption to all claims filed on or after January 1, 1982, corresponding changes should also be made in all other sections of Part 718 which previously implemented this presumption. The Department concurs in part with this recommendation and corresponding changes have been made in §§ 718.204(c) and 718.205. However, the Department does not concur that changes are appropriate for this purpose in §§ 718.104, 718.107(a)(4), 718.204(b) and 718.307(b), as suggested. Given the broad definition of pneumoconiosis mandated by section 402(b) of the Act, the types of medical and other evidence referred to in those sections may be relevant to the adjudication of claims filed after December 31, 1981, as well as those which were filed on or prior to that date.

(c) One comment advocates the retention of this presumption for claims filed on or after January 1, 1982. The 1981 amendments, however, leave no room for interpretation. Section 202(b)(1) is explicit that this presumption "shall not apply" to such claims. Therefore, this recommendation must be rejected.

(d) No other comments were received concerning this section and no changes were made in it.

Section 718.306 Presumption of entitlement applicable to certain death claims

(a) One comment suggests that paragraph (a) should be revised to require that a claimant present evidence of all the deceased miner's employment, in order to permit a full and complete evaluation of the claim. Although the Department agrees that such evidence may be relevant to the determination of claims under this presumption, it is equally or even more relevant to all other classes of claims as well. Where such evidence is necessary "to make a determination of the claim," the claim may be dismissed pursuant to § 725.409(a) for abandonment where the claimant fails to submit it. Therefore, no change is needed in this section to achieve that purpose.

(b) One comment recommends that this presumption should remain applicable to claims filed after June 1982. The 1981 amendments, however, leave no room for interpretation on this issue. Section 202(b)(2) is explicit that the presumption "shall not apply" to claims filed 180 days or more after the effective date of the amendments. Therefore, this recommendation must be rejected.

(c) No other comments were received concerning this section and no changes were made in it.

Section 725.1 Statutory provisions

(a) One comment pointed out that a typographical error was contained in the proposed version of paragraph (a). Specifically, the word "mines" contained in the ninth line should be "miner". The error has been corrected in the final version as now promulgated. A second typographical error has also been corrected in this paragraph by substituting the words "if the miner" for the word "who" in the last sentence of the paragraph.

(b) One comment objects to the characterization of the Secretary's authority with regard to the re-reading of x-rays in proposed paragragh (h)(1). It proposes that such authority should be limited to "ensuring the quality of the x-ray and detecting fraud." Such a limitation would virtually nullify the amendment which removed the previous restrictions upon the use of re-readings of x-rays in claims adjudication. See the discusion of the comments received in response to proposed § 718.102, especially the purpose of the amendment as defined in paragraph (a), and proposed § 718.202, paragraphs (b) and (c) above. Therefore, no change has been made in response to this comment.

(c) One comment suggested that paragraph (h)(4) be revised to conform to similar changes proposed for paragraphs § 718.202(c) and 718.204(c)(5). For the reasons stated in paragraph (h) discussing the comments received and changes made in § 718.202, a similar change has been made in paragraph (h)(4).

(d) Three comments were received concerning proposed paragraph (h)(5). One comment supports the paragraph as proposed. However, another comment points out that proposed paragraph (h)(5) "incorrectly implies that the filing of a miner's claim after December 31, 1981 is a necessary prerequisite for subsequent survivor entitlement under the 1981 Act." No such implication was intended nor would such an interpretation be correct. A third comment also indicates the need for clarification and consistency in the statement of the relationship between miners' and survivors' claims under the 1981 amendments. For the reasons stated in the discussion of the comments received concerning § 718.1, paragraph (h)(5) has been revised to conform to the changes made in paragraph (a) of that section.

(e) No other comments were received concerning this section and no other changes were made in it.

Section 725.4 Applicability of other parts in this title

One comment recommended that this section be amended to incorporate the changes proposed by the same commenter to be made in § 718.2. For the reasons stated in response to that comment above, no change has been made in this section. No other comments were received concerning this section and no changes have been made in it.

Section 725.101 Definitions and use of terms

No comments were received concerning the proposed changes in this section and no further changes have been made in it.

Section 725.102 Disclosure of program information

No comments were received concerning the proposed changes in this section and no further changes have been made in it.

Section 725.201 Who is entitled to benefits; contents of this subject

One comment was received concerning the proposed changes in this section. It repeats the recommendation contained in paragraph (b) of the comments discussed under § 718.306. For the reason stated there, it must be rejected. No other comments were received concerning this section and no changes have been made in it.

Section 725.205 Determination of dependency; spouse

One comment was received concerning this section. However, the substance of the comment is directed to § 725.207 and it is discussed under that section. No other comments were received concerning this section and no changes have been made in it.

Section 725.207 Determination of dependency; divorced spouse

(a) One comment objects to the criterion that a court order requiring the miner to support the spouse is included as one of three alternate ways by which a divorced spouse may be found to be dependent upon the miner. It proposes as an alternative that a divorced spouse should be entitled to a share in the miner's benefits if the couple lived together for at least ten years, whether or not the miner is in fact contributing to the divorced spouse's support or is under any legal obligation to do so. However, section 402(a)(2) of the Act expressly provides for the three alternative definitions of dependency incorporated in this regulation and for no other means for meeting this requirement. Adoption of this additional grounds for establishing dependency for a divorced spouse would require an amendment to the Act. Therefore, this suggestion must be rejected.

(b) Another comment suggests that "in the case of a divorced spouse, a [miner's] contribution [to the divorced spouse's support] which is less than 50% of the alleged dependent's income or the full amount of the benefit or augmentation involved should not be considered 'substantial'." The first part of this comment appears to seek to fuse the alternative dependency criteria provided in section 402(a)(2) of the Act. They provide in essence that the divorced spouse either be actually receiving at least one-half of his or her support from the miner or that the miner be under a legal obligation to make a substantial contribution to such support. If the 50% rule were extended to all situations, the statutory distinctions would be rendered meaningless. Therefore, the first part of this suggestion must be rejected. What constitutes a "substantial contribution" to the support of a divorced spouse can only be determined on a case-by-case basis. No general rule which would operate in an equitable manner under all circumstances can be promulgated to define this concept. Nor does the Department believe that it would be appropriate to promulgate a definition of this term which would be at variance with the regulations of the Social Security Administration defining the same term. See 20 CFR 410.351 and 410.395. Therefore, no change has been made in response to this comment.

(c) No other comments were received concerning this section and no changes have been made in it.

Section 725.208 Determination of relationship; child

(a) One comment suggests that the establishment of a parent-child relationship by the means provided in paragraph (f)(1), i.e., by voluntary acknowledgement or judicial determination should be equally effective regardless of whether the relationship is or was established before or after the parent has been determined to be eligible for benefits under the Act. Changes in this section were included in the Notice of Proposed Rulemaking for the sole purpose of correcting certain technical errors which were contained in the version of the section which was previously promulgated. There is nothing in the 1981 amendments to the Act which would support the suggested change. Moreover, adoption of the suggested change would require the Department of Labor to promulgate regulations at variance with those of the Social Security Administration defining the same concept under the same Act. See 20 CFR 410.330(f). Therefore, no change has been made in response to this comment.

(b) One comment suggests that paragraph(f)(2) should be revised to require that the parent must have been "substantially" contributing to the support of the natural child in order for the relationship to be recognized for the purpose of augmentation of benefits. The reasons for rejecting the suggested change discussed in paragraph (a) above are equally applicable to this proposed change.

(c) No other comments were received concerning this section and no changes have been made in it.

Section 725.212 Condition of entitlement; surviving divorced spouse

One comment was received which objects to the requirement stated in revised paragraph (a)(3)(ii) that a surviving spouse of a deceased miner who was found entitled to benefits on a claim filed on or after January 1, 1982, must file a separate claim and prove that the miner's death was due to pneumoconiosis in order to be entitled to survivor's benefits. As noted in response to a related comment in paragraph (o) of the discussion of comments received concerning § 718.205, the Congress having clearly decided to adopt such a requirement, the Department is not free to eliminate it in the implementing regulations. Therefore, no change has been made in response to this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.213 Duration of entitlement; surviving spouse or surviving divorced spouse

One comment was received which objects to any change being made from the version of this section which was promulgated in 1978. This section was included in the Notice of Proposed Rulemaking for the sole purpose of correcting an erroneous cross-reference which was inadvertently included in the section as previously promulgated. No substantive change is made by this technical correction. Therefore, the proposed version is consistent with this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.214 Determination of relationship; surviving spouse

One comment was received which recommends that this section should be revised to provide for the situation where two or more spouses "had a legal marriage or what they thought was a legal marriage to the same miner." It is suggested that this section should establish priorities among such claimants or provide for the sharing of benefits among them. This section was included in the Notice of Proposed Rulemaking for the sole purpose of correcting an erroneous cross-reference in the section as previously promulgated. No substantive change is made by this technical correction. This section already provides that benefits are payable to a spouse from a valid marriage in preference to a spouse from

a purported marriage. In the case of purported marriages, no benefits are payable unless the purported spouse and the miner were living in the same household at the time of the miner's death. Thus, the Department believes that the regulation provides sufficient guidance to adjudicate the claims of multiple purported spouses. It is also generally consistent with the Social Security Administration's regulation addressing the same issue. See 20 CFR 410.310. Therefore, no change has been made in response to this comment. No other comments were received concerning this section and no changes were made in it.

Section 725.217 Determination of dependency; surviving divorced spouse

One comment was received which objects to the requirement that the surviving divorced spouse must have been actually receiving support from the deceased miner or entitled to receive such support pursuant to a court order or written agreement in order to be found to have been a dependent of the deceased miner. For the reasons stated in response to a similar comment in paragraph (a) of the discussion of comments received concerning § 725.208, no change to the regulation can be made in response to this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.218 Condition of entitlement; child

One comment was received which objects to the requirement stated in revised paragraph (a)(2) that a surviving dependent child of a deceased miner who was found entitled to benefits on a claim filed on or after January 1, 1982, must file a separate claim and prove that the miner's death was due to pneumoconiosis in order to be entitled to survivors' benefits. As noted in response to a related comment in paragraph (o) of the discussion of comments received concerning § 718.205, the Congress having clearly decided to adopt such a requirement, the Department is not free to eliminate it in the implementing regulations. Therefore, no change has been made in response to this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.219 Duration of entitlement; child

(a) Three comments were received which noted that a typographical error was included in the proposed revision of paragraph (b)(3)(ii). The erroneous cross-reference to § 725.209(d) has been replaced with the correct cross-reference to § 725.209(b).

(b) Two of the comments received further stated that the cross-reference to the definition of student in § 725.209(b) should also be revised to conform to recent changes in the Social Security Act. However, section 402(g) of the Black Lung Benefits Act, 30 U.S.C. 902(g), states that "The term 'student' means a 'full-time student' as defined in section 202(d)(7) of the Social Security Act *or* a 'student' as defined in Section 8101(17) of Title 5, United States Code." (Emphasis added.) Although the definition of student in the Social Security Act, 42 U.S.C. 402(d)(7), was amended by the Omnibus Budget Reconciliation Act of 1981, no comparable amendments wre made to the alternative definition contained in the Federal Employees' Compensation Act (FECA), 5 U.S.C. 8101(17). The definition of student contained in § 725.209(b) is directly derived from the cited provisions of the FECA. Therefore, no change in that section is appropriate in response to these comments.

Section 725.220 Determination of relationship; child

One comment was received which suggests the same change to this section which was treated in paragraph (b) of the discussion of comments received concerning § 725.208. For the reasons stated there, no change has been made in response to this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.222 Conditions of entitlement; parent, brother, or sister

One comment was received which repeats the same objection to the proposed change in paragraph (a)(5)(ii) which was discussed above in response to the comments received concerning §§ 725.212 and 725.218. For the reasons stated above in response to those comments, no change has been made in response to this comment. No other comments were received concerning this section and no changes have been made in it.

Section 725.225 Determination of dependency; parent, brother, or sister

No comments were received concerning this section and no changes have been made in it.

Section 725.367 Payment of a claimant's attorney's fee by responsible operator

(a) Three comments were received which are supportive of the proposed changes in this section.

(b) Two comments were received which support an additional change in proposed paragraph (b). Specifically, it is recommended that the fourth sentence be revised to read "liability of an operator, carrier or claimant." This change would have the effect of relieving a claimant from any liability for any part of an attorney's fee in a case which is subject to the transfer of liability provisions of the 1981 amendments. However, those amendments only served to transfer the liabilities of employers and insurance carriers with respect to certain claims to the Trust Fund. There is nothing in those amendments or their legislative history to suggest that they were intended to alter the rights or obligation of claimants with respect to those claims. Therefore, any liability for the payment of attorney's fees which previously was the responsibility of the claimant remains unaffected by the operation of the transfer of liability provisions and no change in the proposed version of paragraph (b) can be made in response to these comments.

(c) No other comments were received concerning this section and no changes have been made in it.

Section 725.420 Initial determinations

No comments were received concerning this section and no changes have been made in it.

Section 725.421 Referral of a claim to the Office of Administrative Law Judges

No comments were received concerning this section and no changes have been made in it.

Section 725.456 Introduction of documentary evidence

No comments were received concerning this section and no changes have been made in it.

Section 725.490 Statutory provisions and scope

No comments were received concerning this section and no changes have been made in it.

Section 725.496 Special claims transferred to the Trust Fund

(a) The notice of proposed rulemaking, 47 FR 22674 (May 25, 1982), especially requested comments concerning the definition of cases subject to the transfer of liability provisions of the 1981 amendments. Twelve of the comments received responded to that request. The Department appreciates the assistance which it has received from these comments.

(b) Most of the comments received concerning this section are extensive and detailed. Only one of them reflected the belief that the proposed definitions of the classes of claims subject to the transfer of liability provisions are overly broad. All of the other comments received reflect the view that the proposed definitions contained in this section are unduly narrow and artificially restrict the intended scope of the transfer of liability provisions of the 1981 amendments. As is explained below in the detailed discussion of the individual comments received, the Department cannot agree with most of the specific proposals received for expansion or revision of the proposed definitions. It must be stressed that the transfer of liability provisions were never intended to relieve mine operators and their insurers from all of the unanticipated liabilities which arose as a result of the 1977 amendments. They were to be a partial release from such liabilities applicable only to certain specific and carefully defined classes of claims. For instance, there is no transfer of liability for those claims which were pending with the Department of Labor under Part C of the 1972 version of the Act at the time of the passage of the 1977 amendments and which were or will be ultimately found to be compensable under its liberalized eligibility provisions. Moreover, it should be noted that those same 1977 amendments also contained a partial release of liability provisions in that they transferred from mine operators and their insurers to the newly established Trust Fund liability for the payment of claims in which the miner's coal mine employment ceased prior to 1970. The legislative history is clear that it was estimated that the definitions which were adopted in the 1981 amendments for this second transfer of liability would produce the additional transfer of liability from private parties to the Trust Fund of approximately 10,200 claims. The Subcommittee on Oversight of the House Committee on Ways and Means received and reviewed extensive testimony concerning the proposed transfer of liability for "approximately 10,200 of those claims" before issuing its December 7, 1981, recommendation that "serious consideration be given" to the implementation of the proposal. Committee Print, pp. 19–20 and 30. See also the December 14, 1981, testimony of Bruce Watzman, Legislative Representative of the National Coal Association, before the Senate Labor Subcommittee which contrasted the 10,200 claims intended to be transferred by the proposed legislation with the "anywhere from 17,000 to 22,000 claims that could qualify" for transfer under another bill which had been introduced in the preceding Congress. Mr. Watzman stated, "we have worked very closely with the insurance industry, as well as the administration, to try to define the universe of transfer claims as *tightly as possible*". Committee Print, pp. 78 and 80 (Emphasis added.) At the same hearing, Andrew Kalmykow, Consultant and former Assistant General Counsel of the American Insurance Association, and Tom O'Day, Government Relations Officer for the Alliance of American Insurers, also referred to their "best estimates" that the transfer provisions under consideration would apply to "roughly" 10,000 claims with a present value of $1.4 or $1.5 billion. Id., pp. 150–152. The repeated references to the 10,200 number in the debates in both the House and the Senate likewise reflect Congressional reliance on the approximate correctness of that estimated figure. According to the best information currently available to the Department, application of the definitions contained in the proposed version of this section requires the Trust Fund to assume permanent liability for payment of 12,000 claims. Rather than supporting the view that the Department's proposed definitions are unduly restrictive, this figure tends to support the conclusion that the transfer language adopted in the 1981 amendments has produced a somewhat more extensive transfer of liability than the participants in the legislative process originally anticipated or appear to have intended.

(c) One comment was received which suggests either that no detailed definition of the classes of claims subject to the transfer of liability provisions is needed or, in the alternative, that proposed paragraphs (a) and (b) which paraphrase the relevant language of sections 422 and 402 of the Act, as now amended, are sufficient for this purpose. It is contended that the remainder of the proposed section is unnecessary. This position is similar to the idea that no detailed regulatory definition of the phrase "death due to pneumoconiosis" was necessary. Some of the reasons for the rejection of that concept discussed above in response to the comments received concerning proposed § 718.205 are equally applicable here. The sheer diversity of proposed interpretations contained in the comments received in response to the proposed version of this regulation and the potential for prolonged and extensive litigation which they reflect is persuasive evidence of the need for an authorizative statement of the scope and applicability of the transfer of liability provisions. Immediately upon the passage of the 1981 amendments, the Department developed guidance for its personnel in the implementation of these provisions (see especially BLBA Bulletin 82–7, March 31, 1982). The proposed version of this section reflected that guidance. It also served both to put all interested parties on notice as to those interpretations and definitions and to solicit their assistance in the further refinement of them. The Department believes that this process has been a fruitful one and that it would be counter-productive to now abandon the purposes which proposed paragraphs (c) through (f) were designed to serve. Therefore, no change in this section has been made in response to this comment. However, a new subparagraph (2)(D) has been added to paragraph (b) defining the fourth means by which claimant action would have prevented an informal denial from becoming final. This addition reflects the provisions of section 22 of the Longshoremen's and Harbor Workers' Compensation Act, 33 USC 922, as incorporated by section 422 of the Act. See also paragraph (o) below.

(d) Several comments were received which request that proposed paragraphs (a) and (b) be supplemented by adding a definition for the word "approved." It is suggested that if the previously denied claim was ever the subject of a deputy commissioner's initial finding or initial determination of entitlement, then the claim should be deemed to have been "approved" and be accepted for payment by the Trust Fund, regardless of its subsequent procedural history. These comments are apparently based on the belief that liability for the payment of a previously denied claim can only transfer from a coal mine operator or its insurer to the Trust Fund if at some point in the past the claim has been "approved." The Department cannot accept this interpretation. The language of section 205(a) of the 1981 amendments is clear. The transfer of liability provision is applicable to a previously denied claim which "is or has been approved in accordance with the provisions of section 435." It is not limited to the past tense, i.e., claims which have already been "approved." It is equally applicable to those previously and currently denied claims which may at some future time be found to be entitled to benefits under the eligibility criteria mandated by section 435. The issues of claimant eligibility and operator transferability are separate and

distinct. But the intent of the Congress is clear: in no event shall an operator or insurer bear liability for the costs of the payment of such a claim. Not only did the amendments release operators and carriers from future liability for such costs; they also include a specific provision, to be codified at section 9501(d)(7) of the Internal Revenue Code, providing for the reimbursement from the Trust Fund for all such costs already incurred. If "approval" were the operative part of the amendment, then a potentially liable operator or insurer could bring itself within the scope of the amendments by the mere act of agreeing to pay the previously denied claim (regardless of its merits), thus rendering it "approved", secure in the knowledge that the liability for payment would immediately transfer to the Trust Fund. The Department is convinced that Congress did not intend such an absurd result. Rather, the transfer of liability provision is to be understood as intending the immediate release of operators and carriers from both actual and potential liabilities for such previously denied claims. See also paragraph (c) of the discussion concerning § 725.497. If the claimant has already succeeded in finally establishing entitlement to benefits, payment of those benefits is assumed by the Trust Fund. However, if the claim has not yet been finally adjudicated, the Department must be free to exercise its judgement as to whether or not it will voluntarily accept liability for payment of the claim on behalf of the Trust Fund. The Department cannot agree that it is automatically bound to accept such liability based on a previous initial finding or initial determination favorable to the claimant which may have been made at a time when the evidentiary record concerning the claimant's entitlement to benefits was much less fully developed. Therefore, no changes have been made in response to these comments.

(e) Several comments were received concerning the proposed version of paragraph (c) which point out that the words "unless such claims were merged in accordance with the agency's regulations" could produce differing results depending upon whether or not the agency had complied with its own regulations. No such result was intended. The relevant language has been revised in the final version of this paragraph to now read "unless such claims were required to be merged by the agency's regulations" in response to these comments.

(f) Several comments were received which are critical of the emphasis contained in proposed paragraph (c) upon the specific procedural history of individual claims in those situations where the miner and/or the dependent survivors have filed more than one claim under the Act. The gist of these comments is that proposed paragraph (c) mistakenly focuses upon individual pieces of paper labelled "claims" and other procedural niceties rather than getting to the heart of the matter which is claimant entitlements. It is suggested that a claim should be understood as being in the nature of a legal cause of action, i.e., that it is a group of facts giving rise to a legal right. This same basic concept also underlies many of the comments received concerning proposed paragraphs (d), (e) and (f).

(g) The Department believes that the claims as cause of action analogy is misplaced. The more correct analogy would be to a complaint or other preliminary pleading which is filed to initiate an adjudication of the nature of the right or the validity of the cause of action which is being asserted. Throughout its various versions, the Act has been consistent in requiring that a claim must be filed before any determination of eligibility for benefits could be undertaken. With the limited exception of dependent survivors of miners previously found eligible for benefits provided by section 422(l) of the Act, no miner or dependent survivor could be found entitled to benefits as a primary beneficiary without first having filed a claim. The two administering agencies have developed, promulgated and applied detailed regulations defining what constitutes a claim, who may file a claim, when it will be considered to have been filed, *etc.* See 20 CFR 410.420–410.433 (Social Security Administration (SSA)) and 20 CFR 725.301–725.311 (Department of Labor). Moreover, claims are not interchangeable, nor is the date or sequence of their filing irrelevant. Depending upon when and with which agency the claim was filed significant differences have existed with regard to virtually every aspect of a claim: eligibility requirements, availability of presumptions, methods of initial adjudication, hearing and appellate review procedures, evidentiary rules applicable (especially with regard to the use of x-ray and affidavit evidence), offsets applicable, the availability of medical benefits and the source of payment. The same claim may have been reviewed under several versions of the Act and by both administering agencies. A specific claim initially filed in 1970 with SSA under Part B of the Act and repeatedly denied by it under the 1969 and 1972 versions of the Act could ultimately be approved by the Department of Labor a decade later under section 435 of the 1977 amendments. Such unforeseeable developments in the history of individual claims are what gave rise to the enactment of the 1981 transfer of liability provisions. A claim which would have been paid from the general revenues of the United States, if it had been approved by SSA under the 1969 or 1972 versions of the Act, could suddenly become the payment liability of a coal mine operator under the 1977 amendments. The question of whether operators' insurance arrangement covered this unexpected result was being vigorously litigated when Congress was considering the 1981 amendments. The legislative history is replete with references to the uncertainties surrounding the outcome of the litigation. It was cited as a factor which supported passage of the provisions which would transfer these unanticipated liabilities from both operators and their insurers to the Trust Fund. The Congress recognized that both the eligibility requirements to be met and the financial consequences which flowed from meeting them have varied significantly under the Act. It, therefore, selected only certain classes of cases with specific procedural histories and clearly estimated numerical and financial impacts for inclusion in the transfer of liability provisions. The Department is not free to ignore or blur those distinctions and the underlying rationales which led to their adoption. Therefore, it believes that the focus upon the procedural history of individual classes of claims reflected in proposed paragraphs (c)–(f) is appropriate. No changes have been made in response to these comments.

(h) Several comments received in response to proposed paragraph (d) are critical of its requirement that an "election card" must have been filed if the previously denied Part B claim is to come within the scope of the transfer provisions. It is contended that Congress intended that all previously denied claims be reviewed under the 1977 amendments and that insistence upon the filing of an election card is inconsistent with that intent. The Department cannot agree that this is an appropriate reading of section 435 of the 1977 amendments, its implementing regulations or the applicable legislative history.

(i) Section 435 explicitly states that pending or denied claims under Part B may, "upon the request of the claimant," 30 U.S.C. 945(a)(1), be reviewed by SSA.

30 U.S.C. 945(a)(1)(A), or referred directly to DOL, 30 U.S.C. 945(a)(1)(B). It requires the Secretary of HHS to "approve forthwith each claim for which review *is requested* under paragraph (1)(A). . . ." 30 U.S.C. 945(a)(2)(A). Any question as to whether a "request for review" under this provision means some affirmative and concrete act on claimant's part is laid to rest by SSA's regulations. 20 CFR 410.704(d) explicitly requires a *request* for review within six months of the date of notification of right of review. Failure to act within the time limit constituted a waiver of the right to review of the Part B claim. 20 CFR 410.704(d).

(j) The legislative history of section 435 amply demonstrates that while review of Part C and section 415 claims was intended to be *automatic*, a Part B claimant had to *elect* either review under Part B by SSA or referral to DOL for refiling under Part C. See H.R. Rep. No. 95–864, 95th Cong., 2d Sess. (1978), reprinted in *Black Lung Benefits Reform Act and Black Lung Benefits Revenue Act of 1977, Committee on Education and Labor," House of Representatives* (1979) 891–92. Senator Randolph, in introducing the conference committee report accompanying the bill enacted as the 1977 amendments, noted that "pending and denied Part C claims *will be reviewed* by the Secretary of Labor, while "(a)ll denied Part B claimants *will be given the option* of having their claims reviewed. . . ." by SSA or DOL. *Id.* at 902 (emphasis added). Similarly instructive is the statement of Senator Clark immediately following passage of the 1977 amendments, which includes DOL's explanation of major provisions of the bill. After noting that previously denied or pending Department of Labor claims would be "*automatically* reviewed," *id.* at 939 (emphasis in original), the statement noted that claimants who filed with the Social Security Administration "will be notified by the SSA that *upon request of the claimant*," the claim would be processed in accordance with 30 U.S.C. 945(a)(1). *Id.* Although several comments cite other portions of the legislative history in support of their argument that a universal and automatic review was intended, such references cannot be given greater weight than the unambiguous language of section 435 and the conference committee report. Therefore, no changes have been made in response to these comments.

(k) Because of the importance of the Social Security Administration's implementing regulations to a proper understanding of the operation of section 435 of the 1977 amendments, the last sentence of proposed paragraph (d) has been revised to include an express reference to them.

(l) Several comments suggest that its inequitable or arbitrary to treat two similarly situated claimants differently based on the "happenstance" that one returned an election card to the Social Security Administration and that the other did not. Although it is true that two claimants, both of whom had denied Part B claims and pending Part C claims at the time of the enactment of the 1977 amendments, would appear to be differently affected by the transfer of liability provisions of the 1981 amendments if one had returned an election card four years earlier and the other had not, this analysis misses the point of the legislative changes. Taken as a whole, the 1981 amendments were intended to achieve several interrelated objectives: (1) The tightening of eligibility criteria for future filed claims while preserving the substantive rights of those persons whose claims had already been filed, (2) to secure the future solvency of the Trust Fund, and (3) to transfer a portion of the unanticipated liabilities which had been imposed upon operators and insurers by the 1977 amendments to the Trust Fund. Each provision of the amendments must be understood not only in terms of its express language but also in relationship to those objectives. In the example of the two claimants given above, it is implied that it is unfair to confer the benefit of transfer status upon one while denying it to the other. However, the intent of the amendments was not to confer additional benefits upon such claimants. Rather, it was intended to preserve their pre-existing substantive rights unchanged. See the summary of the legislative history on this point contained in paragraph (e) of the discussion of comments received concerning § 718.205. In fact, the transfer of liability provisions do not affect the rights of claimants with regard to such substantive matters as eligibility criteria and benefit rates. They merely substitute one source of payment for another.

(m) The primary purpose of the transfer of liability provision was to relieve mine operators and their insurers of a portion of the unanticipated liabilities imposed upon them by the 1977 amendments. To that end, the Congress chose to focus primarily upon claims originally filed with SSA, since employers and insurers could not, prior to the enactment of the 1977 amendments, have anticipated liabilities arising from that source. The estimates referred to during the legislative process make clear that approximately 80% of all transfer cases would come from that category. The remaining 20% were to be drawn from Part C claims finally denied by the Department of Labor under the 1972 version of the Act. Here again, prior to the enactment of the 1977 amendments, employers and insurers had a right to assume that they had been released from any possible liability as to those claims.

(n) In order to transfer liability for the payment of the claims of both of the claimants referred to paragraph (e) above, the Department would have to ignore the express language of the transfer provisions and frustrate congressional expectations as to the scope of the transfer provisions and their implications for the future solvency of the Trust Fund. This uniformity of claimant treatment could be achieved in either of two ways. The Department could revise its previous interpretation and conclude that whenever a previously denied Part B claim was merged with a pending Part C claim, the merged claim assumed the nontransfer status of the Part C claim rather than the transfer status of the Part B claim. This procedure would achieve uniform treatment of the claimants but it would also yield substantially fewer transfers of liability than Congress anticipated and would thus deny employers and insurers the amount of release from liability which Congress intended them to receive. Alternatively, such uniformity could also be achieved by ignoring the language of sections 435 and 422, as now amended, and concluding that whenever the claimant had both a non-transferable pending Part C claim and a denied Part B claim, the claim would transfer even though the Part B claim was never reviewed and approved under the provisions of section 435 and the pending Part C claim was not otherwise eligible for transfer. Under this approach, uniformity of claimant treatment would be achieved at the cost of significantly increasing the number of cases subject to the transfer provisions and thus jeopardizing the objective of future Trust Fund solvency. The Department believes that neither approach would be consistent with Congressional intent or the express language of section 205 of the 1981 amendments. Therefore, no changes have been made in paragraph (d) in response to these comments.

(o) Several comments questioned the provisions of proposed paragraph (e) which refer to the situation where a claim filed with the Department of Labor under the 1972 version of the Act was the subject of repeated denials. Specific

objection is made to reliance on the date of the last such denial as dispositive of the issue as to whether the claim comes within the transfer of liability provisions. The intent of Congress was to transfer liability from operators and insurers to the Trust Fund only for those claims which were finally denied by the Department of Labor under the 1972 version of the Act and which were reviewed and made compensable by the 1977 amendments, thus creating new and unanticipatable liabilities for those operators and insurers. It is equally clear that the Congress did not intend to transfer liability for those claims which were still pending with the Department of Labor at the time of the enactment of the 1977 amendments. It is also important to distinguish between an administrative or informal denial on the one hand and a warning that the claim *may* be denied unless additional evidence is submitted in support of it. This latter function was traditionally performed by CM–990 series letters under DOL's administration of the 1972 version of the Act. Under the incorporated provisions of section 22 of the Longshoremen's and Harbor Workers' Compensation Act, 33 USC 922, the denial of a claim does not become truly final until the expiration of one year from the date of that denial. Many claims filed with the Department of Labor under the 1972 version of the Act were the subject of multiple denials which resulted from repeated claimant requests for reconsideration or modification of prior denials of those claims. Unless the last such denial occurred more than one year prior to the effective date of the 1977 amendments, i.e., March 1, 1978, the possibility of a further reconsideration and ultimate approval of the claim continued to exist under the 1972 version of the Act. That possibility removed such claims from the class of unanticipatable liabilities which are the subject of the transfer of liability provisions. Therefore, no change has been made in response to these comments.

(p) Several comments objected to the distinction which was drawn in the second sentence of proposed paragraph (f) between miners' and survivors' claims for purposes of the applicability of the transfer of liability provisions. Those comments are apparently based upon the most common situation applicable to claims filed prior to January 1, 1982 in which survivors' entitlements to benefits were derivative from the miner's entitlement. Thus, it is contended that in all cases in which the miner's claim is subject to the transfer of liability provisions, all related survivors' benefits should also become the liability of the Trust Fund. However, this contention ignores the fact that separate survivors' claims were often filed after the denial of the miner's claim or even during the pendency of the miner's claim, when the miner's death occurred prior to the final adjudication of his or her claim. In addition to the ground for approval of total disability due to pneumoconiosis available to the miner's claim, survivors' claims could also be approved on the basis of death due to pneumoconiosis. Thus, it was possible that a survivor's claim could be approved even though a previous claim by the miner had been denied. The inclusion of the section 411(c)(5) presumption in the 1977 amendments which awarded survivors' benefits based on a presumed partial disability due to pneumoconiosis prior to the miner's death significantly increased the likelihood of such a result where both miner's and survivor's claims had been filed. Proposed paragraph (f) was designed to address the situation where two separate claims had been filed. For instance, a miner's claim which was denied by SSA under Part B of the Act and a survivor's claim which was approved by the Department of Labor under Part C of the Act. If the survivor's claim had been approved or was pending with the Department of Labor at the time of the enactment of the 1977 amendments, it would not fall within the transfer of liability provisions for such Part C claims, since it did not come within the class of unanticipatable liabilities. However, the denied miner's Part B claim which was reviewed and ultimately approved pursuant to section 435 of the 1977 amendments does clearly fall within the class of unanticipatable liabilities intended to be subject to the transfer of liability. Paragraph (f) addresses these two situations by transferring liability for both the miner's and the survivor's claim, *unless* the survivor's entitlement was established on a separate claim, not otherwise subject to the transfer of liability provisions, *prior* to approval of the miner's claim. This resolution preserves the general rule applicable to claims filed prior to January 1, 1982, that where the miner's claim is found to be compensable, survivors' rights are derivative from it. However, it also preserves the distinction mandated by the Congress that only unanticipatable liabilities were to be transferred from operators and insurers to the Trust Fund. Therefore, no change has been made in response to these comments.

(q) No other comments were received concerning this section and no further changes were made in it.

Section 725.497 Procedures in special claims transferred to the trust fund

(a) Although the notice of proposed rulemaking did not include specific proposals for defining the procedures for determining which individual cases are subject to the transfer of liability provisions of section 205 of the amendments, several comments were received recommending the adoption of such procedures and proposing language to be used for that purpose. The Department agrees that the formal promulgation of such procedures may be helpful in the disposition of those cases in which the applicability of section 205 is disputed.

(b) This section, as now promulgated, is based on a composite of the recommendations and proposals received. It also serves to codify the procedures which have been applied by the Department to the dispositions of those claims since the passage of the amendments. The recommendations and proposals received were generally consistent with each other and with the Department's current practices. However, the two instances in which there was a significant difference of opinion in the comments received or where the Department is unable to adopt the suggestions proposed are discussed in the following two paragraphs.

(c) One comment proposed that the dismissal of the coal mine operator or insurance carrier which has been released from liability for the payment of the claim by section 205 should not take place until there has been a determination on the claimant's eligibility for benefits "where the record is otherwise complete." The other comments received all recommend that such operators and carriers should be dismissed as expeditiously as possible and support the view that "in no event shall an operator or carrier participate as a necessary party in any claim for which only the Trust Fund may be liable." The Department concurs with the latter position. It is consistant both with 30 U.S.C. 934(b)(1)(B) and the intent of the 1981 amendments in enacting the transfer of liability provisions. Section 205 releases employers and carriers from some of the unanticipated liabilities which arose from the 1977 amendment. The amendments also provide for the reimbursement to operators and carriers for benefits which they have paid to such claimants. However, there is no provision for the

reimbursement to such employers and carriers for legal and other defense costs associated with those cases. Therefore, it is clearly inconsistent with the Congressional intent to require employers and carriers to incure additional non-reimbursable costs in association with claims for which they now have no liability for payment. Paragraph (c) as now promulgated incorporates the latter position.

(d) Several of the comments received also proposed promulgation of a new section or subsection defining the finality of decisions on the transferability of liability for claims under section 205. The proposals suggest that uniform time periods of 30 or 60 days be defined for the purpose of seeking reconsideration or appeal of such decisions. While the adoption of a uniform time period for further action on this single issue may be desirable, it is not feasible. Decisions on the transferability of claims liability and the dismissal of operators and carriers from further involvement in proceedings are made by deputy commissioners, administrative law judges and the Benefits Review Board as well as by the United States Circuit Courts of Appeals. Each of these levels of adjudication has already established timeframes for seeking reconsideration, appeal or othewise modifying their decisions. Some of these time periods are established by statute, others by regulations or court rules. To impose a uniform time period for this single issue upon all of these levels of the adjudicative process is in part beyond the Secretary's regulatory authority. Even for those levels of the adjudicatory process where the establishment of procedural rules is within the Secretary's authority, the establishment of a special timeframe for a single issue would tend to further complicate an already complex adjudicatory system. Therefore, these suggestions have not been incorporated into the regulation as now promulgated.

Section 725.520 Computation of benefits

No comments were received concerning this section and no changes have been made in it.

Section 725.532 Suspension, reduction, or termination of benefits

No comments were received concerning this section and no changes have been made in it.

Section 725.533 Modification of benefit amounts; general

(a) One comment was received which objected to the offset of reduction on benefits for any reason other than receipt of a workers' compensation award for the same occupational disease. No change can be made in response to this comment. The 1981 amendments are clear that the excess earnings offset which was previously applicable to black lung benefits awarded to surviving dependent parents, brothers, and sisters are also now applicable to the benefits awarded to miners whose claims are filed on or after January 1, 1982.

(b) No other comments were received concerning this section and no changes have been made in it.

Section 725.536 Reductions; excess earnings

(a) One comment was received concerning this section. It raises the same objection which was discussed concerning § 725.533 above. For the reason stated there, no change can be made in response to this comment.

(b) No other comments were received concerning this section and no changes have been made in it.

Section 725.608 Interest

(a) Several comments were received which contend that proposed paragraph (a), when read in isolation from proposed paragraph (b), appears to impose an obligation upon mine operators and other employers for the payment of interest even though the claimant is not ultimately found to be entitled to benefits. To avoid such a possible misinterpretation, a new sentence has been added at the conclusion of paragraph (a) which makes clear that the obligation for the payment of such interest is dependent upon the claimant ultimately being found to be entitled to benefits.

(b) One comment was received which was supportive of the proposed section, but which also suggested that, in addition to interest, criminal penalties should be imposed for non-payment or delayed payment of benefits. The Congress has clearly specified those portions of the Act in which it found criminal penalties to be appropriate. Since no criminal penalty was enacted by the Congress for this purpose, it is beyond the regulatory authority of the Department of Labor to create such a penalty. Therefore, no change can be made in response to this comment.

(c) Paragraph (d), as now promulgated, has been revised to include the statutory exception (payment of interest on advances from the United States Treasury) to the general rule that the Black Lung Disability Trust Fund shall not be liable for the payment of interest.

(d) No other comments were received concerning this section and no other changes have been made in it.

Miscellaneous Comments.—A number of comments were received which went beyond the scope of the proposed rulemaking. As indicated in the preamble to the notice of proposed rulemaking (47 FR 22674), "other changes to the existing regulations which may be appropriate will be considered by the Department separately at a later date."

Effective Date

The Secretary has determined that in order to expedite the adjudication of claims which are subject to the 1981 amendments to the Act and these implementing regulations and thus reduce hardships suffered by deserving claimants, these regulations shall be effective immediately upon their promulgation in the **Federal Register**, except §§ 725.533(a)(3) and 725.536 which contain information collection requirements which are under review at OMB. This finding is made pursuant to 5 USC 553(d).

Drafting Information

This document was prepared under the direction and control of Robert B. Collyer, Deputy Under Secretary, Employment Standards Administration, U.S. Department of Labor, Room S–2321, 200 Constitution Avenue, N.W., Washington, D.C. 20210, Telephone (202) 523–6191.

Classification—Executive Order 12291

These final rules only implement the 1981 amendments to the Black Lung Benefits Act and make certain technical corrections to the regulations as previously promulgated. They do not, in themselves, impose any additional requirements. Therefore, this is not classified as a "major rule" under Executive Order 12291 on Federal Regulations, because it is not likely to result in (1) an annual effect on the economy of $100 million or more; (2) a major increase in cost or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets. Accordingly, no regulatory impact analysis is required.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1980 (Pub. L. 96–511), the reporting or recordkeeping provisions that are included in this regulation have been submitted for approval to the Office of Management and Budget (OMB). They are not effective until OMB approval has been obtained and the public notified to that effect through a technical amendment to this regulation.

Regulatory Flexibility Act

The Department believes that the rule will have no "significant economic impact upon a substantial number of small entities" within the meaning of section 3(a) of the Regulatory Flexibility Act. Pub. L. 96–354, 91 Stat. 1164 (5 U.S.C. 605(b)). The Secretary has certified to the Chief Counsel for Advocacy of the Small Business Administration to this effect. This conclusion is reached because the amendments are only implementing the 1981 amendments to the Black Lung Benefits Act and they do not, in themselves, impose any additional requirements upon small entities. Accordingly, no regulatory impact analysis is required.

Regulatory Flexibility Act Certification

I, Raymond J. Donovan, Secretary of Labor, hereby certify, pursuant to 5 U.S.C. 605(b), that the final rules contained in 20 CFR 718 and 725, described in this document, will not have a significant economic impact on a substantial number of small entities. This conclusion is reached because the final rules only implement the 1981 amendments to the Black Lung Benefits Act and they do not, in themselves, impose any additional requirements upon small entities. Thus no economic impact is expected with respect to small entities.

Signed at Washington, D.C., this 25th day of May 1983.

Raymond J. Donovan,

Secretary of Labor.

The program affected by this rule and its program number in the Catalog of Federal Domestic Assistance is: Coal Mine Workers' Compensation (Black Lung), 17.307.

List of Subjects

20 CFR Part 718

Black lung benefits, Lung diseases, Miners, Mines, Workers' compensation, X-rays.

20 CFR Part 725

Administrative practice and procedure, Black lung benefits, Lung disease, Miners, Mines, Workers' compensation.

For the reasons set out in the preamble, Parts 718 and 725 of Chapter IV of Title 20 of the Code of Federal Regulations are amended as follows:

PART 718—STANDARDS FOR DETERMINING COAL MINER'S TOTAL DISABILITY OR DEATH DUE TO PNEUMOCONIOSIS

1. The authority for Part 718 reads as follows:

Authority: 5 U.S.C. 301, Reorganization Plan No. 6 of 1950, 15 FR 3174, 30 U.S.C. 901 et seq. 902(f), 925, 932, 934, 936, 945; 33 U.S.C. 901 et seq.

2. Section 718.1 is revised to read as follows:

§ 718.1 Statutory Provisions.

(a) Under Title IV of the Federal Coal Mine Health and Safety Act of 1969, as amended by the Black Lung Benefits Act of 1972, the Federal Mine Safety and Health Amendments Act of 1977, the Black Lung Benefits Reform Act of 1977, the Black Lung Benefits Revenue Act of 1977, the Black Lung Benefits Amendments of 1981, and the Black Lung Benefits Revenue Act of 1981, benefits are provided to miners who are totally disabled due to pneumoconiosis and to certain survivors of a miner who died due to or while totally or partially disabled by pneumoconiosis. However, unless the miner was found entitled to benefits as a result of a claim filed prior to January 1, 1982, benefits are payable on survivors' claims filed on or after January 1, 1982, only when the miner's death was due to pneumoconiosis, except where the survivor's entitlement is established pursuant to § 718.306 of this part on a claim filed prior to June 30, 1982. Before the enactment of the Black Lung Benefits Reform Act of 1977, the authority for establishing standards of eligibility for miners and their survivors was placed with the Secretary of Health, Education, and Welfare. These standards were set forth by the Secretary of Health, Education, and Welfare in Subpart D of Part 410 of this title, and adopted by the Secretary of Labor for application to all claims filed with the Secretary of Labor (see 20 CFR 718.2, 1978). Amendments made to section 402(f) of the Act by the Black Lung Benefits Reform Act of 1977 authorize the Secretary of Labor to establish criteria for determining total or partial disability or death due to pneumoconiosis to be applied in the processing and adjudication of claims filed under Part C of Title IV of the Act. Section 402(f) of the Act further authorizes the Secretary of Labor, in consultation with the National Institute for Occupational Safety and Health, to establish criteria for all appropriate medical tests administered in connection with a claim for benefits. Section 413(b) of the Act authorizes the Secretary of Labor to establish criteria for the techniques to be used to take chest roentgenograms (X-rays) in connection with a claim for benefits under the Act.

(b) The Black Lung Benefits Reform Act of 1977 provided that with respect to a claim filed on or before the effective date of this part, that is filed prior to April 1, 1980, or reviewed under section 435 of the Act, the standards to be applied in the adjudication of such claim shall not be more restrictive than the criteria applicable to a claim filed on June 30, 1973, with the Social Security Administration, whether or not the final disposition of the claim occurs after March 31, 1980. All such claims shall be reviewed under the criteria set forth in Part 727 of this title.

3. Section 718.2 is revised to read as follows:

§ 718.2 Applicability of this part.

This part is applicable to the adjudication of all claims filed after March 31, 1980, and considered by the Secretary of Labor under section 422 of the Act and Part 725 of this subchapter. If a claim subject to the provisions of section 435 of the Act and Subpart C of Part 727 of this subchapter cannot be approved under that subpart, such claim may be approved, if appropriate, under the provisions contained in this part. The provisions of this part shall, to the extent appropriate, be construed together in the adjudication of all claims.

4. In § 718.102, paragraph (e) is revised to read as follows:

§ 718.102 Chest roentgenograms (X-rays).

* * * * *

(e) No chest X-ray shall constitute evidence of the presence or absence of pneumoconiosis unless it is in substantial compliance with the requirements of this section and Appendix A, except that in the case of a deceased miner where the only available X-ray is of sufficient quality for determining the presence or absence of pneumoconiosis and such X-ray was interpreted by a Board-certified or Board-eligible radiologist or a certified "B" reader (see § 718.206) such X-ray shall be considered and shall be accorded such weight and probative

value as is appropriate in light of all of the evidence applicable to the individual case. It shall be presumed, in the absence of evidence to the contrary, that the requirements of Appendix A have been met.

5. In § 718.106, paragraph (b) is revised to read as follows:

§ 718.106 Autopsy; biopsy.

* * * * *

(b) No report of an autopsy or biopsy submitted in connection with a claim shall be considered unless the report complies with the requirements of this section, except that in the case of a miner who died prior to March 31, 1980, such reports shall be considered even when the reports are not in substantial compliance with the requirements of this section. Such nonconforming reports concerning miners who died prior to March 31, 1980, shall be accorded such weight and probative value as is appropriate in light of all of the evidence applicable to the individual case.

* * * * *

6. In § 718.202, paragraphs (a)(1)(i) and (c) are revised as follows:

§ 718.202 Determining the existence of pneumoconiosis.

(a) * * *

(1) * * *

(i) In all claims filed before January 1, 1982, where there is other evidence of pulmonary or respiratory impairment, a Board-certified or Board-eligible radiologist's interpretation of a chest X-ray shall be accepted by the Office if the X-ray is in compliance with the requirements of § 718.102 and if such X-ray has been taken by a radiologist or qualified radiologic technologist or technician and there is no evidence that the claim has been fraudulently represented. However, these limitations shall not apply to any claim filed on or after January 1, 1982.

* * * * *

(c) A determination of the existence of pneumoconiosis shall not be made solely on the basis of a living miner's statements or testimony. Nor shall such a determination be made upon a claim involving a deceased miner filed on or after January 1, 1982, solely based upon the affidavit(s) (or equivalent sworn testimony) of the claimant and/or his or her dependents who would be eligible for augmentation of the claimant's benefits if the claim were approved.

7. In § 718.204, paragraph (c)(5) is revised to read as follows:

§ 718.204 Total disability defined. Criteria for determining total disability.

* * * * *

(c) * * *

(5) In a case involving a deceased miner in which the claim was filed prior to January 1, 1982, where there is no medical or other relevant evidence, affidavits (or equivalent sworn testimony) from persons knowledgeable of the miner's physical condition shall be sufficient to establish total (or under § 718.306 partial) disability. On a survivor's claim filed on or after January 1, 1982, but prior to June 30, 1982, where entitlement is sought to be established in accordance with § 718.306, where there is no medical or other relevant evidence, affidavits (or equivalent sworn testimony) from persons knowledgeable of the miner's physical condition shall be sufficient to establish total or partial disability; however, such a determination shall not be based solely upon the affidavits or testimony of the claimant and/or his or her dependents who would be eligible for augmentation of the claimant's benefits if the claim were approved. Except as provided in § 718.305, proof that the miner suffers or suffered from a totally disabling respiratory or pulmonary impairment as defined in paragraphs (c)(1), (c)(2), (c)(4) and this paragraph shall not, by itself, be sufficient to establish that the miner's impairment is or was due to pneumoconiosis.

* * * * *

8. Section 718.205 is amended by revising paragraph (b), revising former paragraph (c) and redesignating it as paragraph (b)(5), and adding paragraphs (c) and (d) to read as follows:

§ 718.205 Death due to pneumoconiosis.

* * * * *

(b) For the purpose of adjudicating survivors' claims filed prior to January 1, 1982, death will be considered due to pneumoconiosis if any of the following criteria is met:

(1) Where competent medical evidence established that the miner's death was due to pneumoconiosis, or

(2) Where death was due to multiple causes including pneumoconiosis and it is not medically feasible to distinguish which disease caused death or the extent to which pneumoconiosis contributed to the cause of death, or

(3) Where the presumption set forth at § 718.304 is applicable, or

(4) Where either of the presumptions set forth at § 718.303 or § 718.305 is applicable and has not been rebutted.

(5) Death shall be considered to be due to pneumoconiosis where the cause of death is significantly related to or aggravated by pneumoconiosis.

(c) For the purpose of adjudicating survivors' claims filed on or after January 1, 1982, death will be considered to be due to pneumoconiosis if any of the following criteria is met:

(1) Where competent medical evidence established that the miner's death was due to pneumoconiosis, or

(2) Where pneumoconiosis was a substantially contributing cause or factor leading to the miner's death or where the death was caused by complications of pneumoconiosis, or

(3) Where the presumption set forth at § 718.304 is applicable.

(4) However, survivors are not eligible for benefits where the miner's death was caused by a traumatic injury or the principal cause of death was a medical condition not related to pneumoconiosis, unless the evidence establishes that pneumoconiosis was a substantially contributing cause of death.

(d) To minimize the hardships to potentially entitled survivors due to the disruption of benefits upon the miner's death, survivors' claims filed on or after January 1, 1982, shall be adjudicated on an expedited basis in accordance with the following procedures. The initial burden is upon the claimant, with the assistance of the deputy commissioner, to develop evidence which meets the requirements of paragraph (c) of this section. Where the initial medical evidence appears to establish that death was due to pneumoconiosis, the survivor will receive benefits unless the weight of the evidence as subsequently developed by the Department or the responsible operator establishes that the miner's death was not due to pneumoconiosis as defined above. However, no such benefits shall be found payable before the party responsible for the payment of such benefits shall have had a reasonable opportunity for the development of rebuttal evidence. See §§ 725.412–725.415 concerning the operator's opportunity to develop evidence prior to an initial determination and §§ 718.307 and 718.403 on the burden of proof.

9. Section 718.303 is amended by adding paragraph (c) to read as follows:

§ 718.303 Death from a respirable disease.

* * * * *

(c) This section is not applicable to any claim filed on or after January 1, 1982.

10. Section 718.305 is amended by adding paragraph (e) to read as follows:

§ 718.305 Presumption of pneumoconiosis.

* * * * *

(e) This section is not applicable to any claim filed on or after January 1, 1982.

11. In § 718.306, paragraph (a) is revised to read as follows:

§ 718.306 Presumption of entitlement applicable to certain death claims.

(a) In the case of a miner who died on or before March 1, 1978, who was employed for 25 or more years in one or more coal mines prior to June 30, 1971, the eligible survivors of such miner who claims have been filed prior to June 30, 1982, shall be entitled to the payment of benefits, unless it is established that at the time of death such miner was not partially or totally disabled due to pneumoconiosis. Eligible survivors shall, upon request, furnish such evidence as is available with respect to the health of the miner at the time of death, and the nature and duration of the miner's coal mine employment.

* * * * *

PART 725—CLAIMS FOR BENEFITS UNDER PART C OF TITLE IV OF THE FEDERAL MINE SAFETY AND HEALTH ACT, AS AMENDED

12. The authority for Part 725 reads as follows:

Authority: 5 U.S.C. 301, Reorganization Plan No. 6 of 1950, 15 FR 3174, 30 U.S.C. 901 et seq., 902(f), 925, 932, 934, 936, 945; 33 U.S.C. 901 et seq.

13. Section 725.1 is amended by revising paragraphs (a) and (g), redesignating paragraph (h) as paragraph (j) and adding new paragraphs (h) and (i) to read as follows:

§ 725.1 Statutory provisions.

(a) *General.* Title IV of the Federal Mine Safety and Health Act of 1977, as amended by the Black Lung Benefits Reform Act of 1977, the Black Lung Benefits Revenue Act of 1977, the Black Lung Benefits Revenue Act of 1981 and the Black Lung Benefits Amendments of 1981, provides for the payment of benefits to a coal miner who is totally disabled due to pneumoconiosis (black lung disease) and to certain survivors of a miner who dies due to pneumoconiosis. For claims filed prior to January 1, 1982, certain survivors could receive benefits if the miner was totally (or for claims filed prior to June 30, 1982, in accordance with section 411(c)(5) of the Act, partially) disabled due to pneumoconiosis, or if the miner died due to pneumoconiosis.

* * * * *

(g) *Changes made by the the Black Lung Benefits Revenue Act of 1977.* The Black Lung Benefits Revenue Act of 1977 established the Black Lung Disability Trust Fund which is financed by a specified tax imposed upon each ton of coal (except lignite) produced and sold or used in the United States after March 31, 1978. The Secretary of the Treasury is the managing trustee of the fund and benefits are paid from the fund upon the direction of the Secretary of Labor. The fund was made liable for the payment of all claims approved under section 415, part C and section 435 of the Act for all periods of eligibility occurring on or after January 1, 1974, with respect to claims where the miner's last coal mine employment terminated before January 1, 1970, or where individual liability can not be assessed against a coal mine operator due to bankruptcy, insolvency, or the like. The fund was also authorized to pay certain claims which a responsible operator has refused to pay within a reasonable time, and to seek reimbursement from such operator. The purpose of the Fund and the Black Lung Benefits Revenue Act of 1977 was to insure that coal mine operators, or the coal industry, will fully bear the cost of black lung disease for the present time and in the future. The Black Lung Benefits Revenue Act of 1977 also contained other provisions relating to the fund and authorized a coal mine operator to establish its own trust fund for the payment of certain claims.

(h) *Changes made by the Black Lung Benefits Amendments of 1981.* In addition to the change reflected in paragraph (a) of this section, the Black Lung Benefits Amendments of 1981 made a number of significant changes in the Act's standards for determining eligibility for benefits and concerning the payment of such benefits. The following changes are all applicable to claims filed on or after January 1, 1982: (1) The Secretary of Labor may re-read any X-ray submitted in support of a claim and may rely upon a second opinion concerning such an X-ray as a means of auditing the validity of the claim; (2) the rebuttable presumption that the death of a miner with ten or more years employment in the coal mines, who died of a respirable disease, was due to pneumoconiosis is no longer applicable; (3) the rebuttable presumption that the total disability of a miner with fifteen or more years employment in the coal mines, who has demonstrated a totally disabling respiratory or pulmonary impairment, is due to pneumoconiosis is no longer applicable; (4) in the case of deceased miners, where no medical or other relevant evidence is available, only affidavits from persons not eligible to receive benefits as a result of the adjudication of the claim will be considered sufficient to establish entitlement to benefits; (5) unless the miner was found entitled to benefits as a result of a claim filed prior to January 1, 1982, benefits are payable on survivors' claims filed on and after January 1, 1982, only when the miner's death was due to pneumoconiosis; (6) benefits payable under this part are subject to an offset on account of excess earnings by the miner; and (7) other technical amendments.

(i) *Changes made by the Black Lung Benefits Revenue Act of 1981.* The Black Lung Benefits Revenue Act of 1981 temporarily doubles the amount of the tax upon coal until the Trust Fund shall have repaid all advances received from the United States Treasury and the interest on all such advances. The Fund is also made liable for the payment of certain claims previously denied under the 1972 version of the Act and subsequently approved under section 435 and for the reimbursement of operators and insurers for benefits previously paid by them on such claims. With respect to claims filed on or after January 1, 1982, the Fund's authorization for the payment of interim benefits is limited to the payment of prospective benefits only. These changes also define the rates of interest to be paid to and by the Fund.

(j) *Longshoremen's Act provisions.* The adjudication of claims filed under sections 415, 422 and 435 of the Act is governed by various procedural and other provisions contained in the Longshoremen's and Harbor Workers' Compensation Act (LHWCA), as amended from time to time, which are incorporated within the Act by sections 415 and 422. The incorporated LHWCA provisions are applicable under the Act except as is otherwise provided by the Act or as provided by regulations of the Secretary. Although occupational disease benefits are also payable under the LHWCA, the primary focus of the procedures set forth in that Act is upon a time definite of traumatic injury or death. Because of this and other significant differences between a black lung and longshore claim, it is determined, in accordance with the authority set forth in section 422 of the Act, that certain of the incorporated procedures prescribed by the LHWCA must be altered to fit the circumstances ordinarily confronted in the adjudication of a black lung claim. The changes made are based upon the Department's experience in processing black lung claims since July 1, 1973, and all such changes are specified in this part or part 727 of this subchapter. No other departure from the incorporated provisions of the LHWCA is intended.

14. Section 725.4 is amended by revising paragraphs (a) and (d) to read as follows:

§ 725.4 Applicability of other parts in this title.

(a) *Part 718.* Part 718 of this subchapter, which contains the criteria and standards to be applied in determining whether a miner is or was totally disabled due to pneumoconiosis, or whether a miner died due to pneumoconiosis, shall be applicable to the determination of claims under this part. Claims filed after March 31, 1980, are subject to the revised part 718 as promulgated by the Secretary in accordance with section 402(f)(1) of the Act on February 29, 1980. The criteria contained in subpart C of part 727 of this subchapter are applicable in determining claims filed prior to April 1, 1980, under this part, and such criteria shall be applicable at all times with respect to claims filed under this part and under section 11 of the Black Lung Benefits Reform Act of 1977.

* * * * *

(d) *Part 727.* Part 727 of this subchapter, which governs the review, adjudication and payment of pending and denied claims under section 435 of the Act, is applicable to this part as provided in such part 727. The criteria contained in subpart C of part 727 for determining a claimant's eligibility for benefits shall be applicable under this part with respect to all claims filed before April 1, 1980, and to all claims filed under this part and under section 11 of the Black Lung Benefits Reform Act of 1977.

* * * * *

15. Section 725.101 is amended by revising paragraphs (a)(1), (a)(10), and (a)(31) to read as follows:

§ 725.101 Definitions and use of terms.

(a) * * *

(1) The "Act" means the Federal Coal Mine Health and Safety Act, Pub. L. 91–173, 83 Stat. 742, 30 U.S.C. 801–960, as amended by the Black Lung Benefits Act of 1972, the Mine Safety and Health Act of 1977, the Black Lung Benefits Reform Act of 1977, the Black Lung Benefits Revenue Act of 1977, the Black Lung Benefits Revenue Act of 1981, and the Black Lung Benefits Amendments of 1981.

* * * * *

(10) "Division" or "DCMWC" means the Division of Coal Mine Workers' Compensation in the OWCP, United States Department of Labor.

* * * * *

(31) "Black Lung Disability Trust Fund" or the "Fund" means the Black Lung Disability Trust Fund established by the Black Lung Benefits Revenue Act of 1977, as amended by the Black Lung Benefits Revenue Act of 1981, for the payment of certain claims adjudicated under this part (see subpart G of this part).

* * * * *

16. In § 725.102, paragraph (a) is revised to read as follows:

§ 725.102 Disclosure of program information.

(a) All reports, records, or other documents filed with the OWCP with respect to claims are the records of the OWCP. The Director or his or her designee shall be the official custodian of those records maintained by the OWCP at its national office. The Deputy Commissioner shall be the official custodian of those records maintained at a district office.

* * * * *

17. Section 725.201 is amended by revising paragraphs (a)(2), (a)(4), and (b) to read as follows:

§ 725.201 Who is entitled to benefits; contents of this subpart.

(a) * * *

(2) The surviving spouse or surviving divorced spouse or, where neither exists, the child of a deceased miner, where the deceased miner;

(i) Was receiving benefits under section 415 or Part C of title IV of the Act as a result of a claim filed prior to January 1, 1982; or

(ii) Is determined as a result of a claim filed prior to January 1, 1982, to have been totally disabled due to pneumoconiosis at the time of death, or to have died due to pneumoconiosis. Survivors of miners whose claims are filed on or after January 1, 1982, must establish that the deceased miner's death was due to pneumoconiosis in order to establish their entitlement to benefits, except where entitlement is established under § 718.306 of part 718 on a survivor's claim filed prior to June 30, 1982, or;

* * * * *

(4) The surviving dependent parents, where there is no surviving spouse or child, or the surviving dependent brothers or sisters, where there is no surviving spouse, child, or parent, of a miner, where the deceased miner;

(i) Was receiving benefits under section 415 or Part C of title IV of the Act as a result of a claim filed prior to January 1, 1982; or

(ii) Is determined as a result of a claim filed prior to January 1, 1982, to have been totally disabled due to pneumoconiosis at the time of death, or to have died due to pneumoconiosis. Survivors of miners whose claims are filed on or after January 1, 1982, must establish that the deceased miner's death was due to pneumoconiosis in order to establish their entitlement to benefits, except where entitlement is established under § 718.306 of part 718 on a survivor's claim filed prior to June 30, 1982.

(b) Section 411(c)(5) of the Act provides for the payment of benefits to the eligible survivors of a miner employed for 25 or more years in the mines prior to June 30, 1971, if the miner's death occurred on or before March 1, 1978, and if the claim was filed prior to June 30, 1982, unless it is established that at the time of death, the miner was not totally or partially disabled due to pneumoconiosis. For the purposes of this part the term "total disability" shall mean partial disability with respect to a claim for which eligibility is established under section 411(c)(5) of the Act. See § 718.306 of part 718 which implements this provision of the Act.

* * * * *

18. Section 725.205 is amended by revising paragraph (c) to read as follows:

§ 725.205 Determination of dependency; spouse.

* * * * *

(c) The miner has been ordered by a court to contribute to such individual's support (see § 725.233(e)); or

* * * * *

19. Section 275.207 is amended by revising paragraph (c) to read as follows:

§ 725.207 Determination of dependency; divorced spouse.

* * * * *

(c) A court order requires the miner to furnish substantial contributions to the individual's support (see § 725.233 (c), (e)).

20. Section 725.208 is amended by revising paragraphs (f)(1) and (f)(2) to read as follows:

§ 725.208 Determination of relationship; child.

* * * * *

(f) * * *

(1) The beneficiary, prior to his or her entitlement to benefits, has acknowledged in writing that the individual is his or her son or daughter, or has been decreed by a court to be the parent of the individual, or has been ordered by a court to contribute to the support of the individual (see § 725.233(e)) because the individual is his or her son or daughter; or

(2) Such beneficiary is shown by satisfactory evidence to be the father or mother of the individual and was living with or contributing to the support of the

individual at the time the beneficiary became entitled to benefits.

21. Section 725.212 is revised to read as follows:

§ 725.212 Condition of entitlement; surviving spouse or surviving divorced spouse.

(a) An individual who is the surviving spouse or surviving divorced spouse of a miner is eligible for benefits if such individual:

(1) Is not married;

(2) Was dependent on the miner at the pertinent time; and

(3) The deceased miner either:

(i) Was receiving benefits under section 415 or part C of title IV of the Act at the time of death as a result of a claim filed prior to January 1, 1982; or

(ii) Is determined as a result of a claim filed prior to January 1, 1982, to have been totally disabled due to pneumoconiosis at the time of death or to have died due to pneumoconiosis. A surviving spouse or surviving divorced spouse of a miner whose claim is filed on or after January 1, 1982, must establish that the deceased miner's death was due to pneumoconiosis in order to establish entitlement to benefits, except where entitlement is established under § 718.306 of part 718 on a claim filed prior to June 30, 1982.

22. Section 725.213 is amended by revising paragraph (b)(3) to read as follows:

§ 725.213 Duration of entitlement; surviving spouse or surviving divorced spouse.

* * * * *

(b) * * *

(3) Where the individual qualifies as the surviving spouse of a miner under § 725.204(d), such individual ceases to qualify as provided in that paragraph.

23. Section 725.214 is amended by revising paragraph (d) to read as follows:

§ 725.214 Determination of relationship; surviving spouse.

* * * * *

(d) Such individual went through a marriage ceremony with the miner resulting in a purported marriage between them and which but for a legal impediment (see § 725.230) would have been a valid marriage, unless such individual entered into the purported marriage with knowledge that it was not a valid marriage, or if such individual and the miner were not living in the same household at the time of the miner's death. The provisions of this paragraph shall not apply if another person is or has been entitled to benefits as the surviving spouse of the miner and such other person is, or is considered to be, the surviving spouse of such miner under paragraph (a), (b), or (c) of this section at the time such individual files a claim for benefits.

24. Section 725.217 is amended by revising paragraphs (a)(1), (a)(2) and (a)(3) to read as follows:

§ 725.217 Determination of dependency; surviving divorced spouse.

(a) * * *

(1) The individual was receiving at least one-half of his or her support from the miner (see § 725.233(g)); or

(2) The individual was receiving substantial contributions from the miner pursuant to a written agreement (see § 725.233 (e) and (f)); or

(3) A court order required the miner to furnish substantial contributions to the individual's support (see §275.233 (c) and (e)).

25. Section 725.218 is amended by revising paragraph (a)(1) and (a)(2) to read as follows:

§ 725.218 Conditions of entitlement; child.

(a) * * *

(1) Was receiving benefits under section 415 or Part C of title IV of the Act as a result of a claim filed prior to January 1, 1982, or

(2) Is determined as a result of a claim filed prior to January 1, 1982, to have been totally disabled due to pneumoconiosis at the time of death, or to have died due to pneumoconiosis. A surviving dependent child of a miner whose claim is filed on or after January 1, 1982, must establish that the miner's death was due to pneumoconiosis in order to establish entitlement to benefits, except where entitlement is established under § 718.306 of part 718 on a claim filed prior to June 30, 1982.

* * * * *

26. Section 725.219 is amended by revising paragraph (b)(3)(ii) to read as follows:

§ 725.219 Duration of entitlement; child.

* * * * *

(b) * * *

(3) * * *

(ii) Is not a student (as defined in § 725.209(b)) during any part of the month in which the child attains age 18;

* * * * *

27. Section 725.220 is amended by revising paragraph (f)(2) to read as follows:

§ 725.220 Determination of relationship; child.

* * * * *

(f) * * *

(2) Such beneficiary is shown by satisfactory evidence to be the father or mother of the individual and was living with or contributing to the support of the individual at the time such beneficiary became entitled to benefits.

28. Section 725.222 is amended by revising paragraphs (a)(5)(i) and (a)(5)(ii) to read as follows:

§ 725.222 Conditions of entitlement; parent, brother, or sister.

(a) * * *

(5) * * *

(i) Was entitled to benefits under section 415 or Part C of title IV of the Act as a result of a claim filed prior to January 1, 1982; or

(ii) Is determined as a result of a claim filed prior to January 1, 1982, to have been totally disabled due to pneumoconiosis at the time of death or to have died due to pneumoconiosis. A surviving dependent parent, brother or sister of a miner whose claim is filed on or after January 1, 1982, must establish that the miner's death was due to pneumoconiosis in order to establish entitlement to benefits, except where entitlement is established under § 718.306 of part 718 on a claim filed prior to June 30, 1982.

* * * * *

29. Section 725.225 is amended by revising paragraph (b) to read as follows:

§ 725.225 Determination of dependency; parent, brother, or sister.

* * * * *

(b) The individual was totally dependent on the miner for support (see § 725.233(h)).

30. Section 725.367 is amended by redesignating the existing text as paragraph (a) and adding paragraph (b). As amended § 725.367 reads as follows:

§ 725.367 Payment of a claimant's attorney's fee by responsible operator.

(a) If an operator declines to pay any benefits on or before the 30th day after receiving written notice of its liability for a claim on the ground that there is no liability for benefits within the provisions of the Act, and the person seeking benefits shall thereafter have utilized the services of an attorney in the successful prosecution of the claim, there shall be awarded, in addition to the award of benefits, in an order, a reasonable attorney's fee against the operator or carrier in an amount approved by the deputy commissioner, administrative law judge, Board, or court as the case may be, which shall be paid promptly and directly by the operator or carrier to the claimant's attorney in a lump sum after the order becomes final.

(b) Section 205(a) of the Black Lung Benefits Amendments of 1981, Pub. L. 97-119, amended section 422 of the Act and relieved operators and carriers from liability for the payment of benefits on certain claims. Payment of benefits on those claims was made the responsibility of the Trust Fund. The claims subject to this transfer of liability are described in § 725.496 of this part. On claims subject to the transfer of liability described above the Trust Fund will pay all fees and costs which have been or will be awarded to claimant's attorneys which were or would have become the liability of an operator or carrier but for the enactment of the 1981 Amendments and which have not already been paid by such operator or carrier. Section 9501(d)(7) of the Internal Revenue Code, which was also enacted as a part of the 1981 Amendments to the Act, expressly prohibits the Trust Fund from reimbursing an operator or carrier for any attorney fees or costs which it has paid on cases subject to the transfer of liability provisions.

31. Section 725.420 is amended by revising paragraphs (a) and (b) to read as follows:

§ 725.420 Initial determinations.

(a) Section 9501(d)(1)(A)(1) of the Internal Revenue Code provides that the Black Lung Disability Trust Fund shall begin the payment of benefits on behalf of an operator in any case in which the operator liable for such payments "has not commenced payment of such benefits within 30 days after the date of an initial determination of eligibility by the Secretary * * *." For claims filed on or after January 1, 1982, the payment of such interim benefits from the Fund is limited to "benefits accruing after the date of such initial determination * * *."

(b) Except as provided in § 725.415 of this subpart, after the deputy commissioner has determined that a claimant is eligible for benefits, on the basis of all evidence submitted by a claimant and operator, and has determined that a hearing will be necessary to resolve the claim, the deputy commissioner shall in writing so inform the parties and direct the operator to begin the payment of benefits to the claimant in accordance with § 725.522. The date on which this writing is sent to the parties shall be considered the date of initial determination of the claim.

* * * * *

32. In § 725.421, paragraph (b)(1) is revised to read as follows:

§ 725.421 Referral of a claim to the Office of Administrative Law Judges.

* * * * *

(b) * * *

(1) Copies of the claim form or forms;

* * * * *

33. In § 725.456, paragraph (b)(1) is revised to read as follows:

§ 725.456 Introduction of documentary evidence.

* * * * *

(b) * * *

(1) Any other documentary material, including medical reports, which was not submitted to the deputy commissioner, may be received in evidence subject to the objection of any party, if such evidence is sent to all other parties at least 20 days before a hearing is held in connection with the claim.

* * * * *

34. In § 725.490, paragraph (a) is revised to read as follows:

§ 725.490 Statutory provisions and scope.

(a) One of the major purposes of the black lung benefits amendments of 1977 was to provide a more effective means of transferring the responsibility for the payment of benefits from the Federal government to the coal industry with respect to claims filed under this part. In furtherance of this goal, a Black Lung Disability Trust Fund financed by the coal industry was established by the Black Lung Benefits Revenue Act of 1977. The primary purpose of the Fund is to pay benefits with respect to all claims in which the last coal mine employment of the miner on whose account the claim was filed occurred before January 1, 1970. With respect to most claims in which the miner's last coal mine employment occurred after January 1, 1970, individual coal mine operators will be liable for the payment of benefits. The 1981 amendments to the Act relieved individual coal mine operators from the liability for payment of certain special claims involving coal mine employment on or after January 1, 1970, where the claim was previously denied and subsequently approved under section 435 of the Act. See § 725.496 for a detailed description of these special claims. Where no such operator exists or the operator determined to be liable is in default in any case, the Fund shall pay the benefits due and seek reimbursement as is appropriate. See also § 725.420 for the Fund's role in the payment of interim benefits in certain contested cases. In addition, the Black Lung Benefits Reform Act of 1977 amended certain provisions affecting the scope of coverage under the Act and describing the effects of particular corporate transactions on the liability of operators.

* * * * *

35. Section § 725.496 is added to part 725 to read as follows:

§ 725.496 Special claims transferred to the Trust Fund.

(a) The 1981 amendments to the Act amended section 422 of the Act and transferred liability for payment of certain special claims from operators and carriers to the Trust Fund. These provisions apply to claims which were denied before March 1, 1978, and which have been or will be approved in accordance with section 435 of the Act.

(b) Section 402(i) of the Act defines three classes of denied claims subject to the transfer provisions:

(1) Claims filed with and denied by the Social Security Administration before March 1, 1978:

(2) claims filed with the Department of Labor in which the claimant was notified by the Department of an administrative or informal denial before March 1, 1977, and in which the claimant did not within one year of such notification either:

(i) Request a hearing; or

(ii) Present additional evidence; or

(iii) Indicate an intention to present additional evidence; or

(iv) Request a modification or reconsideration of the denial on the ground of a change in conditions or because of a mistake in a determination of fact;

(3) Claims filed with the Department of Labor and denied under the law in effect prior to the enactment of the Black Lung Benefits Reform Act of 1977, that is, before March 1, 1978, following a formal hearing before an administrative law judge or administrative review before the Benefits Review Board or review before a United States Court of Appeals.

(c) Where more than one claim was filed with the Social Security Administration and/or the Department of Labor prior to March 1, 1978, by or on behalf of a miner or a surviving dependent of a miner, unless such claims were required to be merged by the agency's regulations, the procedural history of each such claim must be considered separately to determine whether the claim is subject to the transfer of liability provisions.

(d) For a claim filed with and denied by the Social Security Administration prior to March 1, 1978, to come within the transfer provisions, such claim must have been or must be approved under the provisions of section 435 of the Act. No claim filed with and denied by the

Social Security Administration is subject to the transfer of liability provisions unless a request was made by or on behalf of the claimant for review of such denied claim under section 435. Such review must have been requested by the filing of a valid election card or other equivalent document with the Social Security Administration in accordance with section 435(a) and its implementing regulations at 20 CFR 410.700–707.

(e) Where a claim filed with the Department of Labor prior to March 1, 1977, was subjected to repeated administrative or informal denials, the last such denial issued during the pendency of the claim determines whether the claim is subject to the transfer of liability provisions.

(f) Where a miner's claim comes within the transfer of liability provisions of the 1981 amendments the Trust Fund is also liable for the payment of any benefits to which the miner's dependent survivors are entitled after the miner's death. However, if the survivor's entitlement was established on a separate claim not subject to the transfer of liability provisions prior to approval of the miner's claim under section 435, the party responsible for the payment of such survivors' benefits shall not be relieved of that responsibility because the miner's claim was ultimately approved and found subject to the transfer of liability provisions.

36. Section 725.497 is added to part 725 to read as follows:

§ 725.497 Procedures in special claims transferred to the Trust Fund.

(a) *General.* It is the purpose of this section to define procedures to expedite the handling and disposition of claims affected by the benefit liability transfer provisions of Section 205 of the Black Lung Benefits Amendments of 1981.

(b) *Action by the Department.* The OWCP shall, in accordance with the criteria contained in § 725.496, review each claim which is or may be affected by the provisions of Section 205 of the Black Lung Benefits Amendments of 1981. Any party to a claim, adjudication officer, or adjudicative body may request that such a review be conducted and that the record be supplemented with any additional documentation necessary for an informed consideration of the transferability of the claim. Where the issue of the transferability of the claim can not be resolved by agreement of the parties and the evidence of record is not sufficient for a resolution of the issue, the hearing record may be reopened or the case remanded for the development of the additional evidence concerning the procedural history of the claim necessary to such resolution. Such determinations shall be made on an expedited basis.

(c) *Dismissal of operators.* If it is determined that a coal mine operator or insurance carrier which previously participated in the consideration or adjudication of any claim, may no longer be found liable for the payment of benefits to the claimant by reason of section 205 of the Black Lung Benefits Amendments of 1981, such operator or carrier shall be promptly dismissed as a party to the claim. The dismissal of an operator or carrier shall be concluded at the earliest possible time and in no event shall an operator or carrier participate as a necessary party in any claim for which only the Trust Fund may be liable.

(d) *Procedure following dismissal of an operator.* After it has been determined that an operator or carrier must be dismissed as a party in any claim in accordance with this section, the Director shall take such action as is authorized by the Act to bring about the proper and expeditious resolution of the claim in light of all relevant medical and other evidence. Action to be taken in this regard by the Director may include, but is not limited to, the assignment of the claim to the Black Lung Disability Trust Fund for the payment of benefits, the reimbursement of benefits previously paid by an operator or carrier if appropriate, the defense of the claim on behalf of the Trust Fund, or proceedings authorized by § 725.310.

(e) Any claimant whose claim has been subsequently denied in a modification proceeding will be entitled to expedited review of the modification decision. Where a formal hearing was previously held, the claimant may waive his right to a further hearing and ask that a decision be made on the record of the prior hearing, as supplemented by any additional documentary evidence which the parties wish to introduce and briefs of the parties, if desired. In any case in which the claimant waives his right to a second hearing, a decision and order must be issued within 30 days of the date upon which the parties agree the record has been completed.

37. In § 725.520, the introductory text of paragraph (a), paragraphs (a)(1), (a)(2), and (a)(3) are revised and paragraph (a)(4) is removed to read as follows:

§ 725.520 Computation of benefits.

(a) *Basic rate.* The amount of benefits payable to a beneficiary for a month is determined, in the first instance, by computing the "basic rate." The basic rate is equal to 37½ percent of the monthly pay rate for Federal employees in GS–2, step 1. That rate for a month is determined by:

(1) Ascertaining the lowest annual rate of pay (step 1) for Grade GS–2 of the General Schedule applicable to such month (see 5 U.S.C. 5332);

(2) Ascertaining the monthly rate thereof by dividing the amount determined in paragraph (a)(1) of this section by 12; and

(3) Ascertaining the basic rate under the Act by multiplying the amount determined in paragraph (a)(2) of this section by 0.375 (that is, by 37½ percent).

* * * * *

38. In § 725.532, paragraph (a) is revised to read as follows:

§ 725.532 Suspension, reduction, or termination of payments.

(a) No suspension, reduction, or termination in the payment of benefits is permitted unless authorized by the deputy commissioner, administrative law judge, Board, or court. No suspension, reduction, or termination shall be authorized except upon the occurrence of an event which terminates a claimant's eligibility for benefits (see subpart B of this part) or as is otherwise provided in subpart C of this part, §§ 725.306 and 725.310, or this subpart (see also §§ 725.533–725.546).

* * * * *

39. In § 725.533, paragraph (a)(3) is revised to read as follows:

§ 725.533 Modification of benefit amounts; general.

(a) * * *

* * * * *

(3) In the case of benefits to a parent, brother, or sister as a result of a claim filed at any time or benefits payable on a miner's claim which was filed on or after January 1, 1982, the excess earnings from wages and from net earnings from self-employment (see § 410.530 of this title) of such parent, brother, sister, or miner, respectively; or

* * * * *

40. Section 725.536 is revised to read as follows:

§ 725.536 Reductions; excess earnings.

In the case of a surviving parent, brother, or sister, whose claim was filed at any time, or of a miner whose claim was filed on or after January 1, 1982, benefit payments are reduced as appropriate by an amount equal to the deduction which would be made with respect to excess earnings under the provisions of sections 203 (b), (f), (g), (h), (j), and (l) of the Social Security Act (42

U.S.C. 403 (b), (f), (g), (h), (j), and (l)), as if such benefit payments were benefits payable under section 202 of the Social Security Act (42 U.S.C. 402) (see §§ 404.428–404.456 of this title).

41. Section 725.608 is amended by revising paragraphs (a) and (b), redesignating previous paragraph (c) as paragraph (d), and adding a new paragraph (c) to read as follows:

§ 725.608 Interest.

(a) If an operator or other employer fails or refuses to pay any or all benefits due under the terms of an initial determination by a deputy commissioner (§ 725.420), a decision and order filed and served by an administrative law judge (§ 725.478) or a decision filed by the Board or a United States court of appeals, including any penalty awarded in addition to benefits in accordance with § 725.607, such operator shall be liable for simple annual interest on all past due benefits computed from the date on which such benefits were due and payable, in addition to such operator's or other employer's liability as is otherwise provided in this part. On claims filed on or after January 1, 1982, in which the payment of retroactive benefits has been withheld pending final adjudication of liability in accordance with section 422(d) of the Act as amended, interest on such withheld retroactive benefit payments shall begin to accumulate 30 days after the date of the first determination that such an award should be made. The first determination that such an award should be made may be a deputy commissioner's initial determination of entitlement, an award made by an administrative law judge or a decision by the Board or a court, whichever is the first such determination of entitlement made upon the claim. Except as provided in paragraph (b) of this section, interest payments owed under this paragraph shall be made directly to the beneficiary. However, an operator or other employer shall have no obligation to pay interest except with respect to benefits which it has either agreed to pay or it has been directed to pay by an order which has become final.

(b) If an operator or other employer fails or refuses to pay any or all benefits due pursuant to an award of benefits or an initial determination of eligibility made by the deputy commissioner and the Fund undertakes such payments, such operator or other employer shall be liable to the Fund for simple annual interest on all payments made by the Fund for which such operator is determined liable, computed from the first date on which such benefits are paid by the Fund, in addition to such operator's liability to the Fund, as is otherwise provided in this part. Interest payments owed pursuant to this paragraph shall be paid directly to the Fund.

(c) The rates of interest applicable to paragraphs (a) and (b) above shall be computed as follows:

(1) for all amounts outstanding prior to January 1, 1982, the rate shall be 6% simple annual interest;

(2) for all amounts outstanding for any period during calendar year 1982 the rate shall be 15% simple annual interest; and

(3) for all amounts outstanding during any period after calendar year 1982 the rate shall be simple annual interest at the rate established by section 6621 of the Internal Revenue Code of 1954 which is in effect for such period.

(d) The Fund shall not be liable for the payment of interest under any circumstances, other than the payment of interest on advances from the United States Treasury as provided by section 9501(c) of the Internal Revene Code of 1954.

Signed at Washington, D.C. this 25th day of May, 1983.

Raymond J. Donovan,

Secretary of Labor.

Part IV

Department of Commerce

National Oceanic and Atmospheric Administration

National Marine Sanctuary Program Regulations

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

15 CFR Part 922

[Docket No. 30321-44]

National Marine Sanctuary Program Regulations

AGENCY: Office of Ocean and Coastal Resource Management (OCRM), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: These final regulations revise existing procedures for identifying and selecting marine sanctuary candidates, as well as for designating these sites as national marine sanctuaries. The regulations reflect a management-oriented approach to protecting special marine areas. They reflect the refinements and programmatic policies outlined in the Program Development Plan (PDP) for the National Marine Sanctuary Program (January 1982).

EFFECTIVE DATE: These regulations are effective June 30, 1983.

FOR FURTHER INFORMATION CONTACT: John Epting, Sanctuary Programs Division, Office of Ocean and Coastal Resource Management, NOAA, 3300 Whitehaven St., N.W., Washington, D.C. 20235; (202) 634-4236.

SUPPLEMENTARY INFORMATION:

I. Authority

This notice of final rulemaking is issued under the authority of Title III of the Marine Protection, Research and Sanctuaries Act, as amended in 1980, 16 U.S.C. 1431-1434.

II. General Background

On September 7, 1982, NOAA published proposed revised regulations for continued implementation of the National Marine Sanctuary Program, pursuant to Title III of the Marine Protection, Research and Sanctuaries Act, 16 U.S.C. 1431-1434 (The Act). Written comments on the proposed regulations were accepted until November 8, 1982. These comments have been considered in preparing these final regulations. In response to comments concerning the mission and goals, criteria for the site evaluation list (SEL) and Active Candidate selection, and sanctuary size, the regulations have been modified.

The final regulations further clarify the Program's mission and goals, revise the SEL and active candidate criteria, and further clarify the concept of multiple use of sanctuary areas. These regulations supersede the previous regulations for the program (44 FR 44831 (1979)).

III. Refinements to the Regulations for the National Marine Sanctuary Program

The proposed regulations solicited comments on a number of programmatic refinements. These refinements are discussed at length in the Program Development Plan (PDP) for the National Marine Sancturary Program (published in January 1982). The PDP describes the Program's mission and goals; changes in the site identification and selection criteria; modifications to the nomination and designation process; and the components and purposes of site-specific management plans.

A. Adoption of the Mission and Goals for the Program

The Mission and Goals are based on the statute which provides that sanctuaries may be designated for their "conservation, recreational, ecological, or esthetic values" (section 302(a)). Although broad in scope, they establish a framework within which specific program activities are conducted. The Mission Statement and Goals are adopted with several revisions by the final regulations (§ 922.1).

B. Revision of the Procedures for Initially Identifying Potential Sanctuary Candidates

(1) Elimination of the List of Recommended Areas

In regulations published on July 31, 1979 (44 FR 44831), NOAA established the List of Recommended Areas (LRA) as a means of eliminating clearly inappropriate proposals, advising the public at large of recommended sites, cataloging potentially significant marine sites, and soliciting information on those sites. The LRA, however, did not totally fulfill these purposes. Since LRA site evaluation criteria were broad and allowed marginally acceptable nominations to qualify for further consideration, the procedure resulted in unnecessary controversy over the Program as a whole. A great number of nominations were received, many of which were minimally acceptable, in some instances incorporating large areas of Outer Continental Shelf waters and encompassing thousands of square miles. This caused substantial confusion and concern over the status of sites on the LRA and the likelihood of further action. Even though the majority of the listed sites would never become active candidates, the LRA has often been perceived as the blueprint for the national marine sanctuary program. These revised regulations eliminate the LRA process from the Program, and replace it with the Site Evaluation List procedure.

(2) Establishment of a Site Evaluation List

The Site Evaluation List (SEL) process, described in subpart B of the regulations, will eliminate the problems created by the LRA.

The PDP established the policies and procedures for the SEL process (see Chapter III of the PDP). Regional resource evaluation teams, selected by NOAA and using NOAA-developed identification criteria (see Appendix 1), were to identify high natural resource and human use value sites. NOAA began implementing the site identification process in February 1982. NOAA used regional resource evaluation teams, comprised of knowledgeable scientists with regional research experience, to identify, evaluate, and recommend sites suitable for sanctuary consideration in accordance with site identification criteria in Appendix 1. By actively seeking sites based on sound criteria, resource data and input from marine scientists, and by assuring early public review at the regional level, highly-qualified marine sanctuary sites can be identified. The teams' initial lists of sites were circulated for public comment in the summer and fall of 1982. Based on these comments and applying the identification criteria in Appendix 1, each regional team developed a final list recommending 3-to-5 sites per region. These sites were submitted to NOAA in early February 1983. After a preliminary analysis of the sites based on the criteria in Appendix 1, NOAA will publish a notice of the availability of potential sites for the SEL in the **Federal Register**. These sites will be subject to a ninety-day comment period. At the conclusion of the comment period, and after the effective date of the national marine sanctuary regulations, NOAA will publish a final SEL, based on the selection criteria as set forth in these regulations (see § 922.20(b)) and the public comments.

It should be noted that the identification of potential sites for listing on the draft SEL meets the requirements of NOAA's existing regulations (see 44 FR 44831, Subpart B (1979)).

After the SEL is adopted, NOAA will review an additional site for listing on the SEL only if it is an important new discovery or if there is substantial new information indicating that a known site merits such consideration. NOAA will

determine, in consultation with appropriate scientists and resource managers, whether such sites meet the selection criteria specified in Appendix 1. If such a determination is made, the sites will be placed on the Site Evaluation List for further evaluation as national marine sanctuaries, consistent with the procedures in §§ 922.20 through 922.22.

C. Selection of Active Candidates and the Actual Designation of Marine Sanctuaries

Selection from the SEL as an active candidate is the second step in evaluating a site for potential designation. Subpart C contains the criteria by which NOAA selects active candidates. A site-specific management plan is prepared as part of the designation process. The environmental impact statement evaluates the impacts of sanctuary designation and management plan implementation. Only a limited number of sites at a time will be selected as active candidates and evaluated by NOAA for sanctuary designation.

D. Enforcement Activities

The enforcement section (subpart D) has been revised to incorporate by reference NOAA-wide civil procedures and seizure and forfeiture procedures which will apply to all proceedings under this Act. These procedures are set forth, respectively, at 46 FR 61643(1981) (to be codified at 15 CFR 904.100 through 904.273) and 46 FR 31648 (1981) (to be codified at 50 CFR Part 219).

IV. Summary of Significant Comments on the Proposed Regulations and NOAA's Responses

NOAA received comments from 23 sources. Commenters included members of Congress, Federal and state agencies, representatives of the oil and gas industry, and environmental and public interest groups. All comments received are on file at the Sanctuary Programs Division, Office of Ocean and Coastal Resource Management. The comments are available at that office for review upon request. Each of the major issues raised by commenters has been summarized and NOAA's responses provided under the relevant subheading in this section.

General

Executive Order 12291 and the Regulatory Flexibility Act. Several commenters suggested that the regulations be reevaluated in light of Executive Order 12291 and the Regulatory Flexibility Act (Pub. L. 96–354).

Response: These regulations provide general standards for the future designation and subsequent implementation of national marine sanctuaries by NOAA. As regulations for a particular sanctuary are proposed, they will be reviewed pursuant to Executive Order 12291 and the Regulatory Flexibility Act, and necessary analyses prepared. This has been done in the past by NOAA. For example, regulatory impact analyses were prepared for portions of the regulations implementing both the Channel Islands and Point Reyes-Farallon Islands National Marine Sanctuaries.

Section-by-Section Analysis

Subpart A—General

Section 922.1(a)—*Mission and Goals.* (1) Several reviewers suggested that the Mission be revised to allow sanctuary designation only where the marine area is threatened by existing or potential activities. They suggest that the research goals (§ 922.1(b)(2)) and public awareness goals (§ 922.1(b)(3)) are not in themselves necessary reasons for creating a sanctuary.

Response: While NOAA agrees that an existing or probable threat to a site is an important factor in whether to designate a marine sanctuary, the prime factor to be considered is the area's natural resource and human use values compared to other sites of national significance. The Act provides two criteria for sanctuary designation—preservation and restoration of marine areas for their "conservation, recreational, ecological, or esthetic values." While the Act allows NOAA to restore areas which have been subject to man's impacts, the Act also directs NOAA to preserve special marine areas before they are threatened or harmed by man's activities. Thus, the threat to the area's conservation, recreational, ecological, or esthetic values is only one test NOAA uses in designating sanctuaries.

NOAA also agrees that the research goals and public awareness goals are not by themselves sufficient reasons for establishing a sanctuary. The prime reason for sanctuary designation is always to protect the site's conservation, recreation, ecological, and esthetic values. Sites having such values, however, often provide substantial opportunities for research and public awareness.

(2) Other reviewers suggested that the mission and goals in the proposed regulations represented a major shift in the Program toward giving human use "improper priority " over the protection of an area for its conservation, recreational, ecological or esthetic values. One reviewer stated that the replacement of "preserving or restoring such areas for their conservation, recreational, ecological or esthetic values" (Act, section 302(a)) with "comprehensive management of special marine areas for the long-term benefit and enjoyment of the public" and placing "optimum compatible public and private use" on an equal footing with enhanced resource protection represents a drastic departure from existing regulations and from the spirit of the Act.

Response: As noted in our above response, protection of the area's important natural resource values remains the Program's primary purpose. The mission and goals represent an attempt to balance resource protection with legitimate human uses of the marine environment.

(3) One commenter recommended that the mission and goals section contain a provision stating that the existing regulations of other Federal agencies be incorporated into the National Marine Sanctuary Program. For example, the Department of the Interior regulations governing oil and gas development activities on the Outer Continental Shelf should be the basis for the regulation of such activities located within a marine sanctuary.

Response: Existing regulations of federal and state authorities are considered in determining whether to designate marine sanctuaries and in developing the management framework for such sanctuaries. NOAA has, in many instances, and on a site specific basis, relied upon existing federal and state regulations to preserve or restore a sanctuary's natural resource and human use values when such regulations have been judged to meet the purposes and policies established by Congress in the Act. For example, NOAA has relied upon existing federal and state regulations to control fishing activities within a sanctuary when it has been determined that the interests of other federal and state agencies in managing these activities "are parallel to the interests of NOAA in managing the sanctuary, preserving the stocks and their habitats" (45 FR 65200). Similarly, NOAA has decided not to regulate a variety of activities, ranging from anchoring (46 FR 7942) and safeguarding waterfowl (46 FR 7939) to recreational boating (45 FR 65201) and instead relied upon existing authority. With respect to the few remaining preexisting oil and gas leases within the boundaries of the Channel Islands National Marine

Sanctuary, NOAA relies upon the regulatory authority of several federal and state agencies to fulfill the purposes of sanctuary designation under the Act (15 CFR 935.6). New regulations are promulgated only when necessary to control activities within the sanctuary (section 302(f)).

(4) *Multiple Use.* Several reviewers suggested that NOAA encourage multiple compatible use of sanctuary areas based on the capacity of the marine resource to assimilate various human and natural impacts. One reviewer specifically recommended that the regulations recognize, to the greatest extent possible, that multiple use is one of the objectives of the Sanctuary Program.

Response: NOAA intended to convey that multiple use is encouraged in sanctuaries to the greatest extent possible, as long as such use is compatible with the purposes of the sanctuary. Goals 1 and 4 of the Program has been refined to reflect this intent (§ 922.1(b) (1) and (4)).

Section 922.2—*Definitions.* (1) Several commenters suggested that "regional resource evaluation team" be defined. NOAA was also asked to describe the procedure by which the teams were chosen. One reviewer noted that since the regional teams are discussed in Chapter III.B.1 of the PDP, this discussion should either be restated or referenced in the regulations.

Response: Regional resource evaluation teams represent the teams of scientists chosen by NOAA to make the initial selection of sites based on NOAA's criteria in Appendix 1.

In developing the list of individuals for each regional team, NOAA consulted with federal agencies, universities, and private organizations including oil and gas industry representatives for recommendations on appropriate scientists. The final team members and their affiliations are:

Specific reference is also made to the description of the teams in the PDP at § 922.20(b) (see "comment").

(2) One commenter recommended adding a definition of "marine areas" which incorporates the language of section 320(a) of the Act.

Response: The recommended definition has been added at § 922.2(g).

Subpart B—Site Evaluation List

(1) Several reviewers noted with approval that this section formally abolishes the List of Recommended Areas (LRA). Such reviewers believe that the SEL has the potential to be a much more reponsible mechanism for selecting potential sites. The final regulations should make clear, however, that none of the former LRA sites will receive any further consideration for sanctuary status unless renominated as part of the SEL process. It was also requested that the regulations expressly state that listing on the SEL and later selection as an Active Candidate do not impose any sanctuary regulatory controls.

Response: Sites formally on the LRA receive no sanctuary consideration unless they have been reselected by NOAA and placed on the SEL through the site evaluation process as specified in § 922.20(a). The effect of listing on the SEL or Active Candidate List is described at § 922.21.

(2) Several commenters recommended specific criteria for use in selecting sites for the SEL; the criteria were recommended to ensure that high resource and human use value sites are

selected for the SEL. These commenters noted that if comprehensive and precise SEL criteria are included in the regulations, Appendix 1 can be deleted.

Response: NOAA has incorporated Appendix 1, as revised, into the regulations (see § 922.20(b)). Appendix 1 contains the criteria used initially by the teams and then by NOAA to comprise the SEL. These criteria are quite specific and reflect the range of values intended to be protected by the Act.

It must be noted that more comprehensive and precise criteria than those presented in Appendix 1 are not applicable to the SEL. There is simply not enough information available at the time of SEL selection to analyze in detail other factors besides natural resource and human use values. SEL selection should provide a list of high resource and human use value sites that provide the basis for further consideration. Other concerns are factored in progressively at later stages in the designation process. For example, active candidate criteria are much more specific, focusing not only on natural resource and human use values (see § 922.30(b)).

(3) Another reviewer suggested that the regulations include a specific timetable for selecting sites from the SEL to ensure that sites do not remain on the SEL indefinitely.

Response: While a precise timetable for selection of sites from the SEL cannot be established, § 922.22(a) provides that sites considered but not designated are not replaced on the SEL. Thus, the number of sites on the SEL is reduced over time. All sites remaining on the SEL after 5 years will be reevaluated.

(4) In terms of adding new sites after the SEL is established, several reviewers noted that the regulations should not assume that the selection and designation of marine sanctuaries is a one-time effort. They point out that the program is mandated by Congress "for the purpose of preserving or restoring such [marine] areas for their conservation, recreational, ecological or esthetic values." The reviewers state that the regulations should identify the process that will be followed in designating a marine sanctuary, without implying that this will only happen once or that the program is limited to a set number of sites.

For instance, one reviewer suggested that NOAA periodically review site evaluation lists and recommendations made by federal, state, and local agencies or the interested public. Similarly, another reviewer suggested that once the original SEL is established, regional resource evaluation teams of knowledgeable scientists should periodically determine whether there have been any newly discovered sites that would qualify for inclusion on the list.

Finally, another reviewer suggested a change in the procedures for selecting sites for SEL consideration. In addition to considering for the SEL sites which are important new discoveries, it was suggested that known sites be reconsidered if substantial new information arises which establishes the need to reassess a particular site.

Response: NOAA's intent is to allow new sites to be added to the SEL only if they represent significant new discoveries, or if there is substantial new information establishing the national significance of a known site, which was previously unavailable to the regional resource evaluation teams (see § 922.22(c)).

As noted in the previous above response, any sites remaining on the SEL after 5 years will be reevaluated. If additional sites are required for further sanctuary consideration, § 922.22(b) provides a procedure for initiating a new identification process.

Subpart C—Selection of Active Candidates and the Designation of National Marine Sanctuaries

Active Candidates. (1) One reviewer questioned the relationship between the criteria used for SEL selection and Active Candidate selection. It was suggested that non-ecological factors be taken into account at the SEL selection stage, rather than subsequently at the Active Candidate stage. This would eliminate one step in the process.

Response: SEL selection and Active Candidate selection serve distinct purposes. SEL selection is geared toward choosing sites of high natural resources and human use value. Since sites on the SEL already have a certain requisite level of value, the Active Candidate criteria also take other factors into consideration, including the results of public and agency review and comment during preliminary consultation (§ 922.30(c) and (d)).

(2) Another reviewer suggested that the criteria for Active Candidate selection in the existing regulations (15 CFR Part 922.21, 44 FR 44831 *et seq.* (1979)) be used. Another reviewer suggested revised criteria based partially on those in the original regulations.

Response: More specific criteria for Active Candidate selection have been developed in the regulations. The criteria embodied in the original regulations are not entirely applicable because they do not take the new SEL process and the criteria in Appendix 1 into consideration.

(3) One reviewer suggested publishing notice of preliminary consultation not only in the **Federal Register**, but also in newpapers of general circulation.

Response: Notice of preliminary consultation will be published in newspapers in the local area(s) of concern.

(4) One reviewer suggested that prior to preliminary consultation, and before actual selection of a site as an Active Candidate, that the Assistant Administrator (AA) should request comments for "the appropriate Regional Technical Advisory Groups formed under the Department of the Interior's Outer Continental shelf Advisory Committee."

Response; Since a notice of preliminary consultation is published in the **Federal Register** and in the local area(s) of concern, it is not necessary to specify the Regional Technical Advisory Groups in the regulations. The Department of the Interior is formally provided with opportunities to comment throughout the process.

(5) One reviewer recommended that the regulations be revised to provide that if a potential site is considered for formal designation and designation, "and be approved through the same administrative procedures lending to the original designation. . . ."

Response: This section reflects the terms of the Act (section 302(f)(1)). Sites meeting the identification and selection criteria in Appendix 1 have national significance under the Act. The Act provides that sanctuaries are to be designated based on their conservation, recreation, ecological, and esthetic values. The criteria in Appendix 1 focus on these values; sites selected for the SEL based on these values are therefore deemed to be of national significance. As in the past, activities will be subject to sanctuary regulation only if the regulations are necessary to protect the area's values. Regulatory changes, for activities listed as subject to regulation in the Designation Document, may be made so long as they remain consistent with the Designation and the Administrative Procedures Act. Such changes do not require reapproval by the Secretary of Commerce and the President. Likewise, revisions to the Management Plan can be made as long as they are consistent with the Designation Document.

(4) One reviewer noted that the geographical area encompassed by a proposed site should only include the area necessary to provide adequate protection.

Response: This is fully NOAA's intent.

(5) Several reviewers suggested that the regulations discuss size considerations in more detail in the body of the regulations. Another reviewer suggested that Section III.E.1 of the PDP, discussion NOAA's expectations with respect to maximum size, should be imcorporated into the site identification criteria.

Response: Although no maximum or minimum size limits are established, NOAA expects that the Channel Islands and Point Reyes-Farallon Islands National Marine Sanctuaries, covering 1,252 and 948 square nautical miles respectively, are likely to represent the upper end of the sanctuary size spectrum and that future sanctuaries will be no larger. Size considerations are addressed under the Mission and Goals (§ 922.1(d) and the Active Candidate Criteria (§ 922.30(b)(4)). A reference has also been added to the appropriate discussion in the PDP ("Comment" to § 922.1(d)).

(6) One commenter recommended that in developing sanctuary-specific regulations relating to activities under the jurisdiction of one or more Federal agencies, these regulations should be developed in consultation with the appropriate Federal agency.

Response: Such coordination has always been done as a part of the preliminary consultation process and environmental impact statement development under the National Environmental Policy Act. To emphasize such cooperation further, § 922.31(b) has been modified explicity to include this cooperation

(7) One reviewer suggested that while there is a time limit (90 days) from initiation of preliminary consultation to the date when the AA must select a site as an Active Candidate, there is no limit on the time in which the AA must initiate preliminary consultation. The reviewer claims that without a specific timetable for each step in the designation process, areas would be tied up for an indefinite period of time. It is claimed that this problem is made especially serious if the legal effect of such listing is not clarified. The reviewer requests that a specific time limit within which NOAA must initiate preliminary consideration of areas included on the SEL be established. A related concern is that the regulations do not specify the amount of time within which the AA must either select an Active Candidate for designation or remove it from the SEL.

Response: As noted above, the regulations clarify that such listing imposes no regulatory controls on the use or development of these areas. Thus, the claim that the use of the areas of the SEL will be tied up for indefinite periods is without merit. It is also not possible for NOAA to set precise time limits on when sites from the SEL will be selected as active candidates. NOAA can only consider a few sites at a time, but cannot realistically determine in advance which sites will be selected first and in what order for consideration.

The regulations, at § 922.22(a), do clarify that the entire SEL will be reevaluated in 5 years. As sites on the SEL are selected for preliminary consultation and active candidacy, the SEL will be reduced. Sites selected for active candidate consideration, but later rejected, will not be returned to the SEL, but dropped with a written rationale.

It is also important to point out the advantages of the SEL. It provides a clear picture of the only sites that NOAA can consider for national marine sanctuaries during the lifetime of the SEL (except for the narrow exception specified in § 922.22(c) (concerning new discoveries or new information). Because the sites on the SEL do not have regulatory status and can be selected for active candidacy and further consideration as a marine sanctuary only after NOAA's careful scrutiny in applying the active candidate criteria, preparing an EIS, and seeking public input, NOAA finds that the overall implementation of the designation process will be much more predictable than past procedures. It provides a clear presentation of the sites that can be considered and numerous opportunities for public review.

(8) One reviewer recommended that there be a notice and opportunity for a public hearing before any interim emergency regulations can become effective.

Response: This provision can only be invoked when, consistent with the Administrative Procedure Act, notice and comment are impracticable, unnecessary, or contrary to the public interest (5 U.S.C. 553(b)). Specific procedures for implementing such emergency regulations will be detailed in the site-specific regulations.

(9) One commenter recommended that a Federal mediation process was necessary to handle a situation where several Federal agencies disagree on sanctuary designation or the regulatory requirements which should be imposed.

Response: NOAA has determined that a formal mediation process unique to marine sanctuaries is not needed. If interagency disputes do arise over designation or implementing regulations, the Executive Office of the President can mediate.

(10) With respect to § 922.31(d) and 922.31(a)(2), one reviewer suggested that the term "public" be inserted into these sections to ensure that the meetings are in fact "public meetings."

Response: This has been done.

(11) With respect to § 922.32(e), one reviewer suggested it would be helpful if this section briefly indicated the purpose of the public hearing, as indicated in section 302(e) of the Act.

Response: An explanation has been added.

(12) One reviewer requested that the regulations reflect that the designation of a sanctuary be consistent with an affected state's approved coastal management program.

Response: This has been done, see § 922.32(a)(1).

(13) One reviewer suggested that specific provisions be added for withdrawal of designation.

Response: NOAA does not have sufficient guidance, either in the statute or from the legislative history, on which to base a process for withdrawing sanctuary designation since the statute and legislative history only speak to designating national marine sancturies.

APPENDIX 1—Several commenters suggested detailed changes to this Appendix.

Response: Appendix 1 has been revised and is incorporated into the regulations § 922.20(b). Appendix 2 has been deleted.

V. Other Actions Associated with the Notice of Final Rulemaking

(A) Classification Under Executive Order 12291

NOAA has concluded that these regulations are not major "rules" within Section 1(b) of Executive Order 12291 because they will *not* result in:

(1) An annual effect on the economy of $100 million or more;

(2) A major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or

(3) Significant adverse effect on competition, employment, investment, productivity, innovation or on the ability of United States-based enterprises to complete with foreign-based enterprises in domestic or export markets.

The final rules amend existing procedures by providing greater selectivity and specificity in initially identifying and processing potential national marine sanctuaries in accordance with the Program Development Plan for the National Marine Sanctuary Program. These rules establish a revised process for

identifying, designating, and managing national marine sancturies. They will not result in any direct economic or environmental effects nor will they lead to any major indirect economic or environmental impacts. They are intended to reduce delay and uncertainty in the site selection and approval process.

(B) Regulatory Flexibility Act Analysis

A Regulatory Flexibility Analysis is not required for this notice of proposed rulemaking. The regulations set forth procedures for identifying, selecting, and, if designated, managing national marine sanctuaries. These rules do not directly affect "small government jurisdictions" as defined by Pub. L. 96–354, the Regulatory Flexibility Act, and the rules will have no direct effect on small businesses.

(C) Paper Work Reduction Act of 1980 (Pub. L. 96–511)

These regulations will impose no information collection requirements of the type covered by Pub. L. 96–511.

(D) National Environmental Policy Act

NOAA has concluded that publication of these rules does not constitute a major Federal action significantly affecting the quality of the human environment. Therefore, an environmental impact statement is not required.

List of Subjects in 15 CFR Part 922

Administrative practice and procedure, Environmental protection, Marine resources, Natural resources.

(Federal Domestic Assistance Catalog Number 11.419 Coastal Zone Management Program Administration)

Dated: May 24, 1983

K. E. Taggart,

(Acting) Assistant Administrator for Ocean Services and Coastal Zone Management.

Accordingly, it is proposed that 15 CFR Part 922 by revised as follows:

PART 922—NATIONAL MARINE SANCTUARY PROGRAM

Subpart A—General

Sec.

922.1 Mission and Goals.
922.2 Definitions.
922.10 Effect of National Marine Sanctuary Designation.

Subpart B—Site Evaluation List (SEL)

922.20 Purpose of the Site Evaluation List.
922.21 Effect of Placement on the SEL or Selection as an Active Candidate.
922.22 SEL Time Frame and Consideration of New Sites.

Subpart C—Selection of Active Candidates and the Designation of National Marine Sanctuaries

Sec.

922.30 Selection of Active Candidates.
922.31 Designation Process.
922.32 Coordination with States.

Subpart D—Enforcement

922.40 Applicable Procedures.

Appendix 1—National Marine Sanctuary Site Identification and Selection Criteria.

Authority: Title III, Public Law 95–532, as amended (16 U.S.C. 1431–1434).

Subpart A—General

§ 922.1 Mission and goals.

(a) The mission of the National Marine Sanctuary Program (Program) is the establishment of national marine sanctuaries for the purpose of preserving or restoring such areas for their conservation, recreational, ecological, or esthetic values. Designated sanctuaries should be illustrative of the nation's marine areas. Decisions to designate areas as national marine sanctuaries are based on an evaluation of the area's intrinsic natural resource and human use values and the impacts of various activities on these values.

Note.—Section 302(a) of the Act permits the Secretary of Commerce, with the approval of the President, to designate ocean areas as marine sanctuaries for "the purpose of preserving or restoring such areas for their conservation, recreational, ecological, or esthetic values." Decisions to designate an area are therefore based on the area's intrinsic values. For purposes of analysis, these regulations use the term "natural resource and human use values" to equate to the statutory language of "conservation, recreation, ecological, or esthetic values." The term "natural resource" value is synonymous with the "ecological" values referred to in the statute. The statute's terms "conservation," "recreational," and "esthetic" values are covered in the regulations as "human use values." The criteria for sanctuary identification and selection which are categorized into natural resource and human use values, are therefore based on the statute's terms "conservation, recreational, ecological, or esthetic values."

(b) The goals of the Program are to carry out this mission by designating national marine sanctuaries to:

(1) Enhance resource protection through the implementation of a comprehensive, long-term multiple use management plan tailored to the specific resources;

(2) Promote and coordinate research to expand scientific knowledge of significant marine resources to improve management decisionmaking in marine sanctuaries;

(3) Enhance public awareness, understanding, and wise use of the marine environment through public interpretive and recreational programs; and

(4) Provide for multiple compatible public and private use of special marine areas.

(c) The National Marine Sanctuary Program will seek maximum public participation throughout all the stages that may lead to the designation of a sanctuary.

(d) Sanctuary size, while highly dependent on the nature of the site's resources, will be no larger than necessary to ensure the sanctuary's effective management. Sanctuaries will be limited to relatively small, geographically discrete marine areas. NOAA intends that the maximum size will not exceed that of the largest existing marine sanctuary at the time of the effective date of these regulations.

Note.—The criteria for active candidate selection explicitly includes size considerations in § 922.30(b)(4). The SEL selection criteria also includes size considerations under "Management Concerns" (Appendix 1.A. IV.).

§ 922.2 Definitions.

(a) "Act" means Title III of the Marine Protection, Research and Sanctuaries Act of 1972, as amended, 16 U.S.C. 1431–1434.

(b) "Active Candidate" means a site selected by NOAA from the Site Evaluation List for further consideration leading to sanctuary designation.

(c) "Affected State" means any State in which a proposed marine sanctuary includes waters lying within the territorial limits of that State or superjacent to the subsoil and seabed within the seaward boundary of that coastal State.

(d) "Administrator" means the Administrator of the National Oceanic and Atmospheric Administration, United States Department of Commerce.

(e) "Assistant Administrator" (AA) means the Assistant Administrator for Ocean Services and Coastal Zone Management, National Oceanic and Atmospheric Administration, United States Department of Commerce, or his/her successor or designee.

(f) "Human use values", as used in these regulations, equates to the statutory language of "conservation," "recreational," and "esthetic" values (section 302(a)).

(g) "Marine areas" means those areas of the ocean waters, as far seaward as the outer edge of the Continental Shelf, as defined in the Convention of the Continental Shelf (15 U.S.T. 74; TIAS 5578), of other coastal waters where the

tide ebbs and flows, or of the Great Lakes and their connecting waters.

(h) "National marine sanctuary" means a marine area, as defined above in paragraph (g), which is designated for the purpose of preserving or restoring such area for its conservation, recreational, ecological or esthetic values, as provided by section 302(a) of the Marine Protection, Research, and Sanctuaries Act of 1972.

(i) "Natural resource values" refers to the "ecological" values specified in the Act (section 302(a)).

(j) "Person" means any private individual, partnership, corporation, or other entity; or any officer, employee, agent, department, agency or instrumentality of the Federal government, or any State, local or regional unit of government.

(k) "Secretary" means the Secretary of the United States Department of Commerce.

(l) "Site Evaluation List" (SEL) means that list of high natural resource and human use value sites established by the AA as qualifying for further evaluation as national marine sanctuaries.

§ 922.10 Effect of national marine sanctuary designation.

The designation of a national marine sanctuary, and the management plan implementing it (including regulations, if applicable), are binding on any person subject to the jurisdiction of the United States. Designation does not constitute any claim to territorial jurisdiction on the part of the United States, and the management plan implementing it applies to foreign citizens only to the extent consistent with recognized principles of international law or otherwise authorized by international agreement.

Subpart B—Site Evaluation List (SEL)

§ 922.20 Purpose of the Site Evaluation List.

(a) The List of Recommended Areas (LRA) is abolished. Sites on the prior LRA have no further status under these regulations, unless the site has been reselected and placed on the Site Evaluation List (SEL), as provided in § 922.22.

(b) In place of the LRA, the Assistant Administrator (AA) will establish a Site Evaluation List comprising the most highly qualified marine sites identified and recommended by the regional resource evaluation teams in accordance with the Program's mission and goals set forth in § 922.1 and the site identification and selection criteria described in Appendix 1, which is incorporated into these regulations.

Note.—Procedures for SEL site identification and description of the regional resource evaluation teams (teams) are discussed in Chapter III.B of the Program Development Plan (PDP). The site identification criteria used by the teams and the criteria for SEL selection by NOAA are the same and are provided in Appendix 1. The teams' identification of sites for the SEL was based primarily on the area's natural resource values and human use values (See Appendix 1.A I and II). Sites recommended to NOAA for inclusion on the SEL were accompanied by a written analysis of the sites' natural resources and human use values. Sites from the Alaskan region are not included in the current SEL. NOAA's selection of sites for the SEL will be based on the area's natural resource and human use values, the potential activity impacts, and management concerns, including to the extent feasible, a preliminary consideration of the economic effects of sanctuary designation. (See Appendix 1.A. III and IV).

(c) After a preliminary analysis of the sites based on the criteria in Appendix 1, NOAA will publish a notice of availability of sites proposed for listing on the SEL in the **Federal Register**. These sites will be subject to a ninety-day comment period. At the conclusion of the comment period, NOAA will publish the final SEL in the **Federal Register**, based on the selection criteria and the public comments. For each site on the SEL, NOAA will prepare a written analysis of the site describing its values relative to the selection criteria in Appendix 1. Such analysis becomes part of the administrative record for that site.

(d) The SEL serves as NOAA's working list for future marine sanctuary sites; only sites on the SEL may be considered for subsequent review as active candidates for designation. Thus, the SEL provides a pool from which potential sanctuaries are considered.

§ 922.21 Effect of placement on the SEL or selection as an active candidate.

Placement of sites on the SEL or selection for further consideration as active candidates does not subject such sites to any regulatory controls under Federal law. Such regulations may only be established after designation, as provided under § 922.31.

§ 922.22 SEL time frame and consideration of new sites.

(a) As sites are designated as marine sanctuaries or rejected from further consideration, they will be removed from the SEL. Rejected sites will not be replaced on the SEL. Sites remaining on the SEL after a 5 year period will be reevaluated.

(b) If after the 5-year reevaluation, it is determined that a new SEL is necessary, notice of the initiation of a new SEL identification process will be published in the **Federal Register** at least twelve (12) months in advance. NOAA will reevaluate the prior SEL process, including the team approach, and determine, after public comment, how to design and implement a new site selection process.

(c) Unless a new identification process is established as provided in paragraph (b) of this section, the AA will consider future recommendations of potential sanctuary sites only if such sites are important new discoveries or if substantial new information previoulsy unavailable establishes the national significance of a known site. NOAA will determine, in consultation with appropriate scientists, resource managers, and other interested parties, and after public review, whether such sites meet the selection criteria specified in Appendix 1. Qualified sites will be placed on the Site Evaluation List for further evaluation as national marine sanctuaries, consistent with the procedures set forth in these regulations.

Subpart C—Selection of Active Candidates and the Designation of National Marine Sanctuaries

§ 922.30 Selection of active candidates.

(a) Only a limited number of sites at one time will be selected from the SEL as active candidates and further evaluated for sanctuary designation.

(b) The AA will select sites from the SEL for Active Candidate consideration based on the evaluation contained in the written analysis developed in accordance with § 922.20(c), as well as the following additional factors:

(1) A primary reason for considering a site for marine sanctuary designation is the area's high natural resource and human use values. When selecting an active candidate, NOAA considers the site's relative contribution to the Program's mission and goals;

(2) A consideration of the immediacy of need for sanctuary designation based on the present or potential threats to resources, and the vulnerability of the resources. Consideration will also will be given to the cumulative effect of various human activities that individually may be insignificant.

(3) An evaluation of the benefits to be derived from sanctuary designation, including an assessment of the site's natural resource and human use values, the adequacy of existing management or regulatory regimes for protecting these resources, and the effectiveness of

NOAA's proposed management program.

(4) A consideration of the present feasibility of sanctuary designation in light of the sanctuary's size, requirements for managing the site, program staffing, and fiscal constraints; and

(5) An initial consideration of the economic impacts and benefits of sanctuary designation, including a consideration of the range of public and private uses which may be consistent with sanctuary designation.

(c) Before selecting a site as an active candidate, the AA shall undertake preliminary consultation on the considerations described in paragraph (b) of this section with relevant local, state, and Federal government agencies and appropriate regional fishery management councils. The AA also shall request comments from the public and any relevant international agencies. NOAA's written analysis described in § 922.20(c) will be provided for review. Notice of such preliminary consultation shall be published in the **Federal Register** and in newspapers in the area(s) of local concerns.

(d) Within 180 days of initiating preliminary consultation, the AA shall determine whether to select the site as an active candidate and publish a notice of this determination in the **Federal Register.** If the site is not selected, a short statement of the reasons for the negative determination shall be specified in the notice.

§ 922.31 Designation process.

(a) After selecting a site as an active candidate, the AA shall prepare a draft designation document, including the terms of the designation, and draft management plan to implement the designation in consultation with relevant Federal, state, and local agencies, Regional Fishery Management Council members, and other interested persons. Management plans generally shall include sections on: Goals and objectives, management responsibilities, resource studies, interpretive and educational programs, public and private uses consistent with sanctuary designation, and regulations (where applicable). A draft environmental impact statement (DEIS) will be prepared on the designation document and management plan, including draft regulations if applicable. The Plan and the EIS will be prepared in as timely a manner as possible allowing for maximum public input. The time period between active candidate selection and recommendation of the site to the Secretary for designation is not to exceed three (3) years, unless the AA determines that additional time is needed for public discussion.

(b) The terms of designation shall include the geographic area included within the Sanctuary; the characteristics of the area that give it conservation, recreational, ecological, or esthetic values; and the types of activities that will be subject to regulation in order to protect those characteristics. The terms of the designation may be modified only by the same procedures through which the original designation was made. If regulations are promulgated, they shall be consistent with and implement the terms of the designation. Regulations relating to activities under the jurisdiction of one or more other Federal agencies will be developed in consultation with these agencies. All amendments to these regulations must remain consistent with the designation.

(c) Early in the development of the sanctuary documents and the DEIS, public meetings shall be held in the area or areas most affected to solicit public and government agency input on the significant issues related to the proposed action.

(d) The AA will publish the draft designation document and a summary of the management plan including the draft regulations, where applicable, in the **Federal Register.** The **Federal Register** notice shall be published concurrently with the Environmental Protection Agency (EPA) Notice of Availability of the DEIS. Not less than 30 days after publication of the applicable documents, the AA shall hold at least one public hearing in the area or areas most affected by the proposed designation in accordance with section 302(e) of the Act.

Note.—Section 302(e) of the Act provides that before a sanctuary is designated, public hearings must be held in the coastal areas which would be most directly affected by such designation. The purpose of the hearings is to receive and give proper consideration to the views of any interested party.

(e) After publication of a final environmental impact statement, and final consultation with all appropriate Federal agencies, including the Departments of State, Defense, the Interior, Transportation, Energy, and the Environmental Protection Agency, the Secretary shall transmit the proposed designation to the President for approval. Where sites include state waters, the applicable documents will be sent to the Governor of the State for final consultation, as provided under paragraph (h) (1) of this section.

(f) The AA shall announce the designation of a Sanctuary and publish the designation document and implementing regulations in the **Federal Register.**

(g) A designation shall become effective unless either: (1) The governor of any affected State, as defined in § 922.2(c) certifies to the Secretary, before the end of the sixty-day period beginning on the date of the publication of the designation, that the designation or any of its terms described in paragraph (b), of this section are unacceptable to the state, in which case those terms certified as unacceptable will not be effective in the waters described in § 922.2(c) until the Governor withdraws his/her certification of unacceptability; or

(2) Both Houses of Congress adopt a concurrent resolution consistent with section 302(h) of the Act, within sixty calendar days of continuous session of Congress after the date on which the designation was transmitted, which disapproves the designation or any of its terms described in paragraph (b) of this section.

(h) After the designation becomes effective, and where essential to prevent immediate, serious and irreversible damage to the resources of a sanctuary, activities other than those listed in the designation may be regulated within the limits of the Act on an emergency basis for an interim period not to exceed 120 days, during which time an appropriate amendment of the terms of the Designation will be sought by the Secretary.

Note.— Specific emergency procedures will be provided in the regulations implementing individual sanctuaries.

§ 922.32 Coordination with States.

(a) The AA shall make every effort to consult and cooperate with affected states throughout the entire national marine sanctuary review and designation process. In particular the AA shall:

(1) Consult with the relevant state officials prior to selecting any site on the SEL as an Active Candidate, pursuant to § 922.30, especially concerning the relationship of any site to state waters and the consistency of the proposed designation with an approved State Coastal Zone Management Program. For purposes of consistency review by States with federally-approved coastal management programs, designation of a national marine sanctuary is deemed to be a Federal activity which directly affects the State's coastal zone and must be undertaken in a manner consistent to the maximum extent practicable as provided by section 307(c)(1) of the Coastal Zone Management Act of 1972.

as amended, and implementing regulations at 15 CFR Part 930 *et seq.*

(2) Ensure that any relevant state agency is consulted prior to holding any public meeting pursuant to § 922.31(d) or public hearing pursuant to § 922.31(e).

(3) Provide the Governor an opportunity to certify the designation as unacceptable as specified in § 922.31(h)(1).

(b) In accordance with section 302(f)(4) of the Act, where the need arises and a state agency possesses appropriate law enforcement capabilities that could assist the AA in carrying out the Act's responsibilities, state law enforcement officers may be deputized as Federal law enforcement agents and authorized to enforce those provisions of the Act and applicable regulations for the specific sanctuary.

Subpart D—Enforcement

§ 922.40 Applicable procedures.

NOAA will apply to all enforcement matters under the Act the consolidated civil procedure regulations, set forth at 46 FR 61643 (1981) (to be codified at 15 CFR 904.100 through 904.273), and the seizure, forfeiture, and disposal procedure regulations set forth at 46 FR 31648 (1981) (to be codified at 50 CFR Part 219).

Appendix 1—National Marine Sanctuary Site Identification and Selection Criteria

During the summer of 1981, the National Marine Sanctuary Program draft Site Identification and Selection Criteria were reviewed and refined by three marine scientists: Drs. Walter H. Adey, Rezneat M. Darnell, and G. Carlton Ray. Taking their recommendations into consideration, the criteria presented below were developed.

The criteria are directly related to the Program's mission and goals, see § 922.1. The criteria are grouped into four categories: (1) Natural resource values; (2) human use values; (3) potential activity impacts; and (4) management concerns. The criteria under each category reflect concerns significant to the Program.

The site identification and selection process is discussed in detail in the PDP, chapter III. The regional resource evaluation teams (teams), convened to recommend to NOAA areas for SEL consideration, focused on the (1) natural resource value and (2) human use value criteria (represented in sections I and II, below). These criteria are designed to insure that sites recommended to NOAA for SEL consideration have high natural resource and human use values.

In selecting sites for the SEL, NOAA also considers to the extent such information on the site is available, potential activity impacts and management concerns (as presented in sections III and IV, below). NOAA's selection of sites for the SEL is only the first of several determinations before sanctuary designation or subsequent rejection of a site as not qualified for sanctuary status. [At the SEL stage NOAA's prime focus is on the site's natural resource and human use values.] The presence of such high values is a requisite or "minimum" requirement for NOAA's further consideration since the Act requires that sanctuaries be designated based on the site's "conservation, recreational, ecological, or esthetic values" (section 302(a)). Other, more specific issues are factored into NOAA's decision whether to select a site as an active candidate (see Subpart C of the regulations).

I. Natural Resource Values

A. *Subregional Representation*

The area under consideration is representative of the biogeographic subregion in which it is located (Reference: Sanctuary Program Classification System in the PDP).

Examples: This criterion would apply to an area containing species assemblages which are especially characteristic of the Oregonian subregion of the British Columbian region. Another example would be an area containing species assemblages which are especially characteristic of the Floridian or American Atlantic Antillean subregion of the West Indian region.

B. *Community Representation*

The area under consideration is significant in relation to the ecological communities which are found within the specified habitat type or within the biogeographic region or subregion (i.e., on a macroscale, communities as assemblages of species populations within a prescribed area or habitat).

Examples: (1) The wide spectrum of marine habitats in the Channel Islands National Marine Sanctuary in California created by accentuated bottom relief, varied bottom substrates, and gradation in water depth from island shorelines to deep coastal basins support a variety of ecological communities.

(2) Coral reef, grass bed, soft bottom, and open-bay habitat areas in the Key Largo National Marine Sanctuary support a variety of ecological communities associated with the east Florida reef tract.

C. *Biological Productivity*

The area under consideration is significant in relation to its level of primary and/or secondary production.

Examples: (1) East Breaks at the edge of the outer continental shelf off Corpus Christi, Texas, is characterized by intense local upwelling, high primary productivity, and exceptional fish production.

(2) In the Gray's Reef National Marine Sanctuary, much production may be imported; outcroppings of limestone rocks may serve to entrap, conserve, and circulate detritus and plankton which provide energy sources for reef invertebrates, which in turn support marine fisheries and sea turtles.

(3) In the Channel Islands National Marine Sanctuary, the cold waters of the California Current flowing south meet the warm waters of the California Counter Current flowing north to create upwellings of cold nutrient-rich waters that enhance the biological productivity of the area.

Note.—This example also meets Criterion I.F.)

(4) In many cases, coral reefs are not only energetically self-sustaining (i.e., they produce locally enough food to support the community), but they are also specifically organized to entrap, hoard, and recycle materials received from the surrounding waters (i.e., products that are imported and conserved).

D. *Biotic Character/Species Representation*

The area under consideration is of special interest because it supports:

(1) Ecologically limited species;

(2) Ecologically important species; or

(3) Unique species associations or biological assemblages.

Examples: (1) This criterion would apply to marine habitat areas upon which ecologically limited species (e.g., threatened, endangered, rare, depleted, endemic, or peripheral species) are dependent during all or part of their lives.

(2) This criterion would apply to marine areas containing species which contribute in a significant way to the maintenance of a specified ecosystem found in the region or subregion, such as the Channel Islands National Marine Sanctuary which supports one of the largest and most varied assemblages of marine mammals and seabirds in the world.

(3) The waters of Point Lobos, California, support a unique assemblage of kelp, sea urchin, abalone, and sea otters.

(4) Submarine canyons support unusual biological communities of soft corals, crustaceans, and fish, and are known as "pueblo villages."

(5) This criterion would also apply to wide sandy bottom areas which are characterized by low productivity, but unique species composition, such as certain areas off central texas.

E. *Species Maintenance*

The area under consideration is important to life history activities, including special feeding, courtship, breeding, birthing/nursery, resting/wintering, and migration areas.

Examples: (1) The waters off the Point Reyes-Farallon Islands provide deep and shallow water feeding areas for a wide variety of marine organisms, including seabirds, marine mammals, and marine fisheries. The Farallon Islands support the largest seabird rookeries in the contiguous United States and are used, along with the mainland, by California sea lions, harbor seals, and elephant seals for hauling out and pupping purposes. Whales, including several endangered species, and porpoise pass through the sanctuary on annual migrations.

(2) The waters around certain Hawaiian Islands are important wintering, birthing/nursery, and perhaps courtship/breeding areas for endangered whales.

(3) Spiny lobster migration routes off Florida are important for the "off shelf" movement of this species.

(4) The mouth of the Mississippi River is an important brown shrimp over-wintering ground.

F. *Ecosystem Structure/Habitat Features*

The area under consideration is characterized by special chemical, physical, and/or geological habitat features.

Examples: (1) The Florida Middle Grounds on the Gulf of Mexico continental shelf represent an unusual geological formation—a drowned Pleistocene reef—which supports rich and diverse reef communities.

(2) Transition zones occur where two different marine systems converge—such as at coastal/marine system interfaces, shelf/slope interfaces, soft bottom/hard bottom ecotones, or cold water/warm water current convergence zone. These areas of mixing ofter have unique physical and ecological characteristics, high production, and species diversity/population densities which are ofter greater than in areas flanking them. For example, a transition zone is formed near Cape Hatteras where cold northern waters of the Labrador Current mix with warm water eddies of Gulf Steam/Florida Current and as a result, northern and southern species mix and co-exist with species endemic to the area.

Note.—This example also meets Criterion I.C.)

(3) Easternmost coastal areas of Maine—with unique bay-heads and rocky coasts, varied substrates derived from glacial materials, extensive sub-fjord character, and numerous offshore islands—are matched by few areas in the world in habitat types and species diversity.

II. Human-Use Values

A. *Fishery Resources of Recreational Importance*

The area under consideration contains fish and shellfish species, species groups (e.g., snapper-grouper complex), or fishery habitats which are important to the recreational fishing industry/community and for which conservation and management are in the public interest.

B. *Fishery Resources of Commercial Importance*

The area under consideration contains fish and shellfish species, species groups (e.g., snapper-grouper complex), or fishery habitats which are important to the commercial fishing industry and for which conservation and management are in the public interest.

C. *Ecological/Esthetic Resources of Importance for Recreational Activities Other Than Fishing*

The area under consideration contains exceptional natural resources and features which, because of their importance to nature watching and other nonconsumptive recreational activities, enhance human appreciation, understanding, and enjoyment of nature.

Examples: (1) Rocky shorelines, shallow nearshore waters, and intertidal pools in the Channel Islands and Point Reyes-Farallon Islands National Marine Sanctuaries have rich and varied plant and animal life which attract many persons interested in photography and nature study.

(2) The prominent topography around the Channel Islands and Point Reyes-Farallon Islands National Marine Sancturaies provides outstanding ocean vistas.

(3) The spectacular spur-and-groove coral reef formation in the Looe Key National Marine Sanctuary attracts SCUBA and snorkeling enthusiasts from all over the world.

(4) The waters off Maui, Hawaii, are popular for humpback whale watching.

D. *Research Opportunity*

The area under consideration provides exceptional opportunities for research in marine science and resource management.

Examples: (1) The Gray's Reef National Marine Sanctuary serves as a natural laboratory or control area for research in live bottom ecology.

(2) The Key Largo National Marine Sanctuary is amenable to onsite research activities for many reasons, including the diversity of resources available, the past history of scientific research and education in the area, the compatibility with similar research efforts in adjacent John Pennekamp State Park and Biscayne National Park, and the proximity of the site to user groups. In addition, the Carysfort Reef Lighthouse provides a unique research base from which to launch studies concerning the sanctuary environment.

(3) The Channel Islands National Marine Sanctuary offers a special opportunity to coordinate research with the Channel Islands National Park. Such coordination will contribute to a better scientific understanding of the marine environment and to more effective management by answering questions such as those related to fisheries, marine mammals, seabirds and those related to development and use of marine resources.

E. *Interpretive Opportunity*

The area under consideration provides an excellent opportunity to interpret the meanings and relationships of special marine resources in order to enhance general understanding, appreciation, and wise use of the marine environment.

Examples: (1) Through a variety of interpretive media, including aquaria displays, narrated slide shows and glassbottom boat tours, a visitor to the Key Largo National Marine Sanctuary is exposed to a variety of marine and coastal ecosystems, including open ocean, fringing coral reefs, patch reefs, mangroves, open bay, and barrier islands.

(2) The Channel Islands National Marine Sanctuary provides an exceptional opportunity to interpret marine and insular ecosystem features through the use of various interpretive "hands on" techniques that go beyond tradition educational tools, such as brochures and pamphlets.

F. *Historical, Archaeological or Paleontological*

The area under consideration contains (or is likely to contain) submerged remnants of past life that are of special historical, cultural or paleontological value.

Examples: (1) This criterion would apply to marine areas where known or possible shipwrecks, armaments, or other maritime relics occur and where protection is desirable to conserve or restore esthetic values and to advance the goal of the United States antiquities laws to protect historical resources.

(2) This criterion would apply to marine areas containing, or suspected of containing, remnants of historic human occupation by Indians, Eskimos, early Americans, or other peoples.

(3) This criterion would apply to marine areas containing fossils and geological formations whose study would reveal clues to the Earth's geologic history, the characteristics of ancient environments and the relationship of ancient plants and animals to the Earth's evolutionary history.

Additional Factors in Site Identification and Selection

III. Potential Activity Impacts

Many marine areas are subject to human use, some of which bring adverse pressures to bear on the natural resources. Where applicable, initial identification of potential marine sanctuary areas includes a summary of existing and potential human activities in these areas as well as a preliminary assessment of environmental impacts. To the extent such information is available, NOAA's selection of sites for the SEL will consider impacts of human activities on the area's natural resource and human use values, as well as the impacts of site selection on human activities already taking place within the site.

IV. Management Concerns

A. *Relationship to Other Programs*

While some sanctuaries may be designated to protect resources not currently managed by other existing programs (e.g., the *U.S.S. MONITOR* on the continental shelf off North Carolina), most recommendations involved cooperation with some other Federal, State, local agency or organization. The ability of existing regulatory mechanisms to protect the values of the area and the contribution of the Sanctuary Program to that existing management effort may be an important factor in selecting sanctuary candidates. Depending on the location, the resource, and the existing system, the Program could either complement the status quo by filling specific gaps or form a management umbrella over a fragmented system to help coordinate and strengthen diverse, but related efforts. At different sites, NOAA may work to complement other pograms' efforts such as estuarine sanctuaries, national parks, wildlife refuges, or state preserves, among others. There may be instances where NOAA's primary contribution to protection of special marine areas will be in the form of enhanced public awareness through interpretive and research programs.

B. *Management of a Conservation Unit*

Optimum size of a marine sanctuary is an issue to be considered in potential sanctuary sites. The size or extent of a marine sanctuary should be a cohesive conservation unit amenable to effective management given fiscal and staff constraints of the managing entities.

C. *Accessibility*

Since national marine sanctuaries are to be readily available for public use, when use is compatible with the sanctuary's goals and objectives, consideration should be given to

factors which limit or enhance public access to a particular site.

D. *Surveillance and Enforcement*

Another issue to be considered when evaluating a potential sanctuary site is the degree to which the area lends itself to adequate enforcement and surviellance and the capabilities of responsible agents (e.g., U.S. Coast Guard, state law enforcement divisions, or the like). This depends on the location, its size, and the types or resources involved. Consideration is also given to: (1) Degree of surveillance/enforcement presence needed in the area—light, medium, or heavy; (2) schedule—routine, prescribed, or case-by-case basis; and (3) logistics—vessels, aircraft, manpower, equipment, and budgetary requirements.

E. *Economic Considerations*

The designation of a national marine sanctuary may have economic effects at both local and national levels. Prior to the development of a management plan for a particular site which describes the uses and activities which may take place within a sanctuary, it is difficult to calculate fully the economic impact of sanctuary designation. It is also difficult to determine, at the SEL stage, the economic benefits of the sanctuary to society as a whole based on such considerations as public use, and research and interpretive values which will also be fully described in a management plan. Sanctuary designation may, in some cases, enhance economic value by insuring long-term protection for commercially significant resources, such as commercial or recreational fish stocks, vital habitats, and resources which generate tourism. Conversely, a designated marine sanctuary may have negative economic impacts if management regulations unduly restrict commercial activities.

To the extent, feasible, a decision to include a proposed site on the SEL will take into consideration the ecomonic effects of sanctuary designation. As consideration of a particular site progresses through the designation process, more information will be developed and analyzed concerning the economic efforts to sanctuary designation.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

42 CFR Part 405

Medicare Program; Payment for Physician Services Furnished in Hospitals, Skilled Nursing Facilities, and Comprehensive Outpatient Rehabilitation Facilities

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final rule; delay in effective date.

SUMMARY: This rule implements a delay in the effective date of a final rule with comment period that appeared in the **Federal Register** on March 2, 1983. That rule revised the regulations that govern Medicare coverage and reimbursement for services of physicians who practice in providers and, as published, was to be generally effective on May 31, 1983.

Due to the provisions of Pub. L. 98–21 (Social Security Amendments of 1983: enacted April 20, 1983) and comments we have received, we are delaying the effective date of the regulations concerning provider-based physicians until October 1, 1983.

EFFECTIVE DATE: The rules published March 2, 1983 are effective for physician services furnished on or after October 1, 1983.

FOR FURTHER INFORMATION CONTACT: Leonard Peshkin, (301) 594–1115.

SUPPLEMENTARY INFORMATION:

I. Background

On March 2, 1983, we published in the **Federal Register** (48 FR 8902) a final rule with comment period that set forth regulations governing Medicare reimbursement of services furnished by provider-based physicians. Generally, those regulations were to be effective for services furnished on or after May 31, 1983.

However, 42 CFR 405.550(e), which requires the overhead incurred by leased departments to be reimbursed on a reasonable cost basis through the provider, contains provisions indicating that it would be applied for services furnished under lease agreements established on or after July 1, 1966, effective June 30, 1983, and for services furnished under lease agreements established before July 1, 1966, effective March 2, 1985. Those time frames provided 120 day and 2 year delays from the date of publication respectively, during which parties may renegotiate lease arrangements if they believe it is necessary or appropriate. The 2 year delay was granted to providers that had longstanding lease arrangements predating Medicare to allow adequate time for the parties to the lease to adjust their arrangements in a manner that ensures that delivery of services is not disrupted and that the providers can be adequately reimbursed for services they furnished to Medicare patients.

II. Delay of Effective Date

Since publication of the final rules on reimbursement for physician services in providers, Congress enacted Pub. L. 98–21 (Social Security Amendments of 1983). Title VI of this law, enacted April 20, 1983, establishes a system of prospective payment for Medicare inpatient hospital services effective with hospital cost reporting periods beginning on or after October 1, 1983. Basically, this system will reimburse hospitals on the basis of prospectively determined rates. Currently, Medicare payment amounts to hospitals are retrospectively determined based upon the hospitals reasonable costs, subject to certain limits.

The regulations implementing the prospective payment system will affect some of the same operating procedures that the provider-based physician regulations affect. Since the prospective payment system regulations will be in place by October 1, 1983, we believe that it would be advantageous to all parties to delay until October 1, 1983, the implementation of the regulations published March 2, 1983.

Delaying the effective date will also reduce the burden placed on Medicare contractors. Instead of implementing separate operating instructions, and system changes for both the provider-based physician rules and the prospective payment system rules, some of which would overlap, the contractors will be responsible for implementing only one set of instructions and system changes for both rules.

In addition, we have received many comments concerning the comparatively short amount of time (120 days, in most cases) allowed for renegotiation of lease and other arrangements. Commenters have indicated that it is unlikely that these renegotiations will be completed by the current effective date and, in any case, would be an added burden to physicians and providers.

For these reasons, we believe that a delay in the effective date of the regulations governing payment for physicians services furnished in hospitals, skilled nursing facilities (SNFs), and comprehensive outpatient rehabilitation facilities (CORFs), until October 1, 1983, would be both practical and in the best interest of the public and the Medicare program.

In the March 2, 1983 **Federal Register** document, we invited comments on all the new issues (such as combined billing) that were raised in that document that were not addressed in the notice of proposed rulemaking for these regulations published September 30, 1982 (47 FR 43578). We will be publishing a final rule in the near future that will respond to all the comments we have received on the combined billing issue and other new issues raised in the preamble of the final rule with comment period.

III. Impact Analysis

A. Executive Order 12291

Executive Order 12291 requires us to prepare and make available to the public a regulatory impact analysis for any regulations likely to result in an annual effect on the economy of $100 million or more, cause a major increase in costs or prices, or meet other threshold criteria specified in section 1(b) of the Order. We have determined that this rule does not meet the criteria of a "major rule" in section 1(b). Therefore, a regulatory impact analysis is not required.

B. Regulatory Flexibility Act

The Secretary certifies, under 5 U.S.C. 605(b), as enacted by the Regulatory Flexibility Act (Pub. L. 96–354), that this rule will not have a significant impact on a substantial number of small entities. That Act requires us to prepare and make available to the public a regulatory flexibility analysis under 5 U.S.C. 603(b), unless the Secretary so certifies. The purpose of the analysis would be to explain the expected impact of the rule and to analyze alternatives that might reduce its negative impact on small entities. (A small entity is a small business, a nonprofit enterprise, or a government jurisdiction with a population of less than 50,000.)

All of the affected individuals and providers, except for contractors, are considered small entities for purposes of the Regulatory Flexibility Act. Therefore, these provisions clearly impact a substantial number of small entities. However, the delay in implementation of these regulations will, for the reasons already noted, result in an advantage to these individuals and providers, rather than a negative impact. Also, we believe that any loss to the Federal government will not result in a significant increase in allowable payments to these parties. Therefore, a

regulatory flexibility analysis is not required.

IV. Waiver of Proposed Rulemaking

We are publishing this delay in the rule's effective date without notice of proposed rulemaking procedures. The revised regulations concerning payment for physician services furnished in providers published in the **Federal Register** on March 2, 1983, were to be effective, for the most part, for services furnished on or after May 31, 1983. We do not believe that a delay in this rule's effective date is rulemaking that requires use of notice and comment procedures. In any event, however, the failure to publish by May 31, 1983, a final rule that delays the effective date of those regulations to October 1, 1983, would be contrary to the public interest. Therefore, we find good cause to waive proposed rulemaking procedures.

V. List of Subjects in 42 CFR Part 405

Administrative practice and procedure, Certification of compliance, Clinics, Contracts (Agreements), End-Stage Renal Disease (ESRD), Health care, Health facilities, Health maintenance organizations (HMO), Health professions, Health suppliers, Home health agencies, Hospitals, Inpatients, Kidney diseases, Laboratories, Medicare, Nursing homes, Onsite surveys, Outpatient providers, Reporting requirements, Rural areas, X-rays.

(Catalog of Federal Domestic Assistance Program No. 13.773, Medicare—Hospital Insurance Program, No. 13.774, Medicare—Supplementary Medical Insurance Program)

Dated: May 26, 1983.

Carolyne K. Davis,

Administrator, Health Care Financing Administration.

Approved: May 27, 1983.

Margaret M. Heckler,

Secretary.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR NOTICE 41 FR 32914, August 6, 1976.) Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY	USDA/ASCS		DOT/SECRETARY	USDA/ASCS
DOT/COAST GUARD	USDA/FNS		DOT/COAST GUARD	USDA/FNS
DOT/FAA	USDA/REA		DOT/FAA	USDA/REA
DOT/FHWA	USDA/SCS		DOT/FHWA	USDA/SCS
DOT/FRA	MSPB/OPM		DOT/FRA	MSPB/OPM
DOT/MA	LABOR		DOT/MA	LABOR
DOT/NHTSA	HHS/FDA		DOT/NHTSA	HHS/FDA
DOT/RSPA			DOT/RSPA	
DOT/SLSDC			DOT/SLSDC	
DOT/UMTA			DOT/UMTA	

Note: The Office of the Federal Register proposes to terminate the formal program of agency publication on assigned days of the week. See 48 FR 19283, April 28, 1983.

List of Public Laws

Last Listing May 25, 1983

This is a continuing list of public bills from the current session of Congress which have become Federal laws. The text of laws is not published in the **Federal Register** but may be ordered in individual pamphlet form (referred to as "slip laws") from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (phone 202–275–3030).

S. 957 / Pub. L. 98–33 To provide for an increase in the number of members of the Congressional Award Board, and for other purposes. (May 25, 1983; 97 Stat. 194) Price: $1.75

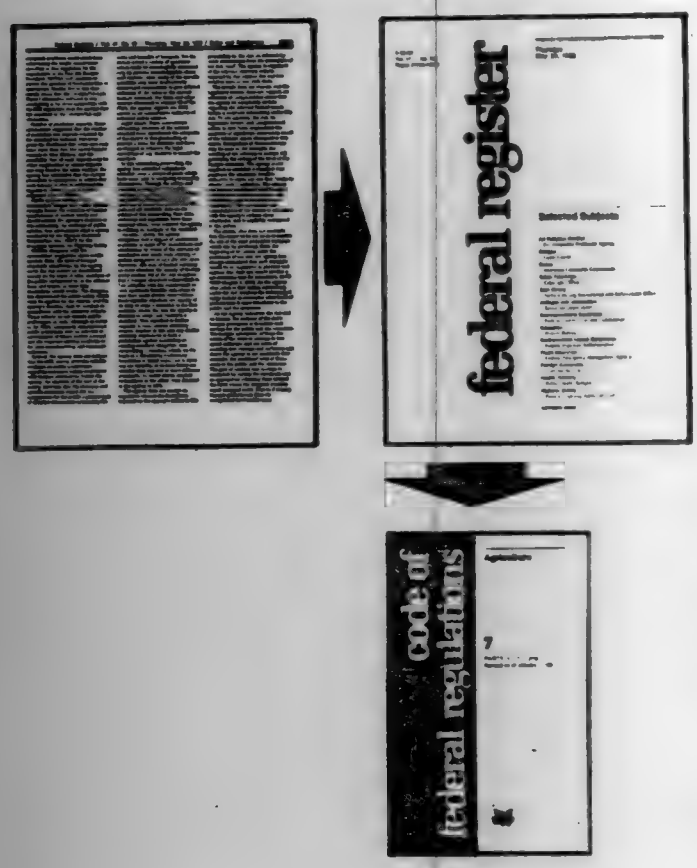
The Federal Register

Regulations appear as agency documents which are published daily in the **Federal Register** and codified annually in the **Code of Federal Regulations**



The **Federal Register**, published daily, is the official publication for notifying the public of proposed and final regulations. It is the tool to use to participate in the rulemaking process by commenting on the proposed regulations. And it keeps people up to date on the Federal regulations currently in effect.

Mailed monthly as part of a **Federal Register** subscription are: the LSA (List of CFR Sections Affected) which leads users of the **Code of Federal Regulations** to amendatory actions published in the daily **Federal Register**; and the cumulative **Federal Register Index**.

The **Code of Federal Regulations** (CFR) contains the annual codification of the final regulations printed in the **Federal Register**. Each of the 50 titles is updated annually.

Subscription Prices:

Federal Register
One year: $300 domestic; $375 foreign
Six months: $150 domestic; $187.50 foreign

Code of Federal Regulations
One year: $615 domestic; $768.75 foreign
Single volumes: Individually priced.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $300.00 per year, or $150.00 for six months, payable in advance. The charge for individual copies is $1.50 for each issue, or $1.50 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register.**

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Rules and Regulations

Federal Register
Vol. 48, No. 106
Wednesday, June 1, 1983

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

7 CFR Part 319

[Docket No. 83-318]

Citrus Canker—Mexico; Correction

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Amendment to interim rule; correction.

SUMMARY: This document corrects the amendment to the "Citrus Canker—Mexico" interim regulations which was published in the **Federal Register** on April 21, 1983 (48 FR 17322–17327). The interim regulations were amended to allow any importer to import restricted articles for movement to and use in certain northern parts of Louisiana and Texas in accordance with certain conditions, and to allow restricted articles to be culled and repacked under certain conditions in restricted areas in Texas. Because of editorial errors it is necessary to make a correction to clarify provisions which were intended to help assure that wholesale and chain store distributors in nonrestricted areas in Louisiana or Texas do not reship restricted articles into restricted areas. Accordingly, in 7 CFR 319.27–12(b) on page 17327, the phrase "to any other wholesale or chain store distributor in a restricted area" is changed to "to any other wholesale or chain store distributor in a nonrestricted area in Louisiana or Texas".

EFFECTIVE DATE: June 1, 1983.

FOR FURTHER INFORMATION CONTACT: Thomas O. Gessel, Director, Regulatory Coordination Staff, APHIS, USDA, Room 728 Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, (301) 436–5533.

Harvey L. Ford,
Deputy Administrator, Plant Protection and Quarantine, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-M

Agricultural Marketing Service

7 CFR Part 932

Olives Grown in California; Administrative Provisions

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule amends the administrative rules and regulations with respect to nomination procedures, public member and late assessment procedures of the California Olive Committee. The rule also specifies the procedures for assessment crediting of handler paid advertising expenditures and removes an obsolete definition of "limited use" styles. The changes implement two recent amendments to the marketing order.

EFFECTIVE DATE: June 1, 1983.

FOR FURTHER INFORMATION CONTACT: William J. Doyle, Chief, Fruit Branch, F&V, AMS, USDA, Washington, D.C. 20250, telephone 202–447–5975.

SUPPLEMENTARY INFORMATION: This rule has been reviewed under Secretary's Memorandum 1512–1 and Executive Order 12291 and has been designated a "non-major" rule. William T. Manley, Deputy Administrator, Agricultural Marketing Service, has certified that this action will not have a significant economic impact on a substantial number of small entities. This action is designed to promote orderly marketing of California olives for the benefit of producers, and will not substantially affect costs for those persons directly regulated.

The amendment of Subpart—Rules and Regulations (47 FR 13118, 51348) is issued under the marketing agreement, as amended, and Order No. 932, as amended (7 CFR Part 932, 47 FR 32905, 51092), regulating the handling of olives grown in California. The agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674). This section is based upon the recommendations and information submitted by the California Olive Committee and upon other available information. It is hereby found that this action will tend to effectuate the declared policy of the Act.

The changes contained herein would become effective June 1, 1983, and they are identical to those published as an interim final rule in the March 8, 1983, issue of the **Federal Register** (48 FR 9633). The interim final rule was made effective for the period March 8 through June 1, 1983, and provided the opportunity for the public to submit written comments on the interim rule until April 7, 1983. No comments were received.

Section 932.52 was amended effective August 1, 1982 (47 FR 32905), to provide that the current U.S. Standards for Grades of Canned Ripe Olives (7 CFR Part 52), instead of the U.S. Standards effective in 1971, apply for purposes of outgoing quality and limited use regulations. Thus, § 932.110 which adds "quartered" and "segmented" styles as those which may be produced from limited use sized olives, is no longer applicable and should be terminated.

Effective August 1, 1982, § 932.29 was amended to provide that producer members of the Committee may be nominated through a combination of producer meetings and subsequent mail ballots, or such other procedure recommended by the Committee and approved by the Secretary. Thus, § 932.129 should be revised to provide that Committee members who represent producers shall be nominated through a prescribed combination of public meetings with or without mail ballots, as the Committee may determine. Section 932.129 should also be revised to specify who may vote in such nominations and who may serve on the Committee.

Effective August 1, 1982, § 932.25 was revised to provide that the size of the Committee may be increased from 16 members and alternates to 17 members and alternates through the selection of a public member and alternate who are not producers or handlers. Also, § 932.29(c) was added to provide that nominations for public member and alternate shall be submitted to the Secretary prior to April 16 of the year in which nominations are made. Section 932.29(c) also provides that the Committee shall prescribe procedures

for the selection and voting for each candidate. Thus, § 932.130 should be added to prescribe the qualifications for the public member and alternate and to permit the Committee to recommend its nominee to the Secretary.

Section 932.39(c) was added in 1982 (47 FR 32905) to permit the Committee with the approval of the Secretary to levy interest and/or late charges for assessments not paid to the Committee by handlers within a prescribed period of time. Thus, § 932.139 should be added, which establishes for all assessments not received by the Committee within 30 days, a two percent late payment charge and an additional interest charge computed according to the number of days an assessment is delinquent beyond the 30 day payment period.

Finally, § 932.45 was amended in 1982 (47 FR 51092) to provide for crediting a portion of a handler's direct expenditures for paid advertising for olives. Section 932.145 should be added to implement this provision. That section specifies the direct expenditures which may be so credited, the amount of assessments available for crediting, and the procedures handlers should follow to obtain credit.

It is found that it is impracticable and contrary to the public interest to postpone the effective date of this final rule until 30 days after publication in the **Federal Register** (5 U.S.C. 553), and good cause exists for making these regulatory provisions effective as specified in that: (1) The changes implement recent amendments to the order and were recommended by the California Olive Committee; (2) olive handlers are aware of the changes and require no advanced preparation time; (3) some of changes represent a relief of restrictions or an application for benefits and no useful purpose is served by delaying the effective date of this action; and (4) the public has had an opportunity to comment on the amendments and no comments were received.

List of Subjects in 7 CFR Part 932

Marketing agreements and orders, Olives, California.

PART 932—[AMENDED]

Therefore, Subpart—Rules and Regulations (7 CFR 932.108–932.161) is amended as follows:

§ 932.110 [Removed]

1. Section 932.110 is removed.

2. Section 932.129 is revised to read as follows:

§ 932.129 Nomination procedures for producer members.

Members and alternate members on the Committee who represent producers shall be nominated in accordance with the procedures specified in either paragraph (a) or paragraph (b) of this section as the Committee may determine.

(a) *Mail ballot voting.* (1) The Committee shall schedule a meeting, prior to March 1 of each odd-numbered year, in each producing district for the purpose of selecting candidates for member and alternate member nominations. A notice of such meetings will be mailed to each producer of record in each district. The nomination process is as follows:

(i) Any person who produces olives in a particular district may offer the name of any producer from that district as a candidate for either a member or alternate member position in said district.

(ii) A producer, who produces olives in more than one district, can be selected as a candidate for a member or alternate member position in only one district.

(iii) The Committee will notify by mail producers who are selected as candidates but are not in attendance at such meetings. Such producers have the right to decline such listing on the ballot within 7 days of mailing such notice.

(iv) In the event that no candidates or an insufficient number of candidates are selected at such meetings for the producer members and alternates in the respective districts, the Committee will give written notice to producers in said district that additional names may be submitted for the specified position(s).

(2) Following such meetings, and no later than March 15 of each odd-numbered year, the Committee shall prepare and mail a ballot to each producer that delivered olives during that crop year in each district.

(i) A producer who produces olives in more than one district must choose the district in which the producer will vote and notify the Committee of that choice. If the Committee is not notified and more than one ballot is received from such a producer, the first ballot received will be counted. Candidates may only vote in the district in which they are seeking nomination.

(ii) Each ballot will list separately the names of candidates for the member positions and the names of candidates for the alternate member positions for said district.

(iii) A ballot will be mailed to producers of record to give them an opportunity to vote. Committee records will be used to determine the list of producers eligible to cast ballots. However, any producer who is not identified in such records may receive a ballot if the Committee determines that such producer is eligible to participate in nominations in that district.

(iv) A producer may cast a vote for as many candidates as there are member or alternate positions in said district.

(v) The candidate on each list, as prescribed in paragraph (a)(2)(ii) of this section, who receives the most votes will be the nominee for the first position, and until all positions for that district are filled, the candidates receiving the second, third and fourth highest number of votes will be the nominees for the second, third and fourth position respectively.

(vi) In the event of a tie which would result in elimination of a tied candidate, a second ballot with the names of those tied candidates will be mailed to producers in said district for another vote.

(b) Nomination Meetings. In lieu of the mail ballot nomination procedure specified in paragraph (a) of this section, the Committee may schedule nomination meetings. In such an event, the following procedure will apply:

(1) Prior to March 15 of each odd-numbered year, the Committee shall schedule a nomination meeting to be held in each district for the purpose of obtaining nominees for producer members and alternate members for such district.

(2) Nominations for members and balloting thereon shall precede nominations and balloting for alternate members.

(3) The candidate for each position who receives the highest number of votes shall be the nominee for the position: *Provided,* That such candidate receives a majority of the ballots cast. If no candidate receives such a majority, the two candidates who received the highest number of votes shall participate in a run-off balloting to determine which is the nominee.

(c) For the purposes of this section, a producer is a person engaged in a proprietary capacity as a single business unit in the production of olives for market as packaged olives and includes an individual (owner-operated), partnership, corporation, association, institution, or other legal business unit.

(d) *Determination of producer eligibility.* (1) Only producers (including duly authorized officers or employees of producers) who produced olives within the district shall participate in the nomination and election of producer members and alternates.

(2) Each producer (as defined in paragraph (c) of this section) shall be entitled to cast only one vote for each position.

(3) A producer having olive acreage in more than one district may participate in nominations and elections in only one district. The district in which the producer wishes to participate shall be the producer's choice.

(4) Any member of a producer's family (husband, wife, son or daughter) may vote on behalf of an owner-operated, landlord-tenant, family enterprise, or other farming unit.

(5) Any authorized officer or employee of a corporation which is a producer may vote.

(6) Any authorized member of a partnership which is a producer may vote.

(7) Power of attorney (proxies) for voting purposes are not accepted.

3. Section 932.130 is added to read as follows:

§ 932.130 Public member and alternate public member eligibility requirements and nomination procedures.

(a) *Eligibility requirements.* (1) The public member and alternate public member shall not be a producer, handler, or family member (husband, wife, son or daughter) of a producer or handler of olives and shall have no direct financial interest in, nor be engaged in, the commercial production, marketing, buying, grading or processing of olives; nor shall they be either an officer, director, or employee, or family member of an officer, director, or employee of any firm engaged in such activities.

(2) The public member and alternate public member should be able to devote sufficient time and must express a willingness to attend subcommittee and committee activities regularly and to familiarize themselves with the background and economics of the olive industry.

(3) The public member and alternate public member must be residents of California.

(b) *Nomination procedures.* (1) Prior to April 16 of the year in which nominations are made, the Committee will recommend to the Secretary a public member and alternate public member for the Committee for a two-year term of office beginning June 1 and ending May 31 of odd numbered years.

(2) The Committee will solicit, interview and recommend to the Secretary its nominees for public member and alternate public member.

(3) A majority vote is required in Committee actions concerning the nomination of the public member and alternate public member.

4. Section 932.139 is added to read as follows:

§ 932.139 Late payment and interest charges.

(a) The Committee shall impose a late payment charge on any handler whose assessment has not been received in the Committee's office within 30 days of the invoice date shown on the handler's assessment statement. The late payment charge shall be two percent of the unpaid balance.

(b) In addition, the Committee shall impose an interest charge on any handler whose assessment payment has not been received in the Committee's office within 30 days of the invoice date. The interest charge shall be the current commercial prime rate at the Committee's bank and shall be applied thereafter to the unpaid balance and late payment charge for the number of days an assessment is delinquent beyond the 30 day payment period.

5. Section 932.145 is added to read as follows:

§ 932.145 Marketing promotion, including paid advertising and crediting for handler paid brand advertising.

(a) In order for a handler to receive credit for paid brand advertising expenditures against the handler's pro rata expense assessment obligations pursuant to § 932.45, the Committee shall determine that such expenditures meet the applicable requirements of this section.

(1) Creditable direct expenditures shall mean the actual money spent for advertising space in magazines, newspapers, outdoor media, transit, or other similar print media not otherwise prohibited in this section, or time charges for radio, television and other similar electronic media: *Provided,* That the amount of the creditable expenditures shall be the gross media cost as listed on the invoice, less any frequency or cash discounts earned.

(2) For an advertisement resulting from joint participation by a handler and one or more manufacturers or sellers of complementary commodities or products, and including the brands of all participants, the handler's credit shall be the amount computed according to the handler's proportional share of the total allowable payment to the advertising medium, or the handler's payment thereof, whichever is less.

(3) Production costs, preparation expense, travel allowances, costs relating to pre-testing of advertising, test marketing, directory advertising, point of sale material, premiums, trade promotional allowances, coupon redemption fees, or other expenses not directly connected with paid space or time costs, shall not be eligible for such assessment crediting.

(4) "Brand" is defined as those brands which are controlled, owned and registered by regulated olive handlers, or their parent or subsidiary companies.

(b) Pursuant to § 932.39, assessments shall be paid by each handler in each fiscal year to cover the Committee's expenses as approved by the Secretary pursuant to § 932.38.

(1) Such assessment funds shall first be made available to cover the Committee's administrative expenses, and if applicable, expenses for research and crop estimates.

(2) Any remaining assessment funds over the amount budgeted pursuant to paragraph (b)(1) up to an additional $8 per ton, shall be used for the Committee's generic advertising and marketing promotion projects.

(3) Any remaining assessment funds over the amounts budgeted pursuant to paragraphs (b) (1) and (2), up to an additional $8 per ton, shall be made available for crediting a handler's direct expenditures for paid brand advertising; and

(4) Any remaining assessment funds over the amounts budgeted pursuant to paragraphs (b) (1), (2) and (3) shall be allocated equally for:

(i) The Committee's generic advertising and marketing promotion projects; and

(ii) Crediting a handler's direct expenditures for paid brand advertising.

(c) Each advertisement must be published, broadcast, or displayed during the fiscal year in which credit is requested, except:

(1) The initial period shall begin on September 1, 1982, and end on December 31, 1983; and

(2) That a maximum of 34 percent of a handler's total assessment obligation available for crediting advertising expenditures as of December 31 of each fiscal year, may be included as an assessment obligation in the succeeding fiscal year, but must be so credited no later than June 30 of such succeeding fiscal year with documentation to be filed with the Committee no later than the following August 31. Any such remaining assessment funds not credited are due to the Committee no later than the following September 15.

(d) Except as provided in paragraph (c), assessments available to a handler for crediting but not so credited by December 1 shall become due and payable by December 1, except that the creditable brand advertising scheduled

after December 1 may be deducted from the assessment due provided a purchase order, insertion order or other document showing that intention to advertise is submitted by December 1. The submission of intentions to advertise will not relieve a handler from the obligation of submitting proof of performance for the expenditure.

(e) Handlers who meet the applicable requirements specified in this section shall be credited with 100 percent of such allowable expenditures, but the total amount credited shall not exceed their individual prorate share of the total amount assessable for brand credit for that fiscal year.

(f) Except as provided in paragraph (c) of this section, any funds available for the assessment credit for handler paid brand advertising but not so credited, shall be paid to the Committee as provided in § 932.39, and such funds shall be placed in the Committee's reserves pursuant to § 932.40(a)(2).

(g) A handler must file a claim with the Committee to obtain credit for advertising expenditure. Each claim must be submitted in writing and accompanied by appropriate proof of performance as follows:

(1) For published advertisements, a copy of the publication invoice, agency invoice, if any, and tear sheet of the advertisement;

(2) For radio advertisements, a copy of the station invoice, a copy of the script, or reference to a copy on file with the Committee, and the agency invoice, if any;

(3) For television advertisements, a copy of the station invoice, script, and tape or story board of the advertisement, or a reference to these in the Committee files, and the agency invoice, if any;

(4) For outdoor advertisements, a copy of the company invoice, a photograph of the display or a reference to a photograph in the Committee files, and the agency invoice, if any;

(5) Or such other proof of performance and invoice as may be approved by the Committee.

(Secs. 1–19, 48 Stat. 31, as amended (7 U.S.C. 601–674))

Dated: May 24, 1983.

D. S. Kuryloski,

Deputy Director, Fruit and Vegetable Division.

BILLING CODE 3410-02-M

Food Safety and Inspection Service

9 CFR Part 318

[Docket No. 82-004F]

Production Requirements for Cooked Beef, Roast Beef, and Cooked Corned Beef

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: On July 23, 1982, the Food Safety and Inspection Service (FSIS) published an immediately effective interim rule establishing production requirements for cooked beef, roast beef, and cooked corned beef. The interim rule reorganized and clarified the existing rules, strengthened cooking requirements, required marking of the production data, and established handling and storage requirements. FSIS solicited comments on the interim rule and has considered all comments received. FSIS has determined that the interim rule, with some modifications, shall be made a final rule.

EFFECTIVE DATE: July 1, 1983.

FOR FURTHER INFORMATION CONTACT: Mr. Bill F. Dennis, Director, Processed Products Inspection Division, Meat and Poultry Inspection Technical Services, Food Safety and Inspection Service, U.S. Department of Agriculture, Washington, DC 20250, (202) 447–3840.

SUPPLEMENTARY INFORMATION:

Executive Order 12291

The Agency has determined that this final rule is not a major rule under Executive Order 12291. It will not result in an annual effect on the economy of $100 million or more; a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies or geographic regions; or significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.[1]

Effect on Small Entities

The Administrator, FSIS, has determined that this final rule will not have a significant economic impact on a substantial number of small entities, as defined by the Regulatory Flexibility Act, Pub. L. 96–354 (5 U.S.C. 601), because it contains sufficient flexibility to allow a number of different production procedures to be used which will result in safe, wholesome product.[1]

Background

On July 23, 1982, FSIS published in the **Federal Register** (47 FR 31854) an interim final rule, effective immediately, establishing production requirements for cooked beef, roast beef, and cooked corned beef. The interim final rule was designed to assure destruction of salmonellae in roasts during cooking and to prevent recontamination after cooking so that cooked beef, roast beef, and cooked corned beef would be salmonellae-free upon leaving the official establishment. Recent outbreaks of salmonellosis had shown the need for strengthened requirements.

Comments on the Interim Rule

FSIS received 14 comments in response to the interim final rule—9 from meat processing establishments, 2 from industry associations, 1 from a university, 1 from a consumer, and 1 from a State health department. One commenter was in full support of the interim rule, and another commenter opposed it in general. The following is a discussion of the issues raised by the commenters and FSIS's response to each:

1. The largest single area of interest in the comments was the chilling process. The interim rule required that chilling begin within 90 minutes after the completion of the cooking cycle of the product, and that product be chilled to an internal temperature of 40° F or lower within 7½ hours after completion of the cooking cycle. Although few argued that roasts could not be chilled in 7½ hours, the major contentions concerning chilling requirements were that FSIS did not take the following factors into consideration when adopting the chilling requirements: (1) larger roasts are more difficult to chill than smaller ones; (2) some roasts are heated well above 145° F (the maximum internal temperature addressed in the interim rule) and thus may require longer than 7½ hours to chill; (3) air cooling, which does not spoil a dry cooked roast's appearance, is more difficult than water cooling; and (4) commercial chilling conditions in setting the requirement.

In the final rule, the maximum chilling time after the cooking cycle has been restricted to no more than 6 hours for the time that product is in the optimal growth zone for pathogens—the zone between 120°F (48.8°C) and 55°F (12.7°C)—with the stipulations that chilling then continues until 40°F (4.4°C) is reached and that the product is not packed for shipment until this occurs. To

[1] More detailed information relating to the impact is set forth in the interim rule (pages 31854 and 31855 of the July 23, 1982, **Federal Register**).

arrive at this chilling requirement, FSIS scientists requested cooling times and temperatures from many processors. After a thorough review and evaluation of the cooling times and temperatures, FSIS has determined that the above chilling requirement is safe and represents good manufacturing practices. Further, the revised chilling requirement is consistent with the cooling requirements for roast beef as set forth in the Food and Drug Administration's Model Ordinance and Code for Retail Stores.

The interim rule also required that product prepared for cooking either be chilled to 40°F within 2 hours of completion of the precooking preparation or that the product be entered into the cooking cycle. This provision was somewhat misunderstood, and several commenters objected to it.

FSIS intended the provision to require the processor to decide by the time precooking preparation was completed whether the product could shortly thereafter enter the cooking cycle. If the product could enter the cooking cycle within 2 hours, the product could remain at processing room temperature for that time. If not, the product would be placed immediately in a cooler at 40°F or lower. In the final rule, the wording of this provision has been changed to make this intention clearer.

2. The interim rule required all pieces of meat in each lot which was being cooked to be within a range of 2 pounds and 2 inches in thickness. A number of commenters considered this requirement unnecessary. One suggested that control be either 2 pounds or 2 inches in thickness, not both.

FSIS agrees with that suggestion. The original purpose of the interim rule was to prevent such diversity in size and thickness of the meat that some pieces were overcooked before other pieces were cooked enough. The fear was that the establishments would tend to err on the side of taste and consumer appeal and, in trying to prevent overcooking of some pieces of meat, would undercook others. However, once the point was raised, the Administrator has determined that either criterion gives sufficient control on uniformity, and that allowing either criterion provides more flexibility for the establishments. Therefore, the final rule has been changed to require that all pieces of meat in a lot which is being cooked to be within a range of either 2 pounds or 2 inches in thickness.

3. A few comments addressed the variety of control provisions contained in the interim rule dealing with recognized problems. Some said the controls were effective as written, whereas others challenged some particular aspect. (If one kills all salmonellae during cooking, why worry about chilling? If a plant has a good record, why require expensive changes, especially expensive monitoring equipment? If the problem is recontamination, why not just deal with that and leave processing alone?)

Because the problems with respect to the production of cooked beef, roast beef, and cooked corned beef are serious and all the outbreaks of salmonellosis cannot be assigned to any one cause, a broadly-based, many-faceted control program is appropriate. FSIS is cognizant of the fact that cooked beef, roast beef, and cooked corned beef are produced under a variety of conditions and procedures. The Administrator is willing to consider future presentations of data concerning additions or modifications to these requirements. It should be stressed, however, that adequate documentation of satisfactory performance is essential.

4. Several commenters stated that separate areas should not be required for raw and cooked product if the meat is cooked in a bag.

Many establishments cut the end or corner of the bag to release some cook-out juices while other establishments rebag the product. In either case, this allows opportunity for recontamination by Salmonellae organisms. Even where the meat remains in the bag throughout the cooking and chilling cycles, if the outside of the bag is placed on a surface contaminated with salmonellae by raw meat, the finished product can be contaminated by a transfer of organisms from the bag to the meat when it is taken from the bag. Therefore, separation during processing is necessary.

Some commenters also stated that cooked product need not be in a water-tight covering to be stored in the same cooler as raw product.

FSIS acknowledges that other forms of suitable protective coverings exist. Therefore, the final rule has been amended to permit the use of other protective coverings, provided that the alternative coverings used are approved, upon request in writing, by the Circuit Supervisor.

5. Several commenters indicated that the interim rule was not clear concerning exactly which products are being regulated. Specifically, one commenter stated that the term "cooked beef" was ambiguous.

FSIS disagrees with that comment. Roast beef and cooked beef are the common or usual names for the products being regulated. Although some comminuted beef products such as patties, loaves, and hamburger may be cooked beef, they are not labeled as simply "cooked beef." The products being regulated are beef roasts (cuts of beef suitable for roasting), cured or uncured, which are cooked by dry heat (roasting) or moist heat.

Since the publication of the interim rule, FSIS has become aware of some confusion as to whether roasts which are chunked and formed or sectioned and formed are included in the interim rule. The interim rule was intended to cover these roasts, and the final rule has been clarified to make this evident.

6. A number of the commenters objected to the requirement that establishments which have a cooling deviation contact the Processed Products Inspection Division in Washington. The commenters believed that this requirement is time consuming and burdensome, and that the establishments would not quickly obtain the information they needed. The commenters suggested that these deviations be controlled at a regulatory level that is more accessible.

FSIS's concern was that the deviations be handled by personnel with sufficient expertise to assure that the problem is handled safely. In response, FSIS has revised the final rule to provide that the decisions concerning cooling deviations be made at the Regional Offices since they have processing specialists trained to handle cooling deviations.

7. One commenter questioned the inclusion of corned beef along with roast beef, but not the inclusion of other deli items such as ham, pastrami, cooked turkey, etc.

FSIS included corned beef in the interim rule because this product is frequently produced by the same processors that produce cooked and roast beef, often using the same packaging tables and equipment. Further, routine sampling of cooked corned beef has revealed the presence of salmonellae. Corned beef, because it is frequently consumed in sandwiches without reheating, represents a potential health hazard when contaminated with salmonellae.

8. Several commenters stated that the handling of spices is not properly specified. Several believed that FSIS was being too rigorous and compliance would be too costly. On the other hand, one commenter stated that FSIS was not rigorous enough. One stated that filtering spice mixtures was futile because one cannot filter out bacteria.

Filtering the curing solutions removes the particles of meat and other debris

upon which bacteria grow. It is more difficult to remove debris and bacteria from a dry mixture. In either case discarding daily any ingredient that has contacted the product controls the build-up of salmonellae. An incidental advantage to this for the establishment is that this provision establishes an incentive for management to better control its spices to avoid waste. The one exception is for product that is immersed in the same brine for more than 1 day.

9. Two commenters stated that they had been given an unreasonably short time to plan a major capital expense to comply with the interim rule.

There are several hundred establishments under inspection, many of which had to make some change to accommodate the provisions of the interim rule. FSIS appreciates that some establishments suffered inconveniences due to the immediately effective interim rule. However, FSIS's public health obligation to prevent further outbreaks of salmonellosis mandated issuance of the interim rule.

10. Several commenters stated the regulation was too burdensome. Two requested that USDA supply a format for the written procedure. Another believed that holding records for 6 months was too long.

The rule itself provides a guide as to the type of submittal needed. Six months record storage is necessary due to the possibility of a recall.

11. Two comments concerned labeling. One suggested that the production date be required on the shipping case rather than on the immediate container. Another suggested that FSIS allow a choice of the production, packaging, or pull date to be used.

Labeling serves two functions. First, it identifies the manufacturer of the package. Only immediate container labeling can provide rapid traceback in case of food-borne illnesses. Second, labeling provides the date of production so that, should contamination occur, similarly affected product can be efficiently and economically located. The date of production is obviously far more useful for this purpose than the packaging or pull date which can vary among establishments.

Miscellaneous Amendments

The final rule has been modified by allowing more flexibility in cooking methods, including the cooking of corned beef in sealed ovens and the roasting of corned beef, by removing a requirement for netting or racks for roasts of more than 10 pounds, and by allowing more flexibility in the use of relative humidity to kill surface bacteria. The Administrator has determined that requiring netting or racks for roasts greater than 10 pounds does not detract or add to the safety of the product and that the cooking methods required for roast beef are equally effective for corned beef. Also, the humidity requirements can be eased for products cooked to an internal temperature of 145° F or above because there is scientific evidence showing that humidity is not as necessary for these products as it is for products cooked to lower temperatures.

The final rule has been modified to clarify that the requirement that roasts do not touch or overlap while cooking does not apply to product that is stirred or agitated to assure heat transfer during cooking or cooling. Such product is likely to move around in the cooking or cooling vessel, and there is far less trouble with heat distribution because both convection and conduction heat transfer are present. Since the only reason for this provision was to assure that each roast receives the minimum internal temperature required for safety, and since stirred or agitated product will not have a heat distribution problem, the safety of these products does not depend on the applicability of this provision.

To assure sanitary handling, processing, and storing of cooked beef, roast beef, and cooked corned beef, the interim rule required that establishments submit a set of written procedures to the Regional Director for approval. Section 318.17(f) (1) through (6) sets forth the information to be included in the written procedures. FSIS has become aware that some confusion exists as to what is required in the set of written procedures. In some cases, the written procedures may include only the information required in § 318.17(f); however, written alternate procedures may be required to be submitted as well by other paragraphs within § 318.17, e.g., (h)(2), (h)(6), and (i)(3). Therefore, a new paragraph (f)(7) has been added to § 318.17 in the final rule to include any permitted alternate procedure into the written procedures to be submitted for approval.

Minor revisions have also been made for clarity in the final rule.

Recordkeeping Requirements

Information collection requirements contained in this regulation (§ 318.17) have been approved by the Office of Management and Budget under the provisions of 44 U.S.C. Chapter 35 and have been assigned OMB #0583–0015.

Final Rule

After careful consideration of the comments received on the interim rule and other relevant information available to FSIS, the Administrator has determined that the interim rule, as revised herein, should be published as permanent regulations as set forth below.

List of Subjects in 9 CFR Part 318

Meat inspection, Preparation of products.

PART 318—[AMENDED]

1. The authority citation for Part 318 reads as follows:

Authority: 34 Stat. 1260, 79 Stat. 903, as amended, 81 Stat. 584, 84 Stat. 91, 438; 21 U.S.C. 71 *et seq.*, 601 *et seq.* (33 U.S.C. 1254).

2. The heading and text of § 318.17 are revised to read as follows:

§ 318.17 Requirements for the production of cooked beef, roast beef, and cooked corned beef.

(a) Cooked beef and roast beef, including sectioned and formed roasts and chunked and formed roasts, and cooked corned beef shall be prepared by one of the time and temperature combinations in the following table. The stated temperature is the minimum which shall be produced and maintained in all parts of each piece of meat for at least the stated time:

TABLE FOR TIME/TEMPERATURE COMBINATION FOR COOKED BEEF, ROAST BEEF, AND COOKED CORNED BEEF

Minimum internal temperature		Minimum processing time in minutes after minimum temperature is reached
Degrees Fahrenheit	Degrees Centigrade	
130	54.4	121
131	55.0	97
132	55.6	77
133	56.1	62
134	56.7	47
135	57.2	37
136	57.8	32
137	58.4	24
138	58.9	19
139	59.5	15
140	60.0	12
141	60.6	10
142	61.1	8
143	61.7	6
144	62.2	5
145	62.8	Instantly

(b) Cooked beef, including sectioned and formed roasts and chunked and formed roasts, and cooked corned beef shall be moist cooked throughout the process or, in the case of roast beef or corned beef to be roasted, cooked as provided in paragraph (c) of this section. The moist cooking may be accomplished by (1) placing the meat in a sealed, moisture impermeable bag, removing the

excess air, and cooking, (2) completely immersing the meat, unbagged, in water throughout the entire cooking process, or (3) using a sealed oven or steam injection to raise the relative humidity above 90 percent throughout the cooking process.

(c) Roast beef or corned beef to be roasted shall be cooked by one of the following methods:

(1) Heating roasts of 10 pounds or more in an oven maintained at 250°F (121°C) or higher throughout the process;

(2) Heating roasts of any size to a minimum internal temperature of 145°F (62.8°C) in an oven maintained at any temperature if the relative humidity of the oven is maintained either by continuously introducing steam for 50 percent of the cooking time or by use of a sealed oven for over 50 percent of the cooking time, or if the relative humidity of the oven is maintained at 90 percent or above for at least 25 percent of the total cooking time, but in no case less than 1 hour; or

(3) Heating roasts of any size in an oven maintained at any temperature that will satisfy the internal temperature and time requirements of paragraph (a) of this section if the relative humidity of the oven is maintained at 90 percent or above for at least 25 percent of the total cooking time, but in no case less than 1 hour.

The relative humidity may be achieved by use of steam injection or by sealed ovens capable of producing and maintaining the required relative humidity.

(d)(1) Except as provided in paragraph (d)(2) of this section, establishments producing cooked beef, roast beef, or cooked corned beef shall have sufficient monitoring equipment, including recording devices, to assure that the time (within 1 minute), the temperature (within 1°F), and relative humidity (within 5 percent) limits of these processes are being met. Data from the recording devices shall be made available to a program employee upon request.

(2) In lieu of recording devices, establishments may propose in the written procedures prescribed in paragraph (f) of this section, an alternative means of providing inspection personnel with evidence that finished product has been prepared in compliance with the humidity requirements of paragraphs (b) and (c) of this section, and the 145°F (62.8°C) temperature requirements of paragraph (a) of this section.

(e) Each package of finished product shall be plainly and permanently marked on the immediate container with the date of production either in code or with the calendar date.

(f) In order to assure that cooked beef, roast beef, and cooked corned beef are handled, processed, and stored under sanitary conditions, the establishment shall submit a set of written procedures through the inspector-in-charge for approval by the Regional Director. The written procedures shall include the following information:

(1) The temperature to which raw frozen product is thawed and the time required.

(2) The lot identification procedure for lots of product during processing.

(3) The storage time and temperature combinations which the establishment intends to use before cooking, the cooking time and temperature the establishment intends to use, and the time, if any, the establishment intends to wait after cooking and before cooling.

(4) If a code, instead of the calendar date, is used on the immediate container of the finished product, its meaning shall also be included.

(5) Any other critical control points in the procedures which could affect the safety of the product.

(6) In lieu of recording devices, the alternate means permitted by § 318.17(d)(2) of providing evidence to inspection personnel that the finished product will be prepared in compliance with temperature or humidity requirements.

(7) Any other alternate procedure used that is permitted in this section.

(g) The establishment shall maintain records and reports which document the time, temperature, and humidity at which any cooked beef, roast beef, or cooked corned beef is cooked and cooled at the establishment. Such records shall be kept by the establishment for 6 months or for such further period as the Administrator may require for purposes of any investigation or litigation under the Act, by written notice to the person required to keep such records. Such records shall be made available to the inspector or any duly authorized representative of the Secretary upon request.

(h) The handling and processing of cooked beef, roast beef, and cooked corned beef before, during, and after cooking shall be such as to prevent the finished product from being adulterated. As a minimum, they shall be controlled as follows:

(1) The establishment shall notify the inspector-in-charge which processing procedure will be used on each lot, including time and temperature.

(2) In order to assure uniform heat penetration and consequent adequate cooking of each piece of beef, individual pieces of raw product in any one lot shall either not vary in weight by more than 2 pounds or not vary in thickness by more than 2 inches at the thickest part. Alternate methods of assuring uniform heat penetration may be submitted in writing for approval to the Regional Director.

(3) A water-based solution that is used for injecting or immersing the meat shall be refrigerated to 50°F (10°C) or lower from the time it contacts the meat, and shall be filtered each time it is recirculated or reused.

(4) A nonmeat ingredient, including the water-based solution in (h)(3) above, which has contacted meat shall be discarded at the end of that day's production unless it is in continuous contact with one batch of product.

(5) Product prepared for cooking shall be entered into the cooking cycle within 2 hours of completion of precooking preparation, or be placed immediately in a cooler at a temperature of 40°F (4.4°C) or lower.

(6) The time and temperature requirements shall be met before any product in the lot is removed from the cooking units. Unless otherwise specified in the written procedures approved in accordance with paragraph (f) of this section, the heat source shall not be shut off until these requirements are met.

(7) Other than incidental contact caused by water currents during immersion cooking or cooling, product shall be placed so that it does not touch or overlap other products. This provision does not apply to product that is stirred or agitated to assure uniform heat transfer.

(8) Temperature sensing devices shall be so placed that they monitor product in the coldest part of the cooking unit; and when an oven temperature is required by paragraph (c) of this section, the oven temperature shall also be monitored in the coldest part of the cooking unit.

(9) If a humidity sensing device is required in an oven, it shall be placed so that it measures humidity in either the oven chamber or at the exit vent.

(10) Chilling shall begin within 90 minutes after the cooking cycle is completed.

(i) All product shall be chilled from 120°F (48 .8°C) to 55°F (12.7°C) in no more than 6 hours.

(iii) Chilling shall continue and the product shall not be packed for shipment until it has reached 40°F (4.4°C).

(11) Any establishment that has experienced a cooking process deviation during preparation of product may either

reprocess the product completely, continue the heating to 145°F (62.8°C), or contact the Regional Director for a review of the process schedule for adequacy and, if needed, for a cooking schedule to finish that one batch of product.

(12) An establishment that has experienced a cooling deviation after the product has been cooked shall contact the Regional Director to determine the disposition of that retained product.

(i) Cooked beef, roast beef, and cooked corned beef shall be so handled as to assure that the product is not recontaminated by direct contact with raw product. To prevent direct contamination of the cooked product, establishments shall:

(1) Physically separate areas where raw product is handled from areas where exposed cooked product is handled, using a solid impervious floor to ceiling wall; or

(2) Handle raw and exposed cooked product at different times, with a cleaning of the entire area after the raw material handling is completed and prior to the handling of cooked product in that area; or

(3) Submit a written procedure for approval through the inspector-in-charge to the Circuit Supervisor detailing the steps to be taken which would avoid recontamination of cooked product by raw product during processing.

(j) To prevent indirect contamination of cooked product:

(1) Any work surface, machine, or tool which contacts raw product shall be thoroughly cleaned and sanitized with a solution germicidally equivalent to 50 ppm chlorine before it contacts cooked product;

(2) Employees shall wash their hands and sanitize them with a solution germicidally equivalent to 50 ppm chlorine whenever they enter the heat processed product area or before preparing to handle cooked product, and as frequently as necessary during operations to avoid product contamination; and

(3) Outer garments, including aprons, smocks, and gloves, shall be especially identified as restricted for use in cooked product areas only, changed at least daily, and hung in a designated location when the employee leaves the area.

(k) Cooked product shall not be stored in the same room as raw product unless it is first packaged in a sealed, water-tight container or is otherwise protected by a covering that has been approved, upon written request, by the Circuit Supervisor.

(Approved by the Office of Management and Budget under OMB #0583-0015)

Done at Washington, DC, on: May 20, 1983.

Donald L. Houston,

Administrator, Food Safety and Inspection Service.

[FR Doc. 83-14850 Filed 5-31-83; 8:45 am]

BILLING CODE 3410-DM-M

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 25 and 95

Access to and Protection of National Security Information and Restricted Data

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Nuclear Regulatory Commission (NRC) is amending its regulations to modify the requirements for submitting reports on classification/declassification actions, adding a specific marking to classified documents released to International Atomic Energy Agency (IAEA) representatives, maintaining records concerning visits involving classified information, and updating the regulations in accordance with the requirements of Executive Order 12356 and its Implementing Directive. These amendments provide additional guidance for handling classified drafts of documents and working papers and for obtaining approvals for the security of telecommunication and automatic data processing systems where classified information is involved. These amendments are necessary to incorporate experience gained under the current regulations and to prevent the unauthorized disclosure of National Security Information and Restricted Data.

EFFECTIVE DATE: June 27, 1983.

FOR FURTHER INFORMATION CONTACT: Richard A. Dopp, Security Policy Branch, Division of Security, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Telephone: (301) 427-4415.

SUPPLEMENTARY INFORMATION: On December 30, 1982 the Commission published proposed amendments in the **Federal Register** (47 FR 58275) to improve the clarity of direction of 10 CFR Parts 25 and 95 and to bring these parts into conformance with E.O. 12356 which was published in the **Federal Register** on April 6, 1982 (47 FR 14874).

A thirty day public comment period for the proposed rule expired January 31, 1983. No public comments were received. The proposed amendments have been modified in response to editorial and minor content changes recommended by the NRC staff, and are being published in final form, to be effective thirty days after publication.

Effective August 1, 1982, E.O. 12356, together with an accompanying Information Security Oversight Office (ISOO) Implementing Directive, changed certain requirements governing the classification, declassification, downgrading and safeguarding of National Security Information. As explained more fully in connection with the specific changes indicated herein, Parts 25 and 95 required amendment to bring them into conformance with the provisions of E.O. 12356. Additional guidance and clarifying changes have been provided.

In particular, this rule revises the authority citations in 10 CFR Parts 25 and 95 and revises some definitions contained in these parts. The rule also clarifies the requirements for submittal of a complete security forms packet and makes other minor amendments.

Section 6.1 of E.O. 12356 reflects a change in the definition of the term "National Security Information." Sections 25.5 and 95.5 have been amended to reflect this revised definition. Additionally, § 95.5 has been revised to reflect changes in the definitions of "National Security," and "Classified Matter."

Section 25.17(c) in its original final form (45 FR 14476) required a full personnel security packet of forms identified in (1) through (6) of paragraph (c) to be submitted with each access authorization request. On October 30, 1980 (45 FR 71763), NRC amended § 25.17(c) and waived the full set of forms requirement for those individuals who already possessed an active security clearance from another Federal agency or who were being processed for a security clearance by another Federal agency on the effective date of the rule. The October 30, 1980 amendment substantially reduced the initial administrative burden on affected licensees who used the new procedure to obtain authorizations for affected employees. However, this provision continues to permit a reduced requirement for forms, even if the previously granted security clearance has since been terminated. This was not the staff's intent. The changes contained in this revision will continue to permit the certification of existing active Federal government access authorizations (with the reduced forms requirement) when based on adequate investigations which are not more than five years old.

Paragraph (c) of § 25.33, "Termination of access authorizations," currently requires the licensee or other organization official conducting a termination briefing to notify NRC in writing that a briefing was conducted and to forward the Security Termination Statement. Section 25.33(c) has been revised to reflect that the NRC Division of Security accepts the submission of the completed termination statement as evidence that the termination briefing has been conducted.

When Part 25 was originally published, NRC prescribed a number of recordkeeping requirements based on disposition schedules then in use. A recordkeeping requirement for documents relating to classified visits was not identified at that time. A records maintenance requirement for NRC Form 277 will provide the opportunity for NRC review of the classified visit program at the affected facility and provides assurance that only properly authorized individuals obtain access to classified matter during visits to other facilities and agencies. A revision of § 25.35 imposes this necessary recordkeeping requirement.

Sections 25.37 and 95.61, "Violations," have been revised to provide clear and concise notice of potential criminal liabilities and the availability of criminal penalties for the willful violation of the parts and to reflect the replacement of E.O. 12065 with E.O. 12356.

In order to permit licensees and others to make changes to their facility security plans, a new § 95.15(d) has been added. Changes which do not decrease the effectiveness of the plan may be made without prior NRC approval, but they must be submitted within two months after the changes have been made.

Classified documents which have been released to IAEA representatives will be identified by a special marking applied to them in accordance with instructions contained in the specific disclosure authorization letter provided by the NRC to the licensees. This additional means of identification and control for classified documents has been incorporated in § 95.36.

The requirements of E.O. 12356 modified the markings to be applied to classified documents. These modifications are reflected in the revisions made to § 95.37(c), "Markings required on face of classified document." Under E.O. 12356, the declassification of documents can occur on a specific date, event, or upon the originating agency's determination that the document may be declassified. Since the new E.O. eliminated the scheduled or routine review for declassification, § 95.37(c) has been revised to reflect this change. Additionally, § 95.37(c)(6), which addresses the extension of classification beyond six years, has been deleted since National Security Information documents under the new E.O. are no longer automatically declassified after that period.

The requirements of E.O. 12356 also modified the markings applied to transmittal documents. These new markings are set forth in the proposed revisions to § 95.37(h).

Section 95.37, "Classification and preparation of documents," provides detailed requirements for the marking and handling of classified documents. Experience in working with this section has demonstrated a need to provide more direction for the marking and handling of newly created documents. For this reason, a new § 95.37(k) has been added that provides specific direction for the marking and handling of drafts and working papers.

The existing § 95.39(d), "Telecommunication of classified information," and § 95.49, "Security of automatic data processing (ADP) systems," also demonstrated the need for revision to provide the necessary direction and requirements to establish a secure telecommunication or ADP system. Revised §§ 95.39(d) and 95.49 impose no additional requirements, but do offer more detailed direction.

Section 95.57 presently requires the submission of an NRC Form 790 whenever a document containing National Security Information or Restricted Data is generated or its classification is changed. The amendment to this section clarifies who should submit this report, what actions should be reported, and on what schedule.

Section 95.59, "Inspections," is being revised to reflect the replacement of E.O. 12065 with E.O. 12356.

Part 95, Appendix A, "Classification Guide for Safeguards Information," is being updatd to comply with E.O. 12356. A significant change occurs in the area of declassification guidance. Whereas previously, reviews at the end of seven or 20 years required, a determination by the originating agency is now required before information may be declassified.

Paperwork Reduction Act Statement

This final rule amends information collection requirements that are subject to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.). These requirements were approved by the Office of Management and Budget approval numbers 3150–0046, 0047, 0048.

Regulatory Flexibility Certification

In accordance with the Regulatory Flexibility Act of 1980, 5 U.S.C. 605(b), the Commission hereby certifies that this rule will not have a significant economic impact on any small entities. Each NRC licensee or other organization which may require access to National Security Information and/or Restricted Data used, processed, stored, reproduced, transmitted and destroyed in connection with a license or application for a license could potentially be impacted by this rule and required to provide adequate protection for National Security Information and/or Restricted Data. Only 12 entities (including five fuel cycle facilities, three transportation companies, one reactor and three other organizations) are currently required to meet the requirements of 10 CFR Parts 25 and 95. Since none of these have been determined to be small as defined by the Regulatory Flexibility Act of 1980 the Commission finds that this rule will not have a significant economic impact upon a substantial number of small entities.

List of Subjects

10 CFR Part 25

Classified information, Penalty, Reporting and recordkeeping requirements, Security measures.

10 CFR Part 95

Classified information, Penalty, Security measures.

Under the authority of the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974, as amended, and 5 U.S.C. 552 and 553, the following amendments to 10 CFR Parts 25 and 95 are published as a document subject to codification.

PART 25—ACCESS AUTHORIZATION FOR LICENSEE PERSONNEL

1. The authority citation for Part 25 is revised to read as follows:

Authority: Secs. 145, 161, 68 Stat. 942, 948, as amended (42 U.S.C. 2165, 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); E.O. 10865, as amended, 3 CFR 1959–1963 COMP., p. 398 (50 U.S.C. 401, note); E.O. 12356, 47 FR 14874, April 6, 1982.

Appendix A also issued under Title V, Pub. L. 82–137, 65 Stat. 290 (31 U.S.C. 483a).

For the purposes of sec. 223, 68 Stat. 958, as amended (42 U.S.C. 2273), §§ 25.13, 25.17(a), 25.33 (b) and (c) are issued under sec. 161i, 68 Stat. 948, as amended (42 U.S.C. 2201(i)); and §§ 25.13 and 25.33(b) are also issued under sec. 161o, 68 Stat. 950, as amended (42 U.S.C. 2201(o)).

2. In § 25.5, the definition of "National Security Information" is revised to read as follows:

§ 25.5 Definitions.

* * * * *

"National Security Information" means information that has been determined pursuant to Executive Order 12356 or any predecessor order to require protection against unauthorized disclosure and that is so designated.

* * * * *

3. In § 25.17, paragraphs (a) and (c) are revised to read as follows:

§ 25.17 Approval for processing applicants for access authorization.

(a) Access authorizations shall be requested for licensee employees or other persons (e.g., 10 CFR Part 2, Subpart I) who need access to National Security Information and/or Restricted Data in connection with activities under Parts 50, 70, or 72.

* * * * *

(c)(1) Each personnel security packet submitted, must include the following completed forms:

(i) Personnel Security Questionnaire (NRC–1, Parts I and II);

(ii) National Agency Check-Data for Nonsensitive or Noncritical-Sensitive Position (SF–85–A)—for "L" cases only;

(iii) Two Standard Fingerprint cards (FD–258);

(iv) Security Acknowledgment (NRC–176);

(v) Authority to Release Information (NRC–259); and

(vi) Related forms where specified in accompanying instructions (NRC–254).

(2) Forms identified in paragraphs (c)(1) (i) and (ii) of this section must be typed. Only a Security Acknowledgment (NRC Form 176) need be completed by any person possessing an active access authorization, or who is being processed for an access authorization, by another Federal agency. The active or pending access authorization must be at an equivalent level to that required by the NRC and be based on an adequate investigation not more than five years old.

* * * * *

4. In § 25.31, paragraph (b) is revised to read as follows:

§ 25.31 Extensions and transfers of access authorizations.

* * * * *

(b) The NRC Division of Security may, on request, transfer an access authorization when an individual's access authorization under one employer or activity is terminated, simultaneously with the individual being granted access authorization for another employer or activity.

* * * * *

5. In § 25.33, paragraph (c) is revised to read as follows:

§ 25.33 Termination of access authorizations.

* * * * *

(c) When an access authorization is to be terminated, a representative of the licensee or other organization shall conduct a security termination briefing of the individual involved, explain the Security Termination Statement (NRC Form 136) and have the individual complete the form. The representative shall promptly forward the original copy of the completed Security Termination Statement to the NRC Division of Security, Office of Administration, Washington, DC 20555.

6. Section 25.35 and the center heading that precedes it are revised to read as follows:

Classified Visits

§ 25.35 Classified visits.

Visits to NRC, NRC contractor, licensee or licensee related facilities, or other government agencies or their contractors involving access to classified information by individuals covered by this part require advance certification of "need-to-know" and verification of NRC access authorization. Individuals planning these visits shall complete NRC Form 277, "Request for Visit or Access Approval," with the "need-to-know" certified by the appropriate NRC office exercising licensing or regulatory authority. This NRC office shall then forward the request to the NRC Division of Security at least 15 days in advance of the date of the visit for appropriate verification of NRC access authorization. The Division of Security shall forward the form to the facility to be visited. Records related to these visits must be maintained by the facility for two years following the expiration date of the visit authorization.

7. Section 25.37 and the center heading that precedes it are revised to read as follows:

Violations

§ 25.37 Violations.

(a) An injunction or other court order may be obtained to prohibit a violation of any provision of:

(1) The Atomic Energy Act of 1954, as amended;

(2) Title II of the Energy Reorganization Act of 1974, as amended; or

(3) Any regulation or order issued under these Acts.

(b) National Security Information is protected under the requirements and sanctions of Executive Order 12356.

(c) Whoever willfully violates, attempts to violate, or conspires to violate, any provision of the Atomic Energy Act of 1954, as amended, for which no criminal penalty is specifically provided or any regulation or order prescribed or issued under subsections 161 i or o of the Act may be guilty of a crime and, upon conviction, may be punished by fine or imprisonment or both, as provided by law. Regulations issued under the Act include regulations issued under subsections 161 i and o and cited within the authority citation at the beginning of this part for the purposes of section 223.

PART 95—SECURITY FACILITY APPROVAL AND SAFEGUARDING OF NATIONAL SECURITY INFORMATION AND RESTRICTED DATA

8. The authority citation for Part 95 is revised as follows:

Authority: Secs. 145, 161, 68 Stat. 942, 948, as amended (42 U.S.C. 2165, 2201); sec. 201, 88 Stat. 1242, as amended (42 U.S.C. 5841); E.O. 10865, as amended, 3 CFR 1959–1963 COMP., p. 398 (50 U.S.C. 401, note); E.O. 12356, 47 FR 14874, April 6, 1982.

For the purposes of sec. 223, 68 Stat. 958, as amended (42 U.S.C. 2273); §§ 95.13, 95.15(a), 95.25, 95.27, 95.29(b), 95.31, 95.33, 95.35, 95.37, 95.39, 95.41, 95.43, 95.45, 95.47, 95.51, 95.53, and 95.57 are also issued under sec. 161i, 68 Stat. 949, as amended (42 U.S.C. 2201(i)).

9. In § 95.5, the definitions of "Classified Matter," "National Security," and "National Security Information" are revised to read as follows:

§ 95.5 Definitions.

* * * * *

"Classified Matter" means documents or material containing classified information.

* * * * *

"National Security" means the national defense or foreign relations of the United States.

"National Security Information" means information that has been determined pursuant to Executive Order 12356 or any predecessor order to require protection against unauthorized disclosure and that is so designated.

* * * * *

10. In § 95.15, paragraph (d) is added to read as follows:

§ 95.15 Approval for processing licensees and others for security facility approval.

* * * * *

(d) A licensee or other person may make a change in an NRC approved facility security plan for the safeguarding of National Security Information and/or Restricted Data without prior NRC approval, if the change does not decrease the effectiveness of the plan. A report containing a description of each change must be furnished to the NRC, Director of Security, Office of Administration, Washington, DC 20555, with a copy to the Regional Administrator of the appropriate NRC Regional Office listed in Appendix A, 10 CFR Part 73, within two months after the change.

11. In § 95.36, paragraph (c) is revised to read as follows:

§ 95.36 Access by representatives of the International Atomic Energy Agency.

* * * * *

(c) In accordance with the specific disclosure authorization provided by the Division of Security, licensees are authorized to release (i.e., transfer possession of) copies of documents which contain National Security Information directly to IAEA inspectors and other representatives officially designated by IAEA to request and receive classified National Security Information documents. These documents shall be marked specifically for release to IAEA in accordance with instructions contained in NRC's disclosure authorization letter. Licensees may also forward these documents through NRC to IAEA representatives at IAEA headquarters in accordance with the NRC disclosure authorization. Licensees are not authorized to reproduce documents containing National Security Information except as provided in § 95.43 of this part.

* * * * *

12. In § 95.37, paragraphs (c) and (h) are revised and new paragraph (k) is added to read as follows:

§ 95.37 Classification and preparation of documents.

* * * * *

(c) *Markings required on face of classified documents.* Each classified document must contain on its face:

(1) For National Security Information documents:

(i) Identity of classifier. The identity of the classifier must be shown by completion of the "CLASSIFIED BY" line. The completion of the "CLASSIFIED BY" line must show the guide or guidance responsible for the classification and the signature of the classifier applying the guidance to the document.

(ii) Date of classification and office of origin. The date on a document at the time of its origination may be considered the date of classification if the document is marked as classified on the same day it is originated. If the document is marked on a day subsequent to its origination, the actual date of marking must be shown on the "Classified By" line.

(iii) Classification designation (e.g., Secret, Confidential) and National Security Information.

(iv) Date or event for declassification. Completion of the "Declassify On" line will satisfy this requirement. If the information is not to be declassified automatically on a specific date or upon occurrence of an event, the "Declassify On" line must read as "Declassify On: Originating Agency's Determination Required."

(2) For Restricted Data documents:

(i) Identity of the classifier. The identity of the classifier must be shown by completion of the "Derivative Classifier" line. The "Derivative Classifier" line must show the name of the person classifying the document and the basis for the classification. Dates for downgrading or declassification do not apply.

(ii) Classification designation (e.g., Secret, Confidential) and Restricted Data.

* * * * *

(h) *Transmittal document.* If a document transmitting National Security Information and/or Restricted Data contains no classified information or the classification level of the transmittal document is not as high as the highest classification level of its enclosures, then it must be marked at the top and bottom with a classification at least as high as its highest classified enclosure. The classification may be higher if the enclosures, when combined, warrant a higher classification than any individual enclosure. When the contents of the transmittal document warrant a lower classification than the highest classified enclosure(s) or combination of enclosures or requires no classification, a stamp or marking such as the following must also be used on the letter:

UPON REMOVAL OF ATTACHMENTS THIS DOCUMENT IS:

(Classification level of transmittal document standing alone or the word "UNCLASSIFIED" if the transmittal document contains no classified information.)

* * * * *

(k) *Drafts and working papers.* Drafts of documents and working papers which contain or which the originator believes contain classified information must be marked on the top and bottom of each page with the highest level of classification contained, or believed to be contained, with the National Security Information or Restricted Data marking. It is not required that other markings specified in § 95.37(c) can be applied or that an NRC Form 790 be prepared as indicated in § 95.57(c) for drafts and working papers, provided they are not disseminated outside the facility. Prior to any dissemination outside of the facility, drafts and working papers must be reviewed by an authorized derivative classifier, final and complete classification markings applied, and an NRC Form 790 prepared and submitted to the NRC Division of Security, Washington, D.C. 20555. If classified Secret, the document must be recorded in the accountability record in accordance with § 95.41.

13. In § 95.39, paragraph (d) is revised to read as follows:

§ 95.39 External transmission of documents and material.

* * * * *

(d) *Telecommunication of Classified Information.* There must be no telecommunication of National Security Information or Restricted Data unless the telecommunication system has been approved by the NRC Division of Security. Licensees or other persons who may require a secure telecommunication system shall submit a telecommunication plan as part of their request for NRC security facility approval, as outlined in § 95.15, or as an amendment to their existing security plan for the protection of National Security Information or Restricted Data.

§ 95.41 [Amended]

14. Section 95.41 is amended by capitalizing the word "secret," which precedes National Security Information.

15. Section 95.43 is revised to read as follows:

§ 95.43 Authority to reproduce.

Secret National Security Information and/or Restricted Data must not be reproduced without the written permission of the originator, the originator's successor, or higher authority. Confidential National Security Information and/or Confidential Restricted Data may be reproduced, unless restricted by the originating agency, to the extent required by operational needs.

16. In § 95.45, paragraph (a) is revised to read as follows:

§ 95.45 Changes in classification.

(a) Documents containing National Security Information and/or Restricted Data must be downgraded or declassified as authorized by NRC classification guides or as determined by NRC. Requests for downgrading or declassifying any National Security Information and/or Restricted Data should be forwarded to the NRC Division of Security, Office of Administration, Washington, DC 20555. Requests for downgrading or declassifying of Restricted Data will be coordinated as appropriate by the NRC Division of Security with the Department of Energy.

* * * * *

17. Section 95.49 is revised to read as follows:

§ 95.49 Security of automatic data processing (ADP) systems.

Classified data or information must not be processed or produced on an ADP system unless the system and procedures to protect the classified data or information have been approved by the NRC Division of Security. Approval of the ADP system and procedures is based on a satisfactory ADP security proposal submitted as part of the licensee's or other person's request for NRC security facility approval outlined in § 95.15 or submitted as an amendment to its existing security plan for the protection of National Security Information or Restricted Data.

18. In § 95.57, the introductory paragraph is revised to read as follows and the undesignated paragraph following § 95.57(b) is designated as (c) and is revised to read as follows:

§ 95.57 Reports

Each licensee or other person having a security facility approval shall immediately report to the Regional Administrator of the appropriate NRC Regional Office listed in Appendix A, 10 CFR Part 73:

* * * * *

(c) In addition, a licensee's or license related organization's authorized classifier shall complete a NRC Form 790 (Classification Record) whenever a document containing National Security Information and/or Restricted Data is generated, its classification is changed or it is declassified. Notification of declassification is not required for any document or material which has an automatic declassification date. Completed NRC Forms 790 should be submitted to the NRC Division of Security, Washington, DC 20555, on a monthly basis.

19. Section 95.59 is revised to read as follows:

§ 95.59 Inspections.

The Commission shall make inspections and surveys of the premises, activities, records and procedures of any person subject to the regulations in this part as the Commission deems necessary to effect the purposes of the Act, E.O. 12356, and NRC rules.

20. Section 95.61 is revised to read as follows:

§ 95.61 Violations.

(a) An injunction or other court order may be obtained to prohibit a violation of any provision of:

(1) The Atomic Energy Act of 1954, as amended;

(2) Title II of the Energy Reorganization Act of 1974, as amended; or

(3) Any regulation or order issued under these Acts.

(b) National Security Information is protected pursuant to the requirements and sanctions of E.O. 12356.

(c) Whoever willfully violates, attempts to violate, or conspires to violate, any provision of the Atomic Energy Act of 1954, as amended, for which no criminal penalty is specifically provided or any regulation or order prescribed or issued under subsection 161i of the Act may be guilty of a crime and, upon conviction, may be punished by fine or imprisonment or both, as provided by law. Regulations issued under the Act include regulations issued under subsection 161i and cited within the authority citation at the beginning of this part for the purposes of section 223.

21. In the introduction to Appendix A, the introductory text of paragraph (C), and paragraphs (E.5), (F), and (G) are revised to read as follows:

Appendix A—Classification Guide for Safeguards Information.

* * * * *

Introduction

* * * * *

C. *Basic Policy.* The principle which underlies the policy for classification of safeguards information is to provide the maximum possible information to the public, while at the same time protecting against unauthorized disclosure of information which could cause damage to the national security. Such information includes:

* * * * *

E. *Definitions used in the Guide:*

* * * * *

5. *National Security Information (NSI)*—information or material collectively termed information, that is owned by, produced for or by, under the control of, or regulated by the United States Government, and that has been determined pursuant to Executive Order 12356 or prior Executive Orders to require protection against unauthorized disclosure, and that is so designated.

* * * * *

F. *Declassification—E.O. 12356.* Restricted Data is exempt from automatic declassification and does not require declassification markings. National Security Information identified in this Guide will be marked for declassification as specified by the applicable topic of this Guide. This Guide has been approved by an original Top Secret classification authority.

G. *Abbreviations.* The following abbreviations are used in this Guide

S—Secret.
C—Confidential.
U—Unclassified.
RD—Restricted Data.
NSI—National Security Information.
OADR—Originating Agency's Determination Required.
SSNM—Strategic Special Nuclear Material.

* * * * *

22. In Appendix A, the "Classification Guidance" heading following paragraph G. is designated paragraph H.; immediately beneath the paragraph H. heading "Classification Guidance," a new subheading "(a) Subject" is inserted above the left-hand column of the guidance item list; and immediately beneath the paragraph H. heading "Classification Guidance," a new subheading "(b) Requirement" is inserted above the right-hand column of the guidance item list to read as follows:

Appendix A—Classification Guide for Safeguards Information

* * * * *

H. CLASSIFICATION GUIDANCE

(a) Subject	(b) Requirement
. . .	. . .

23. In Appendix A, under the "Requirements" column (b) of paragraph H., the requirements in items 112, 123, 201, 212, 214, 221, 222, 224, 225, 226, 231, 241, 254, 261.2, 261.3, 261.4, 262.1, 262.3, 263.1, 263.2, 264.1, 264.2, 270, 283, 291, 333.1, 333.3, 334.1, 334.2, 334.3, 335, 336, 372, 373, 385, 386, 410, 411, 412, 413, 420, 422, 423.1, 423.2, 423.3, 541, and 542, are revised to read "Declassify on: Originating Agency's Determination Required (OADR)."

24. For Appendix A, the note following item 423.2 is removed.

Dated at Bethesda, Md., this 12th day of May 1983.

For the Nuclear Regulatory Commission.

William J. Dircks,

Executive Director for Operations.

CIVIL AERONAUTICS BOARD

14 CFR Part 389

Waiver of Filing-Fee Requirements

AGENCY: Civil Aeronautics Board.

ACTION: Waiver of Filing-Fee Requirements Under 14 CFR Part 389.

SUMMARY: Following requests on behalf of certain foreign carriers, the Director, Bureau of International Aviation, acting under delegated authority, has waived the requirements of Part 389 of the Board's Organization Regulations to the extent necessary to relieve the carriers of Switzerland (by letter dated 4/11/83), the People's Republic of China (by letter dated 4/14/83), Israel (by letter dated 4/15/83), El Salvador (by letter dated 5/11/83), Australia (by letter dated 5/18/83), and the Netherlands (by letter dated 5/20/83), from paying the filing fees set forth in § 389.15. Each action was effective immediately on the date of the letter and the filing of a petition for review will not alter its effectiveness.

FOR FURTHER INFORMATION CONTACT: Allen Brown, Regulatory Affairs Division, Bureau of International Aviation, Civil Aeronautics Board; (202) 673–5134.

Phyllis T. Kaylor,

Secretary.

[FR Doc. 83–14651 Filed 5–31–83; 8:45 am]

BILLING CODE 6320–01–M

DEPARTMENT OF COMMERCE

International Trade Administration

15 CFR Part 369

Restrictive Trade Practices or Boycotts; Interpretation

AGENCY: International Trade Administration, Commerce.

ACTION: Interpretation.

SUMMARY: The Department wishes to clarify the application of its antiboycott regulations (15 CFR Part 369) to situations in which companies located within the United States purchase or sell goods located outside the United States, when those goods never enter the U.S.

EFFECTIVE DATE: June 1, 1983.

FOR FURTHER INFORMATION CONTACT: Howard N. Fenton, Director, Compliance Policy Division, Office of Antiboycott Compliance, U.S. Department of Commerce (202/377–2381).

SUPPLEMENTARY INFORMATION: The antiboycott regulations apply to "activities in the interstate or foreign commerce of the United States" as defined in § 369.1(d). This definition states, in relevant part,

> . . . the activities of a United States person located in the United States are in the interstate or foreign commerce of the United States if they involve the sale, purchase, or transfer of goods or services (including information) between . . .
>
> (i) Two or more of the several States (including the District of Columbia);
>
> (ii) Any State (including the District of Columbia) and any territory or possession of the United States;
>
> (iii) Two or more of the territories or possessions of the United States; or
>
> (iv) A State (including the District of Columbia), territory or possession of the United States and any foreign country.

During the past five years the Office of Antiboycott Compliance has been asked its views on the application of this section to transactions involving the sale or purchase of goods by a person located within the United States and a foreign country, where the goods never physically enter a state or territory of the United States. The Office is taking this opportunity to make its informal position on this question available to the general public through this interpretation

The principal author of this interpretation is Howard N. Fenton, Director, Compliance Policy Division, Office of Antiboycott Compliance.

List of Subjects in 15 CFR Part 369

Boycotts, Foreign trade, Reporting requirements, Restrictive trade practices, Trade practices.

Interpretation

PART 369—[AMENDED]

The following appendix is added to Part 369 as Supplement 8.

Supplement 8

Appendix—Interpretation; Definition of Interstate of Foreign Commerce of the United States

When United States persons (as defined by the antiboycott regulations) located within the United States purchase or sell goods or services located outside the United States, they have engaged in an activity within the foreign commerce of the United States. Although the goods or services may never physically come within the geographic boundaries of the several states or territories of the United States, legal ownership or title is transferred from a foreign nation to the United States person who is located in the United States. In the case of a purchase, subsequent resale would also be within United States commerce.

It is the Department's view that the terms "sale" and "purchase" as used in the regulations are not limited to those circumstances where the goods or services are physically transferred to the person who acquires title. The regulations define the activities that serve as the transactional basis for U.S. commerce as those involving the "sale, purchase, or transfer" of goods or services. In the Department's view, as used in the antiboycott regulations, "transfer" contemplates physical movement of the goods or services between the several states or territories and a foreign country, while "sale" and "purchase" relate to the movement of ownership or title.

This interpretation applies only to those circumstances in which the person located within the United States buys or sells goods or services for its own account. Where the United States person is engaged in the brokerage of foreign goods, i.e., bringing foreign buyers and sellers together and assisting in the transfer of the goods, the sale or purchase itself would not ordinarily be considered to be within U.S. commerce. The brokerage service, however, would be a service provided from the United states to the parties and thus an activity within the U.S. commerce and subject to the antiboycott laws. See Section 369.1(d)(13).

The Department cautions that United States persons who alter their normal pattern of dealing to eliminate the passage of ownership of the goods or services to or from the several states or territories of the United States in order to avoid the application of the antiboycott regulations would be in violation of § 369.4, the evasion section of the regulations.

William V. Skidmore,

Director, Office of Antiboycott Compliance.

BILLING CODE 3510–25–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Parts 2 and 35

[Docket No. RM81–38; Order No. 298]

Construction Work in Progress for Public Utilities; Inclusion of Costs in Rate Base

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Final rule.

SUMMARY: The Commission is establishing new regulations (18 CFR 35.26) to govern the inclusion of the costs of construction work in progress (CWIP) in the rate base of public utilities. The rule provides that any public utility engaged in the sale of electric power for resale may, subject to certain initial limitations, file to include in rate base up to 50 percent of CWIP associated with the investment in ongoing construction projects and nuclear fuel in process of refinement, conversion, enrichment, and fabrication.

The Commission retains its existing approach of allowing inclusion of all CWIP associated with pollution control and fuel conversion facilities. The Commission also amends the requirements of certain cost of service statements in § 35.13 in order to obtain information about construction programs pertinent to the utility's rate change filings. Under these filing requirements, requests for inclusion of CWIP in rate base shall include an assessment of the relative costs of adopting alternative strategies.

EFFECTIVE DATE: July 1, 1983.

FOR FURTHER INFORMATION CONTACT:

Ronald L. Rattey, Office of Regulatory Analysis, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, (202) 357–8154

Michael R. Postar, Office of the General Counsel, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, (202) 357–8033.

SUPPLEMENTARY INFORMATION:

Issued: May 16, 1983.

Introduction*

The Federal Energy Regulatory Commission (Commission) is amending its regulations that govern the inclusion of construction work in progress (CWIP) in the rate base of public utilities. The new rule replaces present CWIP policy, codified in 18 CFR 2.16, with a new § 35.26 which provides that any public utility engaged in the sale of electric power for resale may file to include in rate base up to 50 percent of CWIP, subject to a rate impact limitation in the first two years, and all CWIP associated with pollution control and fuel conversion facilities. The CWIP costs affected by the rule are those costs that are allocable to electric power sales for resale.

Under the new rule, utilities are eligible to file to include as CWIP in rate base the investment in construction projects and certain costs of nuclear fuel in process of refinement, conversion, enrichment, and fabrication. The rule allows filing for CWIP in rate base irrespective of the financial condition of the utility. The Commission also amends the requirements of certain cost of service statements in § 35.13 in order to obtain information about construction programs pertinent to the utility's rate change filings. Under these filing requirements, requests for inclusion of CWIP in rate base will assist the Commission in evaluating the prudence of the claimed costs, including the element of the extent to which the investment is part of a least-cost power supply strategy.

*The Appendix to the Preamble consisting of Table Nos. 1 through 5 is not being published in the Federal Register but is in copies of the order available in the Commission's Division of Public Information.

I. Background

A regulated utility is entitled to an opportunity to recover its costs plus a reasonable return on investment. Among its costs is the cost of financing the construction of new facilities for the generation and transmission of electric power. This cost includes debt interest and a reasonable equity return on the capital investment used to finance construction. There are two mutually exclusive ratemaking methodologies by which these so-called "carrying charges" on construction capital are recovered in rates.

One method capitalizes the carrying charges incurred during the construction period as allowance for funds used during construction (AFUDC).[1] AFUDC is recorded in part as current income to the utility and in part as an offset to interest expenses, but no cash payments are made by ratepayers during construction. Payments from ratepayers to recover the carrying charges begin when the completed plant goes into operation. The cost of the completed plant at that time includes all carrying charges recorded during the construction period, as well as the direct costs of land, labor and construction materials.[2] The entire cost of the plant (including AFUDC) is added to rate base, and it earns a rate of return on investment and is depreciated over the life of that plant.

The second method for recovering carrying charges incurred during the construction period is to include CWIP in rate base. (CWIP includes accrued AFUDC on investment not in rate base.) The utility thereby recovers its carrying charges currently from ratepayers through the return component of its rates, rather than adding them to the cost of construction for recovery when the plant is in service. The return on CWIP is recorded as income on a current basis (like AFUDC), and actual cash payments are made by the ratepayers currently (unlike AFUDC).

[1] Commission Order Nos. 561 and 561–A govern the manner in which carrying charges are computed and added to the costs of plant under the AFUDC method (issued February 2, 1977 and August 1, 1977, respectively), 42 FR 9.161 (1977) and 42 FR 9,661 (1977), respectively.

[2] *See* Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act (Class A and Class B), Electric Plant Instructions, 18 CFR Part 101 (1980).

Each method is intended to assure the utility of an opportunity to recover from its ratepayers the carrying charges associated with construction investment. The two methods of recovery differ primarily according to when the investment is permitted in rate base, *i.e.*, when the carrying charges are reflected in the cost of service and thus in rates charged to ratepayers. The courts generally defer to the administrative agency's choice of methods.[3]

This final rule responds to widespread concern over the need for adequate financing of the Nation's planned electricity generation capacity. With respect to both the nature of the problem and the appropriate regulatory response, the debate has been conducted over the last few years in the Congress,[4] the state regulatory commissions,[5] proceedings before the Commission,[6] and among the commentators.[7] Although the Commission regulates only a portion of electric power sales nationally, it has been actively engaged in a reexamination of ways in which it might ensure the future reliability of the electric power systems, avert the future imposition of unnecessarily high rates and encourage fuel-efficient generating capacity.

On March 6, 1981, the Commission convened an Informal Public Conference on the Financial Condition of the

Cir. 1978) (rulemaking adopting existing § 2.16 allowing CWIP for pollution control and fuel conversion facilities and establishing criteria allowing consideration of CWIP in certain instances where utility is experiencing "severe financial difficulty").

[7] *See, e.g.*, Electricity Consumers Resource Council, "Profiles in Electricity Issues: Should CWIP be Included in an Electric Utility's Rate Base?" (July 1981); U.S. General Accounting Office, "Construction Work in Progress Issue Needs Improved Regulatory Response for Utilities and Consumers," Report by the Comptroller General of the United States (EMD–80–75) (June 23, 1980). Copies of these documents, as well as 24 other articles, reports or expert testimony in state utility proceedings, were placed in the public record of this rulemaking in November of 1981, 46 FR 55,535 (November 10, 1981).

Electric Power Industry.[8] The conference was held in response to widespread concern among both federal and state regulatory bodies as to the deteriorating financial condition of the Nation's electric utilities. Sitting with members of a number of state regulatory commissions, this Commission heard voluminous testimony regarding the financial condition of the electric utility industry. Some of the comments at the conference evaluated the Commission's experience under the existing policy that permitted the inclusion of CWIP in rate base in only very limited cases. On the basis of that public conference, as well as on information available in reviewing the regular rate filings of jurisdictional utilities, the Commission commenced the present proceeding to revise the existing rules.

The Notice of Proposed Rulemaking (NOPR) in this proceeding was issued on July 27, 1981.[9] The NOPR summarized relevant data on the financial condition of the electric utility industry and the need for utilities to acquire capital at reasonable costs. In addition, the NOPR discussed possible effects that the inclusion of CWIP in rate base might have on the actual costs to utilities of obtaining capital. While much of the NOPR was focused on a proposal to provide specific criteria a formula concerning the amount of CWIP that would be includable in rate base, the Commission stressed that it was actively considering several ways of treating construction-related costs in rates, as well as non-rate-related solutions to financing new plant construction. The Commission requested comment on all alternatives.

One of these alternatives specifically set forth in the NOPR was to allow a fixed percentage of CWIP in rate base regardless of a utility's financial condition. As stated in the NOPR:[10]

> This alternative has the advantage of eliminating controversy over the appropriate standard for determining financial difficulty. However, it would require the Commission to depart significantly from its present policy by permitting CWIP in the rate base of utilities regardless of their financial health.

This is the proposal which the Commission adopts.

II. The Debate in a Nutshell

Two sharply divergent views of the electric utility industry emerged from the comments. According to privately-owned utility companies, the industry has been (and remains) in difficult financial straits which raise serious questions as to the industry's ability to finance today the construction of electrical generation capacity which will be needed later this decade and beyond. Under this view, utilities' inability to earn their allowed rate of return [11] reduces current cash flow, tending to increase the need for additional external financing. This tends in turn to increase risk and thereby to increase the actual cost of capital. These factors then tend to jeopardize the industry's ability to finance the major new facilities which the industry projects are needed to replace inefficient existing facilities and to satisfy increased consumer demands later this decade. These financial constraints are said to have caused the cancellation and deferral of substantial new capacity over the past few years. Financial concerns also have tended to bias the industry's investment in favor of smaller facilities which may require less construction capital (and thus are easier to finance) but which are more costly to consumers in the long run because of higher fuel and maintenance costs.

Thus the utility industry's comments, by and large, tend to view an increase in the inclusion of CWIP in rate base primarily as a partial answer to these financing difficulties. These comments deal extensively with the effect of CWIP in rate base on utility cash flow and the cost of capital. And they strongly recommend that we allow all utilities to include 100 percent of CWIP in rate base.

The utilities' wholesale power customers present a different view. While generally recognizing that the utility industry has faced financial difficulties over the last few years, these commenters contend that the situation has brightened considerable during the pendency of this proceeding as state regulatory commissions have increasingly recognized the need for higher rates.[12] Moreover, they claim that the extensive cancellations and deferrals of new capacity reflect a belated recognition of sharply reduced growth in electricity demand, not the utilities' inability to obtain adequate financing. The customers thus oppose the inclusion of CWIP in rate base as an unnecessary and unduly costly answer to yesterday's problem. They recommend strongly against inclusion of any CWIP in rate base.

We take an intermediate position. While the industry's financial picture has improved over the last year, difficulties remain. Moreover, as we have reviewed the comments, we have come to better appreciate the effects of the current regulatory approach to dealing with construction work in progress.

As detailed below, the present approach does add to financing difficulties and, therefore, tends to artificially reduce the supply of capital devoted to new capacity construction. But we agree with the customers that plant cancellations also (and perhaps even primarily) reflect recognition of reduced demand projections.

The present regulatory approach tends to separate the supply side of the question (including the incentives for increased capital investment) from the demand side (including the utilities' planning for new capacity to meet that demand). Put another way, due to the long lead times for planning and constructing new capacity, consumption trends reflect present costs rather than the higher costs of the new capacity which will be required to satisfy that demand as projected into the future. But at the higher prices resulting from additional capacity, demand will tend to be less. Accordingly, demand projections have consistently tended to overstate actual demand over the last decade.[13]

In an unregulated and freely competitive world, price movements would occur to ensure rough equilibrium in supply and demand in the aggregate. Utilities are regulated, of course, due to their historic position as natural monopolists. The regulator thus has the obligation to try to achieve through regulatory tools the rough supply/demand balance which translates into adequate and reliable electric service at the lowest reasonable cost.

The comments in this proceeding demonstrate that the present approach fails this test. According to utilities, the

[8] *See* Transcript of Informal Public Conference on the Financial Condition of the Electric Power Industry, Docket No. EL81-7-000 (March 6, 1981) (hereinafter cited as Public Conference).

[9] Notice of Proposed Rulemaking, Construction Work in Progress for Public Utilities, Docket No. RM81-38, 46 FR 39,445 (August 3, 1981). In response to the NOPR, the Commission received hundreds of initial and reply comments over a six-month period. As an additional means of exploring the issues and receiving comment from interested persons, the Commission, on December 7-8, 1981, heard oral presentations from some 25 representatives of various interest groups.

[10] 46 FR 39,452.

[11] Many commenters refer to this inability as "earnings attrition." Academically more precise definitions or attrition might not include all reasons for earning shortfalls but only those stemming from increases in costs outpacing increased revenues.

[12] According to one recent estimate in a trade journal, some $8 billion in rate increases were granted during 1981 and some $6 billion in increases were anticipated in 1982. Foley, "Electric Utility Financing—Let's Ease Off The Panic Button," Pub. Util. Fortnightly (January 6, 1983) at 27.

[13] *See generally* U. S. Department of Energy, Initial Comments.

present approach is inadequate because it tends to jeopardize adequate financing for needed facilities. This is to say that it fails the capital attraction test [14] in that it fails to provide for supply of adequate capital. This is the thrust of much of the comment concerning adequacy of cash flow, low bond ratings, and the increased cost of capital. Customers, on the other hand, attribute current difficulties to reductions in demand forecasts. Yet these overstated demand projections are, to some degree, a natural consequence of a regulatory scheme which effectively conceals from consumers the high costs of new service until after those costs have already been incurred. Then, when customers have adjusted electricity consumption decisions to the higher prices, it begins to appear—too late—that too much supply has been made available.

In one sense, it is not possible for the utility and the customer commenters both to be right in their assessements: if supply is inadequate to meet demand, it is not possible at the same time for demand to greatly exceed supply.

But, in a more important sense, both sets of commenters are correct in that the status quo tends to send disparate price signals to suppliers of capital for electricity generation and consumers of that electricity. In this sense, the detailed debate in the comments as to CWIP's effect on cash flow, cost of capital, demand forecasting and related matters can be interpreted as part of this broader analysis.

Today's rule attempts to strike a balance between the competing views and takes a modest step at tying supply and demand together in a somewhat clearer fashion.

The purpose of the rule is thus threefold:

- To mitigate any bias which may discourage additonal capital investment in needed facilities;
- To enable the need for those facilities to be more accurately evaluated by price signals which reflect today some of the costs associated with future facilities; and
- To mitigate the sudden price increases which tend to result under an AFUDC policy thereby furthering the goal of rate stability.

The remainder of this preamble expands upon these purposes and discusses the comments received in light of the analysis.

[14] Bluefield Waterworks and Improvement Comapny v. Public Service commission, 262 U.S. 679 (1923).

III. Basis for the Rule

Many of the issues coming before this Commisssion concern the balance between the interests of investors in the utilities that we regulate and the interests of those utilities' customers. The stakes in the issue of CWIP are different. The CWIP issue is for the most part not concerned with potential shifts in wealth between investors and consumers. If utility regulation functioned as it should—in particular, if electric utilities were able to earn returns equal to their cost of capital—the CWIP issue would not be concerned with such shifts at all. Even within the present context of imperfect utility regulation, the CWIP issue is principally concerned with time: for the company, a choice between cash receipts today and larger cash receipts in the future; for the company's customers, a choice between paying higher prices now and paying even higher ones tomorrow.

A. The Utility's Perspective: Tax Credits and Attrition

Debt interest and a reasonable equity return on the capital investment during construction are part of the cost of a utility plant. In one way or another, the utility must be given the opportunity to recover them. If investment in construction work is included in rate base, the utility recovers them through a current cash return just as it recovers the capital costs of facilities that are already providing service; if CWIP is not included in rate base, the carrying charges are capitalized as allowance for funds used during construction (AFUDC). AFUDC is recorded in part as current income to the utility and in part as an offset to interest expenses, but no cash payments are made by ratepayers during construction. Payments from ratepayers to cover the carrying charges begin when the completed plant goes into operation. Both the direct cost of the plant and the capitalized AFUDC are then added to rate base, earn a return, and are depreciated over the life of the plant. Because the investment is considered to include the capitalized AFUDC as well as the direct cost of the plant, the utilities' revenues and the customers' electric bills are higher than they would be if CWIP had been included in rate base.

If allowed returns were always set equal to the cost of capital and if the allowed returns were always expected to be earned, a utility would be indifferent as to whether CWIP was included in rate base. Its exclusion would mean delay in receiving a cash return on the utility's investment, but that delay would be compensated by a return equal to the utility's cost of capital. Such a return would, by definition, fully compensate the utility for the delay and any associated incremental risk. To the extent that additional cash was needed, investors would willingly lend it on the strength of AFUDC's implicit promise of future cash revenues.

As explained below, utilities clearly are not in fact indifferent on the CWIP issue. If there had been any doubt on that score, the record in this rulemaking would remove it. Fifty-nine investor-owned utilities or utility groups submitted comments. Without exception, their comments favor the inclusion of CWIP in rate base. The same position was taken by the Edison Electric Institute and by the investment and accounting firms that assist the industry in raising the required capital.

These comments accurately portray the interests of the investor-owned utilities. Whatever might be the case in a different world, in this one, utilities would gain from the inclusion of CWIP in rate base. That gain has at least two sources. One is the interaction of CWIP policy with the federal income tax law. Under current Commission policy, the benefits of investment tax credits are shared between utility investors and ratepayers. The amount of the tax credit, and therefore the benefit to utility investors, is based only on the direct cost of plant; it does not include capitalized AFUDC.[15] Exclusion of CWIP from rate base under the AFUDC alternative thus dilutes the investment tax credit benefit: that alternative increases the required investment, which must finance the carrying charges as well as the direct cost of the plant, but it does not increase the associated tax credit. Inclusion of CWIP in rate base eliminates this dilution, increasing the effective rate of return on new investment.[16]

The second source of gain to utilities from including CWIP in rate base derives from their current inability to earn a return equal to their cost of capital. Since about 1974, utilities have not realized returns at levels approximating their cost of capital.

[15] To be more precise, it never includes the capitalized equity return portion of AFUDC. It may, however, include the interest portion of AFUDC if utilities choose to capitalize rather than expense this cost for tax purposes.

[16] *See Environmental Assessment Related to Proposed FERC Rule Amendment Regarding Inclusion of CWIP in Rate Base* Section 4.2.2.1 (1983) (hereinafter cited as Environmental Assessment). (Empirical results presented indicate that over time, the earned return on common equity with CWIP in rate base would rise slightly above the earned return without CWIP in rate base.)

Assuming allowed rates of return on common equity approximate costs of common equity, by one estimate the authorized return on common equity to electric utilities averaged 13.2 percent for the period 1972 to 1980, while earned rates of return averaged 11.5 percent for the same period.[17] Another indication of this disparity is utilities' market-to-book ratio which averaged 0.84 during the 1972–1980 period.[18]

A company's cost of capital constitutes by definition its indifference point; it is the level of return at which utility shareholders will neither gain nor lose from a new investment. By the same token, if a company earns less than its cost of capital, any additional investment constitutes a loss for its shareholders; they are poorer if the investment is made than if it is not.

Inclusion of CWIP in rate base reduces a utility's investment. Without CWIP, the company must invest not only in the direct cost of the facility but also in the carrying charges on that investment during the construction period. Inclusion of CWIP eliminates the latter investment and thus reduces the loss to the company's shareholders. So long as the company earns less than its cost of capital, the loss cannot be wholly avoided; under those conditions any investment at all, even one limited to the direct cost of the facility, leaves investors worse off than they would be if no investments were made. But the loss is smaller than it would be if CWIP were excluded from rate base.

There are other reasons why utilities may favor the inclusion of CWI in rate base,[19] but the two just discussed are sufficient to explain the position taken by investor-owned utilities in this proceeding. Inclusion of CWIP will leave the investors better off. It is, however, important to emphasize again the sources of their gain: a tax benefit, and the reduction (but not elimination) of the loss resulting from investment in new facilities.

B. The Ratepayer's Perspective: Present and Future Electric Rates

For consumers as a group, inclusion of CWIP in rate base for any particular construction project or program raises current electric bills and lowers future ones. From this standpoint, the inclusion of CWIP has been analyzed as an investment: the return on the increase in current bills is the reduction in those paid in the future. If inclusion of CWIP resulted in no efficiency gains, the return would equal the utility's allowed rate of return; if, as we think likely, its inclusion resulted in the more efficient planning for the generation of electricity, the return would be higher.[20]

To assess the wealth impact on consumers as a group of including CWIP in rate base (again relative to a specific construction project or program), it is necessary to compare the return to consumers with an appropriate discount rate. The range of plausible discount rates for consumers is wide. At the lower end, it might be set equal to the return on investments broadly available to consumers of electricity, for example, the return on passbook savings accounts. At the upper end it might be set equal to the interest rate on consumer loans.

The allowed return for utilities averaged about 10 percent over the past decade.[21] This return probably is higher than the return on investment broadly available to investors during the period, and probably also somewhat higher than the effective interest rate on mortgage loans, the most important category of consumer loans.[22] The rate probably is, on the other hand, lower than the effective interest cost on other important categories of consumer loans during that period.[23]

Thus, without assuming any efficiency savings, inclusion of CWIP in rate base appears to be economically equivalent to a reasonable investment. On more plausible assumptions concerning the anticipated efficiency benefits, inclusion of CWIP should be substantially more attractive. Yet the customer groups in this proceeding by and large have opposed the inclusion of CWIP in rate base. Those customers may, like anyone else, mistake their own best interests. It is, however, generally both presumptuous and foolish for a regulatory agency to assume that it knows parties' interests better than the parties themselves.

To understand the position taken by utility customers in this rulemaking, it is necessary to begin with the nature of this Commission's jurisdiction over the electric utility industry. Our jurisdiction is essentially a wholesale one. The Commission regulates sales of electricity for resale; regulation of sales to end users is left to the states.

---

[17] Appalachian Power Co., *et al.*, Initial Comments at Figure 4 (the gap between authorized and earned rates of return averaged 1.7 percent for this period). During 1982 this trend appears to have continued. The gap between the earned rate of return on common equity and the allowed return on equity may have widened to 2.0 percentage points (15.8 percent allowed vs. 13.8 percent earned). *See* Argus Research Corp., *Returned and Amounts Authorized* (January–December 1982) (January 11, 1983).

[18] Appalachian Power Co., *et al.*, Initial Comments, Figure 4. In 1982, the market-to-book ratio of electric utilities averaged 0.8, continuing the trend of a ratio of less than 1.0 over the last decade. *See* Argus Research Corp., *supra*. In recent months, with the surge in the stock market, the market-to-book ratios for electric utilities have improved.

[19] As discussed below, inclusion of CWIP also improves cash flow and reduces the price increase when a new plant comes on line. Both the improved cash flow and the smoother price path are likely to assist utilities in assessing the demand for electricity, and this is likely to benefit utility investors as well as ratepayers.

[20] In addition to promoting efficiency, it appears that including CWIP in rate base would also reduce utilities' financing costs. This can happen in several ways. First, it may reduce the risk borne by shareholders with respect to noncompletion or abandonment of plant. Under the Commission's policy on failed or abandoned projects, however, inclusion of CWIP should have relatively little effect on this risk. (*See New England Power Co.*, Opinion No. 49, 8 FERC ¶ 61,054 (July 10, 1979), *aff'd sub nom.* NEPCO Municipal Rate Comm. v. FERC, 668 F.2d 1327 (D.C. Cir. 1981), *cert. denied*, 102 S. Ct. 2928 (1982)). Without CWIP, investors would bear a fraction of the direct cost of the failed project plus a fraction of any associated capitalized AFUDC; inclusion of CWIP would affect only the latter. Further, a reduction in this risk of failure may be achieved principally by shifting that risk from investors to ratepayers, and any resulting saving in capital costs is therefore a mixed blessing from the latter's standpoint.

Second, it may reduce the risk that a utility will default on interest payments or be unable to maintain dividends. This reduction in the risk of default does not appear to involve a shift in risk from investors to ratepayers, or at least it does not do so in any obvious way.

Third, by increasing cash flow, including CWIP in rate base may give utilities increased flexibility in their financing so as to make them better able to weather periods of high interest rates and minimize the stockholder losses arising from issuing common stock at prices below book value. Since inclusion of CWIP is likely to generate significant increases in cash flow (*see* Environmental Assessment, Section 4.2.2.1), this increased flexibility in financing may be an important source of savings in financial costs to utilities, even if there is no reduction in risk or in the marginal cost of capital.

A final source of cost reduction, though probably only of marginal value is the effect the CWIP policy may have on credit markets. Because the credit demands of the electric utility industry are large—one commenter (Appalachian Power Co., *et al.*) stated that the industry accounts for 25–40 percent of total public financing—and because CWIP in rate base will reduce the external financing needs of the industry, interest rates may fall generally.

The available empirical studies on the cost of capital reduction are not entirely conclusive on this point, because in practice it is not easy empirically to distinguish between (1) the effect of AFUDC and (2) the effect of the construction program itself. *See also* discussion *infra*.

[21] Based on the average capital structure, embedded cost of debt and preferred stock, and allowed rates of return on common equity. That return may be lower in the future if reduced inflation brings lower capital costs, but lower inflation should also tend to reduce the nominal discount rate for consumers.

[22] Mortgage interest costs are tax deductible while, for nonbusiness consumers, the lower future bills resulting from inclusion of CWIP constitute a tax-free return. For those consumers, the proper comparison is thus between the full allowed return to the utility and the after-tax cost of mortgages and other loans.

[23] Bureau of the Census, U.S. Department of Commerce, *Statistical Abstract of the United States* at 541 (1980) (for example, the average interest rate on consumer credit cards for 1972–1980 was approximately 17.1 percent).

The electric utility industry is for the most part vertically integrated. Electricity usually is generated, transmitted, and distributed by a single company. The first sale thus is to the end user, and since that is not a sale for resale, it does not fall within this Commission's jurisdiction.

The transactions involving electricity that this Commission does regulate are generally of two kinds, typically with two quite different kinds of purchasers. One kind of transaction consists of so-called coordination sales. These sales take advantage of temporary differences in cost or supply among electric utilities. Measured by the amount of energy involved, such sales constitute approximately two-thirds of electricity sold or exchanged that is under our jurisdiction. Any change in our CWIP policy would have little or no impact on the selling prices of coordination transactions.[24]

The second kind of transaction consists of purchases by electric utilities that regularly depend on other utilities for part or all of the electricity that they distribute to their customers. Such sales are usually referred to as requirements sales. Buyers in these partial or full requirements sales are generally cooperatives or municipal utilities that either lack generating facilities or whose generating facilities are inadequate to meet all of their customers' needs. Requirements sales constitute less than eight percent of all revenues received from sales of electricity by privately-owned electric utilities in this country.[25] A change in our CWIP policy would affect the time pattern of revenues collected from requirements customers.

Opposition to the inclusion of CWIP in rate base is as uniform among the cooperatives and municipal utilities participating in this rulemaking as is support for its inclusion among the investor-owned utilities. The cooperatives and municipals advance a number of arguments, but in our view the most telling one is that they will in some cases not enjoy the lower future rates that would result from the inclusion of CWIP today.[26] Although these cooperatives and municipals are not now self-sufficient, in many cases they plan to construct generating facilities that will reduce or eliminate purchases from other utilities. A policy of including CWIP in rate base thus confronts them with the prospect of paying for generating capacity twice: once from the inclusion of CWIP in their rates, and again through the cost of their own generating facilities.

This concern over not being able to receive the benefits of current payments is entirely understandable. It is, moreover, supported by the Commission's general policy favoring rates based on cost reponsibility. As we said in the tax normalization rulemaking, "all costs should be allocated among customers *and over time* in a manner that matches the burdens of costs with the benefits received." [27] With respect to plant under construction, that policy militates in favor of placing the burden of carrying charges on the customers that the plant later serves.

The particular concerns of the cooperatives and municipals are peculiar to parties that generate or may generate electricity themselves. However, an analogous concern has been expressed with respect to the consumers that ultimately use the electricity, and that ultimately are the principal recipients of the benefits and burdens of any policy that we adopt here. This concern is that the lower future rates resulting from inclusion of CWIP in rate base will be so long delayed that many present consumers will never receive them.

In order to illustrate the basic principles, the above analysis has focused primarily on the rate effect of CWIP associated with a particular construction project or program. To assess the likely rate impact of a general policy of including 50 percent of CWIP in rate base, one must estimate the size of likely future construction programs. If new construction continues to increase at a sufficient rate over the period studied, then CWIP-based rates may remain higher than AFUDC-based rates for a relatively long time as the lower rates resulting from a particular plant being completed are offset by the cost impact of continuing new construction on other facilities. If new construction slows sufficiently, however, CWIP-based rates will fall below AFUDC-based rates at some point in the future.

The comments do not contain studies which project CWIP-based rates over time. At our request, the Energy Information Administration (EIA) has conducted such a study (which forms part of the Environmental Assessment). As discussed in more detail in Section IV below, under plausible assumptions as to future nationwide construction programs, in some regions the CWIP-based rate would fall below the AFUDC- based rate as early as 1990. However, the national average rates would remain minimally higher than AFUDC-based rates (between one-half and one percent) over the next 12 years. We think that it is unlikely that CWIP-based rates would remain indefinitely above AFUDC-based ones.[28]

---

[24] Coordination sales may include a demand or reservation charge. Typically, that charge is keyed to the capital costs of one or more generating units operating on the seller's system. If CWIP is allowed in the rate base, the demand charge when the units are operating may be lower because it will not include a capitalized AFUDC component. Inclusion of CWIP will have no impact on the many other coordination sales that do not include a demand charge in the selling price.

[25] Energy Information Administration, *Statistics of Privately Owned Electric Utilities in the United States 1977*, at 37, 1301–02 (1979). Eight percent represents requirements sales revenues divided by the sum of revenues from sales for resale and revenues from sales to ultimate consumers for the year 1977 which is the latest year for which requirements sales data was completed. The denominator, however, excludes a substantial portion of resale revenues from coordination sales. If these excluded revenues were added to the denominator, the resulting requirements sales percentage would be less than eight percent.

[26] *See, e.g.*, American Public Power Association, *et al.*, Initial Comments at 39.

[27] Final Rule, Regulations Implementing Tax Normalization for Certain Items Reflecting Timing Differences in the Recognition of Expenses or Revenues for Ratemaking and Income Tax Purposes, Order No. 144, issued May 6, 1981, 46 FR 28,617–18 (May 14, 1981) (Emphasis added).

[28] This judgment rests on three grounds. First, for methodological reasons the EIA study assumed that inclusion of CWIP would not reduce utilities' cost of capital or result in efficiency savings. As discussed elsewhere, we believe that inclusion of CWIP probably will do both, and if it does, the point at which CWIP-based rates are lower than AFUDC-based rates is brought closer to the present.

Second, even without any such cost savings over the long-term, CWIP-based rates apparently would remain above AFUDC-based rates only if the annual rate of growth in utility construction expenditures exceeded a utility's allowed rate of return. *See* Livingstone and Sherali, *Construction Work in Progess in the Public Utility Rate Base: The Effect of Multiple Projects and Growth*, 8 Fin. Mgmt. 1, 42 (1979), attached as App. A of Initial Comments of Oglethorpe Power Corp., *et al.* The authors of the cited article thought it likely that in fact the growth and expenditures would exceed utility's cost of capital. However, that view appears to have been based on their assumption that demand for electricity would grow at the rate of six percent annually. More realistic current estimate are in the neighborhood of three percent. If this lower estimates of growth is used and utility expenditures are assumed to increase at the same rate as demand for electricity, AFUDC-based rates will eventually be higher than CWIP-based ones provided that the utilities are allowed a real rate of return in excess of three percent.

Finally, CWIP-based rates that were permanently higher than AFUDC ones would imply that CWIP had in fact *increased* utilities' cost of capital. Since inclusion of CWIP does not increase utility costs, higher rates necessarily mean higher cash returns to shareholders. If CWIP-based rates later fall below AFUDC-based ones, those higher current cash returns are offset by lower future returns, but if CWIP-based rates were to remain permanently higher than AFUDC-based rates , there would be no later offset. But such permanently higher returns could be sustained only if: (1) inclusion of CWIP was perceived as *increasing* risk to utility investors, or (2) investment markets are incapable of anticipating the obvious interaction of inclusion of CWIP and utility growth. Neither of these hypotheses appears to us to be very plausible.

The point at which CWIP-based rates are lower could be long delayed, however, and on the present record it is not possible to exclude the theoretical possibility that the delay could continue indefinitely.

C. Striking a Balance

The cost responsibility principle is not controlling on all issues, however. Perhaps the most significant departure from that principle in the Commission's existing regulation is the use of an original cost rate base methodology, which places a disproportionate share of the burden of a facility on consumption in the early years of its useful life.[29] Commentators have argued for the abandonment of original cost in favor of replacement cost or trended original cost,[30] but original cost offers substantial advantages that have so far been deemed by this Commission and by most other regulatory agencies to offset its shortcomings.[31]

Similarly, we have concluded in this rulemaking that the public interest is on balance best served by a departure from the cost responsibility principle with respect to CWIP.[32] We reach this conclusion because we believe including CWIP will advance three public interest objectives:

(1) Mitigation of any bias against the construction of new generating facilities;

(2) Providing for electric rates to more accurately reflect the costs of providing future service, allowing the need for new capacity to be tested, so far as possible, by the marketplace; and

(3) Furthering the goal of rate stability by providing for smoother increases in electric rates to consumers.

We believe that under present conditions, these objectives are furthered by inclusion of substantial amounts of CWIP in rate base. Arguably, they justify the inclusion of all CWIP, but we are not prepared to go that far at this time. In the rule adopted here, we generally permit utilities to include 50 percent of CWIP.[33]

Experience or changed conditions may dictate that this rule should be modified in the future, either to reduce or to increase the amount of CWIP allowed. For the present and for the foreseeable future, however, we believe that the 50 percent level constitutes a reasonable balance between the principle of intertemporal cost responsibility and the need to create a regulatory setting within which the utility industry can supply the nation's need for electricity at the lowest reasonable cost. For the jurisdictional portion of individual companies, the rule adopted here should generally produce sufficient current cash income to cover the fixed interest and preferred dividend costs and a small part to the cost of common equity for the investment in the work under construction but will defer any cash return on the greater part of the equity investment until the plant begins to provide service.[34] At the industry level, the rule will restore the ratio of construction work outside the rate base to the total rate base to the level prevailing in the early 1970's; the ratio will still be, however, significantly higher than it was in the 1950's and 1960's.[35] The likely rate impacts resulting from the rule are detailed below.

D. CWIP and the Problem of Financial Constraints

The history of the electric utility industry since the middle of the 1970's has been punctuated by frequent cancellations of planned generating capacity. Between 1974 and 1978, 184 generating units that would have provided 155,000 MW of capacity were cancelled. More than half of all powerplants coming into operation since 1974 have been delayed. The delay has increased from an average of 14 months in 1974 to an average of 23 months in 1978 to an average of more than 40 months in 1979.[36]

Some have viewed these cancellations and deferrals as merely an adjustment to more realistic projections of future demand.[37] But this view is by no means universally shared. Several commenters argue that the resumption of growth in the demand for electricity even at a rate substantially lower than the one prevailing up to around 1973 would begin to strain available capacity by the end of the decade;[38] and even if new plants are not needed for added capacity, on some calculations they are still economically justified as replacements for costly oil-fired and gas-fired generating capacity.[39] On this

---

[29] The dollar value of return and associated taxes received on new plant in rate base is much higher in earlier years than in later years because of the use of straight line depreciation for ratemaking purposes. Other common departures from the principle include rate treatment for inventories, plant held for future use, prepayment of rent, etc., where such expenses are placed in rate base at the time they are incurred.

[30] *See, e.g.*, Anderson & Mead, *A Comparison of Original Cost and Trended Original Cost Ratemaking Methods*, Energy Journal (forthcoming); Navarro, Peterson, Stauffer, *A Critical Comparison of Utility-type Ratemaking Methodologies in Oil Pipeline Regulation*, 12 Bell Journal of Economics 392–412 (1981); Streiter, *Trending the Rate Base*, Pub. Util. Fort., May 13, 1982, at 32–37; Swanson, *The Critical Problem of Inflation in Utility Rate Making*, Pub. Util. Fort., Jan 7, 1982, at 29–31; Address by Alfred E. Kahn, Edison Electric Institute, in Phoenix, Ariz. (Jan. 14, 1982).

[31] The two principal advantages of the original cost method are its simplicity in implementation and its positive effect on utilities' present-day cash flow.

[32] *See also infra*, at § IV.C.1.b.

[33] This description must be qualified. The rule allows inclusion of up to 50 percent of CWIP allocable to electric power sales for resale. The 50 percent CWIP allowance would be computed after inclusion of 100 percent of the CWIP related to pollution control and fuel conversion facilities. In recent years, pollution control CWIP has averaged about 11 percent of total CWIP. No data are available on fuel conversion CWIP.

[34] *See* Environmental Assessment, *supra*, at Section 4.3.4. (A policy allowing recovery of only the CWIP-related interest expenses and preferred dividends would, on a national basis, increase rates by slightly less than a 50 percent CWIP policy.)

[35] In 1979 and 1980, CWIP constituted about 40 percent of net plant in service for Class A and B electric utilities. Allowing 50 percent CWIP in rate base would bring the ratio of CWIP to net plant down to about 20 percent which was the average level prevailing between 1970 and 1974. During 1950–1969 CWIP averaged only about eight percent of net plant in service; by the end of the second decade in this period, the CWIP percentage began to rise dramatically. A similar aggregate industry impact would be produced by including all CWIP in rate base above some threshold level. That alternative would also focus the impact of the rule more sharply on utilities with large amounts of construction work in progress in relation to their rate base. We have nevertheless rejected that alternative for two reasons. One is that it would be somewhat more complex to administer. The second is that it would mean that utilities with relatively large construction programs would be able to include 100 percent of any *incremental* investment in rate base. While we are not entirely convinced that it is necessary to leave a part of the cash return on equity dependent on completion of the project, we prefer at this time not to rely wholly on other means of ensuring the expeditious completion of construction work.

Bus. Rev., May–June 1982, at 85. *But see* A. Kaufman, K. Nelson, *Do We Really Need All Those Electeric Plants*, Cong. Research Service (August 1981).

[39] *See* Appalachian Power Co., *et al.*, Initial Comments at 30; Department of Energy, Initial Comments at 12. The argument for new capacity is not in fact entirely distinct from the preceding one. If additional capacity is needed, it may be possible

latter view, the cancellations do not reflect the limited need for the new plants but the utilities' limited ability to finance them.

Projections of demand growth for electricity have been characterized by uncertainty, inaccuracy and controversy for over a decade. In this rulemaking we express no views on the future growth of the demand for electricity, or on the question whether new generating facilities may be economically justified even in the absence of demand growth. Now do we assume that such growth as may occur is best served by capital intensive coal or nuclear plants. It is not our object to influence electric utilities either to add new capacity or to select one technology over another. Rather, our purpose is to create a regulatory framework within which utilities can make an unbiased assessment of the need for new capacity and of the best means of meeting that need.

At present, economic regulation biases utility decisions in two respects: It creates a bias against the creation of new capacity; and to the extent that new capacity is built, it creates a bias in favor of minimizing capital costs, rather than minimizing total economic costs. Possibly the bias will not affect utilities' decisions; utilities may assess the need for capacity and the most economic means of providing that capacity without regard to the effect of their decisions on investors. If the bias does affect decisions, the result may nevertheless be one that serves the public interest; even a broken clock tells the correct time twice a day. However, we do not consider it sound regulatory policy to rely either on the eleemosynary inclinations of regulated companies or on the chance coincidence of regulatory bias and the public interest. It may be impossible to rely wholly on economic incentives to encourage efficient decisions by the companies that we regulate, but we can at least try to avoid creating incentives for them to make inefficient ones.

The regulatory bias has two sources. One is utilities' inability to earn a return equal to their cost of capital. When a utility's earned return is less than its cost of capital, its investors' interest are best served by avoiding investment in new capacity; to the extent that new capacity is built, they are best served by minimizing the investment made to provide that capacity. As discussed earlier, inclusion of CWIP in rate base would reduce this source of bias but not eliminate it. In the end, the remedy for inadequate returns is adequate ones. This Commission has issued a notice of proposed rulemaking on generic rate of return, partly for the purpose of more accurately determining the cost of capital of the utilities that we regulate,[40] and we are continuing to study the relationship between the return that we allow and the one actually earned under the rates that we establish. The problem of inadequate earned returns also is being addressed by the state agencies that regulate the greater part of the electric utility industry.[41] The result of these initiatives remains to be seen; the most recent studies available to this Commission continue to show earned returns well below utilities' cost of capital.[42] Until this Commission and the state utility commissions succeed in closing this gap, the inclusion of CWIP can make a modest contribution towards offsetting this source of bias against new investment.

Inclusion of CWIP is more directly responsive to the second source of bias. This source is the cash flow problem created by the high cost of new base load plants in relation to the present rate base of some utilities. Since such companies generally earn a cash return only on rate base investments, it has often been difficult to finance these construction programs, particularly when the magnitude of CWIP is large in relation to rate base. As mentioned in the NOPR,[43] CWIP as a percentage of net electric plant in service grew from 17 percent in 1970 to 40 percent in 1979. For many companies, of course, the percentage is much larger. The financing difficulties arise because the internal cash flow generated by rate base investments is often insufficient to support the required sales of debt and equity securities.[44]

There are two ways of addressing the problem of cash flow inadequacy. One way is simply to increase the allowed rate of return to produce higher earnings and cash flow. The other way is to allow a cash return on construction investments by including CWIP in rate base. While both approaches have the immediate effect of raising rates, the allowance of CWIP in rate base causes the future rate base, and thus future rates to customers, to be lower than they otherwise would be. On the other hand, raising allowed returns would not be matched by future reductions in rate base and rates. For this reason the Commission has recognized that where increased cash flow is desirable, the allowance of CWIP in rate base "would be the least costly alternative to ensure a utility's financial integrity and to enable it to attract the capital necessary to meet its capital needs."[45]

E. Inclusion of CWIP and the Assessment of the Need for New Facilities

Even an unbiased assessment of the need for new capacity must be based on some estimate of the future demand for electricity. Once such estimates were comparatively easy. Demand increased steadily with (but faster than) the growth of the economy, generally absorbing without difficulty the new capacity built by electric utilities.

The estimation of future demand has now become a much more difficult task. There are several causes for the increased difficulty. After the last decade it can no longer be safely assumed that demand will grow faster than the economy, but neither is it yet clear that we can assume that it will not do so. At the same time, the increased length of time between the beginning and the completion of new generating facilities requires that demand be projected further into the future.

Neither of the two causes just cited lies within this Commission's regulatory reach. There is, however, also a third cause for the increased difficulty in estimating future demand. This is the difference between the price of electricity at the time that demand estimates are made and the price at which electricity must be sold when the planned facility comes on line. Estimates of the future must begin with the present. To the extent that the future

---

to provide it within a relatively short time with gas-fired turbines. The result of the shortage of base-load capacity then would not be a shortage of electricity but rather unnecessarily costly electricity. *See also* Navarro, *Long Term Consumer Impacts of Electricity Rate Regulatory Policies* (January 1983) DOE/PE/701066–1.

[40] Notice of Proposed Rulemaking, Generic Determination of Rate of Return on Common Equity for Electric Utilities, (Docket No. RM80–36), issued August 26, 1982, 47 FR 38,332 (August 31, 1982).

[41] Forecasted test years are generally being used more widely at the state level. Since 1980 approximately nine state commissions joined the 14 which were already using some variant of forecasted test years.

[42] *See* Argus Research Corp., *supra* at n.17. *But see* Salomon Brothers Inc., *Electric Utility Regulation-Semiannual Review*, Industry Analysis 1, 3 (February 11, 1983) (Over the last year the gap appears to have narrowed due to increases in allowed rates of return on common equity and rapidly declining interest rates. However, this may be due to a regulatory lag in responding to declining capital costs.)

[43] Notice of Proposed Rulemaking, Construction Work in Progress for Public Utilities, (Docket No. RM81–38), issued July 27, 1981, 46 F.R. 39,445 (August 3, 1981).

[44] *See* Appalachian Power Co., *et al.*, Initial Comments, at Appendix H (October 30, 1981); Appalachian Power, *et al.*, Reply Comments, at Appendix C (January 15, 1982).

[45] 46 F.R. 39,445.

can be expected to bring not only general economic changes but also substantial increases in the price of electricity, the leap from current data to future projections becomes so much the more difficult.

There was a time when the price of electricity could be expected to decline as new generating facilities were brought on line. Economies of scale and technological progress easily outdistanced the modest rate of inflation. Today the addition of a new facility is more likely to mean higher prices than lower ones. For companies with large construction programs, this price impact is seriously aggravated by the exclusion of CWIP from rate base.

Without any CWIP in rate base, a new plant has no direct effect on consumer prices until it begins to provide service.[46] Then, when it does come on line, consumer's rates must be increased to give the company a cash return on both the direct cost of the plant and the capitalized AFUDC as well as a return of capital through depreciation. If the plant is large relative to the existing rate base, the result can be a rate increase that is both large and sudden, producing a so-called "rate shock."[47]

In contrast, with all CWIP in rate base, the impact of a new plant is spread over the entire construction period, and the rates when the plant begins to provide service are lower because they do not include a return on and of capitalized AFUDC. The price increase is less smooth with the 50 percent policy adopted here, but the price path is still substantially smoother than it would be without any CWIP in rate base. We believe that this smoother and more gradual increase is likely to assist utilities in assessing the need for new capacity. To the extent that unnecessary capacity is thereby avoided, the inclusion of CWIP in rate base will not merely shift the burden on consumers from the future to the present. It will also effect a clear reduction in that burden. Thus inclusion of CWIP will generally allow utilities to pursue least *total* cost strategies to meeting their customers' electric power demands.

F. The Inclusion of CWIP and Economic Regulation

The inclusion of substantial amounts of CWIP in rate base will not by itself solve the problems of the electric utility industry. We believe that it will, however, contribute to the goal of meeting the future need for electricity at the lowest possible cost. It perhaps would not be the means that we would choose for this purpose if we had an unlimited choice. However, the alternatives available to us are limited by the nature of public utility regulation.

Public utility regulation in the form that we know it is virtually unique to this country. The industries that are regulated public utilities in this country are elsewhere generally owned by the government. Public utility regulation is a compromise between nationalization on one hand and unregulated free enterprise on the other.

It is a compromise that on the whole has served this nation well. In price and quality of service, the performance of the public utilities of this nation compares well with that of comparable industries elsewhere in the world. However, the kind of cost-based regulation generally used for utility regulation closes off some solutions to financing large capital additions. In an unregulated market, the approach of capital constraints would allow companies to earn temporary excess profits. On the supply side, these profits would help to finance new additions; on the demand side, the associated high prices would help to test the need for additional capacity and to ration supply until new capacity was brought on line. On the other hand, if electricity was generated by government corporations, future new capacity could be financed by current tax revenues to the extent that it was not financed by current sales.[48]

Indeed, one representative of a number of municipally-owned systems which participated in the proceeding stated during the public hearing that it is "clear that in some instances municipals may in fact have a de facto CWIP" in rate base policy.[49]

These other alternatives are not available to us. Although we are not strictly limited to cost in the rates that we set,[50] there are limitations on the extent to which we can cut ourselves free from cost-based standards, and we altogether lack the power to tax. These limitations were of no consequence so long as utilities could readily finance new capacity strictly on the promise of future cash revenues, but their ability to do so is now in doubt.

In this rulemaking we therefore have turned to the regulatory tools at our disposal, and in doing so we have concluded that the long-run public interest is best served by a departure from the general principle of cost responsibility. The departure is not total. We are allowing only 50 percent of CWIP to be included in rate base. The remaining amounts of CWIP will continue to receive AFUDC treatment and will not be directly reflected in rates until the plant begins to provide service. More importantly, present customers do derive significant benefits for capital expenditures for plants that are not yet providing service.

Utilities invest in additional facilities when customer needs indicate. By planning and constructing new facilities to meet customer requirements, utilities confer a present benefit on customers, namely, the reasonable assurance of a continuing quality of service. It is reasonable for current ratepayers to pay for this benefit.

---

[46] It will have an indirect effect if exclusion of CWIP from rate base increases a company's cost of capital.

[47] *See, e.g.*, Middle South Utilities, Inc., Initial Comments, at 5 (illustrates comparative time patterns of rates under a CWIP and an AFUDC policy). For example, for Long Island Lighting Company, the result of including the Shoreman plant in rate base when it is placed in service in the fall of 1983 would be to increase retail rates by approximately 36 percent. *See* Electrical Utility Week, January 31, 1983. A similar "rate shock" is predicted for Iowa-Illinois Gas & Electric Company (anticipated 29.7 percent increase due to bringing new coal-fired plant on line). Both these companies have filed proposals with applicable state agencies to phase-in the rate base additions over a period of several years after the plants go into service rather than include all the costs in rate base on the in-service date. Other utilities, including Public Service of Indiana and New Orleans Public Service Company are reported to be considering similar steps. *Id.*

[48] Alternatively, a nationalized corporation may issue bonds to finance the need. Since the corporation is part of the state, it is able to borrow funds at lower rates than would be available to a private borrower. This subsidy tends to be financed through higher interest rates paid by non-government borrowers. In addition, the interest cost of the bonds would in general be paid out of current tax revenues; as with the CWIP alternative, therefore, the carrying charges on the construction work would be borne by *present* taxpayers or ratepayers.

[49] *See* Statement of Mr. McHugh, representing ElectriCities of North Carolina, *et al.*, transcript of December 7–8, 1981 public hearing at 420. *See also* Statement of Mr. Ritts on behalf of APPA, transcript at 336 ("I must be frank with you that there are some of our systems that may currently charge customers for part of the cost of the plant"). *See also* Appalachian Power Co., *et al.*, Reply Comments at 65–71.

[50] *See, e.g.*, Panhandle Eastern Pipe Line Co. v. FPC, 324 U.S. 635 (1945) (in setting pipeline's jurisdictional rates, the Commission may properly take into consideration unregulated rates for direct industrial sales); City of Detroit v. FPC, 230 F. 2d 810, 814 (D.C. Cir. 1955), *cert. denied*, 352 U.S. 829 (1956) (use of unregulated filed price is not necessarily excluded for purposes of setting rates for pipelines' own production, nor is rate base method mandatory in all circumstance); Permian Basin Area Rate Cases, 390 U.S. 747, 795 (1968) (FPC obligated to give continuing attention to values that may be reflected only imperfectly by costs); and Texaco v. FPC, 417 U.S. 380, 399 (1974) (Commission may take into account the market price of unregulated gas in determining the just and reasonable rate for regulated gas supplies).

The direct beneficiaries of construction expenditures are, however, the customers that will be served by the plant. The departure from the general principle of cost responsibility will not place the full burden of construction costs on these customers and might be analogized to the one that occurs even in a competitive unregulated market when price temporarily exceeds marginal cost during a period of limited capacity, but the closer analogue may be the use of current tax revenues to finance public works that will serve the future. We have cited the case of government-owned electric utilities but the analogy extends to virtually all public investment.

The needs of the future must be met.[51] Those needs can to some extent be financed by the persons who will directly benefit, but such a nice alignment of benefit and burden is not always possible. We have concluded that it is not possible on the CWIP issue. Or, to state the point more precisely, we have concluded that a rigid adherence to the cost responsibility principle on this issue would not be consistent with our responsibility to further the maintenance of an adequate and efficient electric utility industry.

IV. Comment Analysis

A. Introduction

Due to the financial importance of the Commission's proposals in this docket, the Commission determined to provide for a thorough airing of opinions and an adequate opportunity for interested persons to submit comments. For nearly six months, ending January 15, 1982, the Commission received written initial and reply comments. Two days of oral presentations were also held. As a result of this process, the record in this proceeding contains, among other things, the comments of 33 Federal and state government representatives, 11 firms serving the accounting and financial needs of the electric utility industry, 57 investor-owned utilities or groups, 2 natural gas utilities or industry representatives,[52] 51 wholesale customers or groups of customers of jurisdictional utilities, 57 consumer representatives and consultants, and several hundred individuals (mainly in the form of postcard comments). At the hearings, 25 representatives of a variety of interests presented their views on the treatment of CWIP, responded to questions from Commissioners and staff, and debated many of the central issues in this proceeding. This rulemaking also attracted several letters and suggestions from Members of Congress.

Generally speaking, investor-owned utilities and the financial community support a policy of including a significant portion or all CWIP in rate base. The wholesale customers of investor-owned utilities, primarily municipal and cooperative-owned utilities, retail consumer organizations, large industrial customers, and individual retail consumers and small businesses oppose the inclusion of any CWIP in rate base and favor the use of AFUDC for financing costs. The comments of Federal departments and agencies, state and local regulatory authorities, and consultants were divided on the question of CWIP in rate base.[53]

B. The Financial Condition of the Electric Utility Industry

1. *Source of the Problem.* In issuing the Notice of the Proposed Rulemaking, the Commission viewed the financial condition of the industry as an important reason for considering an expanded use of CWIP in rate base. Commenters, therefore, regarded analysis of that condition as central to this proceeding and the comments are sharply divided.

Investor-owned utilities, several financial institutions, and the U.S. Department of Energy (DOE) generally view the electric industry as facing serious financial problems that may be mitigated by the inclusion of a percentage of CWIP in rate base for all utilities. Most other commenters find that, while individual utilities may be in financial distress, the entire industry is not in distress. Rather, they point to recent indicators that show a general improvement in the ability of utilities to attract capital. These commenters favor a case-by-case consideration of any CWIP requests and no departure from the rule expressed in § 2.16 of the Commission's regulations. Even among commenters who recognize that the industry is facing general financial difficulty, some would allow for CWIP in rate base only on a case-by-case basis.

The source of current financial difficulties is debated by commenters. A sizeable contingent of commenters, mainly investor-owned utilities, financial organizations, the General Accounting Office (GAO) and DOE argue that the widespread financial distress in the industry is directly related to the need to finance ongoing construction. The crux of the argument is that cash flow shortfalls arise from the need to provide new generation plant in the face of inflation in construction costs, delays in construction due to regulation, and the rising cost of capital. Financing costs, in turn, have risen, in part because of reduced bond ratings, the reduced value of common stock, the lower percentage of internally generated funds available to pay for construction, and the increased size of AFUDC as a percentage of income.

Support for this view comes from a major financial rating agency which contends that the plight of the industry is such that it has suffered severe financial deterioration during the last decade because of spiraling fuel costs, double-digit inflation, reverse economies of scale in new construction costs, and increasing and more costly external financing requirements. These factors, this commenter argues, contributed to downgrading more than 150 bond issues since 1970. In 1970, for example, 60 percent of rated electric utility first-mortgage bond issues were rated "AA" or higher by Standard & Poor's (S&P). By 1981, less than 30 percent were in that

---

[51] While utilities under our jurisdiction may not have an explicit obligation to serve requirements of customers, they would not be allowed to terminate such service unless they could show that it was in the public interest. Even if we made such a finding and the distribution utility went out of business, the supplying utility would, in most states, be obligated to provide direct service to the customers of the distribution utility because they would be considered retail customers in the supplying utility's service territory.

[52] These commenters urge the Commission to extend the effect of this rule to natural gas utilities. The Commission has distinguished between natural gas and electric utilities with respect to the treatment of investment in construction projects on the basis of the length of construction periods and the financial condition of each industry. *See* Uniform Systems of Accounts for Public Utilities and Licensees and for Natural Gas Companies (Classes A, B, C and D); Inclusion of Construction Work in Progress in Rate Base (Docket No. RM75-13), issued November 8, 1976, 41 FR 51,392-51,394 (November 22, 1976). No change in Commission policy regarding this distinction has ever been contemplated in this proceeding. This proposal is therefore not adopted.

[53] In the Notice of Proposed Rulemaking, the Commission defined CWIP as "amounts properly included in Accounts 107 (construction work in progress) and 120.1 (nuclear fuel in process of refinement, conversion, enrichment and fabrication) 46 FR 39,454. Both CWIP and nuclear fuel in process of refinement, conversion, enrichment and fabrication are investments in material which will later be used to serve consumers but which, during the development process, still require financial resources from the utility. Presently, nuclear fuel in Account 120.1 receives AFUDC treatment in the same manner as balances in Account 107. Moreover, nuclear fuel is typically removed from Account 120.1 when it becomes a usable fuel stock. This parallels the treatment of investment in new plant which is included in Account 107. The accrued financing costs which are capitalized in each account would be part of the balance eligible for rate base treatment. No commenter addressed the rate base treatment of nuclear fuel being processed. The statements submitted by several wholesale customers and consumer groups stating the general concern that nuclear facilities will comprise a significant portion of CWIP are addressed below.

category. Further, although allowed rates of return have increased from about 12.5 percent in the 1970's to 14 percent in 1980, the actual earned rates of return on investment have not moved proportionately. Indeed, by 1980, they were 11 percent compared with 11.8 percent in 1970.

The quality of earnings has also deteriorated substantially, according to investment analysts. In this regard, one commenter from the financial industry states that virtually all investors responding to a survey stated that the value of the AFUDC component of a utility's earnings is lower in quality than cash earnings. The non-cash nature of AFUDC earnings, essentially an IOU for future payment to present earnings, is said to be of inferior quality. Whereas in 1970 only 11.8 percent of utility earnings were AFUDC "paper earnings," fully 46.3 percent of earnings were AFUDC related in 1980, explains one commenter.

Additional perspective on the problem is supplied by a rating agency, which states that the industry's financial flexibility is limited by: (1) The existence of bond indentures that restrict many companies from issuing new debt; (2) common stock prices below book value whereby new stock issues at those low prices dilute the value of existing common equity; and (3) growing capital requirements of the electric industry in a contracting capital market. This picture is generally acknowledged to be accurate by several commenters from the private financial community. Government sources also concur in this regard.

The GAO states that the industry's poor financial performance is closely tied to inflation, high interest rates, and, in general, the swings in business cycles. It is compounded by long-term construction projects, unanticipated energy conservation, and the fact that current utility earnings are based on older generating plants which cost much less to build than today's plants. As a result of these factors, the GAO states that as of April 1981, the common stock of 98 out of 100 of the largest investor-owned electric utilities was selling below book value. Although only four of the largest 100 electric utilities had a BBB bond rating in 1970, about 30 percent are now rated BBB. The GAO also states that the financial community does not believe that utilities are receiving a rate of return that compensates adequately for the present cost of money. Additionally, GAO comments that a particular problem is that the utility industry is capital intensive. Generally speaking, inflation has had a more disruptive impact on this industry than on others, it is argued, and utilities are now faced with the need to refinance, at current rates, maturing long-term debt originally issued at 2 to 3 percent.

The principal concern of DOE is the financial ability of utilities to undertake needed construction. DOE indicates that because of the present financial situation, utility management has adopted a "capital averse" behavior which avoids investment, wherever possible, by cancelling or deferring the construction of needed generating capacity in favor of less capital-intensive, and less than optimal, generating plant. This behavior arises, argues DOE, because of the rising cost of construction and the inability of utilities to cope effectively with the ensuing financial constraints. According to DOE, construction costs quadrupled between 1967 and 1979 while cash earnings declined to 30 percent of current expenditures, well below the 50 percent target cited by some Wall Street analysts as a recommended minimum. DOE also sees further deterioration in interest coverage ratios when non-cash AFUDC is excluded (4.0 in 1967, 2.0 in 1980), in realized rates of return, and in net earnings excluding AFUDC. The decline in cash earnings has been interpreted by some analysts and investors to signal a decline in the quality of earnings. Cash earnings of utilities now cover only two-thirds of dividend payments and there has been a marked decline in the ratio of the market price of common stock to its book value.

Several state utility commissions specifically state that utilities are experiencing financial difficulties due primarily to the increased cost of construction resulting from delays, the long lead time required for construction of base-load generation facilities, and inflation.

Numerous wholesale customers of investor-owned utilities present a different portrait of the industry's condition and its underlying causes. While acknowledging the difficult financial condition of some utilities, these commenters attribute the industry's difficulties to a decline in the quality of utility management and decision-making and to nuclear construction programs that are often adversely affected by federal regulation and technical problems. Moreover, these commenters argue that inclusion of CWIP in rate base will not improve the condition of utilities beset with such problems. However, some of these commenters argue that, if rate relief is used to combat the adversities facing investor-owned utilities, it should take the form of higher rates of return.

Among the customer groups, many commenters simply doubt that all electric utilities are in financial difficulty and some argue that the financial picture of investor-owned utilities has improved markedly in recent months. These commenters point out that two-thirds of the investor-owned utilities have a bond rating of A or better and that the BBB rated bonds of utilities deemed to be in financial distress are still considered investment grade. Some individual public and cooperative systems believe that Commission actions, including tax normalization, future test periods, recovery of investment in abandoned projects, and fuel adjustment clauses, in addition to the Economic Recovery Tax Act of 1981 (ERTA), have in recent years greatly improved the financial picture for most utilities. In addition to increased regulatory sensitivity at the state and federal levels to potential utility problems, the wholesale customers claim that there has been a leveling in utility capital needs, arguably because there is an excess of future capacity. Morever, these commenters foresee that decreased inflation will reduce capital financing requirements and costs to utilities causing market-to-book ratios to improve. Representatives of wholesale customers observe that the allowance of CWIP would be inflationary and that, as interest rates continue to decline and electric rates increase, fewer utilities will experience serious financial difficulties.

In summary, wholesale customers find the picture of industry-wide distress to be seriously overstated. Retail consumers, consumer groups, environmentalist organizations, and large industrial customers generally concur in this view.

We believe that the record in this proceeding clearly shows that the electric utility industry has been in a weak financial position. While general economic conditions may have exacerbated the financial difficulties of some companies, there is ample support that the electric utility industry has experienced particular difficulty in financing construction programs. Equally clear, this difficulty has led to general deterioration of the industry's financial posture.

The major indicators of the financial condition of electric utilities seriously deteriorated over the past decade. A decline in bond ratings was pervasive. Thirty percent of the industry is now BBB rated. Earned returns lagged behind capital costs, which increased sharply.

Internal cash generation as a percent of construction expenditures fell dramatically.

Perhaps this decline has leveled off and, as some commenters state, has reversed to some degree in the months since the Notice was issued in this proceeding. Even if we assume that it has, the Commission must do what it can to ensure that the financial picture will continue to improve. The financial condition of utilities should not be left totally subject to swings in business cycles. Our regulatory responsibilities do not permit us the luxury of simply relying on the hope that conditions will continue to improve. The Commission must take whatever steps will assist the process and to remove the existing bias against increased capital spending for new capacity.

Because the financial condition of the industry at a particular point in time is not necessarily indicative of the health of the industry, the Commission's concern is more with the long-term outlook in light of the service demands that are anticipated. If the investment necessary to meet that obligation can be expected to undermine the health of the industry, deterioration in service can be foreseen. To encourage the type of investment necessary to maintain infrastructure sufficient to meet service requirements, a regulatory remedy to offset the financial drain posed by construction is necessary.

2. *Adequate and Economical Construction of Plant.* Any consideration of the inclusion of CWIP in rate base naturally raises the question whether utilities need to build additional capacity either to replace worn out or inefficient plant or to meet the growth in the needs of the customers. Many commenters claim that new electric plant must be continually constructed to: (1) Improve or replace existing plant; (2) service increased demands from existing customers; (3) respond to changes in government policy, such as pollution control; and (4) meet service demands of new customers moving into the service area. However, utilities emphasize that an appreciation of the financial stress on them necessitates an understanding of the unique feature of their operations—the obligation to serve.

Electric utilities continually construct new facilities because they have an obligation to serve, even if expanding service may not be profitable. The pressure to anticipate and build for future demand leads to construction programs that have a direct impact on finances and, consequently, on the consideration of any CWIP policy. Several utility systems emphasize the need to undertake construction at "optimal levels." [54] Such construction, it is argued, enables a utility to switch from oil-fired generation to coal or nuclear generation and to stop building short-term, "band-aid" generation facilities which, though less expensive to build, invariably would represent a greater long-term cost to ratepayers. A number of utilities cite the delay or cancellation of such optimal construction programs because of financial constraints. They assert that this creates higher costs to consumers because of increased reliance on purchased power or the inflating costs of deferred construction. Arguably, the prospect is for a decline in service reliability if construction is not undertaken at optimal levels.

Investor-owned utilities claim that they face construction lead-times that have increased from roughly five years in 1960 to 10 or more years in 1981. They also cite significantly higher construction and financing costs for new projects. Some of these commenters view this deteriorating situation as exacerbated by burdensome regulatory requirements and the phenomenon that new plant no longer increases operating efficiency sufficiently to offset the higher cost of construction. As a result, the cost of constructing and replacing utility plant is escalating. There is therefore a significant trend in the industry toward cancelling or deferring capacity scheduled for the mid-1980's and early 1990's. Reflective of this, DOE states that over the last two years very large amounts of general capacity have been deferred or cancelled.

DOE states that it is unable to determine to what extent these delays and cancellations were caused by reduced demand and to what extent to risk of capital aversion. However, it predicts that, if delays and cancellations are caused by financial constraints, they will continue unless remedial action (such as CWIP) is taken. DOE cites examples of financial constraints that prohibit utilities from undertaking economically efficient construction programs. For example, in 1980, well over half of all planned capacity had announcements of delay or cancellation. This is cited as further evidence of the "capital averse" behavior by the utility industry which could result in dangerous shortages of capacity after the period of low demand growth in the early 1980's comes to an end. DOE anticipates that the current respite from demand growth will dissipate and utilities must be prepared to meet an upswing in demand that could come as a result of economic recovery.

Commenters that oppose the rule have a different view of the prospects for, as well as history of, demand growth and the response to it by utilities. They claim that the cause of the current troubled state of the industry is the decline in growth of demand and that new large construction programs are unnecessary or not optimal. Several retail customer groups find that utility management acted imprudently in resorting to large construction programs in the past, particularly construction of nuclear generation. Because about two-thirds of current CWIP financing represents nuclear construction, much of which is allegedly beset with technical difficulties, these commenters generally resist the notion that construction programs should be afforded CWIP treatment. Objections to the rule are therefore raised in the context of disagreements over the composition and size of construction programs, as well as the overall need for future additions to capacity. Some commenters even fear that the proposed rule would encourage or vindicate management decisions that are allegedly unwise and contrary to the interests of ratepayers.

The rule we promulgate today, however, in no way immunizes utilities from allegations that particular management decisions are unwise or imprudent. Its effect in this regard is only to put a portion of construction work which is underway on a more equal footing with plant which is already in service. This does not prejudice any questions which may be raised in individual rate cases concerning the prudence of particular utility investment decisions.

With respect to the question of continued need for greatly expanded generating capacity, we again stress that the present rule is not predicated on an assessment that enormous new capacity is necessarily required. To the contrary, we believe, as stated earlier, that the need for new capacity should be tested by the market to the extent practicable. The present rule furthers this goal by smoothing out the price increases which are associated with additions to capacity, thereby giving both customers and utility management a clearer idea of current and future price levels and demand.

3. *Impact of AFUDC.* Under existing Commission policy, all costs of construction, including interest charged on amounts borrowed (the "cost of money"), are capitalized in a separate utility account and denied any rate treatment until the plant under

[54] *See, e.g.*, Appalachian Power Co., *et al.*, Initial Comments at 22.

construction is placed in service. The allowance for funds used during construction (AFUDC) and the cost of construction are put into rate base when the plant is placed in service. A limited exception to this approach is provided in § 2.16 for investment in pollution control and fuel conversion facilities and in cases of financial distress.

Investor-owned utilities and financial firms state that the problem with AFUDC is that it inevitably represents low quality earnings for utilities. In effect, AFUDC is not income but a promise-to-pay upon completion of construction. These commenters argue that, as AFUDC increases as a percentage of total utility income, debt and equity financing costs increase because investors and analysts tend to view AFUDC as more risky than cash earnings. In addition, they state that because accrual of AFUDC does not create current cash flow, it deprives the utility of funds when they are most needed, that is, during the period of construction of plant. Moreover, because AFUDC accruals are added to the total cost of the new facility included in rate base, the revenue requirements associated with the plant increase for the life of the plant. Finally, the AFUDC methodology creates a surge in rate base at the time a plant is placed in service. These commenters also state that an AFUDC policy hides the true cost of providing power from consumers, thus defeating conservation and making construction appear more necessary.

By way of analysis, one investor-owned utility states that AFUDC affects the cost of capital by decreasing bond ratings one grade and increasing the cost of equity 318 basis points [55] on average. A lending institution believes AFUDC amounts are discounted in evaluating income and equity accounts, thereby affecting a utility's credit-worthiness. Moreover, the financial community ascribes to AFUDC policy the doubts of investors regarding the promise of future earnings, in contrast to cash earnings, if a utility must finance capital costs on construction projects until the in service date. This purportedly depresses the value of common equity. In any event, they argue CWIP has the advantage of providing cash flow during the construction cycle, when cash is most needed to complete major projects.

In contrast, a variety of retail consumers, including industrial consumers, and wholesale utility customers discount the importance of AFUDC in the continuing financial situation of utilities. They point out that the FERC Uniform System of Accounts defines income (including AFUDC) as recorded revenues less expenses, not less cash, and that no studies demonstrate that investors back away from companies having AFUDC balances. There is, they argue, little impact on the cost of equity because AFUDC and retained earnings are, conceptually, sources of future income and both represent a deferral of current cash income to the investor. Finally, several customer commenters assert that an AFUDC policy has positive benefits. AFUDC accounting, for example, provides a financial incentive for a utility to minimize construction delays.[56]

As indicated above, the Commission believes that the existing reliance on AFUDC should be modified. The AFUDC approach does not necessarily guarantee that utility plant will be constructed more economically or expeditiously. What it apparently does do, is mask from the ultimate consumer the real cost of power during the period when a new plant is being constructed, thereby encouraging demand which serves to distort estimates of future demand and the attendant need for new capacity.

AFUDC was a useful tool when construction periods were short, inflation moderate, and the competition for capital less intense. However, the aggravation of these three factors brings into question the viability of the AFUDC method. Also of importance is the timing of AFUDC and CWIP income relative to a utility's cash needs. CWIP in rate base has the distinct advantage of providing cash at the time the utility is in most need of cash flow, that is, during construction.

C. Several Legal and Policy Considerations

1. Presumption Against Inclusion of CWIP in Rate Base. In the Commission's rate regulation of electric utilities, capital costs are generally included in rate base only if the investment is in plant that is "used and useful," or, to put it another way, only if the ratepayers who are paying the costs are getting the benefits.

Commenters are divided with respect to whether this presumption against CWIP in rate base is correct and, perhaps more importantly, whether it remains relevant. Wholesale and retail ratepayers support this as an operative and controlling ratemaking principle predicated on the concept of "used and useful" in the law, the notion that there must be equity between generations of ratepayers, and the claim that retention of the presumption best duplicates a competitive market. In contrast, investor-owned utilities and financial organizations state that the presumption against the inclusion of CWIP in rate base is based upon an archaic and erroneous interpretation of the "used and useful" concept. They controvert the conclusion that plant must be in service to be "used and useful" to current ratepayers or that inequities result if ratepayers pay for plant under construction. Nor, argue several but not all companies, should the electric utility industry be treated in a manner analogous to unregulated business operating in a free market.

a. *"Used and Useful".* Public utility plant under construction historically has been excluded from rate base prior to its providing actual service to utility ratepayers. The "used and useful" concept supposedly originated with the decision in *Smyth v. Ames*, 169 U.S. 466 (1898) in which the Supreme Court, finding that a Nebraska law fixed unreasonably low freight rates, held that rates must be computed according to the fair value of property used to service the public.[57] The principle that a utility is entitled to earn a return on property that is "used and useful" in serving the utility's ratepayers is generally used by this Commission, despite widely recognized exceptions and departures from this rule, particularly when there are countervailing public interest considerations.[58] In this regard, the Commission agrees with the courts:

> The legal system does not compel rigidity, or bureaucratic inflexibility, least of all in an area like energy policy where flexibility may be essential to the public interest.[59]

---

[55] A "basis point" is equivalent to 1/100th of one percent. It is a measure of increases or decreases in the cost of borrowed money or the yield on loans.

[56] In response, utilities state that it is the AFUDC method that inhibits project financing and causes expensive construction delays. This is because of such factors as the financial constraints utilities experience when interest coverages fall below indenture requirements for issuing new debt.

[57] For relationship of the used and useful theory to the prudent investment theory, consider Washington Gas Light Co. v. Baker, 188 F. 2d 11, 16–19 (D.C. 1950).

[58] *See* Tennessee Gas Pipeline Co. v. FERC, 606 F. 2d 1094, 1109 (D.C. Cir. 1979). NEPCO Municipal Rate Committee v. FERC, 668 F. 2d 1327 (D.C. Cir. 1981). Departures from the "used and useful" principle are, in some cases, routine practice. For example, land held for future use has been regularly included in the rate base upon which the utility earns its return. Moreover, the use of a future test period allows inclusion in rate base of plant which will be in service during the test period but which may not be operable on the effective date of the new rates. Somewhat akin, are purchase gas adjustment clauses and fuel adjustment clauses which charge a projected cost to customers for service rendered.

[59] Consolidated Gas Supply Corp., *et al.* v. FPC, 520 F. 2d 1170, 1185 (D.C. Cir. 1975) *quoting* Public

In light of lengthening construction cycles, relatively high inflation, and the proportional significance of capital financing costs in relation to overall project costs, this Commission—as well as many state regulatory authorities—have reexamined the basis for the exclusion of CWIP from rate base and have often disregarded the "used and useful" concept when the reliability of future service is in doubt. This was, in fact, one basis of the FPC's Order No. 555 which ventured to provide some CWIP relief to financially distressed utilities,[60] in addition to rectifying anticipated intergeneration inequities by encouraging expenditures for pollution control and fuel conversion facilities through rate base treatment.

Few commenters in this proceeding analyze the legal significance of the "used and useful" test. Comments focus on equitable and economic considerations. Investor-owned utilities and others suggest that the Commission abandon the concept and financial organizations state that the concept has little applicability to the needs of a financially weakened industry or to those of the Nation. Supporters of CWIP in rate base emphasize that current ratepayers benefit from ensuring the future supply of electric power. Predictably, other commenters believe that any deviations from "used and useful" will cause interperiod ratepayer subsidization, that is, current ratepayers would subsidize future ratepayers by contributing to future plant additions. These commenters agree that it is essential to match costs with benefits, regardless of the financial condition of the industry.

The Commission need not, in this proceeding, pronounce further on the validity of the "used and useful" concept. However, it must be reemphasized that the "used and useful" concept, if administered inflexibly and without regard to other equitable and policy considerations, may fail the interests of both the electric utility industry and its ratepayers. Therefore, a more fruitful discussion of this issue may be conducted in terms of the economic equities upon which most commenters focus.

The fundamental debate over whether allowing CWIP in rate base is consistent with the "used and useful" doctrine is, in this proceeding, really a debate over the question of intergenerational equity, the point to which we now turn.

b. *Intergenerational Equity—Matching Costs and Benefits.* Several commenters state that the inclusion of CWIP in rate base violates the concept that current ratepayers should not bear the cost of future electric service. The inclusion of CWIP in rate base, several commenters contend, would create an interperiod mismatch of costs and benefits whereby current ratepayers would subsidize future electric power customers. This is labeled an "intergenerational inequity." These commenters believe that capitalizing AFUDC is fair for both present and future ratepayers because the cost of plant under construction is recovered from those ratepayers that are served by the facility.

Investor-owned utilities dispute the contention that current ratepayers do not benefit from the construction of new generation facilities. First, these commenters state that it is more the increasing demands of existing customers rather than the obligation to provide service to new customers that necessitates large construction programs. This obscures the significance of any distinction between present and future customers. The argument concludes that in theory, the cost of new plant is assigned to all customers served by the utility rather than to the specific customers that create increased demand for power.

Second, investor-owned utilities argue that the persons or groups that currently would pay for CWIP will generally tend to be the same people who receive service from the facilities under construction. According to the utilities, not only are ratepayers recognizable as utility's customers for decades at a time, they also tend to commit actions (such as making capital investments in electricity-using appliances and equipment) that presume a reliable, continuous, and sufficient supply of electric power into the future. As a result, current ratepayers are arguably very likely to be direct beneficiaries of CWIP in rate base.

The comments on the relative equities of CWIP in rate base muster additional arguments that (1) such a policy leads to a more accurate pricing policy that signals the real cost of meeting future ratepayer requirements and the real incremental cost of current usage; and (2) a CWIP policy would reduce the current cost of capital, thereby reducing current revenue requirements, and benefiting current ratepayers.

In contrast, a variety of wholesale power customers contend that the inclusion of CWIP in rate base in inequitable in many ways. They strenuously disagree that present and future customers tend to be identical, pointing to the mobility of the American public and the phenomenon of municipalities or cooperative systems moving off system to establish their own generating capacity. In those cases, larger numbers of people would allegedly be deprived of the fruits of their investment in CWIP. In addition, numerous groups and individuals perceive that CWIP in rate base would put an undue burden on the elderly, whose prospect of being served by plant under construction are less than those of the general population. Wholesale and retail consumer interests also assert that CWIP does not provide appropriate price signals, in part because any higher rates reflecting CWIP in rate base do not generally include the offset for variable cost (fuel) savings necessary to provide an appropriate price signal to current ratepayers.

The question of intergenerational equity presents the Commission with difficult theoretical problems and compelling human issues. No public policy is perfectly equitable. The Commission is required nevertheless to strike a balance between investors and ratepayers. Likewise, it must balance the interests of present ratepayers and future ratepayers. Even under a strict application of the "used and useful" doctrine, current ratepayers pay for facilities necessitated by past demand and for the capital costs of unused capacity. Moreover, even if CWIP-based rates reduce total costs to the ratepaying public over a period of time, the intergenerational question remains because the question of who pays is distinct from the question of how much. In balancing the various interests involved here, certain observations can be made.

From the standpoint of federal regulation of wholesale rates as opposed to state retail regulation, there is less likelihood that individual ratepayers will bear costs for which no benefit is derived simply because a wholesale CWIP-based rate affects a broad segment of the public. It is reasonable to presume that the chances are relatively great that, in this national community of ratepayers, the person funding CWIP in rate base would also benefit from the contributions of others—no matter where or how often that person might change service areas. Far more important, the Commisssion believes that the Nation as a whole has a critical interest in continuing service reliability at the most reasonable costs. The capital averse behavior of utility management, induced largely by

---

Service Commission v. FPC, 511 F. 2d 338, 353 (D.C. Cir. 1975).

[60] "Inclusion of Construction Work in Progress in Rate Base" (docket No. RM75-13), issued November 8, 1978, 41 FR 51,392 51,394 (November 22, 1976).

escalating costs and long construction times, threatens to undermine that reliability.

If CWIP will help management to more accurately gauge the need for future capacity while alleviating the current bias against additional investment,[61] it is equitable for some portion of the increased costs of future service to be borne by present ratepayers. As noted in Section III, in nations where utilities are nationalized, current tax revenues are available to finance public works designed to serve the future. The Commission foresees long-term benefits arising from inclusion of at least some CWIP in rate base that are sufficient to offset the short-term costs that wholesale and retail customers may experience. Moreover, CWIP may reduce the exposure of utilities to the vicissitudes of business swings which may threaten the ability of utilities to meet their public service obligation.

C. *Analogy to Non-Regulated Industries.* The third discrete issue relating to presumptions against CWIP in rate base involves the argument made by retail ratepayers and consumer groups that AFUDC is a preferable treatment for construction costs because it most closely replicates the way unregulated businesses, which do not have an obligation to serve as do regulated utilities, recover costs. These commenters therefore find CWIP in rate base objectionable because it contravenes the conventions of competitive markets in which construction financing costs are not charged to current customers.[62] Moreover, these commenters view CWIP policy as removing risk which investors normally assume by shifting risk to ratepayers. It is argued that this makes ratepayers into involuntary investors in the utility.

In response to this defense of AFUDC, investor-owned utilities state that regardless of the rate policy, the electric utility industry is not comparable to a competitive market. They contend, for example, the (1) regulated entities base rates on costs, whereas supply and demand controls prices in a competitive market; (2) unregulated entities are not affected with the public interest and have no obligation similar to a utility's obligation to serve all customers within its service territory; (3) a utility must compete with unregulated companies for capital to construct new facilities in spite of the prospect of lower rates of return; and (4) while competitive markets price products at their current capital costs, generally approaching the full cost of marginal production, electric utilities price their power at average cost.

In the Commisssion's opinion, there are significant differences between free market operations and the conditions under which regulated utilities operate. Accordingly, it may not be fruitful to attempt to defend either AFUDC or CWIP policies on the basis of a similarity to competitive markets, and we decline to do so. What is important, however, is to enable the demand of customers for new capacity to be more accurately reflected in the planning forecasts of the utilities. A ratemaking approach such as AFUDC which shields ratepayers from the impact of higher cost capacity until it is completed cannot serve this goal.

2. *Risk-Sharing Between Ratepayers and Investors.* Commenters agree that inclusion of any amount of CWIP in rate base requires ratepayers to shoulder a financial risk generally only borne by investors, that is, the risk of supplying capital in anticipation of some return or benefit. However, the commenters disagree about the extent and significance of the shift. Currently, investors and ratepayers share some of the risks of public utility operations, for example, with respect to pollution control and fuel conversion facilities under the Commission's existing CWIP policy.

Wholesale and retail ratepayers state that investors should bear both the risk of the profitability of an enterprise and the risk that a plant might never be completed, thereby losing its potential to serve or produce revenues.[63] These commenters urge the Commission to retain the status quo rather than force ratepayers to be involuntary investors. These ratepayers state that if investors are shielded from the risks of the enterprise, the market will be dramatically altered and will disrupt its efficient operation.

In contrast, investor-owned utilities and financial organizations state that, even under a CWIP policy, most of the risks associated with a utility operation belong to the utility's investors; they are the principal source of capital for the utility. If CWIP were in rate base, these commenters state that ratepayers would only be required to pay financing costs on a current basis, and would not be obligated to invest capital in the utility. Utilities nevertheless claim that it may be appropriate and socially useful for ratepayers to assume some risks; this would reduce capital costs and the revenue requirement of the utility. Utilities generally believe that the obligation that a utility has to provide power within its service area, even when the economics of such service do not justify added investment, warrants having ratepayers assume a greater share of the associated risk.

It is important to differentiate the role of investor and ratepayer. Neither the proposed or final rules in this docket make ratepayers a primary source of capital. That is not to say, however, that regulated rates contain or should reflect only the value of providing an immediate benefit to ratepayers. Ratepayers, to a greater or lesser extent, have an interest in the financial health of companies charged with serving their needs.

The degree to which it is appropriate for ratepayer funds to be used to help finance the construction of plant for future use is a matter of judgment. The Commission believes that ratepayers should share with investors today the carrying costs of plant under construction. This is, as some commenters point out, analogous to the universal support given public schools through taxes, regardless of whether one is the parent of a student or the likelihood of remaining in the district. Risks and benefits are shared throughout the community at large.

CWIP in rate base does not portend any fundamental realignment of the roles of investors and ratepayers. Regulations must nevertheless recognize certain economic and technical facts of life that make it more difficult for utilities to plan and finance capital investment over long periods of time, including high capital costs, the prospect of demand growth, and protracted construction times. In light of the tendency of utilities to seek short-term and probably ineffectual solutions, the Commission views CWIP in rate base as

[61] The question of whether CWIP in fact encourages unwise managerial choices is a separate issue, discussed in Section IV.D., *infra*.

[62] In the NOPR, the Commission also stated: "The exclusion of CWIP from rate base also most closely duplicates the operation of an unregulated competitive market. In such a market, the price at which the company can sell the production of its existing facilities is unaffected by the fact that new facilities are under construction." 46 F.R. 39,448.

[63] Utilities and financial firms also address the question of the risk of noncompletion of a facility under construction. Under an AFUDC policy, utility investors recover, from ratepayers, capital and accrued AFUDC which is prudently invested in plants abandoned prior to completion. The final rule does not vary this result. The question of how delayed or deferred plant is treated under the rule is determined by whether delayed or deferred plant qualifies as plant under construction which is properly includable in Accounts 107 or 120.1. If CWIP is included in rate base, utility investors are nonetheless allowed to recover prudently invested capital. Because the carrying cost on the capital invested in the projects is recovered currently under a CWIP in rate base policy, a utility would be allowed to amortize only the principal.

a balanced and modest means of sharing the risks inherent in the need for adequate future capacity.

3. *The Financial Distress Standard for Inclusion of CWIP in Rate Base.* In FPC Order No. 555, which established existing §2.16, the Commission adopted a policy that permits inclusion of CWIP in rate base for any electric utility that makes a "clear and convincing" showing of severe financial difficulty. Although the financial conditions of the electric utility industry weakened in recent years, few utilities have filed requests for CWIP rate relief under the severe financial distress standard and no final order granting CWIP under this standard has ever been issued. Although a major alternative proposed in this docket involved a threshold criteria for CWIP eligibility predicated on a utility's financial condition (*e.g.*, bond ratings), the rulemaking also called into question the viability of the severe financial distress standard.

In response to that proposal, commenters dispute whether such a standard is serviceable. Investor-owned utilities and financial firms state that such a test fails to provide timely relief to an ailing utility and permits substantial financial deterioration before relief is available. Moreover, the severe financial distress standard limits relief to particular utilities.

Wholesale and retail ratepayers generally support the retention of a financial distress test, primarily because some test ought to be imposed before any extraordinary rate relief is afforded utilities. They argue that CWIP relief is a last resort and that any relaxation of the severe financial distress standard would undermine that purpose. These commenters therefore advocate case-by-case determinations for any rate relief, as necessary to preserve the financial integrity of a utility. Generally speaking, ratepayers view any rule that includes CWIP in rate base generically as an unwarranted departure from the present policy, the merit of which is purportedly demonstrated by the paucity of CWIP rate requests made under § 2.16 and the precision of judgment which a case-by-case method permits.

In short, these commenters questioned the need for a broader rule allowing CWIP in rate base. Indeed, upon reviewing the final rule we adopt today, these commenters will likely ask: when only a handful of utilities have even requested CWIP under the current rules, on what basis does the Commission allow all utilities to file to include CWIP?

The answer is straightforward. At the time the existing rule was proposed, the primary concern was with providing a vehicle for rate relief to utilities that faced such financial distress. In the ensuing year and a half, however, we have gained a much better understanding of the effects of AFUDC treatment on utility financing, the investment bias created by inadequate returns and the unnecessary future costs which may be imposed by decisions reflecting that bias. At the same time, each cancellation of a power plant on which substantial investment has already been made has underscored the extent to which past price signals for electric power have distorted estimates of future demand and contributed to faulty planning.

These are the primary concerns for the future. Our purpose in this rule is thus considerably broader than merely providing rate relief for utilities in a financial bind. Accordingly, the paucity of requests for CWIP under the existing rule does not itself argue against the course we adopt today.

4. *Inclusion of CWIP in Rate Base Subject to Refund.* Under the Commission's existing regulation, CWIP for pollution control and fuel conversion facilities may be collected subject to refund, just as other rate base items. An allowance of additional CWIP under the financial difficulty test, however, may be included in rate base only following the Commission's final order on the proposed rates and the ensuing litigation over the meaning of financial distress and the nature of appropriate relief. Investor-owned utilities, several state regulatory bodies, and an accounting firm state that CWIP should be included in rate base at the time rates become effective, even if made subject to refund. These commenters argue that the refund obligation relating to CWIP should be the same as that established for the rate filing generally. To delay collection of CWIP-related expenses would allegedly be counter-productive with respect to the financial problems CWIP is intended to alleviate.

Wholesale customers generally disapprove of CWIP collected subject to refund. Several commenters state that allowing CWIP in rate base subject to refund would result in a price squeeze and litigation that could leave the "squeezed" customers financially devastated before a refund based on price squeeze would be made. In other words, these commenters fear that rates may be collected subject to refund for years until a final decision is issued by the Commission. Several partial remedies are proposed by the commenters, such as segregating the CWIP portion of rates collected subject to refund for accounting purposes, repaying a customer for any CWIP contributions if that customer leaves the service territory during the period that rates are collected subject to refund, allowing CWIP in rate base subject to refund only after the initial decision of the administrative law judge, or expediting that portion of any rate proceeding that involves CWIP in rate base in order to minimize the retail impact.

As a matter of policy, the Commission will allow utilities to collect CWIP-related revenues even if rates are subject to refund in order that relief be immediately available to companies with larger construction programs [64] and concomitant capital needs and that cash flow rates achieve more stability over time. After all, two of the main objectives of allowing CWIP in rate base are, first, to prevent unpredictable steep jumps in wholesale rates and, second, to provide consumers with more timely signals about the real cost of every additional increment of power used. These objectives argue for continuity in including CWIP in rate base as close to when costs are incurred as possible. Moreover, by allowing CWIP subject to refund, utilities will find frequent filings less necessary. Finally, the Commission recognizes the surface appeal of the equity notion of refunding CWIP contributions to those parties leaving the systems before a plant becomes operable. Its impracticalities notwithstanding, the Commission does not view the rates that might be paid for future utility plant as fundamentally different than rates for other costs that the utility incurs in the course of maintaining healthy, ongoing operations.

D. Impact of Including CWIP in Wholesale Rate Base

The final rule will affect the financial condition and investment decisions of utilities. In addition, a 50 percent CWIP policy will likely be reflected in actual rates fairly quickly as a result of our decision to allow CWIP-based rates to be collected subject to refund. Accordingly, we evaluate the actual impact this rule may be expected to have on wholesale rates. While the following analysis will help put the Commission's decision in perspective, it

[64] Several commenters question the effect of the final rule on potential price squeeze situations. Although more will be said about price squeeze later, there is no indication that this final rule will dramatically exacerbate the possibility of such discriminatory rate structures. *See* the Environmental Assessment at § 4.2.5. It appears the CWIP does not generally create price discrimination where it does not otherwise exist although, as the percentage of CWIP in rate base increases, the greater the likelihood of some price discrimination.

is essential to remember that the impacts to which the Commission looks are not merely dollars and cents effects, by behavioral changes in utility operations, capital markets, and power consumption. We have sought answers to these difficult questions in the comments submitted in this proceeding as well as in out own detailed analyses. While the following discussion summarizes much of this information, we emphasize that we have reviewed all of the analysis in the comments on these difficult questions.

1. *Impacts on Utilities.* a. *Cash Flow.* The final rule will allow utilities to include up to 50 percent of CWIP in rate base and effectively to convert a proportionate amount of current paper earnings, included as AFUDC, into cash earnings.

Investor-owned utilities state that CWIP increases cash flow, thereby improving the ability of utilities to undertake and complete needed construction programs. They contend that the increased cash flow will be exhibited in higher interest coverage ratios [65] and other financial statistics relied upon by investors and rating agencies in evaluating the credit-worthiness of a utility. According to this view, the increased cash flow will improve flexibility in financing as the industry's dependence on external capital markets is reduced and will therefore reduce financing costs. Moreover, as cash flow improves, debt investors are said to face a lower risk of default and common stock investors are more assured that dividend payments will be maintained.

In contrast, several wholesale customers and a trade association state that, because the Commission regulates a small proportion of total utility rates, inclusion of CWIP in rate base will not result in an appreciable increase in cash flow. For example, the association states that, because one-half of the utilities with bond ratings of BBB+ or below derive less than four percent of their revenues from wholesale transactions, the financial impact on this substantial portion of the industry as a result of CWIP in rate base will be minimal.

The statistical record in this proceeding on how CWIP in rate base affects utility cash flow can be summarized as follows. The utility impacts of including CWIP in rate base are presented in five statistical studies, two of which deal with initial financial impacts on actual utilities and three of which simulate the impacts on hypothetical companies over a much longer period. The initial effects on 50 electric utilities of including all CWIP in rate base are also estimated by one utility commenter [66] in terms of three financial parameters—interest coverage, internal cash flow as a percent of constructon expenditures, and percent change in external financing requirements.

The latter study shows that the average pre-tax interest coverage ratio (excluding AFUDC) would have increased in 1980 from 1.99 to 2.93 if 100 percent of CWIP balances had been included in rate base. A similar improvement is shown with 1979 data. Moreover, the study shown that 30 utilities with interest coverage ratios of less than 2.0 under an AFUDC policy would have improved coverages to greater than 2.0 with 100 percent CWIP in rate base. The study also shows that the ratio of internal cash flow (excluding dividends) to construction expenditures would have increased, on average, from 29 to 44 percent in 1980. Also, 16 of the 17 companies in the sample with a ratio of internal cash flow (excluding dividends) to construction expenditures below 20 percent would increase to above 20 percent with the inclusion of 100 percent CWIP in rate base. Finally, this study finds that if all CWIP had been included in rate base, external financing requirements would have been reduced by about 23 percent in 1980. The stated reasons for this significant reduction are that CWIP in rate base improves the utilities' ability to meet current expenses through cash flow and that this reduces their dependence on external sources of capital.

A wholesale customer [67] presented a statistical analysis of initial financial impacts of including 100 percent CWIP in rate base on 42 utilities with bond ratings of BBB/Baa as of 1979. The study concludes that these utilities would realize only a 1.5 percent increase in cash flow when both jurisdictional and non-jurisdictional portions of the utility's operation were combined. This conclusion is based on a comparison of the increased cash flow derived from allowing CWIP in jurisdictional rates to the cash needs of the entire company, including those associated with non-jurisdictional services. The small increase in cash flow shown is considered by this commenter too insignificant to support the contention that any utility will be substantially better off with CWIP in rate base.

The simulation analyses evaluate the long-term financial impacts of including zero and 100 percent CWIP in rate base.[68] One study, presented by an investor-owned utility, considers three scenarios applied to a "strong" (AA-bond rated) utility and a "weak" (A-bond rated) utility: (1) No CWIP in rate base and attrition of earnings; (2) 100 percent CWIP in rate base and attrition; [69] and (3) no CWIP in rate base no attrition, and a higher allowed/earned rate of return. Both utilities are assumed to be engaged in construction programs to complete five 750 MW coal-fired plants and to begin two more plants over a 20-year study period. Under the first scenario, where CWIP is exluded from rate base and there is continued attrition, the study concludes that over the study period, the "strong" utility would experience a decline to a BBB bond rating. In this case, interest coverage (excluding AFUDC) drops from an average of 2.45 in the first five years to an average of 1.83 in the last five years. The ratio of internal cash flow to construction expenditures also falls dramatically and there is significant dilution of common equity. A similar experience is forecasted for the "weak" (A-rated) utility. In contrast, under the second scenario, if 100 percent CWIP is included in rate base and attrition continues, both utilities are projected to maintain their initial bond ratings. The "strong" utility would generally maintain an average interest coverage of 3.34 over the 20-year study period and internal cash flow as a percent of construction expenditures would average 62 percent compared to 41 percent without CWIP. Comparable results are forecasted in terms of maintaining a higher interest coverage for the "weak" utility. The third scenario involves higher rates of return. Although this alternative tends to increase cash flow and interest coverage, the improvement is less than that which occurs under the second scenario.

[65] An "interest coverage ratio" is earnings before taxes and interest expenses divided by interest expenses. Its significance is that the ratio is a widely-used measure of how utilities are able to meet one particular cash flow requirement, namely, interest expense. The ratio is critical to financing because trust indenture provisions applicable to the utilities commonly prohibit the issuance of new long-term debt unless the interest coverage ratio is maintained at or above a specified minimum level, typically 2.0.

[68] *See* Appalachian Power Co., *et al.*, Initial Comments, at Appendix H, Reply Comments, at Appendix C; Edison Electric Institute, Reply Comments, at Appendix V; Eugene F. Brigham, Public Utility Research Center, University of Florida, Initial Comments, at page 17. (The results of the University of Florida study are very similar to that derived by the Appalachian and Edison Electric studies and are not discussed in the text.)

[69] Under the 100 percent CWIP case, the study assumes a reduction in the cost of capital for both utilities.

An investor-owned utility trade association study estimates the effects of 100 percent CWIP on two hypothetical utilities that are undertaking what is assumed to be representative multi-project construction programs. The hypothetical utilities vary in size and in the technology mix of existing plants. The study does not assume a reduction in the cost of capital when CWIP is included in rate base. Consistent with the utility simulation study, this study finds that, without allowing any CWIP in rate base, interest coverage ratios for these companies were not maintained at the 2.0 minimum level (for issuance of new debt) for the entire study period. However, inclusion of 100 percent of CWIP in rate base maintained the ratio above the minimum level. The study also finds that, if all CWIP is included in rate base, the percent of external financing decreases and the quality of earnings (measured by the ratio of AFUDC to net income) improves.

Tables 1, 2, and 3, attached Appendices to this rule, are graphic illustrations of the results of two additional studies, one conducted by the Energy Information Administration (EIA), the other by FERC staff,[70] which confirm the findings of the studies described above, *i.e.*, that inclusion of 50 percent of CWIP in rate base would measurably improve the jurisdictional portion of utilities' internal cash flow and interest coverage ratios.[71]

The Commission finds that the CWIP policy presented in the final rule will have a salutary effect on cash flow. No commenter disputes that the inclusion of CWIP in rate base will increase cash flow. Only the extent to which cash flow will increase is at issue. The Commission believes that the resolution of this issue must be determined with respect to the effect of including CWIP in rate base on the jurisdictional portion of a utility's operations, as if the federally-regulated portion of the utility's operations "stand alone." The Commission's decision to alter its existing CWIP policy should not be dependent on the limited extent of its jurisdiction over most utilities. The assertion by investor-owned utilities that cash flow will be significantly improved appears to be correct, at least with respect to the jurisdictional portion of the utilities. The objection to CWIP put forth by wholesale customers that the size of the federal jurisdiction over BBB rated utilities augers for only limited impacts, is, therefore, somewhat wide of the mark.

In general, the simulation studies confirm the Commission's expectations regarding the effect that CWIP in rate base has on cash flow and other financial indicators. The studies are useful in evaluating the relative magnitude of the financial impacts of including CWIP in rate base. However, since they are based on 100 percent CWIP in rate base, they overstate the likely impact of including 50 percent of CWIP in rate base by a factor of two. By taking only half of the increase in cash flow and converting this into interest coverage ratios, and other financial measures, one can ascertain the effect of 50 percent of CWIP in rate base. Under a 50 percent CWIP case, the effect on cash flow, interest coverage ratios, etc., is still signficant.

In sum, there is convincing evidence in the record including a study prepared by the FERC and a study prepared for the Commission by EIA which shows an increase in cash flow from including 50 percent of CWIP which is sufficient to affect most utility financial indicators in a very positive fashion.

b. *Cost of Capital.* The projected increase in cash flow and reduction in external financing requirements relates to the second major direct financial consequence of CWIP in rate base, namely, the impact on the cost of capital to utilities. Commenters present and analyze numerous studies on the effect of CWIP on the cost of capital. Investor-owned utilities present studies which support the hypothesis that CWIP in rate base reduces capital costs. Wholesale electric power customers present analyses showing the contrary position. As one might suspect, there are strengths and weaknesses in all of the empirical analyses of this issue, thus indicating the elusiveness of any definitive answers. The studies supported by investor-owned utilities conclude that: (1) AFUDC accounting tends to depress market-to-book ratios of electric utility stocks; and (2) putting CWIP into rate base clearly improves the financial integrity of utilities and lowers capital costs.

Wholesale customers and their trade associations present three of their own analyses which conclude that: (1) empirical evidence does not support the conclusion that AFUDC earnings make utilities more risky as investment; (2) a quality-of-earnings index based upon AFUDC showed no significant effect on the cost of capital in eight out of 10 years studied; and (3) if dividend payments are available in the proper magnitude, investors are relatively unconcerned about AFUDC amounts.

All of the cost of capital analyses have some common weaknesses, such as the failure to adequately separate the effects on riskiness of a construction program from the effects of the CWIP policy. These studies offer conflicting and widely diverging estimates of the cost of capital effects of CWIP in rate base. The investor-owned utilities' studies estimate that debt costs will be reduced by up to 100 basis points and equity costs by up to 300+ basis points.

The studies rely predominantly upon the ratio of AFUDC to net income as a measure of the effect that the inclusion of CWIP in the rate base would have on utilities. These studies rely upon the ratio of AFUDC to net income because, all things being equal, as the investment in plant under construction increases, this ratio rises. Since utilities are affected with the public interest, their obligation to serve drives the need to construct facilities even when such investment may not be economic from the investors' standpoint. This measure, however, has some major shortcomings. For example, it may more accurately relate to the relative size of a company's construction program rather than to whether CWIP is included in rate base. As a result, the studies may merely be reflecting that as the size of a company's construction program increases the company becomes more risky from an investor's perspective. The AFUDC to net income ratio may also be questionable because two companies with identical construction programs and CWIP policies could have significantly different ratios due to (1) the use of a gross-of-tax AFUDC rate rather than a net-of-tax rate, or (2) significantly different earned returns on plant-in-service due to attrition.

Several commenters note, in reply, that the various econometric and statistical studies have shortcomings of a technical nature, such as a lack of independence among variables (*i.e.*, multicollinearity). In addition, the studies extrapolate from historical data, and this may bias the results.

The Commission understandably finds it difficult to draw from the analytic studies submitted in this proceeding any definitive conclusions

---

[70] The FERC model was issued for public comment in "Proposed Computer Model for Evaluating Impact of Alternative CWIP Policies and Staff Study on Cost of Capital," (Docket No. RM81-38) 46 FR 58.148 (November 30, 1981). The Commission also identified the input data which would be used for this model. This model has been adapted to estimate impacts under a 50 percent CWIP in rate base approach. *See also* Environmental Assessment, *supra*, at §§ 4.2.2, 4.4.

[71] With regard to the wholesale customers' estimated 1.5 percent increase in cash flow, the Commission believes that, if the increase were related to an estimate of the jurisdictional portion of cash flow, the percent increase would be much higher. *See* discussion below.

regarding the effect of a CWIP in rate base policy on the cost of capital. The cost of capital studies arrive at often contradictory results from what appear to be similar data bases and modeling techniques. Consequently, our conclusion, which is admittedly no more than a matter of judgment, is that we believe whatever the size of any effect that the inclusion of CWIP in rate base will have on the cost of capital, the rule will generally provide a downward pressure on those costs.[72]

c. *Prudent Decisionmaking and Management Efficiency.* Utility management decisions are constrained by both the financial condition of the utility and the regulatory atmosphere in which the utility operates. If a regulatory policy precludes a regulated utility from earning its cost of capital or maintaining an adequate cash flow, management may be inhibited from undertaking optimal construction projects, meaning simply that management may opt for short-term economies at the expense of effective long-range planning.[73] It is also conceivable that if a regulatory policy produces excess earnings a utility may be encouraged to engage in unneeded or uneconomic construction. Commenters discuss several of these countervailing aspects of the dynamics between management behavior and rate regulation.

Wholesale and retail customers generally express the fear that a CWIP policy will reduce management efficiency and will encourage the construction of larger and economically inefficient facilities. These commenters state that CWIP will not provide a sufficient incentive for utilities to complete projects quickly, efficiently, or to avoid unworthy projects because cost overruns and inefficiencies will be subsidized by the ratepayers. Rather wholesale and retail customers argue that the inclusion of CWIP in rate base serves to reward management inefficiencies.

Many consumers believe that utilities presently construct unnecessary or inefficient generation facilities and that CWIP will promote large scale, and in particular nuclear, construction programs instead of least-cost alternatives. They argue that inclusion of CWIP in rate base exacerbates this condition. Under this view, the burden of establishing management imprudence with respect to a construction program would be shifted to the customer to a greater degree under a policy that routinely includes CWIP in rate base. Most customers, it is argued, do not have the resources or information to shoulder that burden. As a result, utility management would be insulated from challenges to the exercise of its discretion, its accountability will decline, and a major incentive for efficiency will disappear.

Several wholesale customers and consumer representatives argue that the efficiency of management and the need for the construction program should be examined in conjunction with all requests for inclusion of CWIP in rate base. One consumer group states that the consideration of management efficiency should focus on whether management is inflexible or short-sighted. Several wholesale customers stress the need for a thorough review of the economics of construction programs, including the likelihood that a plant will never be placed in service, before CWIP is allowed in rate base. These commenters generally agree that the rate case is the proper context for this inquiry. They conclude that CWIP should not be allowed in rate base if management is found to have acted imprudently with respect to the construction of new facilities.

In contrast, investor-owned utilities, DOE, and several financial firms state that a CWIP policy will actually improve management efficiency by freeing its hand to undertake optimal construction projects. DOE contends that, without CWIP, management will be constrained in raising debt and equity capital and in response will adopt a "capital averse" strategy. This strategy, DOE states, will not yield a least-cost result over the long-term. DOE states that its national load forecasts indicate that, with a modest upsurge, demand could outstrip capacity, especially in light of the increase in cancelled and deferred units.

Investor-owned utilities state that a CWIP policy will give management and investors sufficient confidence in a utility's financial ability to undertake needed investments. This will allow management to pursue an optimal expansion plan and undertake construction of efficient generation units. However, most investor-owned utilities state that a review of the utility's construction program is unnecessary in each rate case because each project is generally reviewed by state or federal agencies prior to commencement of construction. They argue that a review suggested by wholesale customers will impair the availability of CWIP and, based upon the experience under the existing regulations under § 2.16, would unnecessarily complicate and lengthen rate proceedings. Several investor-owned utilities acknowledge that a review of the construction program would not be inappropriate.

In response to this discussion, the Commission emphasizes that encouraging construction is not a goal of this rulemaking. Rather, a CWIP policy should enable management to exercise its discretion in a prudent and rational manner. The present AFUDC policy, however, has not served the industry or its consumers well in this regard. A CWIP rule would allow management to make optimal decisions in light of market conditions, including projections of future demand.

The Commission finds no basis for the contention that CWIP will breed management inefficiency and encourage deliberate delays in construction times. There remain strong incentives for management to seek speedy completion of construction projects. For example, the cash flow to a utility for a completed plant far exceeds that for a plant under construction, even with a 50 percent CWIP policy. This occurs because a utility is able to depreciate only completed plants. In addition, once completed, 100 percent of the plant is included in rate base as opposed to the maximum of 50 percent under this final rule. Therefore, the Commission believes that a CWIP policy does not necessarily undermine existing incentives for management efficiency regarding construction projects.

That is not to say that the Commission need not consider management efficiency and the need for construction programs. A regulated utility is entitled to an opportunity to recover its prudently incurred costs. Allowing utilities to file to include CWIP in rate base neither adds to nor detracts from this fundamental rule of utility ratemaking. With the proliferation of construction projects and the elongation of construction cycles, management prudence loses none of its significance. However, since the prudence of investment decisions and associated costs is a matter of fact in each case, the Commission agrees with those commenters who contend that imprudently incurred costs reflected in CWIP may be disallowed on the same grounds as other imprudently incurred costs proposed for inclusion in rate base.

The final rule adopted will fundamentally reorient the Commission's assessment of the reasonableness of construction programs. It affords in effect an opportunity to review and judge the

---

[72] *See* n.20, *supra.*

[73] *See* The Commission's discussion of this issue in Section III, *supra.*

prudence of costs as those costs are incurred and claimed in rate base, rather than at a later point in time when a project is completed or abandoned and a potentially unwise investment has already been made.

To facilitate the review of the prudence of CWIP costs in rate cases, the final rule expands the filing requirements under § 35.13 of the Commission's regulations to require a general statement of the utility's program for providing reliable and economic power. While the filing required by § 35.13 is brief and will not obviate further data gathering, including discovery, Commission staff and intervenors will be better able to review the prudence of the construction and related costs that may be included in rate base.

In evaluating prudence, additional information, if reasonably available, may be called for. For example, staff or intervenors may request and be entitled to receive the utility's current plans for expansion by year; current and previous construction schedules and cost estimates for major projects; and annual summer and winter reserve forecasts (with available dependable capacity identified by plant and fuel type for internal generation and by source for external capacity). Additional relevant data could include the utility's current economic and financial studies (*e.g.*, production cost simulations or load flow studies), along with technical and economic assumptions (including fuel costs and energy projections), which show the impacts of the utility's capacity and energy plan or which evaluate relative costs of alternative plans. If the filing utility does not have available any of the information specified, it shall submit instead any pertinent information upon which it relied in deciding to replace or expand its power supply facilities.

A finding of a market for power by another agency will, of course, be relevant to any such consideration although such findings seldom deal with prudence related concerns. If the Commission finds construction costs were not prudently incurred, disallowance of rate base treatment may be appropriate.[74]

[74] Absent a showing of inefficiency or improvidence, the Commission is bound to presume that the utility operations were conducted in good faith consistent with principles of "efficient and economical management." Bluefield Waterworks and Improvement Company v. Public Service Commission, 262 U.S. 679, 693, (1923); West Ohio Gas Company v. Public Utility Commission, 294 U.S. 63, 73 (1934).

There has been considerable interest expressed in recent years concerning "least-cost" energy strategies.[75] The Commission understands a least-cost approach to mean one which seeks to provide reliable service over time at the lowest reasonable cost.[76] This, of course, is one element of the prudence standard, and is entirely consonant with fundamental principles of public utility regulation.[77] As such, we fully endorse the least-cost principle as one important component of a prudence determination and intend to apply it to reviewing claimed construction costs as we do to other claimed utility costs.

The contention that the final rule will encourage management to overcapitalize (*i.e.*, build too much capacity or generation plant of excessive size), the so-called Averch-Johnson effect,[78] is similarly flawed. The A–J effect is said to occur if earned rates of return exceed the opportunity cost of capital. Except for the minor effects due to investment tax credits, as noted earlier in the preamble, allowing CWIP in rate base will have no effects on earned returns.

Many commenters that utilize this proceeding as a forum for criticizing nuclear power misconstrue the Commission's objectives. As previously stated, this rule seeks to mitigate the aversion to capital investment. The final rule should help create a more evenly-balanced environment for investment decisions. It follows that the rule will not encourage construction of any particular kind of generation facilities, including nuclear plants.

Public Service Commission, 360 U.S. 378, 388 (1959) (intent of Congress under Natural Gas Act that service should be provided at the "lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.").

[78] Averch, H., and Johnson, L. L., "Behavior of the Firm Under Regulatory Constraints," American Economic Review, Vol. 52, (December 1962); *See also* Bailey, E. E., Economic Theory of Regulatory Constraint, Health—Lexington, 1973.

It is ironic that wholesale and retail customers find that an AFUDC policy provides greater incentives for completing plant under construction. In fact, the massive delays experienced in the construction of electric utility plant over the last decade have occurred in spite of an AFUDC policy being predominantly employed by both federal and state regulatory agencies. The Commission does not believe that a CWIP in rate base policy will cause further deterioration in this regard, but to the contrary finds that it will provide the necessary capital which may permit faster completion of major projects.

In any case, utility management will be held accountable for the prudence and costs of its construction programs. Both federal and state regulatory procedures provide safeguards for consumers from management imprudence. In fact, the Commission has the authority to disallow the recoupment in rates of higher costs incurred as a result of negligence, mismanagement or inefficiency.[79] The new rule will enable the Commission to consider the prudence issue earlier in a construction program than under an approach that only permits capitalization of AFUDC prior to a plant's in-service date.[80]

2. *Impact on Consumers.* a. *Rates.* The rate impact of including CWIP in rate base will vary among utilities, regions of the country, and over time. However, commenters attempted to portray the overall effects of a change in CWIP policy. Predictably, commenters do not always agree. Wholesale and retail consumers generally state that rates based in part on CWIP will be higher in the foreseeable future and may be higher than rates under an AFUDC policy indefinitely. Investor-owned utilities state that, although short-term rates would be higher, rates will decline sufficiently over time to offset (in terms of economic value) the short-term rise in rates.

The trade association of municipal utilities analyzes the short-term impact of including 100 percent CWIP in rate base on jurisdictional rates.[81] The study uses industry aggregate data for 1980 and assigned the FERC jurisdiction over 10 percent of the industry. The study estimates that aggregate impact on

[79] *See* Opinion No. 118, Virginia Electric Power Company, 15 FERC ¶ 61,052, 61,112 (1981), *citing* Public Service Company of New Hampshire, 6 FERC ¶ 61,299 (1979).

[80] Moreover, the requirements of new Statement BM will permit consideration of the reasonableness of the filing utility's construction program earlier in most rate proceedings.

[81] *See* American Public Power Association, Initial Comments, at 45.

jurisdictional revenues would have amounted to $1.17 billion for 1980, if 100 percent CWIP had been included in rate base. A group of wholesale customers prepared a similar analysis, using 1979 aggregated data for the 42 utilities whose bonds were rated BBB/Baa.[82] Under this analysis wholesale customers found that a 100 percent CWIP policy would increase rates initially by an average of 17.4 percent.

Another study prepared by the trade association of investor-owned utilities simulates the effect on rates of two hypothetical utilities of including 100 percent CWIP in rate base.[83] The two utilities differ according to financial resources, technology, and the mix of existing generation plants. The study concludes that inclusion of 100 percent CWIP in rate base would typically result in initial rate increases of less than 10 percent and, over time, lead to rates that fall below AFUDC-based rates.

The Commission finds that these analyses are not unreasonable, given their intended purpose of evaluating the rate impact of a 100 percent CWIP policy. However, this approach necessarily overstates the impacts that could be expected from the final rule. If 50 percent of CWIP were included in rate base, the impacts found in these studies would be essentially half those predicted. However, since the amount of CWIP which may be included in rate base is further limited in the initial years following the effective date of the final rule, these effects will be further restrained at the outset. The final rule phases-in the amount of CWIP allowable in rate base over a two-year period by limiting the rate impact associated with CWIP to six percent in the first year and an additional six percent in the second year. Thereafter, a utility may include up to 50 percent of all CWIP in rate base. This initial limitation on CWIP in rate base ensures that, in those instances in which utilities have disproportionately large construction programs, the initial impacts of the final rule on consumers will not be severe.[84] The Commission's analysis indicates that, without the initial rate increase ceilings, there would be some cases in which relatively large amounts of CWIP costs could initially be included into rate base. Most utilities have modest amounts invested in ongoing construction and will be able to include the maximum allowable amount of CWIP in rate base without approaching the rate increase limitation in the rule.[85]

If all utilities subject to the Commission's jurisdiction received the maximum rate base treatment of CWIP permitted by the final rule (absent any six percent initial limitation), the study submitted by the municipal trade association suggested that the resulting rate impacts would have been $580 million. As a percentage of 1980 wholesale revenues ($9.71 billion), this would have amounted to a rate increase of less than 6 percent to affected customers, less than the limitation which the Commission imposes under § 35.26(d) on utilities individually. Under the 50 percent CWIP in rate base approach adopted in the final rule, the impact on the sample of 42 BBB/Baa rated utilities analyzed by the other wholesale customer group would have been 8.7 percent. Under the study supported by investor-owned utilities through their trade association, the initial rate increase, assuming 50 percent of CWIP in rate base, would have been less than 5 percent on average.[86]

These projected rate increases do not, of course, reflect the 6 percent limit on CWIP-related rate increases for individual utilities. This limitation is established in order to restrain any severe effects that could be experienced in the early years of the new rule due to the potential inclusion in rate base of large amounts of CWIP previously excluded from rate base. In the first two years under the rule, CWIP-related rate impacts are limited to six percent annually. The results of all the studies submitted by commenters also presuppose that the utilities will file immediately to include a maximum allowable amount of CWIP in rate base. The prospect for this is by no means certain. In sum, the wholesale customers and investor-owned utilities trade association's studies, if similarly adjusted for a policy of 50 percent of CWIP in rate base generally reflect rate increases of between five and six percent. The more limited sample used by wholesale customers which yielded an adjusted impact of 8.7 percent is an abberation because BBB/Baa rated utilities are not representative of the industry. Nonetheless, the three studies yield roughly similar estimates of initial rate impacts. Methodologically, there may be other ways of ascertaining the relative value to consumers of CWIP and AFUDC policies, as the commenters suggest.

Utilities and their customers hotly debate the impact of CWIP in rate base in terms of whether CWIP in rate base is less costly to ratepayers than the accrual of AFUDC under a present value analysis. Present value analysis is a means of evaluating the relative value of alternative investments where differences exist in the time pattern of cash flows. It takes into consideration the time value of money—*i.e.*, that a dollar now is worth more than a dollar some time in the future—by discounting the cash flows with a discount rate reflecting alternative uses of money. This analysis is typically performed to ascertain the value of the revenues paid to utilities by consumers both with and without CWIP in rate base. Depending on whether the present value of revenue requirements with CWIP in rate base is less than, greater than or equal to that without CWIP in rate base, consumers should (solely on the basis of cost) prefer, not prefer or be indifferent to CWIP being included in rate base.

For the most part this debate has centered upon the appropriate consumer discount rate to use in evaluating the required revenue streams. In this respect, commenters argue whether the rate should reflect returns available to consumers on high risk (speculative investments) or low risk (passbook savings), and on large or small-sized and on long or short-term investment alternatives. They debate whether these alternative returns should be placed on a before or after-tax basis. In general, wholesale customers tend to argue for

---

[82] *See* Oglethorpe Power Corp., *et al.*, Initial Comments, at 24 and Exhibit SEC–5.

[83] *See* Edison Electric Institute, Reply Comments, at Appendix V.

[84] In the Notice of Proposed Rulemaking, the Commission delineated four factors relevant to determining whether the amount of CWIP allowed in rate base under the proposed mechanical rule should be reduced or phased-in. *See* 46 FR at 39,455. These considerations, which could involve protracted case-by-case review, are short-term rate impacts, price squeeze, management prudence, and the need for power. In response to this proposal, several investor-owned utilities and an accounting firm state that such an open-ended provision would subject requests for CWIP in rate base to a volume of challenges that would deter utilities from even requesting CWIP. However, some utilities recognize that a phase-in of any CWIP relief would reduce the immediate rate impact and would provide a smoother price path with more predictable rates. Wholesale customers state that the four bases for limiting CWIP in rate base should be retained if the final rule does not provide a case-by-case determination of the CWIP request. The final rule provides expressly for an initial limit on rate impacts. The other factors are provided for in the course of Commission proceedings (*e.g.*, price squeeze and prudence considerations).

[85] *See* Table No. 4 of the Appendix to this rule.

[86] On average, the long-term impact estimated in the investor-owned utilities trade association study is unclear. That study finds that CWIP-based rates will fall below AFUDC-based rates but does not present any time series on these prices. The conclusion that CWIP-based rates will be lower in the long-term is supported only by present value analyses which, in turn, are based upon evaluating rates beyond the period during which plants were being constructed. The Commission is thus able to ascertain whether their conclusion is based upon the assumed reduction in construction activity or whether CWIP-based rates fall below AFUDC-based rates even if there is a continuation in construction.

factors that support the use of a high consumer discount rate while utilities argue toward a low discount rate. Some commenters further question the feasibility of establishing a single rate that could reasonably represent the interests of the spectrum of ratepayers affected by CWIP policy.

Comments from both utilities and customers contain present value analyses for single projects using varying discount rates which yield conflicting conclusions. A number of commenters point out that, assuming no cost differences between the two policies (such as a lower cost of capital), consumers would be indifferent to the policies assuming their discount rate was equal to the utility's after-tax cost of capital. With a discount rate below the utility's after-tax cost of capital, consumers would prefer CWIP in rate base over the capitalization of AFUDC, and would not prefer CWIP in rate base if the consumers' discount rate is higher. Further, if the inclusion of CWIP in rate base reduces some costs, such as capital costs, the discount rate would make consumers indifferent to CWIP or AFUDC may be lower than the utility's after-tax cost of capital.[87] Some wholesale customers also argue that present value analyses assume that customers remain on the system throughout the operating life of the plant. Otherwise they would not receive the full benefits of lower prices during the operating life.

Some wholesale customers comment that it is more appropriate to evaluate present value in the context of a utility involved in multiple construction projects over time. One commenter submited a study that it claims shows that, under certain conditions, the present value of CWIP-based revenue requirements will exceed the present value of AFUDC-based revenue requirements.[88] This study finds that, as long as either the nominal percent growth in CWIP (reflecting growth as a function of physical growth and inflation), or the consumers' discount rate is greater than the utility's after-tax cost of capital, the present value of CWIP-based revenue requirements will exceed the present value of AFUDC-based revenue requirements. Under these circumstances, this study concludes that consumers would be penalized if CWIP were included in rate base. The commenter alleges that the conditions for this occurrence are fairly likely but presented no support for this other than citing the hypothetical values used in the 1978 study.

The utility trade association [89] responds to this study by arguing, on various grounds discussed above, that the utility's cost of capital exceeds the consumers' discount rate. Further, this commenter states that it is not logical to expect that the growth rate in CWIP will exceed a utility's cost of capital forever, as the study assumes. Data is presented for the 11 largest bulk power suppliers to REA borrowers which shows, among other things, that seven of the 11 exhibited negative growth in CWIP for at least one year of the last five.

The Commission finds merit in the arguments on both sides of the issue of the present value of CWIP-based versus AFUDC-based rates. For example, the range of reasonable consumer discount rates is arguably wide since the customers affected by the rule are diverse. Some positions are persuasive. For example, the Commission agrees with the wholesale customers that single project analyses may be misleading since most utilities are continuing to add facilities over time and customers pay rates based on the appropriate share of all of a company's power supply facilities. A present value analysis should reflect whole company or industry conditions, including growth in capital investment.

Rates that include CWIP in rate base may eventually fall below AFUDC-based rates for some companies and thus be less costly for their consumers (as a group) than AFUDC-based rates, on the basis of present value analysis. However, this eventuality will depand on the pattern of investment of each utility, as well as such factors as efficiency gains and rates of return.[90]

For the industry as a whole, the Commission believes that, under plausible assumptions of future demand growth and inflation,[91] CWIP-based rates may remain somewhat higher than AFUDC-based rates for the foreseeable future. This conclusion is based on a comparison of rates made in terms of absolute dollars. Assuming CWIP-based rates are slightly higher for the foreseeable future, as the Commission concedes is plausible, no present value analysis will show that CWIP-based rates are less costly to customers than AFUDC-based rates, regardless of the consumer discount rate utilized.[92] Accordingly, it is not necessary for us to attempt to resolve the difficult question of the appropriate consumer discount rate. With respect to the separate question of how large the difference between CWIP-based rates and AFUDC-based rates may be, however, the Commission turns to analyses that are based on the absolute dollar levels of these rates that provide a clearer picture of probable future rate impacts.

The Commission had independently analyzed the rate impact of a 50 percent CWIP policy in two studies. In one study (the FERC staff study), a model [93] is used to calculate the initial-year rate impacts of a 50 percent CWIP policy on 141 electric utilities. The FERC study produced initial-year rate impacts for individual utilities by computing the incremental effects on rates, cash flow, and certain financial rates that would occur if 50 percent of CWIP were included in rate base. The first year rate impacts calculated are an average increase of 4.70 percent with a standard deviation of 4.04 percent. This analysis did not incorporate the initial rate impact limitation provision of the final rule based upon a maximum rate increase of six percent in each of the first two years of the rule's effectiveness. When the six percent ceiling is considered, the average initial price increase to affected customers predicted by the FERC study is reduced to 3.57 percent. The distribution of rate impacts for the 141 utilities studied indicates that the great bulk of utilities would experience a very modest initial increase in rates although four individual utilities could experience initial year increase in jurisdictional rates on the order of 16 or 17 percent absent the 6 percent limitation. The distribution of these impacts is presented in Table 4. The FERC study indicates that, even with a 6 percent limitation on rate increases for the first two years, all jurisdictional utilities would be eligible for the maximum 50 percent CWIP in rate base by the end of the third year.

---

[87] This is consistent with a FERC staff study. *See* "Proposed Computer Medel," *supra.*

[89] Edison Electric Institute (EEI), Reply Comments, at Appendix III.

[90] In this connection, the Commission believes that EEI is in error when it states that growth rates in CWIP must always exceed the utility's after-tax cost of capital in order that the present value of CWIP-based revenue requirements exceed that of AFUDC-based revenue requirements. While a drop in growth for one year may cause CWIP-based rates to fall temporarily below AFUDC-based rates, average CWIP-based rates may remain above AFUDC-based rates as long as the average growth rate exceeds the utility's after-tax cost of capital.

[91] *See* Section III, *supra*, and Chart No. 1, *infra.*

[92] Present value analysis has other limitations. It measures value only in terms of the cost of money discounted to present value. Present value analysis does not account for occurrences, such as efficiency gains or enhanced reliability, that may cause CWIP-based rates to benefit consumers in other ways.

[93] *See* Proposed Computer Model, *supra; see also* the Environmental Assessment § 4.1.2.

The second study of the rate impact of including 50 percent CWIP in rate base is the EIA study. The study estimated national and regional average price impacts of a 50 percent CWIP policy (without the phase-in provision) for the period 1982 to 1995. It found that the increase in prices attributable to including CWIP in rate base would be greatest in the early years and diminish over time (see Chart No. 1 below).* While this trend is predicted for each of the regions and nationwide, the level of rates would vary among regions.

The Commission believes that the methods and assumptions used in the EIA Study bias the initial impacts downward but that the nationwide impact estimates for 1985 and beyond are probably reasonable. The FERC model probably provides more accurate estimates of initial impacts and these impacts are consistent with the results of the studies submitted by commenters.

While in some regions, according to the EIA Study, CWIP-based rates fall below AFUDC-based rates prior to the end of the study period, as shown in Chart No. 1 no crossover was predicted for the nation as a whole. The lack of a crossover point results from the assumptions built into the model regarding growth in capacity additions, inflation, and cost of capital. Given the small difference between CWIP-based rates and AFUDC-based rates beyond 1990, it would appear reasonable to presume that some combination of relatively small reductions in growth rates, inflation or capital costs below those assumed in the model would result in a crossover.

It may well be that, with more accurate price signals, more accurate forecasting, and more efficient construction planning made possible by this rule, the nationwide average rates under this rule by 1990 will in fact fall below those that would result if no change were made. But we are prepared to proceed even if they do not, particularly in view of the generally modest rate impact which this rule may be expected to generate. The reason, as stated in Section III above, is that our regulatory responsibility is both to protect the rate-payer from high rates, while at the same time ensuring that utilities will continue to provide economic and reliable utility services, now and in the future. Accordingly, even if rates are somewhat higher over time under the final rule, the Commission believes that the rule is in the public interest because it will enhance the quality and reliability of service and the more efficient use of our nation's scarce capital and natural resources.

b. *Consumption; Price Signals.* The inclusion of CWIP in rate base has the potential to affect the management practices of utility companies. It also has another significance for economic behavior—that is, it may affect how ratepayers use and pay for power. Commenters dispute whether the inclusion of CWIP in rate base provides ratepayers with more accurate signals about the real cost of power than does an AFUDC policy. Investor-owned utilities and their trade association state that electric rates which are based on substantial amounts of the old plant, and which often cost a fraction of the new plant do not account for the utility's plant under construction, and do not reflect the true cost of providing service. This view suggests that an AFUDC policy leads ratepayers to think that electric power is and will remain less costly than is the case at any one time. An industry observer states that partly as a result of an AFUDC policy, electricity is currently priced at 70 percent of its actual marginal cost. This commenter concludes that rates that do not reflect marginal costs, incorrectly signal consumers as to both present and future cost of electricity. These inaccurate price signals perpetuate excessive use of electric power, artificially inflates demand, and defeats conservation objectives.

In response to the contention that CWIP provides more accurate price signals, wholesale customers state that an AFUDC policy provides the more accurate price signals. Wholesale customers raise two points in this regard. First, they argue that the facility under construction will generally operate at a lower fuel cost than the utility's average current fuel cost. Therefore, when the new plant becomes operable, the increased fixed costs are somewhat offset by reduced fuel costs. However, these commenters argue that because CWIP in rate base will not be offset by these anticipated fuel cost savings, the price of power which includes CWIP will overstate the actual future costs. Second, wholesale customers state that, if the cost of power generated by new facilities is less than from existing facilities,[94] the future cost of power will decline. If CWIP is included in rate base, these commenters argue, the price signal supplied to ratepayers is that costs are rising, when in fact they are not.

Because consumers should be expected to use power rationally, the Commission believes accurate price signals are important. The Commission believes that CWIP-based rates provide a more accurate picture of trends in power costs. As we stated above, demand for power will increase in the future requiring some new capacity construction. Capacity costs in real terms have been increasing over the last decade. By pricing electricity at average system costs, trends in costs and therefore in rates tend to be understated. Because rates do not reflect the cost of providing the incremental unit of electricity required to serve new demand, a customer receives a price signal which may vary from the true cost to the utility of providing service.

Undeniably, CWIP in rate base, to varying degrees, will increase present rates. Those rate increases inform purchasers of power of the increased costs of providing service to them. As stressed above, we anticipate that including CWIP in rate base will tend to provide more accurate price signals to consumers leading to more efficient consumption (and investment) decisions.

3. *Other Rate-Related Issues.* a. *Price Squeeze and Undue Price Discrimination.* Among its responsibilities, the Commission is obligated to foster competition in the electric utility industry, particularly at the wholesale level. Price squeeze is the term used to describe price discrimination that has an anticompetitive effect and that is directed against an electric utility's wholesale customers. A price squeeze exists if a utility's price for wholesale service is higher in relation to wholesale costs than is the utility's price for retail service in relation to retail costs, resulting in actual or potential impairment of the wholesale customer's ability to compete with the utility for that retail service.

In the Notice of Proposed Rulemaking, the Commission stated that it would explore, in each case in which the "price squeeze" issue is raised, the factors which can contribute to a finding of "price squeeze" and undue discrimination, including the inclusion of CWIP in rate base.[95] The Commission

* Chart No. 1 is not being published in the Federal Register, but is in copies of the order available through the Commission's Division of Public Information.

[94] DOE states that a nuclear plant which is intended to replace base load oil-fired capacity is an example of a new plant which will reduce the overall price of electricity to consumers.

[95] 46 FR 39,450.

also stated that it intends "to retain the flexibility to deny CWIP in rate base or modify other cost of service methods as possible remedies after a finding of undue discrimination" and that it will not limit the denial of CWIP in rate base to those circumstances in which the CWIP policy of the relevant state differs from the Commission's policy. Nevertheless, the potential for a price squeeze or other undue price discrimination in particular cases is not an obstacle, in the Commission's view, to a change in its CWIP policy.

With respect to retail power sales, several wholesale customers believe that the inclusion of CWIP in rate base will create a price squeeze and that a final rule should be drafted so as to avoid any possibility of such a price squeeze. Others among this group of commenters pointed out that the potential for price squeeze precludes the inclusion of CWIP in rate base altogether, except in specific cases where price squeeze would not occur. Other wholesale customers state that the rule should operate to limit the inclusion of CWIP in rate base if a price squeeze is found to exist.

Wholesale customers also view CWIP in rate base as an impairment to competition in the wholesale power market in other respects. These commenters anticipate that CWIP in rate base will require wholesale power customers to invest in the plant of their power suppliers, thereby deterring them from changing power suppliers for fear of losing "their" investment. Wholesale customers also argue that CWIP in rate base will make joint ownership of generation facilities impossible for municipal and cooperative utilities whose resources will be strained by having CWIP in their rates.

Investor-owned utilities claim that CWIP in rate base will not cause a price squeeze because of its small impact in relation to the total cost-of-service and the fact that the majority of states already allow varying amounts of CWIP in rate base, thereby lowering the chance of price squeeze occurring when the Commission allows CWIP in rate base. Commenting utilities state that, in any case, consideration of the issue should await a *prima facie* showing of price squeeze in individual cases, rather than be dealt with in a generic rulemaking. In sum, these commenters maintain that CWIP should be addressed in the same manner as any other cost-of-service or rate base item which may cause a price squeeze.

The Commission has considered the potential for price squeeze from this rule. No substantive evidence establishing the occurrence or likely occurrence of a price squeeze was submitted in this record. The Commission's own analysis confirms that the final rule does not generally create price discrimination where it does not otherwise exist, although, as the percentage of CWIP in rate base increases, the likelihood of some price discrimination also appears to increase.[96] Accordingly, with respect to the arguments of wholesale customers, the Commission finds no indication that undue price discrimination or other anticompetitive effects will occur necessarily as a result of implementing the final rule.

Price squeeze or undue discrimination issues may be examined as they might arise in particular cases. The Commission, of course, retains flexibility to deny inclusion of CWIP in rate base or to modify rate treatment of other cost-of-service items as a means of remedying a problem after a finding of undue discrimination. But we do not believe that the rule must operate to automatically deny CWIP simply because a price squeeze is found to exist. If such action is appropriate, it will be based on determinations made on a case-specific basis.[97]

b. *Rate Stability.* Investor-owned utilities, an accounting firm, and a university-sponsored analysis show that the sudden increase in rates which under an AFUDC policy accompanies the completion of a new facility, is lessened if CWIP is included in rate base. These commenters state that the inclusion of CWIP in rate base helps smooth the price path of electricity for two reasons. First, as a utility proceeds to construct a new plant, CWIP is gradually included in rate base with a consequent gradual increase in rates and a relatively stable rate pattern. Under an AFUDC policy, the total costs of the completed plant, including the accumulated financing costs, is included in rate base at the time the plant is made operational. As a result, the next rate filing by the utility will reflect a sudden jump in rates. Second, CWIP in rate base results in quantitatively smaller total additions to rate base than under AFUDC, because the financing costs capitalized over time are included in rate base as part of the total cost of the plant. Under a CWIP policy financing costs are recovered currently.

Wholesale and retail customers state their preference for lower current rates and do not express a concern with regard to the price path that results from an AFUDC policy. Rather, these commenters focus on the relative value of the rates and not the stability of rates over time.

The CWIP approach reduces the total addition to rate base at the time of completion and helps stabilize rates. The lumpiness in rates which occurs under an AFUDC policy is ameliorated by the gradual inclusion of CWIP over a longer period of time. To further smooth the price path of rates under a CWIP in rate base policy, the final rule incorporates a phasing provision which limits the rate increase attributable to CWIP to six percent in the first year and another six percent in the second year after the effective date of the rule. This provision responds to the Commission's concern which was expressed in the short-term price impact "safety-value" of the proposed rule and will ensure that the initial rate impact of the final rule will not be severe. As a result, consumers will be protected from financial shock or economic dislocation as a consequence of any precipitous increase in rates that may occur when the final rule takes effect.

E. Alternative Methods of Providing CWIP Relief

The Commission approached with an open mind the question of how its policy on CWIP in rate base might be improved. The Notice of Proposed rulemaking presented a number of alternative CWIP policies and requested that commenters propose additional alternatives. One approach discussed in the Notice was a mechanical rule which utilizes a threshold test of whether a particular utility is experiencing financial distress attributable to a construction program. Virtually all commenters are critical of this approach and, for a variety of reasons, favored other alternatives.

Investor-owned utilities generally support inclusion of a fixed percent of CWIP industry-wide, with 100 percent as the perferred percentage. In contrast, wholesale and retail customers generally oppose all of the proposed CWIP alternatives, urging retention of the present rule in § 2.16 of the Commission's regulations. Some customers also suggest that, if the Commission is determined to allow CWIP, consideration should be given to including only the interest costs associated with CWIP or some alternative that would make clear the ratepayers are investing in the utilities (contributions in aid of construction or capital certificates methods).

[96] *See* Environmental Assessment, *supra*, at § 4.2.5.

[97] This is consistent with our stated policy not to remedy a price squeeze if it is due solely to state regulatory action or inaction. *See* Opinion No. 157, Pennsylvania Power Co., Docket No. ER77-277-002, *et al.*, 21 FERC ¶ 61,313 (December 21, 1982).

The Commission stated in the Notice that "the specific formulation * * * in § 2.16 has not proven to be satisfactory." The present "financial distress" rule has produced "protracted and complex litigation" that, in several cases, lasted three or more years. In addition, few requests for CWIP relief have been made under the rule and in only one recent case has CWIP actually been allowed in rate base to relieve financial distress, subject to refund pending final determination of the rates.[88] Although utilities have not made extensive use of the financial distress provision for CWIP, the Commission noted that since the inception of this rule, the financial condition of the electric utility industry had deteriorated.

The comments focus on six alternative methods for treating construction financing costs: three that would include various amounts of CWIP in rate base, one that would track individual state CWIP policies, and two that are alternatives to including CWIP in rate base. Although other methods are discussed in the record of this proceeding, the range of approaches that commenters critically evaluate are: (1) Inclusion of a portion of CWIP in rate base according to a formula, including a threshold eligibility criterion; (2) CWIP included at a specific time in the construction of particular facilities; (3) a fixed percentage of all CWIP in rate base; (4) deference to the treatment of CWIP in rate base afforded by the relevant states; and (5) contributions in aid of construction.

1. *Mechanical Inclusion of CWIP in Rate Base: Low Bond Ratings Test and the Ratio of CWIP to Rate Base.* The alternative most prominently highlighted in the Notice is a formulary approach predicted upon a showing of financial distress. Under this approach, the financial distress standard is restated as a two-pronged test. This test requires, first, that utility's first mortgage bonds be rated BBB/Baa or lower, and second, that CWIP exceed 40 percent of jurisdictional rate base. Having met these tests, a utility would be presumptively eligible for rate base treatment of sufficient CWIP to reduce CWIP outside rate base to not more than 40 percent of the whole. However, the Commission could limit or deny rate base treatment on certain specified grounds.

All interests represented in this proceeding were critical of this approach, including investor-owned utilities that oppose any financial distress standard. Wholesale customers contend that a formulary approach is imprecise and would lead to inequities, such as providing relief to utilities whose financial difficulties are not caused by construction programs.

Commenters on all sides of the issue criticize bond ratings as unreliable indicators of a utility's financial condition. They point out that the Commission is obligated to exercise its independent judgment rather than rely upon the decisions of private rating agencies. Investor-owned utilities, on one hand, criticize the level of bond rating (BBB/Baa) that triggers the rule as too low to provide adequte relief. Wholesale customers, on the other hand, argue that such a rule would aid utilities that are not in distress. With respect to the second prong of the proposed rule, that is, the ratio of jurisdictional CWIP to jurisdictional rate base, both investor-owned utilities and wholesale customers find this standard to be arbitrary, lacking any basis in economic fact, and inappropriate for measuring the needs of individual utilities.

Overall, investor-owned utilities believe that the proposed mechanical rule is subject to many of the same criticisms of the existing rule, namely, that it would not grant adequate or timely relief. In other words, such a rule would create uncertainty regarding the ultimate availabiity of relief and would provide too little revenue to protect the financial integrity of the utility. An investor-owned utility states that the proposed rule would initially provide CWIP relief to as few as 11 utilities and would only minimally increase cash flow. Other investor-owned utilities state that requiring a utility to experience severe financial distress before relief is available is a poor regulatory practice because it needlessly exposes utilities to the vagaries of the capital markets. In addition, these commenters criticize the proposal because CWIP rate relief would be reevaluated in each subsequent rate case to determine continued eligibility adding uncertainty regarding the continuity of relief.

Several investor-owned utilities, state regulators, and accounting firms suggest that other financial criteria, such as market-to-book ratios, the ability to pay dividends from current earnings, or average industry financial ratios, would better represent the financial condition of a utility than the two tests proposed in the Notice. One state regulatory authority states that any viable formula should (1) limit AFUDC to 20–40 percent of income available to common stock; (2) require that interest coverage ratios be 3.5 to 4.0, excluding AFUDC; and (3) specify that a minimum of 40 percent of the utility's capital requirements be internally-generated cash.

The Commission continues to believe that the existing mechanism for including CWIP in rate base is inadequate. The main approach articulated in the Notice is a refinement of that policy developed in light of the industry's financial difficulties perceived at the time that the Notice was issued. The strong criticism by all groups of commenters suggests that incremental adjustments to the existing CWIP policy will not substantially increase the effectiveness of the rule. A financial distress test limits relief to utilities that are already experiencing a deteriorating financial condition that invariably impairs credit-worthiness and raises capital costs. As a result, the timely completion of construction projects may be jeopardized. Moreover, a financial distress test creates uncertainty in terms of the availability of relief. By attempting to discriminate among utilities, a financial distress test may not clearly signal when and where rate relief is likely. Since financial health is not easily restored to a company, it may not serve the public interest to withhold rate relief until after the financial condition of a utility has deteriorated.

Another problem with the proposed rule is its failure to provide adequate rate relief to utilities in severe financial difficulty. The Commission's own analysis [89] confirms the contention of commenters on both sides of the CWIP issue that under the proposed rule, qualifying utilities would receive only a minimal increase in cash flow. This would be a wholly inadequate remedy to utilities in severe financial difficulty. The limited nature of the Commission jurisdiction exacerbates this problem. A policy that is reactive to financial difficulty is, therefore, flawed insofar as the available relief will likely be inadequate.

2. *CWIP at a Specified Time Before a Facility is Placed in Service.* An alternative to the mechanical CWIP rule set forth in the Notice is the inclusion in rate base of some or all CWIP at a specified time before the particular facility is placed in service. Several states currently permit the inclusion of CWIP in rate base for projects that are one or two years from being completed. Few commenters directly analyze this approach. Several wholesale customers suggest that this timed inclusion of CWIP in rate base should pertain only to

[88] *See* Montaup Electric Co., Docket No. ER82–325–000, 19 FERC ¶ 61,082 (April 20, 1982).

[89] *See* Environmental Assessment, *supra* at § 4.3.2.

certain types of plants—namely, conservation programs, load management equipment, and transmission plant. An investor-owned utility suggests limited CWIP in rate base to base load generation facilities. The wholesale commenters state that allowing CWIP at a specified time before completion of the facility would increase cash flow late in the construction cycle, when carrying costs and the need for rate relief are greatest. Moreover, this approach is said to ameliorate the sharp increase in rates that typically results under an AFUDC policy when new generation facilities become operable. These commenters state that limiting CWIP in rate base until late in the construction cycle will provide management with an incentive to complete construction projects.

The primary criticism of this approach from investor-owned utilities is that it fails to substantially improve utility cash flow or interest coverage ratios. Although one investor owned utility states that if all CWIP were allowed after the plant was 50 percent completed there would be effective relief, the prevailing view is that the relief afforded would be inadequate.

In the Commission's view, this alternative, while having some of the advantages of the 50 percent rule, is not the best approach. This alternative may lessen but will not prevent potentially steep rate increases similar to those under an AFUDC policy that occur when new plants go on line. With the long lead times on certain types of generating plants, CWIP balances may grow to very high levels before being placed in rate base under this alternative.

3. *Fixed Percentage of CWIP in Rate Base.* The Notice proposed a third distinct method of including CWIP in rate base. This approach would allow all utilities to file to include an amount of CWIP not to exceed a uniform percentage of jurisdictionally-allocated CWIP. There would be no case-by-case determination of financial need, as under both the present rule and other proposed alternatives. This type of CWIP relief would be available to any utility, regardless of financial condition, thereby obviating debate over the appropriate standard for determinating financial difficulty.

Commenters on both sides of the CWIP issue analyze the fixed percentage approach extensively. Investor-owned utilities strongly support placing 100 percent of CWIP in rate base and they appear to contend that any fixed percentage approach will provide greater relief to utilities than other proposals. They also believe that a fixed percentage approach will give the clearest signal of, and regulatory impetus toward, the financial recuperation of utilities.

In response, wholesale customers and retail consumers oppose the inclusion of a uniform amount of CWIP in rate base. Because wholesale customers believe the overall financial condition of the industry to be improving, they view this alternative as unnecessarily costly, particularly with respect to utilities that have adequate cash flow, interest coverage ratios and, in general, a strong financial condition. These commenters state that, because the problems of individual utilities can be traced at least in part to management failures, this approach will only reward ineffective management. These commenters view CWIP in rate base as an extraordinary remedy, the availability of which should be limited. This suggests that only a rule that interposes threshold criteria for CWIP relief would be acceptable. Given this viewpoint, opponents of CWIP do not examine whether a fixed percentage of CWIP under 100 percent would be equitable.

The final rule in this docket adopts a fixed percentage approach that allows any utility to file to include up to 50 percent of all CWIP in rate base in addition to any CWIP related to fuel conversion or pollution control facilities. This formulation has definite advantages for both utilities and ratepayers. A utility will receive a predictable quantum of rate relief over the entire construction period that will likely improve the cash flow, interest coverage, and other financial variables of utilities.

One main consideration supports including a uniform amount of capital investments in rate base. That factor is predictability. A fixed amount of CWIP in rate base provides adequate cash flow in a way that is most valuable to utilities during a construction cycle and in a way that minimizes the potential for repeated litigation of a utility's conformance to threshold standards. It affords utility management a predictable return on current investment and thereby an opportunity to choose construction projects that best serve long-term needs rather than projects that are merely affordable in the near-term because their carrying costs are least oppressive. A fixed percentage of CWIP in rate base, included irrespective of a utility's financial condition, constitutes preventive medicine rather than a curative measure. The overall impact will be an improved outlook for electric supply and reliability. If rate stability and optimal planning for capacity are desired objectives, a fixed percentage of CWIP in rate base has the advantage of carrying forth those objectives with certitude and consistency.

Finally, the Commission chooses the 50 percent approach because it more evenly balances the equities due present and future ratepayers. The final rule requires present ratepayers to be responsible for a portion of a financial burden which traditionally was borne by future ratepayers. Both present and future ratepayers share an interest in continued service reliability. By implementing a 50 percent CWIP policy, the Commission is opting to split this cost responsibility.

4. *Inclusion of CWIP in Rate Base to the Extent Permitted by States.* Under this approach, as presented in the Notice, the inclusion of CWIP in a utility's wholesale rate base would depend upon the CWIP policy of the state regulatory authority that regulates the retail rates of the utility. The objective of such an approach, from the Commission's perspective, would be a uniform treatment of CWIP in the utility's wholesale and retail rates. In those cases where the utility is wholly or predominantly regulated at the federal level, the Commission would independently determine the appropriateness of a request for CWIP rate relief.

Several commenters, including two state regulatory authorities, support this approach because, in their view, it defers to state policies. These commenters state that, at least in those states that allow substantial amounts of CWIP in rate base, this approach would have the advantage of combining federal and state CWIP to achieve a maximum impact. Moreover, this approach eliminates the possibility of price squeeze resulting from differing federal and state CWIP policies,and is claimed to reduce the unfair burden on retail customers that heretofore have been subsidizing wholesale customers.

The Commission has chosen not to adopt this approach for several reasons. The Commission must exercise independent judgment in all matters assigned to it by statute. By deferring to the disparate CWIP policies of the states, the Commission might be viewed as having abdicated its responsibility. The significance and impact of deference to state policy would vary dramatically from state to state. In formulating the new rule, the Commission has neverless considered CWIP approaches employed by the states.

5. *Contributions In Aid of Construction and Capital Certificates.* As alternatives to CWIP in rate base,

several commenters propose the use of either contributions in aid of construction (CIAC) or capital certificates. These alternatives involve ratepayers directly supplying capital to finance utility construction programs rather than compensating utilities for the carrying costs on capital obtained from capital markets as under the CWIP in rate base alternative. Both the CIAC and the capital certificates alternatives involve mandatory loan assessments from ratepayers. The primary difference between CIAC and capital certificates is whether the loans are refunded to ratepayers. The CIAC approach requires that contributions be nonrefundable which is a requirement for obtaining nontaxable status. In contrast, the capital certificates approach requires the issuance of ownership certificates that earn a return and are redeemable at the time the associated plant is placed in service.

Several commenters state that, given favorable tax treatment, the CIAC method could provide utilities with the same amount of dollars during construction as the CWIP in rate base method but CIAC would further lower the long-run cost to ratepayers because of a reduction in utility tax expenses. One state regulatory commission supplies a plan for implementing the CIAC method. This commenter states that the amount assessed against ratepayers could vary to enable utilities to achieve the same cash flow as under a policy of including varying amounts of CWIP in rate base. Capital derived from CIAC would be placed in a restricted account to be used solely for construction and would also have to meet all Internal Revenue Service requirements for nontaxable status. This commenter also presents a numerical example which, it states, shows that the CIAC method would produce lower revenue requirements over the life of a plant than the AFUDC and CWIP methods based on both absolute or present value dollars.

A group of wholesale customers proposes the capital certificates method. One benefit of the capital certificate method is that customers are treated as investors and do not have to remain customers to receive a return on their investment. This is said to resolve the problem of interperiod equity. The certificates would be redeemable when construction on the new facility is completed. The interest rate on the certificates could be based upon the rate the utility is paying other lenders, the prime rate, or some formula. However, this commenter states that purchase of capital certificates by ratepayers should be required only when a utility shows that normal capital market alternatives are unavailable.

Investor-owned utilities state that the CIAC and capital certificates approaches are inappropriate and ineffective as alternatives to CWIP in rate base. They argue that while CIAC is appropriate to finance unique service requirements to specific customers or customer groups, it is not an appropriate mechanism for capital investments that are intended to benefit the system generally. These commenters state that CIAC would not ensure investors and utility management of long-term stability in cash flow since such funds are generally viewed by investors as one-time cash advances from ratepayers.

A group of investor-owned utility commenters state that CIAC is less effective than CWIP in rate base because CIAC only reduces the amount of capital a utility would otherwise obtain from the capital markets. This commenter states that the reduction would affect only a fraction of a utility's construction requirements. Under the CIAC approach, this commenter states that earnings quality would remain poor and external financing needs would continue to erode interest coverage. However, the commenter states that CWIP in rate base is an efficient way of improving interest coverage and quality of earnings.

Several investor-owned utilities argue that the Internal Revenue Service will not grant the contributions nontaxable status. They further argue that the CIAC approach suffers from the same interperiod equity problems as CWIP in rate base.

Several observations can be made with respect to CIAC and capital certificates. In this proceeding, the proposal to use CIAC goes far beyond its historical purpose. For instance, all customers would be required to supply capital as CIAC. Moreover, the assessment of CIAC would be based upon the cost of plant intended to serve the needs of all customers, rather than an individual customer or a defined customer group. These deviations from the conventional use of CIAC bring into question the federal tax treatment that will be accorded capital provided by ratepayers in the form of CIAC. Because tax-exempt status is necessary for CIAC to be less costly than CWIP in rate base, the uncertainty of this issue raises doubts as to the probable outcome were CIAC to be adopted. Moreover, if capital collected through CIAC and capital certificates are not revenues to utilities, there will be no direct changes in either the quality of earnings or interest coverage ratios. This is a significant drawback to the CIAC and capital certificates alternatives. While they may reduce the extent to which a utility must rely on conventional capital markets to obtain capital, these approaches may not improve a utility's ability to access capital markets.

The Commission believes that CIAC and capital certificates are not reasonable alternatives to placing CWIP in rate base. The tax treatment of CIAC, which is crucial to this approach, is unresolved. Moreover, the benefits to the utility industry appear to be far less than under a CWIP approach.

6. *Other Alternatives.* Commenters suggest several additional alternatives to the proposed rule. In particular, several environmental and consumer organizations propose a "soft-paths" approach as an alternative to CWIP in rate base, including enhanced efficiencies through power pooling or brokering, conservation, innovative load management programs, and cogeneration and small power production. These commenters state that the long lead time that creates the financial difficulties experienced by utilities that construct large generation facilities could be avoided through a "soft-paths" program.

Several investor-owned utilities state that utilities are vigorously pursuing conservation and alternative energy programs. However, these commenters argue that these alternatives do not supplant the need for CWIP. The potential for these programs may be vast, but the present realities require continued large scale construction programs. Moreover, one investor-owned utility argues that the financial need of utilities is for immediate aid, which this alternative does not offer.

The Commission is strongly committed to providing a regulatory framework which enables and encourages utilities to pursue "least-cost" energy strategies. In this vein, we applaud the increased efficiencies of power pooling and the development of economical energy resources, including cogeneration and small power production. Moreover, the Commission recognizes the importance of conservation. These are all areas where the Commission intends to continue its efforts wholly apart from the present rule.

Another alternative that wholesale commenters suggest is joint ventures between investor-owned utilities and public and cooperative utilities for constructing and operating large generation facilities. Several wholesale customers state that many successful

joint ventures have already been undertaken, particularly in cases where such development cannot occur without the participation of cooperatives and municipalities. These commenters state that joint ownership would ameliorate the anti-competitive aspects of the buyer-seller relationship in the wholesale power market.

Several investor-owned utilities state that they presently participate in joint ventures in constructing large generation facilities. However, one investor-owned utility criticizes joint ventures as distress sales by utilities which can be ascribed to mounting financial pressures. This commenter argues that such sales to public systems to achieve current solvency adversely impact the future cost of power. Several of these commenters state that, even to the extent joint ventures are feasible, they do not directly address the problems facing the industry today. The Commission need not address this question in the present rule, however. Our regulations neither prohibit nor require the formation of joint ventures in new plant construction.

F. Administrative Law Issues

1. *Environmental Considerations.* Subsection 102(c) of the National Environmental Policy Act of 1969 (NEPA) requires federal agencies to assess the environmental impact of "major Federal actions significantly affecting the quality of the human environment." NEPA requires that an Environmental Impact Statement (EIS) be part of any record of decision for such major Federal actions. An EIS is a detailed analysis of the environmental effects (including socio-economic impacts) of the proposed action and the evaluation of alternatives to the proposed action.

In order to determine the need for an EIS, Federal agencies prepare an Environmental Assessment (EA). An EA is a brief overview of the nature and probable effects of a Federal action. An EA has three principal functions. It aids the agency in determining whether to prepare an EIS. When an EIS is not necessary, it provides the basis for preparation of a Finding of No Significant Impact (FONSI). It also facilitates preparation of an EIS when one is necessary. Incidently, the EA may bring to light technical facts of substantive importance for the underlying decisions.

Several commenters state that the CWIP rulemaking is a major Federal action which requires preparation of an EIS. In order to determine the need for an EIS, an EA was prepared for this final rule.[100] The EA concludes that the final rule is not a major Federal action significantly effecting the quality of the human environment. An EIS is therefore not needed in this rulemaking. The Commission makes a Finding of No Significant Impact below.

2. Regulatory Flexibility Act. The Regulatory Flexibility Act (RFA) requires Federal agencies to consider whether the rule, if promulgated, will have a "significant economic impact on a substantial number of small entities." The Notice of Proposed Rulemaking contained a certification that the proposed rule would not have a significant impact on a substantial number of small entities. Several commenters, including the U.S. Small Business Administration (SBA), contend that the certification is in error and that an Initial Regulatory Flexibility Analysis (IRFA) should be prepared for this rule.

SBA argues that the Commission should have considered the impact of the proposed rule on wholesale and retail customers of the jurisdictional entities subject to rate regulation by the Commission. SBA also argues that because state regulatory authorities may follow the Commission's CWIP policy, this rule will economically affect ultimate retail electric consumers, many of which can be small businesses. SBA suggests that the Commission must prepare an IRFA that analyzes these possible impacts.

Contrary to SBA's assertion, the RFA does not require the Commission to consider the effect of this rule, a federal rate standard, on non-jurisdictional entities whose rates are not subject to the rule. The Commission, therefore, is not under a statutory obligation to study the impact of the CWIP rule upon wholesale or retail customers of any jurisdictional utility or upon other ultimate retail electric consumers. The certification in the NOPR did consider the effect of the proposed rule on jurisdictional utilities. No commenter stated that the analysis was incorrect with respect to these entities.

Second, in disagreement with SBA, several commenters, including two state regulatory authorities, maintain that states will not follow the federal policy. This will significantly limit the national impact of this CWIP rule. The Commission has no other information by which to anticipate the course of action which states may adopt for CWIP.

The final rule will affect the same jurisdictional entities as the proposed rule, although the impact may differ with respect to individual utilities. In the NOPR, the RFA certification stated, in the text and footnotes,[101] as follows:

Since nearly all of the jurisdictional utilities which must comply with the rule proposed here are too large to be considered "small entities,"[a] the Act is not applicable. Further, since the utilities regulated by the Commission hold exclusive selling rights within their service areas and are presumed to be natural monopolies, they dominate their respective fields of operation and, thus, cannot be considered to be "small entities" as that term is defined in the Act.[a]

[a] Currently, 211 entities have rate schedules on file with the Commission. Of these, 184 are Class A or B utilities (having annual electric operating revenues of more than $2,500,000 or $1,000,000 respectively), 20 are other investor-owned utilities, 3 are industrially-owned, two are cooperatives, one is a state agency, and one is a non-profit organization. Thus, only 27 regulated entities complying with this rule have annual electric operating revenues of less than $1,000,000.

[a] Section 601(6) of the Act defines a "small entity" as a small business, a small not-for-profit enterprise, or a small governmental jurisidiction. A "small business" is defined, by reference of Section 3 of the Small Business Act, as an enterprise which is "independently owned and operates [sic] and which is not dominant in its field operation." 15 U.S.C. 632(a) (Supp. 1981).

This analysis holds true for the final rule. The Commission considered the impact of the final rule on all jurisdictional utilities and on wholesale and retail customers and concludes that the impact would not be significant.[102] Based upon the above reasons as well as the reasons stated in the NOPR, the Commission is again certifying that the final rule has no significant economic impact on a substantial number of small entities.

V. Finding of No Significant Impact

The Commission has prepared an Environmental Assessment (EA)[103] to determine the need to prepare an Environmental Impact Statement for the CWIP final rule. Based on the Environmental Assessment, the Commission has determined that the proposed action does not constitute a major federal action significantly affecting the quality of the human environment within the meaning of the National Environmental Policy Act of 1969, 42 U.S.C. 4321, *et seq.*

---

[100] See Section V, *infra.*

[101] 46 FR 39,453.

[102] *See* Section IV, *supra.*

[103] The Environmental Assessment has been placed in the record of this proceeding and is available in: Office of Public Information, Federal Energy Regulatory Commission, 825 North Capitol Street, N.W., Washington, D.C. 20426.

No significant adverse impacts associated with implementation of the CWIP rule change are identified in the EA. Anticipated effects of the rule change are summarized below.

1. The rate impact of a 50 percent CWIP policy on wholesale customers would be highest in the early years of the policy change and diminish over time. One study—the EIA study—found that, nationally, the average rate increase to wholesale customers would be 1.10 percent, 2.27 percent, 0.56 percent, and 0.69 percent in 1983, 1985, 1990 and 1995, respectively. This trend would also occur in each of the regions studied although the level of rate impacts would vary. The initial impacts predicted by this study are biased downward. Another study—the FERC study—which evaluated only initial impacts found that the average initial impact would be about a 4.70 percent increase in wholesale rates with a wide variation among utilities. The estimated initial impacts of the FERC study overstate the true impacts. With the six percent ceiling on annual price increases attributable to CWIP during the first two years of the policy change, the average initial price increases predicted by the two studies would be reduced. With the six percent ceiling, the average price increase predicted by the FERC study would fall to 3.57 percent.

2. It is estimated that nationwide only one in 13 retail utility customers—households, commercial, and industrial establishments—would be affected by the Commission's rule change. Only one in 77 would experience an initial rate increase at about the six percent ceiling level. The proportion of retail customers affected would vary regionally. The impact on the retail customers of total and partial-requirement wholesale customers would be different. The retail customers of total-requirement wholesale customers would experience impacts roughly comparable to those of the wholesale customers. In comparison, the retail customers of partial-requirement wholesale customers would experience a lesser impact. The actual impacts on the different classes of retail customers also depend upon the procedures used by state and local authorities for passing on wholesale rate changes to retail customers.

3. In general, the financial condition of the FERC-jurisdictional portion of utilities would be measurably improved by a 50 percent CWIP policy. At the national level, the EIA study shows that internal cash flow would improve by an average of 5.38 percent, 9.69 percent, 4.18 percent and 4.32 percent in 1983, 1985, 1990 and 1995, respectively. The FERC study shows an even more positive initial impact, *i.e.*, an averge increase of 13.08 percent. As indicated above, the initial impacts predicted by the EIA study understate the true impacts while the FERC study overstates the initial impacts. There would be corresponding improvements in interest coverage ratios and internal cash flow as a percent of construction expenditures. As with the price impacts, these impacts would vary widely among individual utilities and regions, depending upon the level of construction activity and its relation to rate base. The total company impacts would vary depending on the ratio of FERC-jurisdictional sales to total sales and to the extent that state and local commissions follow the FERC's CWIP policy.

4. Allowing CWIP in rate base would produce savings in financial costs to utilities although the magnitude of such savings is uncertain. Such savings would occur either through reductions in the costs of debt and equity capital or through increased flexibility in timing and choice of security issuances.

5. The Commission's final rule would affect utility investment decisions and fuel choices, although this impact would be small on an industrywide basis. This impact would vary among utilities in relation to the percentage of their sales regulated by the Commission. If the Commission allowed 100 percent of jurisdictional CWIP in rate base and state commissions did not change their policies accordingly, only coal and turbine plant additions would be affected and to a relatively minor degree. If, on the other hand, the Commission allowed 50 percent of jurisdictional CWIP in rate base and state commissions followed the Commission's precedent such that utilities averaged inclusion of 50 percent of all of their CWIP in rate base (jurisdictional and nonjurisdictional), there would also be minor changes in oil-steam, gas-steam, and hydro plant addition categories. With regard to fuel choices, reductions in demand brought about by higher prices would generally reduce oil, gas, and coal consumption initially. Changes in fuel choice in later years would depend critically upon the relative prices of these fuels.

6. Probable environmental impacts resulting from plant, fuel, and demand changes in response to the CWIP rule implementation would be negligible but predominantly beneficial, and would primarily result from a general decrease in demand and cut back in coal utilization in most regions. Environmental changes would not be detectable at a national level of analysis but could be at the regional or local level.

7. The major socioeconomic impact of the FERC's final rule on CWIP would be the initial rise in the cost of electricity and thus the greater proportion of budgets allocated to electricity by those retail customers of utilities which purchase some or all of their electric power at wholesale—about one in 13 retail consumers of electricity. The socioeconomic impacts on these consumers at the average national and regional levels would be minor in terms of percent increases in rates, *i.e.*, average national, regional, and individual utility rate increases would generally be less than five percent. Only about one-sixth of the affected retail customers—one in 77 retail customers nationally—would experience the six percent ceiling on initial rate increases (assuming all jurisdictional utilities applied for and received the maximum CWIP allowance under the final rule). Socioeconomic impacts would be unequally distributed among and within customer classes and regions. A small number of households and businesses could be adversely affected, but overall regional and national effects would be insignificant.

8. The impacts of a wide range of alternatives to the 50 percent CWIP rule were considered in this study. The impacts of alternatives considered varied both qualitatively and quantitatively from those of the 50 percent CWIP case.

VI. Regulatory Flexibility Act Certification

For the reasons set forth above in Section IV.F.2. of this preamble, the Commission certifies, pursuant to section 605(b) of the Regulatory Flexibility Act of 1980, that this final rule will not have a significant economic impact on a substantial number of small entities.

VII. Summary of the Rule and Information Regarding Implementation

Under the new rule, § 2.16 is deleted from the regulations and a new § 35.26, entitled "Construction Work in Progress" is inserted. Under § 35.26, utilities may continue to file to include in rate base any CWIP costs incurred for pollution control facilities and fuel conversion facilities. The new rule makes no change in Commission practice in this regard. In addition, the new rule provides that a utility may file to include in rate base up to 50 percent of all CWIP in excess of that actually included in rat base as pollution co..trol

or fuel conversion facilities, regardless of the utility's financial condition. Any CWIP that is or may be properly included in Accounts 107 or 120.1, including construction expenditures and any AFUDC already recorded by the utility, is eligible for rate base in accordance with the new rule.

Paragraph 35.26(a) specifies that the rule will apply to any rate schedules filed by any public utility, as defined in subsection 201(e) of the Federal Power Act. No utility may include CWIP in rate base unless a request is made under this section.

Paragraph 35.26(b) sets forth the definition for the term "CWIP." CWIP includes both the expenditures in the construction project and accrued AFUDC (Account 107). Moreover, CWIP includes investment in nuclear fuel in process of refinement, conversion, enrichment, and fabrication and all accrued AFUDC (Account 120.1). This paragraph also defines "pollution control facility" and "fuel conversion facility."

Paragraph 35.26(c) sets out the general rule. The general rule provides that CWIP may be included in rate base in any initial rate schedule or any rate schedule change filed under § 35.12 or § 35.13. Under subparagraph (c)(1), the Commission retains the existing treatment of CWIP for pollution control facilities by allowing the inclusion of such CWIP in rate base. The description of pollution control facilities has been revised to reflect changes in the language in the Internal Revenue Service laws, 26 U.S.C. 169, and the Commission's Form No. 1. Under subparagraph (c)(2), the existing rule allowing inclusion of CWIP for fuel conversion facilities is retained.

Subparagraph (c)(3) sets forth the new rule allowing utilities to include in rate base not more than 50 percent of any CWIP allocable to electric power sales for resale which is not otherwise included in rate base under subparagraphs (c) (1) and (2) of the new § 35.26.[104] This is intended to permit the inclusion of 50 percent of the 13-month average balance [105] of CWIP in addition to CWIP already included in rate base for pollution control or fuel conversion facilities.

Paragraph 35.26(d) limits the amount of CWIP allowed in rate base under subparagraph (c)(3) in the first two years after the effective date of the rule. The limitation applies to requests for rate schedule changes filed under § 35.13, but not to initial rate schedules filed under § 35.12. Although the Commission recognizes that a utility may file a rate schedule change at any time, if a utility proposes to include CWIP (other than for pollution control and fuel conversion facilities in rate base), there are two conditions which must occur for such a filing to be acceptable insofar as CWIP is concerned.

First, any individual rate filing must not propose more than a six percent CWIP-related rate increase pursuant to § 35.26(c)(3). This increase will be measured in terms of the total wholesale revenues of the utility rather than by reference to individual customers or customer classes.[106] Second, any prior rate schedule that included CWIP under subparagraph (c)(3) of this section must be in effect for not less than 10 months.[107] This provision is intended to restaict rate increases directly related to CWIP in rate base to six percent in the first year of the rule and 12 percent over the first two years. In the third year, a utility may include any amount of CWIP consistent with the other provisions of rule.[108]

Paragraph 35.26(e) implements the Commission's determination to permit the allowable CWIP expenses to be collected beginning when the general rate becomes effective, whether or not the rates are subject to refund.

Paragraph 35.26(f) continues, in substance, the present Commission rules regarding the books of account by requiring a utility including CWIP in rate base to discontinue the capitalization of any allowance for funds used during construction (AFUDC).

Paragraph (g) requires utilities to propose accounting procedures as part of rate filings in Statement AO, which include CWIP in rate base, to ensure that wholesale customers will not be charged for both capitalized AFUDC and a corresponding return on CWIP in rate base and that wholesale customers will not be charged for any corresponding AFUDC capitalized as a result of differing accounting or ratemaking treatments accorded to CWIP by state or local regulatory authorities. The accounting procedures proposed by the utility should include a consideration of any adjustments that are necessary to reflect a lack of coincidence between proposed and actual effective dates for CWIP-based rates and monthly differences between test period and actual CWIP balances.[109]

---

[104] The inclusion of CWIP in rate base may eliminate some timing differences associated with interest expense and, therefore, income tax allowable for ratemaking may be affected.

[105] The Commission expects that for purposes of determining the amount of CWIP includable in test period rate base, utilities will use the traditional rule of the 13 monthly average balances, meaning the beginning and end of each month in the test period. *See* Louisiana Power & Light Co., Opinion No. 110 (Docket No. ER77–533) 14 FERC ¶ 61,075 (1981).

[106] The rule requires utilities to derive revenue requirements both with and without CWIP in rate base. The aggregate CWIP-based revenue requirements and attendant revenue levels will be compared to the aggregate annualized revenue level of the superseded rates.

[107] A utility that has requested CWIP in rate base under § 2.16 is not precluded by the initial 10-month limitation under subparagraph (d) of this rule from first filing for CWIP in rate base as it wishes following the effective date of the rule. However, under the new rule, once such a utility has requested CWIP in rate base for any rate filing, the limitation in subparagraph (d) will apply according to its terms.

[108] In order to enable the Commission to measure CWIP in rate base in those cases in which the rate is settled and made effective in terms only of agreed-upon dollar amounts, without reference to the amount of CWIP rate base, the Commission will presume the rate to be based upon CWIP if, and to the extent that, the utility's rate schedule filing requests CWIP under subparagraph (c)(3) of this section.

[109] In order to ensure the appropriate discontinuance of AFUDC capitalization, the Commission instructs any utility that requests CWIP in rate base under this rule as follows:

1. The average amount of CWIP requested in rate base in the utility's rate filing should be excluded from construction balances for purposes of calculating book AFUDC accruals, beginning on the effective date of the new rates, except to the extent that the stipulation of the parties or the Commission's order provide for a different amount of CWIP in rate base. This will ensure that in settled cases, a utility's rates will be presumed to include CWIP in rate base to the extent requested in its rate filing, except as noted above.

2. In calculating the AFUDC rates used for book purposes under the Uniform System of Accounts (Electric Plant Instructions, Instruction 3(17)), the average jurisdictional amount of CWIP and nuclear fuel in process of refinement, conversion, enrichment, and fabrication requested in the utility's rate filing for rate base treatment must be excluded from the "W" component of the AFUDC formula beginning on the effective date of the new rates, except to the extent that the stipulation of the parties or the Commission's order provide for a different amount of CWIP in rate base.

3. For purposes of calculating rate base, the accrual of AFUDC on CWIP balances added to test period rate base must cease on the proposed effective date of the new rates.

4. The Commission makes the following observations with respect to the question of how timing differences between the test period and the effective date of CWIP-based rates ought to be handled by utilities. As previously described, CWIP-based rates may become effective before, after, or at any time during the test period. The rule therefore requires utilities to provide accounting procedures to ensure that wholesale customers will not be charged for both capitalized AFUDC and corresponding amounts of CWIP proposed to be included in rate base. While the actual level of CWIP will change over time, the average level of CWIP included in rate base remains unchanged until a new rate change becomes effective. Because of this, the amount of CWIP placed in rate base may exceed the actual balance of CWIP at the time of filing or when the test year begins. This phenomenon may occur, for example, if a construction program is just beginning, if costs are anticipated to rise in the immediate future, or if the

Finally, conforming changes are made to § 35.13 which govern cost of service statements filed in conjunction with changes in rate schedules. The rule amends certain statements in existing § 35.13(h) to reflect the fact that utilities will now be able to include in rate base CWIP amounts, in addition to those for pollution control and fuel conversion facilities. Subparagraph (h)(7) is revised to additionally require functionalization of facilities including by indicating whether particular facilities are dedicated to a particular customer or group of customers, such as unit sales transactions.

A new subparagraph (h)(38)—Statement BM Construction Program Statement—is added which requires utilities that file to include CWIP in rate base under subparagraph (c)(3) to file information useful in evaluating the need for power and the alternative methods of meeting that need. Any rate filing which includes CWIP under § 35.26(c)(3) must include statement BM. The new Statement BM requires a utility to describe its long-range program for providing reliable and economic power, to include an assessment of the relative costs of adopting alternative strategies and an explanation of why the program adopted is prudent and consistent with a least-cost energy supply program. This information will assist the Commission in evaluating prudence, including the extent to which utilities seeking rate base treatment of CWIP are utilizing least-cost strategies.

VIII. Effective Date

This final rule is effective July 1, 1983. Pursuant to the Paperwork Reduction Act of 1980, 44 U.S.C. 35 the information collection requirements of this rule have been transmitted to and cleared by the Office of Management and Budget under the existing OMB Control No. 1902–0096.

(Federal Power Act, 16 U.S.C. 791–828c; Department of Energy Organization Act, 42 U.S.C. 7101–7352; E.O. No. 12009, 3 CFR 142 (1978))

List of Subjects

Administrative practice and procedure, Electric power.

In consideration of the foregoing, the Commission amends Chapter I, Title 18 of the Code of Federal Regulations, as set forth below, effective 30 days after publication in the **Federal Register**.

By the Commission.

Kenneth F. Plumb,

Secretary.

PART 35—FILING OF RATE SCHEDULES

1. Part 35 is amended in the Table of Contents by adding at the end of Subpart C a new § 35.26, to read as follows:

* * * * *

Subpart C—Other Filing Requirements

* * * * *

Sec.

35.26 Construction work in progress.

* * * * *

2. Part 35 is amended by adding a new § 35.26, to read as follows:

§ 35.26 Construction work in progress.

(a) *Applicability.* This section applies to any rate schedule filed under this part by any public utility, as defined in subsection 201(e) of the Federal Power Act.

(b) *Definitions.* For purposes of this section—

(1) "Construction work in progress" or "CWIP" means any expenditure for public utility plant in process of construction that is properly included in Accounts 107 (construction work in progress) and 120.1 (nuclear fuel in process of refinement, conversion, enrichment, and fabrication) of Part 101 of this chapter, the Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act (Class A and Class B).

(2) "Pollution control facility" means an identifiable structure or portions of a structure that is designed to reduce the amount of pollution produced by the power plant, but does not include any facility that reduces pollution by substituting a different method of generation or that generates the additional power necessitated by the operation of a pollution control facility.

(3) "Fuel conversion facility" means any addition to public utility plant that enables a natural gas-burning plant to convert to the use of other fuels, or that enables an oil-burning plant to convert to fuels other than natural gas. Such facilities include those that alter internal plant workings, such as oil or coal burners, soot blowers, bottom ash removal systems and concomitant air pollution control facilities, and any facility needed for receiving and storing the fuel to which the plant is being converted, which facility would not be necessary if the plant continued to burn gas or oil.

(c) *General rule.* For purposes of any initial rate schedule or any rate schedule change filed under § 35.12 or § 35.13 of this part, a public utility may include in its rate base any costs of construction work in progress (CWIP), including allowance for funds used during construction (AFUDC), as provided in this section.

(1) *Pollution control facilities.* (i) Any CWIP for pollution control facilities allocable to electric power sales for resale may be included in the rate base of the public utility.

(ii) In determining whether a facility is a pollution control facility for purposes of this section, the Commission will consider:

(A) Whether such facility is the type facility described in the Internal Revenue Service laws, 26 U.S.C. 169(d)(1), as follows: "a new identifiable treatment facility which is used * * * to abate or control water or atmospheric pollution or contamination by removing, altering, disposing, storing, or preventing the creation or emission of pollutants, contaminants, wastes or heat";

(B) Whether such facility has been certified by a local, state, or federal agency as being in conformity with, or required by, a program of pollution control;

(C) Whether such facility is the type facility described in the schedule of "Environmental Protection Facilities," sections 4(A) through 4(D), page 428, FERC Form No. 1, Annual Report of Electric Utilities, Licensees and Others (Class A and Class B) (Revised 12–81); and

(D) Other evidence showing that such facilities are for pollution control.

(2) *Fuel conversion facilities.* Any CWIP for fuel conversion facilities allocable to electric power sales for resale may be included in the rate base of the public utility.

(3) *Other CWIP.* Not more than 50 percent of any CWIP allocable to electric power sales for resale not otherwise included in rate base under paragraphs (c)(1) and (2) of this section, may be included in the rate base of the public utility.

(d) *Initial limitation.* (1) *Limit.* Beginning on July 1, 1983 and ending on July 1, 1985, a public utility may file to include CWIP in rate base under paragraph (c)(3) of this section only if:

(i) Any increase in the utility's test period aggregate wholesale revenues that is directly attributable to CWIP included in the filed rates in accordance with subparagraph (c)(3) of this section is not more than six percent of the test

---

proposed effective date is prior to the test period upon which the rate filing is based. In these cases, a utility will record a negative AFUDC to ensure a proper charging of costs to ratepayers.

period aggregate wholesale revenues under the rate schedules to be superseded; and

(ii) The susperseded rate schedules, if based in part on CWIP included in rate base under paragraph (c)(3) of this section, has been effective for not less than 10 months.

(2) *Filing.* For purposes of determining the size of any rate increase attributable to CWIP proposed to be included in rate base under paragraph (c)(3), a public utility must derive and adequately support, in Statement BK under paragraph (h)(36) of this section, aggregate jurisdictional revenue requirements both with and without such CWIP in wholesale rate base.

(3) *Initial rates.* The limitation in this paragraph does not apply to initial rate schedules filed under § 35.12.

(e) *Effective date.* If a public utility proposes in its filed rates to include CWIP in rate base under this section, that portion of the rate related to CWIP is collectable at the time the general rate becomes effective pursuant to Commission order, whether or not subject to refund.

(f) *Discontinuance of AFUDC.* On the date that any proposed rate that includes CWIP in rate base becomes effective, the public utility must discontinue the capitalization of any AFUDC related to those amounts of CWIP in rate base.

(g) *Accounting Procedures.* At the time that a public utility files to include CWIP in rate base pursuant to this section, it must propose accounting procedures in that rate schedule filing that:

(1) Ensure that wholesale customers will not be charged for both capitalized AFUDC and corresponding amounts of CWIP proposed to be included in rate base; and

(2) Ensure that wholesale customers will not be charged for any corresponding AFUDC capitalized as a result of different accounting or ratemaking treatments accorded CWIP by state or local regulatory authorities.

3. In § 35.13, the Table of Contents is amended by adding at the end a new Statement BM, to read as follows:

§ 35.13 Filing changes in rate schedules.

Contents

* * * * *

(38) Statement BM—Construction program statement.

* * * * *

4. Section 35.13 is amended by revising paragraphs (h)(7)(ii) and (h)(13), to read as follows:

§ 35.13 Filing of changes in rate schedules.

* * * * *

(h) *Cost of service statements.* * * *

(7) *Statement AG—Specified plant accounts (other than plant in service) and deferred debits.* * * *

(ii) The utility shall state the electric utility component balances in Accounts 107 and 120.1, individually and in total, for each item of construction work in progress for pollution control facilities, fuel conversion facilities, or any other facilities that qualify for inclusion in rate base under § 35.26. The utility shall state such balances for each major functional and subfunctional classification under Statement AD as of the beginning of the first month and the end of each month of Period I and Period II with an average of the 13 balances for each period.

* * * * *

(13) *Statement AM—Construction work in progress.* Statement AM is a statement of the amount of construction work in progress described according to functional classification for Period I and Period II. For production plant and transmission plant, the utility shall state the balances as of the beginning of the first month and the end of each month of both Period I and Period II, with an average of the 13 balances for each period. For each function of plant identified in Statement AD other than production or transmission, the utility shall state the balances as of the beginning and the end of both Period I and Period II, with an average of the beginning and end balances for each period. If any Period I or Period II balance is not available, the utility shall include monthly estimates and an explanation of the relevant circumstances. Pollution control facilities, fuel conversion facilities, or other construction amounts reported in Statement AG shall be excluded from amounts reported in this Statement.

* * * * *

5. In § 35.13, the references to Statement BL that appear in paragraphs (d) (1), (2), and (4) and (e)(1) (i), (ii), and (iii) and in the introductory clause in paragraph (h) are replaced by reference to Statement BM.

6. In § 35.13, paragraph (a)(2)(i) introductory text is revised to read as follows:

§ 35.13 Filing of changes in rate schedules.

* * * * *

(a) *General rule.* * * *

(2) *Abbreviated filing requirements.*

(i) *For certain rate increases.* Any utility that files a rate schedule change that provides for a rate increase may submit with its filing only the information required in paragraphs (b), (c), and (h)(37) of this section and in § 35.12(b)(2) and (5) of this part and, for any rate increase decribed in clause (B) of this subparagraph, the information required in paragraph (h)(38) of this section, in accordance with paragraph (g) of this section, if the rate increase is:

* * * * *

7. Section 35.13 is amended by adding a new paragraph (h)(38), to read as follows:

§ 35.13 Filing of changes in rate schedules.

* * * * *

(h) *Cost of service statement.* * * *

(38) *Statement BM—Construction program statement.* Statement BM is a summary of data and supporting assumptions relating to the economics of any construction program to replace or expand the utility's power supply that shall be filed if the utility is filing for construction work in progress in rate base under § 35.26(c)(3) of this chapter. The filing utility shall describe generally its program for providing reliable and economic power for the period beginning with the date of the filing and ending with the tenth year after the test period. The statement shall include an assessment of the relative costs of adopting alternative strategies including an analysis of alternative production plant, *e.g.*, cogeneration, small power production, heightened load management and conservation efforts, additions to transmission plant or increased purchases of power, and an explanation of why the program adopted is prudent and consistent with a least-cost energy supply program.

§ 2.16 [Removed]

8. Section 2.16 is removed.

Statement of C. M. Butler III, Chairman in Response to "Motion Requesting Recusal" in Docket No. RM81-36, Construction Work in Progress for Public Utilities

After careful review of the arguments presented, I have concluded that grounds do not exist for me to recuse myself or be disqualified from the CWIP rulemaking. This conclusion is supported by a memorandum of the FERC General Counsel advising that my statements, about which movants complain, do not require my recusal or disqualification. That memorandum is attached as Appendix A.

Before addressing the merits of the recusal motion, however, I would like to dwell briefly on the matter of procedures for handling such motions. I feel some responsibility to do so because when the motion was filed, I was asked for a reactive statement. In that statement I indicated that the matter would be put to my colleagues for a decision with my abstention. While that seemed an

appropriate way in which to dispose of the matter,[1] I have since been advised that at least one Commissioner feels strongly against putting the matter to a vote. It is feared that the precedent could lead to unnecessary division among the Commissioners should more difficult questions of recusal arise in the future. Upon reflection I agree. The prospect of such division among the Commissioners would probably outweigh the value of the procedure. The procedure which I have adopted might be criticized as unfair if there were no appeal from my decision. Obviously, however, if the participants in this proceeding are disappointed in my resolution of the matter, they will have the opportunity to raise their arguments in the Court of Appeals should they be aggrieved by the Commission's final order in this case.[2] This procedure basically follows the judicial model, and I expect it will be followed in the future.

The General Counsel's opinion deals at length with the merits of the arguments advanced in support of my recusal. I do not intend to repeat them here. However, I wish to add a few words of my own in connection with the matter. The ground for recusal proffered in the motion is prejudgment of issues in a pending rulemaking. Despite the existence of a relatively rich trove of legal scholarship on the general subject, there appears among practitioners before the Commission, members of the Commission staff, and, indeed, members of the House and Senate and their staffs, considerable confusion over the questions of what is at stake in such matters and how to systematically analyze the factual context when a motion for recusal or disqualification is filed against a decisionmaker in an administrative rulemaking.

Rulemaking typically requires the decisionmaker to choose between competing priorities in proposing rules. That responsibility suggests a general duty to acquire knowledge and perspective as to matters about which he or she is to act. Such matters are frequently, if not universally, controversial.[3] Simply stated, ordinary rulemaking is impossible without *some* prejudgments by the rulemaker: Among other things, a rulemaker must form a preliminary view if he is to make rational allocations of resources (*i.e.*, establish priorities) among competing candidates for rulemaking.[4] In Judge Leventhal's words, "One cannot even conceive of an agency conducting a rulemaking proceeding unless it had delved into the subject sufficiently to become concerned that there was an evil or abuse that required regulatory response."[5]

Thus, the law is clear that not all prejudgments subject quasi-legislative decisionmakers to disqualification. Such distinctions are familiar in the law, and the real question is *what kinds of prejudgments necessitate recusal.* The strictest legal standard is as follows: A decisionmaker must recuse himself if he has an irrevocably closed mind about an issue of adjudicative fact material to the decision in a matter pending before him. *FTC v. Cement Institute,* 333 U.S. 683 (1948).[6] The *Cement Institute* case was decided in the context of an adjudication. It is generally accepted that a stricter standard should apply to a decisionmaker acting in a quasi-judicial matter (adjudication), than to one acting in a quasi-legislative matter.[7] The rationale is simple. Fundamental notions of fairness require openmindedness about issues specifically provable and subject to meaningful cross-examination. In contrast, issues of predictive or judgmental fact (quasi-legislative issues) are decided in the context of experience, general philosophy, and the like; and it is virtually impossible for such facts to be decided with a complete *tabula rasa.* In that sense, the quasi-legislative decision is similar to judgments about constitutional policy or law.[8] Thus, the analogous model is not the judge, but the lawmaker. The question that is accordingly presented is when, *if ever,* is a legislator required to disqualify himself from a matter; and to what extent do those rules of conduct apply to the quasi-legislator?

Perhaps unfortunately, this question need not be reached,[9] because even when the strictest standard—that applicable to quasi-judicial decisionmaking—is applied to the remarks of which movants complain, the standard is not satisfied. When those remarks are read *in the context in which they were presented,* they clearly are *not* reflective of an unalterably closed mind.[10]

I wish also to make a general observation. I subscribe strongly to the view that agency decisionmakers should openly discuss *policy* issues pending before them in order to inform interested persons, to the greatest extent possible, of their *policy* views. To do so tends to maximize, if not optimize, the opportunity for debate of the issues and for feedback to the decisionmaker. The consequence is movement in the direction of better shaping of issues and higher quality of input, hopefully leading to better reasoned and articulated agency decisions. In addition, that approach is consistent with the spirit of much recent legislation designed to bring government into the sunshine. In contrast, a liberal policy of disqualification would have a chilling effect on the public's opportunity to learn the nature and extent of an agency's concerns about important issues of public policy, and would tend to discourage debate of the issues. The public's ability to understand and participate meaningfully in the agency's decisional process, and predictably the quality of the agency's decisions, would be to a significant extend diminished.

Next, I would like to address some of my specific concerns with the Motion Requesting Recusal. First, the motion's discussion of the law is characterized by such an absence of legal scholarship as to be of concern.[11] Second, the mischaracterizations of parts of the speech through omission of material parts of it are plausibly knowingly false.[12] That raises substantial questions under the Code of Professional Responsibility.[13] Finally, at

[2] *See* Association of Nat'l Advertisers, Inc. v. FTC, 627 F.2d 1151 (D.C. Cir. 1979), *cert. denied,* 447 U.S. 921, (1980) (concurring opinion of Leventhal, J.) (The Court of Appeals has jurisdiction of the issue and should hear it with the merits of the case). *Cf.* Firestone Tire & Rubber Co. v. Risjord, 449 U.S. 368 (1981).

[3] *See generally* Strauss, *Disqualification of Decisional Officials in Rulemaking,* 80 COL. L. REV. 990 (1980) (*Strauss*).

[4] *Cf.* Laird v. Tatum, 409 U.S. 824, 835 (1972), where Justice Rehnquist made an analogous observation about federal judges:

> Since most Justices come to this bench no earlier than their middle years, it would be unusual if they had not by that time formulated at least some tentative notions that would influence them in their interpretation of the sweeping clauses of the Constitution and their interaction with one another. It would be not merely unusual, but extraordinary, if they had not at least given opinions as to constitutional issues in their previous legal careers. Proof that a Justice's mind at the time he joined the Court was a complete *tabula rasa* in the area of constitutional adjudication would be evidence of lack of qualification, not lack of bias.

[5] Association of Nat'l Advertisers, Inc. v. FTC, *supra* n.2, at 1174.

[6] *Accord, id.;* United Steel Workers of America v. Marshall, 647 F.2d 1189, *cert. denied,* 101 S. Ct. 3148 (1981).

[7] *See generally Strauss, supra,* n.3.

[8] Laird v. Tatum, *supra,* n.4. *See also* D. DAVIS, ADMINISTRATIVE LAW TREATISE § 19:3 (2d ed. 1980); *Strauss* at 1016–17. I do not suggest that regulatory officials should not have an open mind about *all* issues in a pending matter, even the state of the law. I merely make the inescapable observation that it would be impossible, and in fact undesirable if possible, to ignore one's experience in deciding cases.

[9] *But see* ACUS Recommendation No. 80–4, 1 CFR § 305.80–4 (Decisional Officials' Participation in Rulemaking Proceedings).

[10] *Cf.* United Steel Workers of America v. Marshall, *supra,* n.8. In this connection, I choose to deal with the facts as they are presented as objectively as I can. Although *I know* my mind is open about *all* issues in this proceeding, to rest this decision there seems inadvisable because my claim will predictably be dismissed as self-serving.

[11] For example, no distinction is drawn between prejudgments of issues of specific fact and policy, legal, and legislative fact issues. *See, e.g.,* FTC v. Cement Institute; *Strauss.* Furthermore, there is *no* reference to the reasonably abundant judicial literature and commentary on the issues raised in general. *E.g., Strauss.* Nor is there any reference to the recommendations of the Administrative Conference of the United States on the matter. 1 CFR 305.80–4 (Decisional Officials's Participation in Rulemaking Proceedings) (disqualification as inappropriate "* * * for factual judgments that are the consequence of earlier stages of the proceeding, or for prejudgments of policy." *Id.* § 305–80–4(C.1.). How does that square with the following ethical consideration?

> Where a lawyer knows of legal authority in the controlling jurisdiction directly adverse to the position of his client, he should inform the tribunal of its existence unless his adversary has done so; but, having made such disclosure, he may challenge its soundness in whole or in part.

D.C. CODE OF PROF. RESP., EC 7–23 (ABA 1978) (*Code*) (Footnote omitted). It strains credulity that of the lawyers signing the motion, none knew of the rich body of law and commentary on the matter, or, even worse, that in the exercise of ordinary care as lawyers could not find it. In this connection, the contrast between the opinion letter of the General Counsel and the motion is stark, indeed.

[12] *Cf.* RESTATEMENT (SECOND) OF TORTS §§ 526–30 (1977) (Title A. Fraudulent Character of Misrepresentation).

[13] *See Code,* DR7–102(A)(5): "In his representation of a client, a lawyer shall not knowingly make a false statement of law or fact." This disciplinary

least one of the allegations of the movants is disingenuous on its face. It is claimed that rejection of the presumption against allowing CWIP in rate base is a forbidden prejudgment. How is the rejection of a prejudgment itself a forbidden prejudgment? It seemed to me at the time more an expression of agnosticism about the issue, to plagiarize from a former colleague. In sum, I believe that the credibility of the motion itself is a matter for careful scrutiny should this aspect of our rulemaking in Docket No. RM81-38 be reviewed by the Courts of Appeal.

C. M. Butler III.

Appendix A

March 10, 1982.

Memorandum To: Chairman Butler
From: Charles A. Moore, General Counsel
Subject: Request for Recusal in Docket No. RM81-38, Construction Work in Progress for Public Utilities

You requested my views on whether you must withdraw from consideration of Docket No. RM81-38, Construction Work In Progress for Public Utilities (CWIP), because of expressions in a speech delivered at "A Seminar on Utility Finances" sponsored by the U.S. National Committee, World Energy Conference and Edison Electric Institute. In my opinion, recusal is not necessary.

RM81-38 is a proposal to include, under certain circumstances, the costs of CWIP in the rate base of electric utilities. The proposed rule, published in an NOPR in July 1981, would establish more precise criteria for determining whether a utility qualifies for inclusion of CWIP in the rate base and for assessing the amount of CWIP that a qualifying utility may include. It would establish specific grounds upon which the Commission may limit the amount of CWIP that would otherwise be included and would permit a utility on a claim of severe financial difficulty to collect CWIP subject to refund (NOPR, p. 2). The NOPR also invited the public to submit alternative proposals, supported by empirical data or other substantial evidence. (NOPR, p. 35).

The speech was delivered on October 27, 1981, before comments were due in RM81-38 or oral hearings were held.[1] The speech discussed the overall financial health of the electric utility industry and various policy options to address the industry's financial problems. The options fell into two broad categories: deregulation and improved regulation. The CWIP rulemaking was discussed as a target for improved regulation.

The American Public Power Association (APPA) requested that you withdraw from consideration of RM81-38 because "it appears that Chairman Butler already has prejudged two of the fundamental issues in this case—intergenerational inequities and the presumption against inclusion of CWIP [in the rate base]" (motion, p. 6). APPA cited the following remarks as evidence that you summarily dismissed other views, failed to recognize alternatives and have " 'an unalterably closed mind' on this issue" (*Id.*, footnote omitted):

'I shall *accept* . . . that the electric utility industry is, indeed, in poor financial shape. I shall also *disregard* the claims . . . that the financial condition of the utilities is improving' (emphasis in APPA, motion, p. 5).

'. . . there seems to me to be little merit to arguments about intergenerational inequities' (motion, p. 6).

'I disagree with the staff position—contained in our notice of proposed rulemaking—that there should be a presumption against the inclusion of CWIP in rate base' (motion, p. 6).

'There appears to be three reasons why . . . CWIP might be . . . desirable . . . 'Those reasons were: adequately compensating the company for lack of receipt of cash earnings, receiving revenues if a generating project fails or does not go on line, and meeting the capital market's preference for cash income (motion, p. 6).

Parties to an administrative proceeding have the right to a fair hearing before an impartial decisionmaker. *Joint School District No. 1* v. *Hortonville Education Association*, 426 U.S. 482, 493 (1976). But "impartial, . . . does not mean uninformed, unthinking or inarticulate," *Association of National Advertisers, Inc.* v. *FTC*, 627 F.2d 1151, 1174 (D.C. Cir. 1979), *cert. den.*, 447 U.S. 921 (1980). The requirements of due process recognize the necessity for rulemakers to formulate policy in a manner similar to legislative action and to delve into a subject sufficiently before initiating a rulemaking proceeding to conclude tentatively that some agency action is needed (*Id.*).

Because the object of rulemaking is the implementation of law or policy for the future, an agency member functions very much like a legislator when participating in rulemaking proceedings. *Action For Children's Television* v. *FCC*, 564 F.2d 458, 471 (D.C. Cir. 1977). The factual components of such decisions often cannot be separated from their policy foundations. *American Airlines, Inc.* v. *CAB*, 359 F.2d 624, 633 (D.C. Cir. 1966), *cert. den.*, 385 U.S. 843 (1966). Disqualification of a Commissioner in a rulemaking proceeding, therefore, has a serious policy effect which does not come into play when disqualification is in an adjudicatory setting.

For judges put aside personal views on the desirability of a law or program when adjudicating specific rights of specific parties.[2]

In agency rulemaking, on the other hand, the administrator is expected to bring his views, policies and insights to bear on the issues confronting the agency. *Sierra Club* v. *Costle*, 657 F.2d 298, 400-01 (D.C. Cir. 1981). The administrator's view, in turn, will continue to be reshaped through contact with the public (id.).[3] Disqualification of a Commissioner in a rulemaking proceeding is required "only when there has been a clear and convincing showing that an agency member has an unalterably closed mind on matters critical to the disposition of the rulemaking." *Association of National Advertisers, Inc. v. FTC, supra*, 627 F.2d at 1154.[4] In applying this standard, the

---

rule raises similar questions in connection with movants' representations as to the state of the law. *Cf. id.* EC 7-28: "A lawyer should . . . present any admissible evidence . . . unless he knows, or from facts within his knowledge should know, that such testimony or evidence is false . . ." *id.* Legal Ethics Committee Opinion No. 70: "[A] lawyer may not ethically participate in the preparation of testimony that he or she knows, or ought to know, is false *or misleading*." (Emphasis added.)

[1] Initial comments were due on October 30 and oral hearings were held on December 7 and 8.

[2] But even judges need not disqualify themselves from cases involving points of law with respect to which they previously had expressed an opinion. *Laird* v. *Tatum*, 409 U.S. 824, 831 (1972), memorandum of Rehnquist, J.

Generally, under 28 U.S.C. 455(a), a federal judge is required to disqualify himself where his "impartiality might reasonably be questioned." But lack of impartiality is measured by an objective standard of reasonableness. A Federal judge has a clear obligation not to recuse himself without a valid reason. *Simonson* v. *General Motors Corp.*, 425 F. Supp. 574 (E.D. Pa. 1976). Prior expressions of opinion on the legal issues involved in a proceeding do not serve as a basis for disqualification. "And even a judge's public comment giving a general impression of a state of facts does not present a rigidity against refinement and reflection that disqualifies him from sitting in judgment on a particular fact issue." *Association of National Advertisers, supra*, 627 F.2d at 1177 (concurring opinion of Judge Leventhal).

[3] "[T]he very legitimacy of general policymaking performed by unelected administrators depends in no small part upon the openness, accessibility, and the amenability of these officials to the needs and ideas of the public from whom their ultimate authority derives and upon whom their commands must fall" (*Id.*). Since public contacts, like the speech at issue here, nourish an administrator's body of ideas—indeed are the "bread and butter of the process of administration."—such contacts do not routinely lead to disqualification in the rulemaking setting.

[4] That case involved the disqualification of Chairman Pertschuk of the F.T.C. on the basis of public statements he had made expressing his strong belief in the harm advertising caused small children and in the need for stringent rules to curb that harm. For example, he stated in an interview that he "was committed to taking action on the problem of commercialization of children" and that "advertisers seize on the child's trust and exploit it as a weakness for their gain" (*Id.* at 1173, n. 56). In a television interview Chairman Pertschuk stated that "There's a very basic question in our society, and that is . . . the extent to which children are to be treated as commercial objects . . ." He expressed "some serious doubt as to whether any television advertising should be directed at a three or four or five-year-old, or a preschooler:"

They're not competent to understand the nature of the message. We've never treated children as commercial objects in our society . . . (*Id.* at 1174, n. 56).

In addition, in a letter to the head of the Food and Drug Administration, Chairman Pertschuk stated that "[s]etting legal theory aside, the truth is that we've been drawn into this issue because of the *conviction*, which I find you share, that one of the *evils* flowing from the *unfairness* of children's advertising is the resulting distortion of children's perceptions of nutritional values . . ." (*Id.* at 1191, emphasis in dissenting opinion of Judge Mackinnon). The FTC subsequently issued an NOPR concerning children's advertising.

The district court found that Chairman Pertschuk had prejudged issues involved in the rulemaking and ordered him disqualified. The court of appeals reversed, finding that Chairman Pertschuk's remarks represented discussion and perhaps advocacy of a legal theory that might support the exercise of the Commission's jurisdiction over children's advertising but that the Association had failed to demonstrate by these statements that he

statements offered as grounds for disqualification must be viewed as a whole (Id. at 1170). Your speech as a whole does not reveal an unalterably closed mind on the issues involved in the CWIP rulemaking.

The speech opened with a review of FERC rate jurisdiction over the wholesale sale of electric power. It indicated that the agency's impact on the privately-owned sector of the industry was limited. You stated that "the Commission has a regulatory obligation to treat all of its jurisdictional companies fairly, just as it has an obligation to see that consumers are treated fairly" (speech, p. 2). The speech also revealed an unfixed view about CWIP, or the rulemaking and its effects (speech, pp. 7–8):

The Commission currently has under way a rulemaking dealing with Construction Work In Progress (CWIP) to determine whether such construction should be placed in the rate base even though the plant has not yet begun to provide service * * *

* * * * *

What is at stake in this rulemaking? In one sense, a very great deal. On one hand, if all CWIP were immediately put into the rate base, the impact on rates would probably be substantial, and in some cases very substantial. On the other hand, if CWIP is not put in the rate base, AFUDC is accrued and added to the direct construction cost when the plant, in fact, comes on line. With the current high interest rates, it is quite probable that the accrued AFUDUC will double the value of the plant in the rate base and if the plant is large in relation to the size of the utility, the effect on electric rates could be dramatic * * *

* * * * *

In another sense, however, it is not at all clear that something important is at stake * * * From the standpoint of the company, the question therefore is, would it prefer to have an increase in cash earnings now or a larger increase in cash earnings in the future? For consumers, the question is, would they rather have an increase in electric rates now or a still larger increase in the future? The answer to those questions is not at all obvious * * *

The specific remarks that APPA cited do not demonstrate a closed mind on any of the issues involved in the rulemaking. APPA deleted important qualifying words from the remark it challenged first. The complete statement is as follows (speech, p. 3):

Rather than engage in a long discussion about such financial arcana as market-to-book ratios and interest ratios, I shall accept *for the purposes of these remarks*, that the electric utility industry is, indeed, in poor financial shape. I shall also disregard the claims—which seem usually to be followed by the post hoc conclusion that the Commission should therefore do nothing—that the financial condition of the utilities is improving. *On that basis*, the fundamental question raised by the current financial problems of the electric utility industry is, can effective price regulation be reconciled with the financial needs of an electric industry supported by private capacity? (emphasis supplied).

The presumption that the electric utility industry is in poor financial condition and the dismissal of claims that it is improving were assumptions that you clearly limited to the context of the speech.

The discussion of policy or advocacy of a legal theory is not sufficient to disqualify an administrator. *Association of National Advertisers, supra*, 627 F.2d at 1171. An agency could not exercise its broad policymaking powers if administrators were unable to discuss the wisdom of various regulatory positions. (*Id.* at 1170). Such discussion necessarily involves broad general characterizations of reality that are labelled "legislative fact." [8]

Statements of legislative fact are often employed when legal and policy arguments are presented. (*Id.* at 1172). For example, the speech expressed the legislative fact that incurrence of certain costs is associated with the utilities' obligation of continued adequate service (speech, p. 8). Next, the speech expressed the legislative fact that the benefits of that obligation inure as much to the present consumers of electrical service as to future consumers. The statements to which APPA primarily object ["there seems to me to be little merit to arguments about intergenerational inequities" and "[i]n that connection, I disagree with the staff position—contained in our notice of proposed rulemaking—that there should be a presumption against the inclusion of CWIP in rate base"] were made *on the basis* of those two legislative facts (speech, p. 9). *Association of National Advertisers* teaches that expression of viewpoints based on legal and factual assumptions do not bind an administrator to them.

As long as the administrator is free to change his mind upon consideration of the presentations made by those who would be affected, there is no basis for disqualification (*Id.* at 1172; concurring opinion of Judge Leventhal at 1176–77).[9]

The timing of the speech is also a factor bearing on continued participation. In *Association of National Advertisers*, the court noted that Chairman Pertschuk made the challenged comments prior to issuance of an NOPR and that the Chairman "remained free, both in theory and in reality, to change his mind upon consideration of the presentations made by those who would be affected" (*Id.* at 1172). Although your speech was given after the publication of the NOPR, it preceded both the due date for the comments and oral hearings in RM81–38. There was ample opportunity for individuals to present their views after the speech was delivered and there was no showing of unwillingness to change your views upon consideration of the public presentations. Indeed, the NOPR requested that the public submit alternative CWIP policies for agency consideration. The speech does not express any views about the theories or policies suggested by the parties.[7] Accordingly, it does not demonstrate a closed mind on the CWIP rulemaking.

A comparsion of your speech with those found not to warrant disqualification in other cases further supports the conclusion that disqualification is not warranted here. For example, although Chairman Pertschuk stated that he was "committed" to taking action on the problem of commercialization of children, the court ruled that such statements did not demonstrate that he was unwilling or unable to consider rationally argument that a final rule was unnecessary.

The court reached a similar result in *United Steel Workers of America* v. *Marshall*, 647 F.2d 1189, 1208 (D.C. Cir. 1980), *cert. den.*, 101 S.Ct. 3146 (1981). There, Assistant Secretary of Labor Bingham discussed the OSHA lead standard then pending before the Department of Labor in a speech delivered to a union group which was "passionately involved" in the rulemaking proceeding (*Id.* at 1208). Her remarks referred to the dangers of lead,[8] the economic feasibility of the lead standard,[9] and the need for a "medical removal protection provision,"[10] which were contested issues in the proceeding. Although the court believed that she served her agency poorly by making statements so susceptible to an inference of bias, it ruled that the statements represented discussion and she had not demonstrated an unalterably closed mind. The court reasoned that mere proof that she had taken a public position, or expressed strong views, or held an underlying philosophy with respect to an issue in dispute did not overcome the presumption that an administrative official is objective and "capable of judging a particular controversy fairly on the merits" (*Id.*, quoting

---

had an unalterably closed mind on the advertising issue.

[8] The nature of legislative fact is ordinarily general, without reference to specific parties.

Legislative facts are the facts which help the tribunal determine the content of law and of policy and help the tribunal to exercise its judgment or discretion in determining what course of action to take. (*Id.* at 1161–62, quoting Davis, *Judicial Notice*, 55 Columbia L. Rev. 945, 952–59 (1955)).

[9] Judge Leventhal explained:

It is appropriate and indeed mandatory for agency heads and staff to maintain contacts with industry and consumer groups, trade associations and press, congressmen of various persuasions and to present views in interviews, speeches, meetings, conventions, and testimony. The agency gathers information and perceptions in a myriad of ways and must use it for a myriad of purposes. With capacity and willingness to reconsider, there is no basis for disqualification (footnote omitted).

[7] In a subsequent speech delivered January 22, 1982, to "Wall Street Utility Group," you specifically noted the following in regard to the CWIP rulemaking:

We have received numerous written comments in response to our Notice of Proposed Rulemaking, and have also heard oral presentations. Reply comments were due January 15, 1982. We will carefully consider these written and oral pleadings in arriving at a decision.

[8] "I bet I could go down to the hospitals of this city and find a worker that is undergoing kidney dialysis, and I'll bet you a dinner that some of those workers have been in lead plants" (*Id.*).

[9] "I tell you I can smell a phony issue when I see one . . . and to say that safety and health regulations are inflationary is phony" (*Id.*).

[10] "Well, I learned to spell those words a long time ago on the Coke Oven Advisory Committee, and if you want to know how I feel about it, you need only look up my comments during those Committee hearings. As far as I am concerned it is impossible to have a lead standard without it" (*Id.*).

United States v. *Morgan*, 313 U.S. 409, 421 (1941)). APPA tries to distinguish the *United Steel Workers* case on the basis that the Assistant Secretary gave the speech after she had voted on the standard [but before the Secretary of Labor had signed it]. However, the court noted that "[h]ad she made these remarks before the rulemaking began or while OSHA was still receiving public comments, we might still have had to strain precedent to find grounds for her disqualification" (*Id.*, at 1210).

In a somewhat different context, the Supreme Court found that a schoolboard's participation in teacher contract negotiations that preceded and led to a strike did not prevent the board from conducting impartial disciplinary hearings against the striking teachers. *Joint School District No. 1* v. *Hortonville Education Association*, *supra*, 426 U.S. at 493. The court held that mere familiarity with the facts of a case gained by an agency in the performance of its statutory role did not disqualify a decisionmaker, nor was he disqualified simply because he took a public position on a policy issue related to the dispute.

The Supreme Court also rejected claims that statements to Congress by FTC Commissioners in which they equated a particular trade practice with illegal price fixing showed fatal prejudgment of the issue when it arose in a subsequent investigation proceeding before the agency. *FTC* v. *Cement Institute*, 333 U.S. 683, 701 (1948). The Court held that the earlier statements did not necessarily mean that the minds of the members were irrevocably closed. The Court found significant the fact that the industry had an opportunity after the statements to Congress were made to present evidence and argument to persuade the FTC that its business practices were legal.

In sum, because your speech indicated neither unwillingness to consider comments in the RM81-38 proceeding, nor unwillingness to abandon any of the views expressed in the speech in light of those comments, there is no reason to infer an unalterably closed mind on the issues in the CWIP proceeding.

18 CFR Part 2

[Docket No. RM83-21-000; Order No. 303]

Interpretation of Authority To Suspend Initial Rate Schedules

Issued: May 24, 1983.

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Final rule.

SUMMARY: The Federal Energy Regulatory Commission is amending its "Statements of General Policies and Interpretations" in 18 CFR Part 2, to provide for suspension of initial rate schedules under section 205 of the Federal Power Act and section 4 of the Natural Gas Act. These amendments conform the Commission's interpretative rulings to conclusions it drew in *Middle South* v. *Energy, Inc.* The Commission concluded that the Federal Power Act does not prohibit it from suspending initial rate schedules, establishing interim rates during the suspension period, and establishing contingent refund obligations.

DATES: This final rule is effective May 24, 1983.

FOR FURTHER INFORMATION CONTACT: Kenneth J. Malloy, Rulemaking and Legislative Analysis, Office of General Counsel, 825 North Capitol Street, NE., Washington, D.C. 20426, (202) 357-8033

SUPPLEMENTARY INFORMATION:

I. Introduction

The Federal Energy Regulatory Commission (Commission) is amending its regulations to set forth a revised interpretation of the Commission's authority to suspend initial rate schedules under section 205 of the Federal Power Act (FPA) and section 4 of the Natural Gas Act (NGA), and to establish interim rates during the suspension period if necessary. In *Middle South* v. *Energy, Inc.*, Docket No. ER82-66-001, 22 FERC ¶——(May 24, 1983), the Commission concluded that the Federal Power Act does not prohibit the Commission from suspending initial rate schedules, establishing interim rates during the suspension period and establishing contingent refund obligations. This amendment conforms the Commission's interpretative rules to reflect these conclusions.

The Commission's interpretation reverses the conclusion of the Federal Power Commission (FPC) in 1945 that an initial rate schedule cannot be suspended. The new interpretation is based upon a reexamination of the legislative history of the FPA, the well-recognized historical relationship between the FPA and the Interstate Commerce Act (ICA), and upon the Supreme Court's interpretation of comparable language in sections 6 and 15 of the ICA in the *Trans Alaska Pipeline Rate Cases*, 436 U.S. 631 (1978) (*TAPS*). The Commission also found in *Middle South* that the ability to suspend initial rate schedules under the FPA will enable the Commission to better meet its general charge to protect the public interest insofar as it is affected by jurisdictional transactions involving electric power. Since the pertinent statutory provisions of the FPA are substantially identical to the comparable provisions of the Natural Gas Act (NGA)[1] and since the interpretative rules regarding suspension under the NGA track those under the FPA, the NGA rules are also being amended to conform to the Commission's interpretation in *Middle South*.[2]

II. Background

Under section 205(e) of the FPA, the Commission has the authority to suspend electric rate increases for up to five months, after which the rate will go into effect.[3] After a hearing, the Commission may order a refund of such portions of an increased rate found not to be justified.

In interpreting the suspension and refund authority under section 205(e), the Commission has historically distinguished between an "initial" rate schedule and a "change" in a rate schedule for purposes of suspension.[4] Section 2.4(d) of the Commission's regulations makes this interpretation of section 205(e) explicit by stating the "[a]n initial rate schedule cannot be suspended." Section 2.4 of the Commission's regulations reflects the conclusion of the FPC on May 29, 1945, concerning its suspension powers under section 205(e) of the FPA. This conclusion was similarly applied to the Natural Gas Act in § 2.52.

Since May 29, 1945, the Commission has allowed initial rates to become effective without suspension. The Commission viewed the prospective corrective measures under section 206 of the FPA and section 5 of the NGA as comprising the exclusive remedy for

---

[1] The Supreme Court recently stated:

[T]he relevant provisions of the [FPA and the NGA] "are in all material respects substantially identical." FPA v. Sierra Pacific Power Co., 350 U.S. 348, 353 (1956). . . . [W]e therefore follow our established practice of citing interchangeably decisions interpreting the pertinent sections of the two statutes. . . .

Arkansas Louisiana Gas Co. v. Hall, 453 U.S. 571, 577 n.7 (1981).

[2] The Commission expects that suspension of initial rates under the NGA will not frequently occur because of the Commission's certificate authority under section 7(e) of the NGA. Under section 7(e), the Commission may condition a certificate with an adjustment to the proposed initial rate to ensure that service is initiated under rates consistent with the public interest. Refunds of amounts collected under temporary certificates may also be conditions of permanent certification.

[3] Section 205(e), 16 U.S.C. 824d(e) (1976), states in pertinent part:

[T]he Commission . . . may suspend the operation of such schedule . . . but not for a longer period than five months . . . [T]he Commission may . . . require such public utility . . . to refund with interest . . . such portion of such increased rates or charges as by its decision shall be found not justified. . . .

[4] The Commission's regulations concomitantly distinguish between a change in rate schedule and an initial rate schedule in 18 CFR 2.4, 35.1 (b) and (c). Sections 35.12 and 35.13, respectively, contain the filing requirements for initial rate schedules and changes in rate schedules.

potentially unjust or unreasonable initial rates.

III. Discussion

The Commission determined in *Middle South* that the interpretation and conclusions reached in 1945 regarding its suspension power were and are overly narrow. Upon reexamination of the statute and legislative history in light of the *TAPS* case, the Commission concluded in *Middle South* that the historic distinction between initial and changed rates was overly restrictive and unnecessarily hampers the Commission in carrying out its statutory mandate.

The Commission found that the previous interpretation of section 205 of the FPA, expressed in 18 CFR 2.4(d), rests on a narrow reading of subsections (c), (d), and (e) of section 205. Subsection (e) provides for suspension of "any such new schedule." The traditional interpretation holds that this phrase refers back to the immediately preceding subsection (d), which provides that:

> Unless the Commission otherwise orders, *no change shall be made* by any public utility *in any such rates*, charges, classification, or service, or in any rule, regulation, or contract relating thereto, except after sixty days notice to the Commission and to the public. Such notice shall be given by filing with the Commission and keeping open for public inspection *new schedules* stating plainly the change or changes to be made in the schedule or schedules then in force. . . .

16 U.S.C. 824d(d) (1978) (emphasis added).

Thus, the phrase "such new schedule[s]" in section 205(e) has been interpreted to mean only the changed rate schedules referred to in subsection (d). The alternative reading, which the Commission here adopts, is that "such new schedule" most logically applies to both sections 205(d) and 205(c). Section 205(c) requires the utility to file "schedules showing *all* rates and charges for any transmission or sale subject to the jurisdiction of the Commission. . . ." (emphasis added). Thus, under the more expansive reading, the suspension authority extends to new initial rates as well as to newly changed rates.

The Commission found that the reference to a change of rates in section 205(e) most logically relates to changes in those preexisting rate schedules filed with the Commission for the first time as a result of the enactment of section 205. Under this reading, any rate schedule for a new service filed after the first-ever filing would be regarded as a change of service or rate. In effect, section 205 permits "grandfathering" of rate schedules existing at the time of enactment.[5]

The Commission stated that this reading is consistent with the fundamental purpose of the Federal Power Act, that is, to maintain rates that are just and reasonable to both the utility and the consumer. The Commission took as its guide the reasoning of the Supreme Court in *TAPS*. In *TAPS*, the Court found that the Interstate Commerce Commission (ICC) possessed necessarily implied authority pursuant to section 15(7) of the ICA [6] to suspend initial rates of oil pipeline companies under the rate setting scheme of Title I of that Act, which is similar in language, structure, and purpose to the FPA.[7]

The keystone of the Court's analysis was its conclusion that the absence of authority to suspend initial rates is not consistent with the primary purpose of the ICA to maintain reasonable charges for the regulated services. The Court reasoned that absent such suspension authority, the Act would provide no mechanism tending to make initial rates reasonable. This would be particularly the case where (as in *TAPS*) the shippers and the pipeline owners were affiliates. The Court was not deterred in this regard by its admission that the suspension authority was added [8] to deal with the "mischief of unchecked changes in rates." 436 U.S. at 644. It found that unless the legislative history of the statute compelled the opposite conclusion, the suspension power would necessarily apply to initial as well as changed rates because the mischiefs flowing from each are the same.

The Court did not find any significance in the phrase "change of rate" in section 15(7). It noted that Congress, in enacting Titles II, III, and IV of the Act to extend the ICC's original ratemaking jurisdiction to additional modes of transportation, unequivocally indicated that initial rates were new rates capable of being suspended, and yet references to "changed" rates appear in the same places they appear in Title I.[9]

The Commission found that the applicability of the reasoning in the *TAPS* case to this Commission's authority under the FPA is clear.[10] Absent authority to suspend initial rates, the Commission's ability to ensure their reasonableness would be limited to orders with prospective effect made pursuant to section 206. Thus the filing utility's customers would be forced to pay any initial rate ultimately found to be unreasonable until the Commission issued an order pursuant to section 206. In the formal hearing context, this could be a lengthy period. In this respect, absence of initial rate suspension authority is inconsistent with the fundamental requirement of section 205(a) that "all" rates shall be just and reasonable. The Commission stated that it was aware of no rationale in the legislative history to explain why an unlawful initial rate should be viewed as less onerous than an unlawful change in rate.

The Commission next considered the issue of whether suspension of initial rates would be prejudicial to the utility. It noted that the Court in *TAPS* considered this matter and concluded that the ICC has power ancillary to its authority to suspend initial rates under the ICA to set maximum interim rates

---

[5] The legislative history is not clear on this point. *See* H.R. 5423, 74th Cong., 1st Sess. (1935); S. 2796, 74th Cong., 1st Sess. (1935); S. Rep. No. 621, 74th Cong., 1st Sess. 15 (1935); H.R. Rep. No. 1318, 74th Cong., 1st Sess. 29 (1935).

[6] 49 U.S.C. 15(7) (1976). Authority to suspend oil pipeline rates was transferred from the ICC to this Commission pursuant to the Department of Energy Organization Act, 42 U.S.C. 7101–7352 (Supp. IV 1980), and Executive Order No. 12,009, 3 CFR Part 142 (1978). The relevant language of section 15(7) pertaining to suspension is as follows:

> Whenever there shall be filed with the Commission any schedule stating a new individual or joint rate, fare, or charge, . . . the Commission shall have . . . authority . . . to enter upon a hearing concerning the lawfulness of such rate, fare, [or] charge . . .; and pending such hearing and the decision thereon the Commission, upon filing with such schedule and delivering to the carrier or carriers affected thereby a statement in writing of its reasons for such suspension, may from time to time suspend the operation of such schedule and defer the use of such rate, fare, [or] charge . . ., but not for a longer period than seven months beyond the time when it would otherwise go into effect . . . .

[7] These parallels are obvious upon reading the two statutes and have been frequently noted by the courts. *See* Aberdeen & Rockfish Ry. Co. v. SCRAP, 409 U.S. 1207, 1215 (Opinion in chambers (1972)); Arrow Trans. Co. v. Southern Ry. Co., 372 U.S. 658, 666 (1963); Papago Tribal Util. Auth. v. FERC, 628 F.2d 235, 248 N.19 (D.C. Cir. 1980).

[8] Subsection 15(7) was added to the Act by the Mann-Elkins Act of 1910, 36 Stat. 552 (1910).

[9] A second line of reasoning was that if the ICC were not given authority to suspend initial rates, Congress must not have intended to foreclose any equity powers of the courts to enjoin common carrier rates. This could lead to diverse conclusions by the courts, thwarting the regulatory purpose of uniformity of rates. Although the FPA does not require uniformity of rates, it does prohibit undue discrimination in rates, which was also a concern noted by the Court in *TAPS*, 436 U.S. at 641. Thus, the exercise of injunctive authority by the courts is likewise inconsistent with the scheme of the FPA. Further, as noted by the court in Papago Tribal Util v. FERC., 628 F.2d 235, 242 (D.C. Cir. 1980), any judicial authority to suspend rates "would create the hazard of forbidden intrusion into the administrative domain, . . . because it necessarily would involve inquiry into the reasonableness of rates." (Citing Arrow Transp. Co. v. Southern Ry. Co., 372 U.S. 658 (1963) (footnote omitted).

[10] These Titles of the ICA were enacted in the 1930's contemporaneously with FPA.

during the suspension period. The Court further held that part of that ancillary power is the power to order refunds of amounts collected under the interim rates during the suspension period and under the initial rates collected after the suspension period expires where such rates are found to be unreasonable. 436 U.S. at 654–657. This was held to be the case notwithstanding the lack of any express authority to do so in the Act and that the express refund authority of section 15(7) is limited to increased rates or changes at the end of the suspension period.

The Commission found one contrary argument that merited discussion. In *United Gas Pipeline Co. v. Mobile Gas Serv. Corp.*, 350 U.S. 332 (1956) (*Mobile*), the Supreme Court noted a marked contrast between the ICA and the NGA, in that the former in effect "precludes private rate agreements by its requirement that the rates to all shippers be uniform," whereas "the [NGA] permits the relations between the parties to be established initially by contract." *Id.* at 338–39. The reason for the ICA scheme was the administrative impossibility of policing thousands of individual railroad retail transactions. The Court noted by contrast the relatively few wholesale natural gas transactions and the substantial investment that may be required for the service of a particular customer, creating a need for "individualized arrangements." *Id.* The same reasoning, of course, would apply to wholesale transactions under the FPA. Thus, the argument would go, Congress could not have intended to give the parties authority to negotiate individualized contracts for new services and, at the same time, undercut that authority by permitting the Commission to suspend the initial rates resulting therefrom. The mechanism for ensuring the reasonableness of the initial rates would be the parties' arms length negotiations.

The Commission found that the problem with this argument is that the logic would apply equally to *changes* in contracts negotiated at arms length. Such contract changes are clearly subject to suspension and refund. The more salient consideration was found to be that, notwithstanding that private rate agreements are authorized by the FPA, the Commission is given final authority to modify those agreements in order to carry out its mandate to ensure that all rates be just and reasonable. *See Mobile, id.* at 340–41 (construing the Commission's authority under the parallel provisions of the NGA). Furthermore, while an initial rate may represent the product of negotiations between the parties, this is not necessarily the case. The reality is that a new rate for new service may be proffered unilaterally by a utility just as in the case of a changed rate.

Finally, the Commission noted that the Supreme Court found in *TAPS* that the ICC's authority to order "reparations" under the ICA for charges ultimately found to be unreasonable was not an adequate remedy because (1) the damage suffered through loss of competitive advantage would likely exceed the difference between the charged rate and the just and reasonable rate, and (2) the shippers have more incentive to pass along unreasonable rates in the prices of their goods than to seek reparations, thus shifting the burden to the consumer. 436 U.S. at 640–41. The Commission found that the case for its authority to suspend initial rates under the FPA on this basis is even stronger because the Commission, unlike the ICC, has no authority to order "reparations." It is thus that much more difficult for the Commission to enforce the just and reasonable standard absent suspension and refund authority with respect to initial rates.

The Commission noted that there are judicial statements supportive of the restrictive interpretations it had followed in the past. *See Mobile, supra; Indiana & Michigan Mun. Distrib. Assoc. v. FERC, (IMMDA)* 659 F.2d 1193 (D.C. Cir. 1981); *Florida Power & Light Co. v. FERC*, 617 F.2d 809 (D.C. Cir. 1980); *Otter Tail Power Co. v. FERC*, 583 F.2d 399 (8th Cir. 1978). It concluded, however, that these statements are *dicta*. In *Florida Power* and *Otter Tail* the courts stated that they were addressing only the question of whether the Commission had correctly classified the rate schedules as changed rather than initial rates. The Court in *Mobile* made a passing reference to the Commission's suspension authority under the NGA during the course of a discussion of the general statutory scheme, included to highlight a different question which was at issue in that case.[11] In *IMMDA*, the court, while strongly agreeing with the Commission's view that it could not suspend initial rates, made it clear that the basic statutory scheme was not in dispute in that case, 659 F.2d at 1196.

The Commission also concluded in *Middle South* that it has concomitant authority to establish interim rates during the suspension period of an initial rate. This view is premised on the holding of the Supreme Court in the *TAPS* case that exercise of a similar authority to set interim rates by the I.C.C. when it suspended an intitial rate was "an intelligent and practical exercise of its suspension power," particularly in light of the alternative, *viz.*, requiring a filing company to submit and resubmit rates until it hits upon one which is allowed to take effect. 436 U.S. at 651–654.

Likewise, the Commission asserted and exercised its ancillary power to make MSE's initial rates subject to refund, again citing the Supreme Court's discussion of section 15(7) of the Interstate Commerce Act which is virtually identical in its pertinent provisions to section 205(e) of the FPA. In the *TAPS* case, the Court found the refund conditions imposed on both the interim and filed initial rates to be a "legitimate, reasonable, and direct adjunct to the Commission's explicit statutory power to suspend rates pending investigation. . . ." 436 U.S. at 654–657.

IV. Conclusion

In light of the Commission's decision in *Middle South*, the FPC's post-1945 policy, as now stated in 18 CFR 2.4(d), can no longer be considered a proper interpretation of the scope of the Commission's statutory suspension authority under section 205(e) of the FPA. Because section 4 of the NGA is identical in its pertinent provisions to section 205 of the FPA,[12] the Commission now interprets both the FPA and NGA to permit suspension of initial rates. The Commission also believes that it has the correlative authority to establish interim rates, if necessary, in those instances in which it suspends an initial rate, and to make both the interim and initial rates subject to refund. Sections 2.4(d) and 2.52 of the Commission's regulations are, therefore, being amended to reflect this interpretation.

V. Effective Date

The Administrative Procedure Act exempts interpretative rules from both the notice and comment requirements, 5

[11] The Commission noted that in *Mobile*, the Court focused on the distinction between "existing" rates and "new" rates (350 U.S. at 340) and between "long established" versus "newly change" rates (*id.* at 341) rather than on a distinction between "initial" and "changed" rates. The fact that a rate was "new" seemed more important in the Court's discussion than the fact that it was "changed."

[12] The rate setting provisions of the NGA have been found by the courts to be substantially identical to those of the FPA. FPC v. Sierra Pacific Power Co., 350 U.S. 348, 350–51, 353 (1956); Indiana & Michigan Power Co. v. FPC, 502 F.2d 336, 341 (D.C. Cir. 1974); Borough of Lansdale, Pa. v. FPC, 494 F.2d 1104, 1110–11 (D.C. Cir. 1974).

U.S.C. 553(b)(A) (1976), and the requirement that publication be made thirty days before the effective date of the rule, *id.* at section 553(d). Since this rule conforms the statements of interpretation of the Commission's statutory authority under both the FPA and the NGA to the decision reached in *Middle South,* this rule shall be effective May 24, 1983, without prior notice and comment.

List of Subjects in 18 CFR Part 2

Administrative practice and procedure, Electric power, Environmental impact statements, Natural gas, Pipelines.

(Natural Gas Act, 15 U.S.C. 717–717w (1976 & Supp. IV 1980); Federal Power Act, 16 U.S.C. 791a–828c (1976 & Supp. IV 1980); Department of Energy Organization Act, 42 U.S.C. 7101–7352 (Supp. IV 1980); Executive Order 12,009, 3 CFR Part 142 (1978); 5 U.S.C. 553 (1976))

In consideration of the foregoing, the Commission amends Part 2, Subchapter A, Chapter I of Title 18, Code of Federal Regulations, as set forth below.

By the Commission.

Kenneth F. Plumb,

Secretary.

PART 2—[AMENDED]

1. In § 2.4, paragraph (d) is revised to read as follows:

§ 2.4 Suspension of rate schedules.

* * * * *

(d) An initial rate schedule can be suspended and an interim rate established; both can be made subject to refund.

* * * * *

2. Section 2.52 is revised to read as follows:

§ 2.52 Suspension of rate schedules.

The interpretation stated in § 2.4 applies as well to the suspension of rate schedules under section 4 of the Natural Gas Act.

BILLING CODE 6717–01–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Fair Housing and Equal Opportunity

24 CFR Part 111

[Docket No. R–83–1062]

Fair Housing Assistance Program; Program Description and Eligibility Criteria

AGENCY: Office of the Assistant Secretary for Fair Housing and Equal Opportunity, HUD.

ACTION: Interim rule; request for comments.

SUMMARY: This interim rule amends the regulations in 24 CFR Part 111, which describe the program components for State and local Fair Housing agencies and set forth the threshold eligibility criteria for their participation in the Fair Housing Assistance Program (FHAP). The purpose of the amendment is to permit State and local Fair Housing agencies to qualify for training support funding, without regard to the number of years the agency has participated in the Fair Housing Assistance Program.

DATES: The rule is effective July 15, 1983. Comments are due August 1, 1983.

ADDRESS: Interested persons are invited to submit comments regarding the rule to the Office of General Counsel, Rules Docket Clerk, Room 10278, Department of Housing and Urban Development, 451 7th Street, S.W., Washington, D.C. 20410. Comments should refer to above docket number and title. A copy of each comment submitted will be available for public inspection and copying during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Steven J. Sacks, Director, Federal, State and Local Programs Division, Room 5214, Department of Housing and Urban Development, 451 7th Street, S.W., Washington, D.C. 20410 (202) 426–3500. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Department is modifying the noncompetitive component of its Fair Housing Assistance Program to make training support funds available to all participating agencies, regardless of the number of years an agency has participated in the program. The current rule provides training support funds to agencies only during their first and second years of participation.

Financial assistance for training is provided to assure that the State and local agencies have the skills and technical knowledge required to carry out their enforcement responsibilities. An essential element in administering an effective State or local fair housing program is the training of personnel. Fair Housing Law is a rapidly changing area, and the Department recognizes that intermittent, informal training is unlikely to provide the assistance and support necessary for State and local agencies to process housing discrimination complaints effectively, and in conformity with Federal standards. In order to assure consistency in the administration of, and approaches to, fair housing enforcement, the training component of the Fair Housing Assistance Program is used for the expenses asociated with providing training to State and local agency personnel. Currently, agencies participating in the program after their second year are required to attend training in order to meet the performance requirements of their cooperative agreements, but are not eligible to receive training support funds. This amendment will allow agencies to apply for these funds.

The Department regards this rulemaking as a rational response to a perceived problem in its funding policy, and believes that it is in the public interest to make this rule effective as quickly as possible, so that all participating agencies will be eligible to receive training support money during fiscal year 1983. Accordingly, this rulemaking is being promulgated as an interim rule. However, the Department invites public comment on this policy change and will take that comment into account in promulgating the final rule.

Information collection requirements contained in this regulation (§ 111.105(b)) have been approved by the Office of Management and Budget under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–511) and have been assigned OMB control number 2529–0005.

This rule does not constitute a "major rule" as that term is defined in section 1(b) of the Executive Order on Federal Regulation issued by the President on February 17, 1981. Analysis of the rule indicates that it does not: (1) Have an annual effect on the economy of $100 million or more; (2) cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (3) have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations in 24 CFR Part 50 that implement section 102(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection and copying during regular business hours in the Office of the Rules Docket Clerk, Room 10278, 451 7th Street, S.W., Washington, D.C. 20410.

Pursuant to the provisions of 5 U.S.C. 605(b) (the Regulatory Flexibility Act), the Undersigned hereby certifies that

this rule would not have a significant economic impact on a substantial number of small entities, because the training support funds afforded to State and local agencies to enable their participation in HUD-sponsored training should benefit all governmental jurisdictions, irrespective of their size.

The Catalog of Federal Domestic Assistance Program number and title is 14.401, Fair Housing Assistance Program.

This rule is not listed in the Department's Semiannual Agenda of Regulations published on October 28, 1982 (47 FR 48422) pursuant to Executive Order 12291 and the Regulatory Flexibility Act.

List of Subjects in 24 CFR Part 111

Fair housing, Cooperative agreements, Grant programs—housing and community development.

PART 111—[AMENDED]

Accordingly, 24 CFR Part 111 is amended as follows:

1. In § 111.102 paragraph (c) is revised to read as follows:

§ 111.102 Program description for type I—non-competitive funding.

* * * * *

(c) Training. Funding will be available to support training designed to provide skills and technical knowledge in the administration of fair housing laws and programs. HUD-sponsored training support funds will be available on a non-competitive basis to participating agencies as a fixed percentage of their levels of funding under paragraph (a) or (b) of this section, not to exceed a set maximum. Any agency otherwise eligible to receive funding under paragraph (a) or (b) of this section, but electing not to apply for such funding, may apply for training support funds up to the level to which the agency would have been entitled, had it applied for funding under paragraph (a) or (b) of this section.

* * * * *

2. Section 111.105 is amended by revising paragraphs (a)(2), (a)(3) and (b), and by adding a new paragraph (a)(4), as set forth below:

§ 111.105 Criteria for type I-non-competitive funding.

(a) * * *

(2) Be prepared to develop procedures acceptable to HUD for cooperating with other substantially equivalent agencies having concurrent jurisdiction;

(3) Not unilaterally reduce the level of financial resources currently committed to fair housing complaint processing. Budget and staff reductions occasioned by legislative action outside the control of the agency will not result in a per se determination of ineligibility. HUD will, however, take such actions into consideration in assessing the ongoing viability of an agency's fair housing program; and

(4) Participate in training sponsored by HUD and designed in consultation between HUD and agency representatives to provide uniform skills and technical knowledge.

(b) In addition, all first and second year program participants seeking capacity building support must demonstrate that there is, within the geographic jurisdiction of the agency, a sufficient volume of current or potential complaint activity to justify the requested allocation of funds.

(OMB control number 2529-0005).

(Title VIII, Civil Rights Act of 1968, 42 U.S.C. 3601-30 Section 7(d), Department of Housing and Urban Development Act, 42 U.S.C. 3535(d))

Dated: May 9, 1983.

Antonio Monroig,

Assistant Secretary for Fair Housing and Equal Opportunity.

BILLING CODE 4210-28-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[A-9-FRL 2343-4]

Approval and Promulgation of Implementation Plans; California State Implementation Plan Revision

AGENCY: Environmental Protection Agency.

ACTION: Notice of Final Rulemaking.

SUMMARY: The Environmental Protection Agency (EPA) takes final action to approve revisions to rules of seven Air Pollution Districts submitted by the California Air Resources Board (CARB) as revisions to the California State Implementation Plan (SIP). These revisions are generally administrative and retain the previous emission control requirements. EPA reviewed these rules with respect to the Clean Air Act and determined that they should be approved. In addition, this notice corrects an administrative error by updating 40 CFR 52.222, *Extensions*, to be consistent with recent updates to 40 CFR 52.238, *Attainment dates for national standards*.

DATE: This action is effective August 1, 1983.

ADDRESSES: A copy of the SIP revisions are available for public inspection during normal business hours at the EPA Region 9 office and at the following locations.

Public Information Reference Unit, Environmental Protection Agency, Library, 401 "M" Street SW., Room 2404, Washington, D.C. 20460

Library, Office of the Federal Register, 1100 "L" Street NW., Room 8401, Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Douglas Grano, Chief, State Implementation Plan Section, Air Programs Branch, Air Management Division, Environmental Protection Agency, Region 9, 215 Fremont Street, San Francisco, CA 94105, (415) 974-7641.

SUPPLEMENTARY INFORMATION: The CARB submitted the following rules as SIP revisions on the indicated dates:

August 6, 1982

Butte County

Rule 4-6 State Ambient Air Quality Standards
Rule 4-6A Implementation Plans

November 8, 1982

Sacramento County

Rule 59 Appeals
Rule 70 Stationary Source Permit Fees

Santa Barbara County

Rule 210D Permit Fees

Stanislaus County

Rule 110 Equipment Breakdown
Rule 202 Exemptions
Rule 302 Permit Fee Schedules

South Coast AQMD

Rule 708.3 Transportation Management Plans
Rule 1105 Fluid Catalytic Cracking Units—Oxides of Sulfur

Tulare County

Rule 519 Emergency Variance

Yolo-Solano County

Rule 6.1 Agricultural Burning

As described below, these rule revisions are administrative and do not significantly impact current emission control requirements.

Butte County—Rule 4–6 (State Ambient Air Quality Standards) states that all references in Section 4–5 to national ambient air quality standards shall be interpreted to include state ambient air quality standards. Rule 4–6A (Implementation Plans) allows the District to issue a permit to construct for new stationary sources (which are subject to Section 5 of Section 4–5) only if all district regulations are being carried out in accordance with the presently approved State Implementation Plan.

Sacramento County—Rule 59 (Appeals) expands the existing appeal procedures. Rule 70 (Stationary Source Permit Fees) reduces fees for gas stations not subject to Phase II vapor recovery.

Santa Barbara County—Rule 210D (Permit Fees) exempts the district itself from permit fees.

Stanislaus County—Rule 110 (Equipment Breakdown) adds Phase II vapor recovery to the breakdown requirements. Rule 202 (Exemptions) deletes permit rule exemptions for brazing, soldering and welding equipment. Rule 302 (Permit Fee Schedules) allows an increase in permit fees.

South Coast AQMD—Rule 708.3 (Transportation Management Plans) changes the title from Traffic Abatement Plan to Transportation Management Plans. Rule 1105 (Fluid Catalytic Cracking Units—Oxides of Sulfur) postpones the implementation dates for Phase II by two years in order to provide enough time for catalyst manufacturers and refineries to resolve remaining problems with the application of sulfur dioxide (SO_2). The rule also requires the calculation of mass emissions of SO_2 from the regenerator based on the SO_2 concentration obtained from SO_2 monitors.

Tulare County—Rule 519 (Emergency Variance) now provides that no emergency variance shall be granted unless the attainment or maintenance of the national ambient air quality standards will not be endangered.

Yolo-Solano County—Rule 6.1 (Agricultural Burning) removes limitations on the County and allows the District to fully participate in the Sacramento Valley Air Basin experimental agricultural burning program. The experimental program is designed to allow burning while decreasing the particulate emissions.

Under Section 110 of the Clean Air Act as amended, and 40 CFR Part 51, EPA is required to approve or disapprove these regulations as SIP revisions. EPA has evaluated all rules submitted by the CARB and they have been found to be in accordance with EPA policy and 40 CFR Part 51. EPA's evaluation of the submitted rules is available at the EPA Library in Washington, D.C. and the Region 9 office.

The purpose of this notice is to approve all the rule revisions listed above and to incorporate them into the California SIP. EPA is approving these rule revisions without prior proposal because the revisions are noncontroversial, have limited impact, and no comments are anticipated. The public should be advised that this action will be effective 60 days from the date of this **Federal Register** notice. If EPA receives notice within 30 days that someone wishes to submit adverse or critical comments, the approval will be withdrawn and a subsequent notice will be published before the effective date. The subsequent notice will indefinitely postpone the effective date, modify the final action to a proposed action, and establish a comment period.

This notice also corrects an administrative error made in final notices on the Santa Barbara and Stanislaus County 1979 nonattainment area plans (NAPs). Although the attainment date extension requests for carbon monoxide or ozone in these California NAPs were approved, they were only codified in 40 CFR 52.238, *Attainment dates for national standards.* This notice corrects 40 CFR 52.222, *Extensions,* to be consistent with § 52.238 and the Santa Barbara NAP. For Stanislaus County, § 52.238 is also corrected with respect to carbon monoxide. This notice also corrects an administrative error made in the July 1, 1982 (47 FR 28822) Notice of Final Rulemaking, 40 CFR 52.255, *Gasoline transfer vapor control,* to reinstate subparagraphs which were inadvertently omitted.

Under 5 U.S.C. 605(b), the Administrator has certified that SIP approvals do not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.) The Office of Management and Budget has exempted this rule from the requirements of Section 3 of Executive Order 12291.

Under the Clean Air Act, any petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by (60 days from today). This action may not be challenged later in proceedings to enforce its requirements.

Incorporation by reference of the State Implementation Plan for the State of California was approved by the Director of the Federal Register on July 1, 1982.

List of Subjects in 40 CFR Part 52

Air pollution control, Ozone, Sulfur dioxides, Nitrogen dioxide, Lead, Particulate matter, Carbon monoxide, Hydrocarbons, Intergovernmental relations.

(Sec. 110, 172, and 301(a), Clean Air Act, as amended (42 U.S.C. 7410, 7502 and 7001(a)))

Dated: May 10, 1983.

Lee L. Verstandig,

Acting Administrator.

PART 52—[AMENDED]

Subpart F of Part 52, Chapter I, Title 40 of the Code of Federal Regulations is amended as follows:

Subpart F—California

1. Section 52.220 is amended by adding paragraphs (c)(124)(xii)(A) and (c)(126) (i)(A)–(vi)(A) to read as follows:

§ 52.220 Identification of plan.

* * * * * *

(c) * * *

(124) * * *

(xii) Butte County APCD.

(A) New or amended Rules 4–6 and 4–6A.

* * * * * *

(126) Revised regulations for the following APCDs submitted on November 8, 1982 by the Governor's designee.

(i) Sacramento County APCD.

(A) New or amended Rules 59 and 70.

(ii) Santa Barbara County APCD.

(A) New or amended Rule 210D.

(iii) Stanislaus County APCD.

(A) New or amended Rules 110, 202, and 302.

(iv) South Coast AQMD.

(A) New or amended Rules 708.3 and 1105.

(v) Tulare County APCD.

(A) New or amended Rule 519.

(vi) Yolo-Solano County APCD.

(A) New or amended Rule 6.1.

* * * * * *

2. Section 52.222 is amended by revising paragraph (b)(6)(i) and by adding paragraph (d)(3)(i) as follows:

§ 52.222 Extensions.

* * * * * *

(b) * * *

(6) * * *

(i) Santa Barbara County Nonattainment Area for TSP and CO.

* * * * * *

(d) * * *

(3) South Central Coast Air Basin.

(i) Santa Barbara County Nonattainment Area for O_3.

* * * * *

3. In § 52.238 the entries for the San Joaquin Valley Intrastate are revised as follows:

§ 52.238 Attainment dates for national standards.

* * * * *

Air quality control region and [illegible]	Pollutants						
	TSP		SO_2		NO_2	CO	O_3
	Primary	Secondary	Primary	Secondary			
* *	*	*	*	*	*	*	*
San Joaquin Valley Intrastate							
g. Stanislaus County	h	h	e	e	e	h	i
* *	*	*	*	*	*	*	*

4. Section 52.255 is amended by redesignating paragraph (b)(1)(x) as paragraph (b)(1)(i) and removing paragraph (b)(1) (ii)–(ix) reserved and adding a new paragraph (b)(2), to read as follows:

§ 52.255 Gasoline transfer vapor control.

* * * * *

(b) * * *

(1) * * *

(i) Ventura County APCD.

(2) The control requirements of this section are rescinded in the following air pollution control districts.

(i) South Coast AQMD.

(ii) Santa Barbara County APCD.

(iii) Placer County APCD (Mountain Counties Air Basin portion).

(iv) Sacramento County APCD.

(v) Yolo-Solano County APCD.

(vi) Butte County APCD.

(vii) Glenn County APCD.

BILLING CODE 6560-50-M

---

40 CFR Part 180

[PP 9E2166/R562; PH FRL 2374-7]

Tolerances and Exemptions From Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities; Dicamba

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final Rule.

SUMMARY: This rule establishes tolerances for the combined residues of the herbicide dicamba and its metabolite in or on the raw agricultural commodities proso millet grain and straw. The regulation to establish maximum permissible levels for residues of the herbicide in or on the commodities was submitted, pursuant to a petition, by the Interregional Research Project No. 4 (IR–4).

EFFECTIVE DATE: Effective on June 1, 1983.

ADDRESS: Written objections may be submitted to the: Hearing Clerk (A–110), Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Donald Stubbs, Emergency Response and Minor Use Section, Registration Division (TS–767C), Office of Pesticide Programs, Environmental Protection Agency, R. 716B, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202; (703–557–1192).

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule published in the **Federal Register** of April 20, 1983 (48 FR 16912) which announced that the Interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, had submitted pesticide petition 9E2166 to EPA on behalf of the IR–4 Technical Committee and the Agricultural Experiment Stations of Colorado, Kansas, Minnesota, Nebraska, North Dakota, South Dakota, and Wyoming.

This petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of tolerances for the combined residues of the herbicide dicamba (3,6-dichloro-*o*-anisic acid) and its metabolite, 3,6-dichloro-5-hydroxy-*o*-anisic acid in or on the raw agricultural commodities proso millet grain and straw at 0.05 parts per million (ppm). The petition was later amended to propose tolerance levels of 0.5 ppm in or on the commodities.

There were no comments or requests for referral to an advisory committee received in response to the proposed rule.

The data submitted in the petition and other relevant material have been evaluated and discussed in the notice of proposed rulemaking. The pesticide is considered useful for the purpose for which the tolerances are sought. It is concluded that the tolerances would protect the public health and are established as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this notice in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above. Such objections should specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

(Sec. 408(e), 68 Stat. 514 (21 U.S.C. 346(a)(e)))

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests.

Dated: May 25, 1983.

Edwin L. Johnson,

Director, Office of Pesticide Programs.

PART 180—[AMENDED]

Therefore, 40 CFR 180.227(a) is amended by adding and alphabetically inserting the raw agricultural commodities proso millet grain and straw to read as follows:

§ 180.227 Dicamba; tolerances for residues.

(a) * * *

Commodities	Parts per million
* * * * *	
Millet, proso, grain	0.5
Millet, proso, straw	0.5
* * * * *	

[FR Doc. 83-14739 Filed 5-31-83; 8:45 am]

BILLING CODE 6560-50-M

40 CFR Part 180

[PP 1E2514/R558; PH-FRL 2373-7]

Tolerances and Exemptions From Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities; Permethrin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes a tolerance for the combined residues of the insecticide permethrin and its metabolites in or on the raw agricultural commodity kiwifruit. This regulation to establish a maximum permissible level for the combined residues of permethrin in or on kiwifruit was requested, pursuant to a petition, by ICI Americas, Inc.

EFFECTIVE DATE: Effective on June 1, 1983.

ADDRESS: Written objections may be submitted to the: Hearing Clerk (A-110), Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Timothy Gardner, Product manager (PM) 17, Registration Division (TS-767C), Office of Pesticide Programs, Environmental Protection Agency, Rm. 207, CM#2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703-557-2690).

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule published in the **Federal Register** of April 6, 1983 (48 FR 14982) which announced that ICI Americas, Inc., Corcord Pike and New Murphy Road Wilmington, DE 19897, had submitted pesticide petition 1E2514 proposing to amend 40 CFR 180.378 by establishing a tolerance for the combined residues of the insecticide permethrin ((3-phenoxyphenyl) methyl 3-(2,2-dichloroethenyl)-2,2-dimethylcylopropanecarboxylate) and its metobolites in or on the raw agricultural commodity kiwifruit imported from New Zealand. Based upon the residue data, a tolerance of 2.0 parts per million (ppm) is adequate to cover residues of the parent compound and its metabolites, 3-(2,2-dichloroethenyl-2,2-dimethylcyclopropanecarboxylic acid (DCVA) and (3-phenoxyphenyl) methanol (3-PBA).

There were no comments or requests for referral to an advisory committee received in response to the proposed rule.

The toxicological data considered in support of the proposed tolerance were discussed in a related final document [PP 8F2099, 9F2196, 9F2243, 9F2192, 0F2425, 0F2307, 9F2207, 1F2462, 1F2864/R422] published in the **Federal Register** of October 13, 1982 [47 FR 45008].

The pesticide is considered useful for the purpose for which the tolerance is sought. It is concluded that the tolerance will protect the public health and is established as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this notice in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above. Such objections should specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

(Sec. 408(d)(2), 68 Stat. 512 (21 U.S.C. 346a(d)(2)))

List of Subjects in 40 CFR Part 180

Administrative practice and procedures, Raw agricultural commodities, Pesticides and pests.

Dated: May 20, 1983.

Edwin L. Johnson,

Director, Office of Pesticide Programs.

PART 180—[AMENDED]

Therefore, 40 CFR 180.378(b) is amended by adding and alphabetically inserting the commodity kiwifruit to read as follows:

§ 180.378 Permethrin; tolerances for residues.

* * * * *

(b) * * *

Commodities	Parts per million
Kiwifruit	5.0

[FR Doc. 83-14829 Filed 5-31-83; 8:45 am]

BILLING CODE 6560-50-M

[PP 1E2515/R557; PH-FRL 2370-2]

Tolerances and Exemptions From Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities; Pirimiphos-Methyl

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes a tolerance for residues of the insecticide pirimiphos-methyl in or on the commodity kiwifruit. The regulation to establish a maximum permissible level for residues of the insecticide was requested, pursuant to a petition, by ICI Americas, Inc.

EFFECTIVE DATE: Effective on June 1, 1983.

ADDRESS: Written objections may be submitted to the: Hearing Clerk (A-110) Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Jay Ellenberger, Product Manager (PM) 12, Registration Division (TS-767C), Office of Pesticide Programs, Environmental Protection Agency, Rm. 202, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703-557-2386).

SUPPLEMENTARY INFORMATION: EPA issued a proposed rule, published in the **Federal Register** of April 6, 1983 (48 FR 14983), which announced that the ICI Americas, Inc., Concord Pike and New Murphy Road, Wilmington, DE 19897, had submitted pesticide petition 1E2515 to the EPA proposing to amend 40 CFR Part 180 by establishing a tolerance for the combined residues of the insecticide pirimiphos-methyl [*O*-(2-[diethylamino]-6-methyl-4-pyrimidinyl) *O,O*-dimethylphosphorothioate] and its metabolites *O*-(2-[ethylamino]-6-methyl-4-pyrimidinyl) *O,O*-dimethylphosphorothioate, 2-(diethylamino)-6-methyl-4 (3*H*) pyrimidinone, 2-(ethylamino)-6-methyl-4 (3*H*) pyrimidinone, and 2-amino-6-methyl-4 3*H*) pyrimidinone in or on kiwifruit imported from New Zealand at 5.0 parts per million (ppm). The petition was subsequently amended by deleting the metabolites from the tolerance regulation.

There were no comments or requests for referral to an advisory committee received in response to the notice of proposed rulemaking.

The data submitted in the petition and other relevant material have been evaluated. The toxicological data considered in support of the tolerance were discussed in the proposed rule.

The pesticide is considered useful for the purpose for which the tolerance is sought. It is concluded that the tolerance will protect the public health and is established as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this notice in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above. Such objections should specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing and the grounds for the objections. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

(Sec. 408(d)(2), 68 Stat. 512 (21 U.S.C. 346a(d)(2)))

List of Subjects in 40 CFR Part 180

Administrative practice and procedures, Raw agricultural commodities, Pesticides and pests.

Dated: May 17, 1983.

Edwin L. Johnson,

Director, Office of Pesticide Programs.

PART 180—[AMENDED]

Therefore, 40 CFR Part 180 is amended by adding a new § 180.409 to read as follows:

§ 180.409 Pirimiphos-methyl; tolerances for residues.

A tolerance is established for residues of the insecticide pirimiphos-methyl [*0-(2-[diethylamino]-6-methyl-4-pyrimidinyl)0,0-*dimethylphosphorothioate] in or on the following raw agricultural commodity:

Commodity	Parts per million
Kiwifruit	5.0

BILLING CODE 6560-50-M

40 CFR Part 716

[OPTS-84007; TSH-FRL 2370-3]

Health and Safety Data Reporting; Submission of Lists and Copies of Health and Safety Studies

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This amendment will add chemicals to the list of chemical substances and mixtures for which lists and copies of unpublished health and safety studies must be submitted under 40 CFR Part 716 Subpart A, the regulation implementing section 8(d) of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2607(d). The chemical substances to be added were recommended for testing by the Interagency Testing Committee (ITC) in their Twelfth Report to EPA and designated for priority consideration by EPA wihin 12 months. The ITC was established under section 4(e) of TSCA. 40 CFR 716.18(b) provides that chemical substances and designated mixtures that have been designated for testing by the ITC may be made subject to the rule by the publication of a notice to that effect in the **Federal Register**. Thirty days after publication of the notice, the chemicals will become subject to 40 CFR Part 716 Subpart A. Therefore, these substances designated by the ITC will become subject to 40 CFR Part 716 Subpart A on July 1, 1983.

EFFECTIVE DATE: July 1, 1983.

FOR FURTHER INFORMATION CONTACT: Jack P. McCarthy, Director, TSCA Assistance Office (TS-799), Office of Toxic Substances, Environmental Protection Agency, Rm. E-511, 401 M St., SW., Washington, D.C. 20460, Toll free: (800-424-9065), In Washington, D.C.: (554-1404), Outside the U.S.A.: (Operator-202-554-1404.

SUPPLEMENTAL INFORMATION: In the **Federal Register** of September 2, 1982 (47 FR 38780), EPA issued regulations under section 8(d) of TSCA (40 CFR Part 716 Subpart A) to require submission by chemical manufacturers and processors of unpublished health and safety studies on specifically listed chemicals. That rule established standardized reporting requirements and provided for amending the list of chemicals subject to the rule.

40 CFR 716.18(b) provides that ITC-designated chemicals may be made subject to the rule by the publication of a regulation to that effect in the **Federal Register**. Therefore, this regulation to 40 CFR 716.17 constitutes the notice required by 40 CFR 716.18(b). On July 1, 1983 the chemical substances list below will become subject to 40 CFR 716 Subpart A.

Elsewhere in today's **Federal Register**. EPA is issuing a notice announcing the receipt of the Twelfth Report of the Interagency Testing Committee, which was transmitted to the Administrator of EPA on May 11, 1983. The Twelfth Report, which revises and updates the Committee's priority list of chemicals, adds five chemicals to the list for priority consideration within 12 months by EPA in the promulgation of test rules under section 4(a) of TSCA. The five new chemicals are listed below.

Chemicals To be Added

Chemical substance	CAS Numbers
Calcium naphthenate	61789-36-4
Cobalt naphthenate	61789-51-3
Lead naphthenate	61790-14-5
Methylolurea	1000-82-4
2-Phenoxyethanol	122-99-6

Economic Impact

EPA estimates that submitting the required data on these additional chemicals will cost industry $32,000. This consists of the following.

Corporate rule review	$13,900
Corporate review (site identification)	2,800
File search	5,300
Title listing	200
Photocopying (materials)	300
Photocopying (labor)	1,000
Managenal review	7,700
Ongoing reporting	1,100
Total	32,300

If we assume ±30 percent margin of error in these estimates, the range of probable cost varies from $22,600 to $42,000. These costs are minimal compared to the importance of obtaining information in time to evaluate ITC-designated chemicals within statutory deadlines.

Public Record

EPA has established a public record (docket number OPTS-84007) for this rulemaking document which, along with a complete index, is available for inspection in Rm. E-108 from 8:00 a.m. to 4:00 p.m. on working days (401 M St., SW., Washington, D.C. 20460). This record includes information considered by the Agency in adding the ITC chemicals to this rule. The record includes the following:

(1) Health and Safety Study Reporting Regulations (40 CFR Part 716), Public Record, Docket No. 084003.

(2) Information Impact Analysis for 40 CFR Part 716 and this rulemaking.

(3) 12th Report of the Interagency Testing Committee (ITC).

Regulatory Assessment Requirements Paperwork Reduction Act

The reporting provisions of the final section 8(d) rule (40 CFR Part 716) have been approved by the Office of Management and Budget (OMB) under section 3504(b) of the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 *et seq.* The OMB control number is 2070–0004.

Executive Order 12291

Under Executive Order 12291, EPA must judge whether a regulation is "major" and, therefore, subject to the requirement of a Regulatory Impact Analysis. This regulation is not major because it will not result in an effect on the economy of $100 million or more, an increase in costs or prices, or any of the adverse effects described in the Executive Order.

This amendment was not submitted to the Office of Management and Budget (OMB) for review, because the automatic listing of designated substances is provided for in 40 CFR 716.18(b)—a final rule which had been previously reviewed by OMB under the terms of the Executive order.

List of Subjects in 40 CFR Part 716

Chemicals, Health and safety, Environmental protection, Hazardous materials, Recordkeeing and reporting.

Dated: May 18, 1983.

Don R. Clay,

Acting Assistant Administrator for Pesticides and Toxic Substances.

PART 716—[AMENDED]

Therefore, Title 40, Chapter I, is amended by adding § 716.17(a)(4) to read as follows:

§ 716.17 Substances and designated mixtures to which this subpart applies.

(a) * * *

(4) As of July 1, 1983, the following chemical substances are subject to this subpart.

Chemical substance	CAS Numbers
Calcium naphthenate	61789-36-4
Cobalt naphthenate	61789-51-3
Lead naphthenate	61790-14-5
Methylolurea	1000-82-4
2-Phenoxyethanol	122-99-6

* * * * *

OMB Control Number: 2070–0004.

(Sec. 8, Pub. L. 94–469, 90 Stat. 2027 (15 U.S.C. 2607))

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Parts 3200, 3210, 3220, 3240 and 3250

[Circular No. 2526]

Geothermal Resources Leasing Program; General Amendments

AGENCY: Bureau of Land Management, Interior

ACTION: Final rulemaking.

SUMMARY: This final rulemaking eliminates a number of redundant regulatory requirements that currently affect parties seeking to acquire interests in Federal geothermal leases. Deleted are the requirements for separate statements concerning acreage holdings, citizenship, corporate qualifications, proof of authority to act, municipality papers, and identification of other parties in interest. These requirements are unnecessary because prospective lessees or holders of interests in geothermal leases are required to supply and certify this information on the forms used to obtain leases or interests.

EFFECTIVE DATE: July 1, 1983.

ADDRESS: Any suggestions or comments should be sent to: Director (140), Bureau of Land Management, 1800 C Street NW., Washington, D.C. 20240.

SUPPLEMENTARY INFORMATION: A proposed rulemaking to amend the Geothermal Resources Leasing Regulations, 43 CFR Part 3200, Subparts 3210, 3220, and 3240, was published in the **Federal Register** on December 15, 1982 (47 FR 56151). It proposed to delete requirements for parties seeking an interest in Federal geothermal leases to provide certain data regarding their qualifications for holding leases. Only one comment, addressing a number of the provisions in the proposed rule, was received in response to the proposed rulemaking.

The commenter suggested that § 3202.2 be changed by inserting the words "after receipt" after the words "30 days" to clarify that a full 30 days would be allowed to gather and submit requested information. This suggestion was accepted and the change made in the final rulemaking.

The commenter also recommended that the existing requirement that a separate statement disclosing other parties in interest at the time of the lease application remain a part of the regulations. This suggestion was not adopted. In order for a party to have an interest in a lease, that party's name must appear in the application. No other parties in interest are recognized by the Bureau of Land Management until lease assignments or transfers of interests are submitted after lease issuance. Therefore, no separate statement as to other parties in interest is necessary at the time of application.

It was also suggested that § 3202.2–7 concerning fractional present interest be retained. However, this provision was not involved in the proposed rulemaking since it had previously been renumbered and incorporated into § 3207.2–2 (see 43 FR 5004, dated February 3, 1982).

The same commenter suggested that subsection (a) of § 3210.2–1, which requires the name and address of lease applicants be placed on applications, be retained in the regulations. This suggestion was not adopted. The regulations already specify that applications shall be filed on a form approved by the Director. The form used requires applicants to enter names and addresses.

It was suggested that the portions of § 3220.6(d) which require that a plan of exploration or development be submitted prior to lease issuance be deleted. Section 3220.6(d) was proposed for deletion (see 47 FR 18826 dated April 30, 1982), and was deleted in final rulemaking published in the **Federal Register** on April 20, 1983. (See 48 FR 1702.)

Editorial changes are also made in this final rulemaking for the purpose of clarifying the language and the requirements in the proposed rulemaking.

Finally, as a result of the changes made by this final rulemaking, the forms currently used for obtaining an interest in a geothermal lease will be inconsistent with 43 CFR 3200. Until such time as the forms are changed, parties wishing to obtain a geothermal lease may disregard those sections of the forms requiring separate statements and certify their compliance with 43 CFR Part 3200 and the Geothermal Steam Act of 1970. The principal author of this final rulemaking is Karl F. Duscher, Division of Oil, Gas and Geothermal Resources, assisted by the staff of the Office of Legislation and Regulatory Management, Bureau of Land Management.

The Department of the Interior has determined that this document is not a major rule under Executive Order 12291 and will not have a significant economic

effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.).

The Department of the Interior has further determined that the major effect of this final rulemaking would be to reduce the existing regulatory burden on parties involved in applying for interests in Federal geothermal leases. The impact would not be significant under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.).

The information collection requirements contained in this rulemaking have been previously approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance numbers 1004–0038, 1004–0063, and 1004–0074. No new information collection requirements are contained in this rulemaking.

List of Subjects in 43 CFR Part 3200

Environmental protection, Geothermal energy, Mineral royalties, Public lands: classification, Public lands: mineral resources, Surety bonds.

Under the authority of the Geothermal Steam Act of 1970 (30 U.S.C. 1001–1025, Group 3200), subchapter C, Chapter ii of Title 43 of the Code of Federal Regulations is amended as set forth below.

Dated: April 20, 1983.

Garrey E. Carruthers,

Assistant Secretary of the Interior.

1. The following notes are inserted immediately following the part headings:

PART 3200—[AMENDED]

Note.—The information collection requirements contained in Part 3200 of Group 3200 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1004–0074. The information is being collected to allow the authorized officer to determine if lease applicants or lessees are qualified to hold geothermal leases, to enable the authorized officer to complete necessary environmental reviews of prelease exploration operations, and to ensure that all operations on public lands are conducted in compliance with terms and conditions of permits and leases. This information will be used in making those determinations, in completing the subject environmental reviews, and in obtaining the necessary insurances. The obligation to respond is required to obtain a benefit.

PART 3210—[AMENDED]

Note.—The information collection requirements contained in part 3210 of Group 3200 have been approved by the Office of Management and Budget under 44 U.S.C. 3607 and assigned clearance number 1004–0038. The information is being collected to allow the authorized officer to determine if lease applicants are qualified to hold geothermal leases. This information will be used in making those determinations. The obligation to respond is required to obtain a benefit.

PART 3220—[AMENDED]

Note.—The information collection requirements contained in Part 3220 of Group 3200 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1004–0074. The information is being collected to allow the authorized officer to determine the qualified bidder of the highest bonus bid for a competitive lease parcel. This information will be used in making those determinations. The obligation to respond is required to obtain a benefit.

PART 3240—[AMENDED]

Note.—The information collection requirements contained in Part 3240 of Group 3200 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1004–0074. The information being collected to allow the authorized officer to determine if parties obtaining an interest in a lease are qualified to hold such interest. This information will be used in making those determinations. The obligation to respond is required to obtain a benefit.

PART 3250—[AMENDED]

Note.—The information collection requirements contained in Part 3250 have been approved by the Office of Management and Budget under 44 U.S.C. 3507 and assigned clearance number 1004–0063. The information is being collected to allow the authorized officer to determine that the applicant is qualified to hold a utilization license, to enable the authorized officer to complete necessary environmental reviews, and to ensure that a utilization facility is constructed and maintained in compliance with terms and conditions of a license. This information will be used in making that determination, in completing environmental reviews, and in ensuring compliance. The obligation to respond is required to obtain a benefit.

PART 3201—[AMENDED]

§ 3201.2 [Amended]

2. Section 3201.2(e) is removed in its entirety.

3. Section 3202.2 is retitled and revised as follows:

PART 3202—[AMENDED]

§ 3202.2 Proof of qualifications.

Submission of a lease application or offer, or request for approval of an assignment, shall constitute certification of compliance with the regulations of this group and the Geothermal Steam Act of 1970. (30 U.S.C. 1001–1025.) Any party seeking to acquire or already holding a Federal geothermal lease or interest therein may be required by the authorized officer to submit proof that the party is qualified to hold a geothermal lease. Such proof shall be submitted within 30 days after receipt of request.

3a. Section 3202.2–1 is revised to read as follows:

§ 3202.2–1 Proof which may be required.

The authorized officer may require:

(a) Evidence that the lessee does not hold acreage in excess of that prescribed in § 3201.2 of this title. A lessee may be additionally required to submit the serial numbers and percent interest held in all leases as of a specified date.

(b) Evidence that the lessee or applicant is a citizen of the United States or, if a corporation or association, that the entity is in compliance with § 3202.1 of this title.

(c) Evidence that the individual executing an application, lease, or transfer of interest on behalf of another party is authorized to act in that capacity. In the case of a guardian or trustee, a copy of the authorizing court order or other legal instrument shall constitute such evidence.

(d) Evidence indicating whether the applicant or lessee is the sole party in interest and, if not, providing the names, addresses, and nature of interests of any other parties.

(e) Evidence showing that the municipality or governmental unit involved is authorized to hold geothermal leases. The evidence shall include a copy of the governing body's resolution authorizing the particular action being taken.

(f) Evidence setting forth the names and addresses of all members or stockholders controlling more than 10 percent of the corporation or association.

PART 3210—[AMENDED]

§ 3210.2–1 [Amended]

4. Section 3210.2–1 is amended by removing the words "the following:" from the fourth sentence in the first paragraph, by removing paragraphs (a), (b) and (d) in their entirety and by removing the designation "(c)" from paragraph (c) and changing the first word "A" to "a".

PART 3220—[AMENDED]

§ 3220.2 [Removed]

5. Section 3220.2 is removed in its entirety.

§§ 3220.2, 3220.3, 3220.4 and 3220.5 [Redesignated from §§ 3220.3, 3200.4, 3200.5 and 3220.6]

6. Sections 3220.3, 3200.4, 3200.5 and 3220.6 are redesignated as 3220.2, 3220.3, 3220.4 and 3220.5 respectively.

PART 3241—[AMENDED]

§ 3241.1–2 [Removed]

7. Section 3241.1–2 is removed in its entirety.

§ 3241.2–3 [Amended]

8. Section 3241.2–3(b) is amended by adding in the last sentence after the phrase "qualifications of the assignee" the phrase ", if requested by the authorized officer.".

§ 3241.7–1 [Amended]

9. Section 3241.7–1(c) is removed in its entirety.

[FR Doc. 83–14716 Filed 5–27–83; 8:45 am]
BILLING CODE 4310–84–M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 64

[Docket No. FEMA 6526]

Suspension of Community Eligibility Under the National Flood Insurance Program

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Final rule.

SUMMARY: This rule lists communities, where the sale of flood insurance has been authorized under the National Flood Insurance Program (NFIP), that are suspended on the effective dates listed within this rule because of noncompliance with the flood plain management requirements of the program. If FEMA receives documentation that the community has adopted the required flood plain management measures prior to the effective suspension date given in this rule, the suspension will be withdrawn by publication in the **Federal Register**.

EFFECTIVE DATES: The third date ("Susp.") listed in the fourth column.

FOR FURTHER INFORMATION CONTACT: Mr. Richard E. Sanderson, Chief, Natural Hazards Division, (202) 287–0270, 500 C Street Southwest, Donohoe Building—Room 505, Washington, DC 20472.

SUPPLEMENTARY INFORMATION: The National Flood Insurance Program (NFIP), enables property owners to purchase flood insurance at rates made reasonable through a Federal subsidy. In return, communities agree to adopt and administer local flood plain management measures aimed at protecting lives and new construction from future flooding. Section 1315 of the National Flood Insurance Act of 1968, as amended (42 U.S.C. 4022) prohibits flood insurance coverage as authorized under the National Flood Insurance Program (42 U.S.C. 4001–4128) unless an appropriate public body shall have adopted adequate flood plain management measures with effective enforcement measures. The communities listed in this notice no longer meet the statutory requirement for compliance with program regulations (44 CFR Part 59 *et. seq.*). Accordingly, the communities are suspended on the effective date in the fourth column, so that as of that date flood insurance is no longer available in the community. However, those communities which, prior to the suspension date, adopt and submit documentation of legally enforceable flood plain management measures required by the program, will continue their eligibility for the sale of insurance. Where adequate documentation is received by FEMA, a notice withdrawing the suspension will be published in the **Federal Register**.

In addition, the Director of the Federal Emergency Management Agency has identified the special flood hazard areas in these communities by publishing a Flood Hazard Boundary Map. The date of the flood map, if one has been published, is indicated in the fifth column of the table. No direct Federal financial assistance (except assistance pursuant to the Disaster Relief Act of 1974 not in connection with a flood) may legally be provided for construction or acquisition of buildings in the identified special flood hazard area of communities not participatiung in the NFIP and identified for more than a year, on the Federal Emergency Management Agency's initial flood insurance map of the community as having flood prone areas. (Section 202(a) of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), as amended.) This prohibition against certain types of Federal assistance becomes effective for the communities listed on the date shown in the last column.

The Director finds that notice and public procedure under 5 U.S.C. 533(b) are impracticable and unnecessary because communities listed in this final rule have been adequately notified. Each community receives a 6 month, 90 days, and 30 days notification addressed to the Chief Executive Officer that the community will be suspended unless the required flood plain management measures are met prior to the effective suspension date. For the same reasons, this final rule may take effect within less than 30 days.

Pursuant to the provision of 5 U.S.C. 605(b), the Associate Director of State and Local Programs and Support, to whom authority has been delegated by the Director, Federal Emergency Management Agency, hereby certifies that this rule if promulgated will not have a significant economic impact on a substantial number of small entities. As stated in section 2 of the Flood Disaster Protection Act of 1973, the establishment of local flood plain management together with the availability of flood insurance decreases the economic impact of future flood loses to both the particular community and the nation as a whole. This rule in and of itself does not have a significant economic impact. Any economic impact results from the community's decision not to (adopt) (enforce) adequate flood plain management, thus placing itself in non-compliance of the Federal standards required for community participation.

In each entry, a complete chronology of effective dates appears for each listed community.

List of Subjects in 44 CFR Part 64

Flood insurance, Flood plains.

Section 64.6 is amended by adding in alphabetical sequence new entries to the table.

§ 64.6 List of eligible communities.

State and county	Location	Community No.	Effective dates of authorization/cancellation of sale of flood insurance in community	Special flood hazard area identified	Date[1]
California:

BILLING CODE 6718–03–M

44 CFR Part 67

National Flood Insurance Program; Final Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency.

ACTION: Final rule.

SUMMARY: Final base (100-year) flood elevations are finalized for the communities listed below.

The base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATE: The date of issuance of the Flood Insurance Rate Map (FIRM) showing base (100-year) flood elevations, for the community. This date may be obtained by contacting the office where the maps are available for inspection indicated on the table below.

ADDRESSES: See table below.

FOR FURTHER INFORMATION CONTACT: Dr. Brian R. Mrazik, Acting Chief, Engineering Branch, National Flood Insurance Program, Federal Emergency Management Agency, Washington, D.C. 20472, (202) 287–0230.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency gives notice of the final determinations of flood elevations for each community listed. Proposed base flood elevations or proposed modified base flood elevations have been published in the **Federal Register** for each community listed.

This final rule is issued in accordance with Section 110 of the Flood Disaster

Protection Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90–448)), 42 U.S.C. 4001–4128, and 44 CFR Part 67. An opportunity for the community or individuals to appeal proposed determination to or through the community for a period of ninety (90) days has been provided.

The Agency has developed criteria for flood plain management in flood-prone areas in accordance with 44 CFR Part 60.

Pursuant to the provisions of 5 U.S.C. 605(b), the Associate Director, to whom authority has been delegated by the Director, Federal Emergency Management Agency, hereby certifies for reasons set out in the proposed rule that the final flood elevation determinations, if promulgated, will not have a significant economic impact on a substantial number of small entities. Also, this rule is not a major rule under terms of Executive Order 1229, so no regulatory analyses have been prepared. It does not involve any collection of information for purposes of the Paperwork Reduction Act.

List of Subjects in 44 CFR Part 67

Flood Insurance, Flood plains.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and Flood Insurance Rate Map available at the address cited below for each community.

The base (100-year) flood elevations are finalized in the communities listed below. Elevations at selected locations in each community are shown. No appeal was made during the 90-day period and the proposed base flood elevations have not been changed.

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
Alaska	Nome (city), Nome Division, FEMA–6470	Snake River	At the intersection of Center Creek Road and Airport Road.	*15
		Norton Sound	200 feet South of the center of West K St. and Gold Avenue.	*21
			230 feet Southwest of the center of intersection of Rhine Street and Front Street.	*27
			50 feet South of the center of the intersection of Carstens Way and East Front Street.	*28
			At intersection of East Front Street and Campbell Way	*12
Maps available for inspection at City Clerk's Office, Front and Division, Nome, Alaska.				
Illinois	(T) Normal, McLean County (Docket No. FEMA 6442)	Sugar Creek	Just upstream of Cottage Avenue	*751
			Just downstream of Illinois Central Gulf Railroad	*760
			Just upstream of Illinois Central Gulf Railroad	*764
			Just upstream of Veteran Parkway	*791
		West Branch Sugar Creek	Southern corporate limit	*755
			Just downstream of Raab Road	*817
		North Branch Sugar Creek	Mouth at Sugar Creek	*785
			Just downstream of Fort Jesse Road	*786
		East Tributary Skunk Creek	Just upstream of Route 150 (White Oak Road)	*762
			Just downstream of Parkside Drive	*766
		West Tributary Skunk Creek	About 700 feet downstream of Interstates 55 and 74	*776
			Just downstream of Gregory Street	*785
Maps available for inspection at the Housing Inspections Department, City Hall, 100 East Phoenix, Normal, Illinois.				
Send comments to Honorable Richard Godfrey, Mayor, Town of Normal, City Hall, 100 East Phoenix, Normal, Illinois 61761.				
Illinois	(V) Oquawka, Henderson County (Docket No. FEMA–6485).	Mississippi River	About 4.2 miles upstream of Dam No. 18	*538
			About 6.5 miles upstream of Dam No. 18	*540
Maps available for inspection at the Village Hall, Oquawka, Illinois.				
Iowa	(Uninc.) Dubuque County (Docket No. FEMA–6431)	North Fork Maquoketa River	About 1.8 miles downstream of U.S. Highway 151	*813
			Just downstream of State Highway 136	*833
			About 2.2 miles downstream of U.S. Highway 20	*938
			Just upstream of City of Dyersville corporate limits (upstream crossing).	*948
			About 0.2 mile downstream of State Highway 136 (in New Vienna).	*992
			About 2.5 miles upstream of State Highway 136 (in New Vienna).	*1,012
		North Fork Maquoketa River Tributary.	About 0.2 mile downstream of Oak Ridge Subdivision Road.	*957
			About 1.7 miles upstream of Oak Ridge Subdivision Road.	*997
		Hewitt Creek Tributary	Just upstream of City of Dyersville corporate limits	*954
			About 0.7 mile upstream of City of Dyersville corporate limits.	*960
		Hewitt Creek	Just upstream of City of Dyersville corporate limits	*954
			About 1.8 miles upstream of City of Dyersville corporate limits.	*973
		Mississippi River	South county boundary	*605
			North county boundary	*616
		Catfish Creek	At mouth	*610
			About 100 feet downstream of County Road (upstream of City of Dubuque).	*694
		Granger Creek	At mouth	*612
			About 3.2 miles upstream of U.S. Highway 52	*701
		South Fork Catfish Creek	About 0.6 mile upstream of mouth	*635
			Just downstream of English Mill Road	*707
			About 300 feet upstream of English Mill Road	*714
			About 0.3 mile upstream of U.S. Highway 20	*767
		Middle Fork Catfish Creek	About 0.5 mile downstream of County Road	*779
			About 0.3 mile upstream of County Road	*792
		Union Park Hollow	About 400 feet downstream of State Highway 386	*622

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
			About 100 feet upstream of State Highway 386	*636
			About 8,000 feet upstream of State Highway 386	*759
		Couler Valley	At mouth	*622
			About 0.6 mile upstream of State Highway 386 (downstream of City of Dubuque).	*626
		Couler Valley Tributary	At mouth	*622
			About 0.3 mile upstream of mouth	*630
		Durlon Creek	West county boundary	*890
			About 100 feet downstream of County Road	*927
		North Fork Little Maquoketa River	At mouth	*649
			Just downstream of U.S. Highway 52	*661
		North Fork Little Maquoketa River Tributary	At mouth	*665
			Just downstream of County Road (about 1.8 miles upstream of mouth).	*721
			About 0.3 mile upstream of County Road (about 2.1 miles upstream of mouth).	*730
		Bloody Run Creek	At mouth	*622
			About 100 feet downstream of Mudd Lake Road	*633
		Little Maquoketa River	Just upstream of Chicago, Milwaukee, St. Paul and Pacific Railroad	*614
			About 4.5 miles upstream of confluence of North Fork Little Maquoketa River.	*698
		Sherrill Creek	At mouth	*646
			About 0.3 mile upstream of Glen Dalfa Road	*652
		Cloie Branch	At mouth	*636
			About 2.7 miles upstream of mouth	*696
Maps available for inspection at the County Zoning Office, Dubuque County Courthouse, Seventh and Central Streets, Dubuque, Iowa.				
Maryland	Rock Hall, town, Kent County (Docket No. FEMA-6470).	Grays Inn Creek	Downstream corporate limits	*8
			Upstream Rock Hall Road	*12
		Chesapeake Bay	Shoreline at northern corporate limits	*9
			Shoreline at southwestern corporate limits	*11
Maps available for inspection at the Municipal Building, South Main Street, Rock Hall, Maryland.				
[illegible]	(Uninc.) Jackson County (Docket No. FEMA-6449)	Sni-A-Bar Creek	At County Boundary	*740
			About 800 feet upstream of Illinois Central Gulf Railroad.	*776
			Just upstream of Colbern Road	*811
			About 150 feet downstream of Falkenberry Road	*819
		Tributary No. S-1	Just upstream of County Highway 24E	*753
			About 0.60 mile upstream of Jim Owens Road	*810
		Tributary No. S-2	Mouth at Sni-A-Bar Creek	*753
			Just upstream of Jim Owens Road	*763
			About 0.76 mile upstream of Jim Owens Road	*788
		Tributary No. S-3	Mouth at Sni-A-Bar Creek	*755
			About 2,100 feet upstream of Interstate 70	*794
		Tributary No. S-3A	About 600 feet downstream of Jim Owens Road	*755
			About 0.88 mile upstream of Jim Owens Road	*788
		Tributary No. S-4	About 750 feet downstream of Howell Road	*767
			Just downstream of Pink Hill Road	*798
			About 1,200 feet upstream of Pink Hill Road	*804
		Tributary No. S-5	Mouth at Sni-A-Bar Creek	*819
			Just upstream of Brown Road	*878
			Just downstream of Buckner-Tarsney Road	*956
		West Fork Sni-A-Bar Creek	Mouth at Sni-A-Bar Creek	*793
			About 1.29 miles upstream of Buckner-Tarsney Road	*819
			At Village of Lake Lotawana corporate limits	*836
		Blue Branch	Mouth at Sni-A-Bar Creek	*777
			Just downstream of U.S. Highway 40	*792
			Just upstream of U.S. Highway 40	*797
			Just upstream of County Highway AA	*804
			About 200 feet downstream of Ryan Road	*826
		Tributary No. B-1	Just downstream of Illinois Central Gulf Railroad	*800
			At the City of Blue Springs corporate limit	*829
		Tributary No. B-2	Just upstream of U.S. Highway 40	*809
			At the City of Blue Springs corporate limit (About 0.7 mile upstream of Interstate 70).	*840
		Swiney Branch	Just upstream of Seymour Road	*773
			Just downstream of Rust Road	*789
			Just upstream of Rust Road	*794
			Just upstream of Dillingham Road	*822
			About 0.57 mile upstream of Tyler road	*880
		Swiney Branch Tributary	Mouth at Swiney Branch	*784
			About 0.78 mile upstream of Rust Road	*816
			About 150 feet downstream of Dillingham Road	*840
		Horseshoe Creek	Mouth at Sni-A-Bar Creek	*743
			At County Boundary	*763
		Tucker Branch	Mouth at Sni-A-Bar Creek	*747
			Just upstream of Pink Hill Road	*757
			Just downstream of County Highway FF	*824
		Tucker Branch Tributary	Mouth Tucker Branch	*770
			Just upstream of Borgman Road	*778
			Just upstream of Truman Road	*779
			Just upstream of Truman Road	*785
			About 1.23 miles upstream of Truman Road	*819
		Seminary Creek	Mouth at Sni-A-Bar Creek	*742
			About 1.42 miles upstream of Truman Road	*781
		West Fire Prairie Creek	Just upstream of County Highway FF	*773

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
			Just downstream of Argo Road	*709
		West Branch Crawford Creek	About 2,150 feet downstream of Stringtown Road	*898
			Just upstream of Outer Belt Road	*918
			About 2,000 feet upstream of R. F. Gammon Road	*957
		Tributary No. C-2	Mouth at West Branch Crawford Creek	*906
			Just downstream of Outer Belt Road	*916
			About 200 feet upstream of Outer Belt Road	*923
			About 2,000 feet upstream of Outer Belt Road	*938
		Tributary No. C-1	Mouth at Tributary No. C-2	*907
			Just downstream of Outer Belt Road	*911
			Just upstream of Outer Belt Road	*916
			About 1.6 miles upstream of Outer Belt Road	*947
		Missouri River	About 4.0 miles downstream of Atchison, Topeka and Santa Fe Railroad	*712
			About 0.4 mile upstream of State Highway 291	*735
		Mill Creek	About 0.8 mile downstream of Quarry Road	*744
			About 740 feet upstream of Quarry Road	*801
		Fire Prairie	Just downstream of U.S. Highway 24 (near City of Levasy)	*721
			About 630 feet upstream of U.S. Highway 24 (near City of Buckner)	*732
		Horseshoe Creek Tributary	About 0.4 mile upstream of County Boundary	*793
			About 0.7 mile upstream of County Boundary	*805
Maps available for inspection at the County Planning and Zoning Office, First Floor, County Courthouse (Annex), 306 West Kansas, Independence, Missouri.				
New Jersey	Allamuchy, township, Warren County (Docket No. FEMA-6470).	Musconetcong River	Downstream corporate limits	*609
			Dam (downstream)	*624
			Kenny Road (upstream)	*641
Maps available for inspection at the Office of the Township Clerk, Allamuchy Municipal Building, Allamuchy, New Jersey.				
New Jersey	Atlantic City, city, Atlantic County (Docket No. FEMA-6470).	Atlantic Ocean	Entire shoreline within community	*15
			Shoreline of Absecon Inlet at Atlantic Avenue (extended)	*14
			Shoreline of Absecon Inlet at Melrose Avenue (extended)	*13
			Shoreline of Absecon Inlet at Parkside Avenue (extended)	*12
			Shoreline of Clam Creek at Massachusetts Avenue (extended)	*10
			Shoreline of Absecon Channel at Doles Point	*12
			Shoreline of Absecon Bay at Weakfish Island	*12
			Shoreline of Great Thorofare at Pleasantville Boulevard	*11
			Shoreline of Beach Thorofare at Arizona Avenue (extended)	*10
			Shoreline of inside thorofare at Albany Avenue	*10
			Shoreline of Beach Thorofare at Pleasantville Boulevard	*11
Maps available for inspection at the Office of the City Engineer, City Hall, Tennessee & Bacharach Boulevard, Atlantic City, New Jersey.				
New Jersey	Bayonne, city, Hudson County (Docket No. FEMA-6449).	Upper New York Bay	Entire shoreline within community	*10
		Kill Van Kull	At the confluence of Upper New York Bay	*10
			2.0 miles upstream of the Bayonne Bridge	*9
			Upstream of the Bayonne Bridge	*9
		Newark Bay	At the Newark Bay Bridge	*10
			0.6 mile downstream of the Newark Bay Bridge	*9
			0.5 mile upstream of Shooters Island	*9
			At Shooters Island	*9
Maps available for inspection at the Municipal Building, 630 Avenue C, Bayonne, New Jersey.				
New Jersey	Blairstown, township, Warren County (Docket No. FEMA-6470).	Paulins Kill	Upstream Vail Road	*318
			Approximately 3,000' upstream of Rubble Dam	*324
			Upstream Lambert Road	*330
			Confluence of Jacksonburg Creek	*332
			Confluence of Blair Creek	*340
			Upstream corporate limits	*357
		Jacksonburg Creek	Confluence with Paulins Kill	*332
			Upstream New Jersey State Highway Route 94	*363
			Upstream dam	*383
		Blair Creek	Confluence with Paulins Kill	*340
			Upstream Gordon Lane	*365
			Upstream corporate limits	*369
Maps available for inspection at the Municipal Building, Stillwater Road, Blairstown, New Jersey.				
New Jersey	Bound Brook, Borough, Somerset County (Docket No. FEMA-6449).	Raritan River	At confluence of Green Brook	*33
			At confluence of Middle Brook	*36
		Green Brook	At confluence with Raritan River	*33
			At upstream corporate limits	*54
		Middle Brook	At confluence with Raritan River	*36
			Downstream Talmadge Avenue	*40
			Downstream West Union Avenue	*60
			At upstream corporate limits	*66
Maps available for inspection at the Borough Hall, 110 Hamilton Street, Bound Brook, New Jersey.				

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
New Jersey	Evesham (township), Burlington County (FEMA-6470)	Southwest Branch Rancocas Creek.	50 feet upstream from the center of North Elmwood Road.	*50
		Barton Run	50 feet upstream from the center of Taunton Lake Road.	*57
		Tributary No. 1 to Barton Run	At the Center of Tuckerton Road	*42
		Tributary No. 2 to Barton Run	At the Confluence with Barton Run	*46
		Black Run	At the center of Taunton Lake Road	*52
		Tributary to Black Run	200 feet upstream from the center of Kettle Run Road	*86
		Kettle Run	100 feet upstream from the center of Hopewell Road	*126
		South Branch Pennsauken Creek	At the center of Marlton Pike	*73
		Cropwell Brook	100 feet upstream from the center of Conestoga Drive	*68
Maps available for inspection at Municipal Building, 125 E. Main Street, Marlton, New Jersey.				
New Jersey	Hackettstown, Town, Warren County (Docket No. FEMA-6470).	Musconetcong River	Confluence of Trout Brook	*492
			State Route 24 (upstream)	*503
			East Avenue (upstream)	*514
			U.S. Route 46 (upstream)	*522
			Confluence of Hackettstown Brook	*528
			Stephen's Park Road (upstream)	*590
			Upstream corporate limits	*600
		Trout Brook	Confluence with Musconetcong River	*492
			State Route 57 (upstream)	*495
			Hatchery Drive (upstream)	*509
			Hatchery Road (upstream)	*516
			Grand Avenue (upstream)	*529
			Conrail (upstream)	*534
			Prospect Street (upstream)	*564
			U.S. Route 46 (upstream)	*568
			Baldwin Street (upstream)	*581
		Hackettstown Brook	Approximately 1,130 feet upstream of Baldwin Street	*610
			Confluence with Musconetcong River	*528
			Willow Grove Street (upstream)	*531
			Plane Street (upstream)	*536
			Maple Avenue (upstream)	*540
			Franklin Street (upstream)	*542
			Private Drive (downstream), approximately 1,000 feet upstream of Franklin Street.	*547
Maps available for inspection at the Office of the Town Engineer located in the Municipal Building, 215 Stiger Street, Hackettstown, New Jersey.				
New Jersey	Little Egg Harbor, Township, Ocean County (Docket No. FEMA-6470).	Mill Branch	At confluence of Gifflords Mill Branch	*11
			Nugentown Road (upstream)	*12
		Gifflords Mill Branch	At confluence with Mill Branch	*11
			Gifford Lane (upstream)	*14
			Otis Bog Road (upstream)	*18
		Willis Creek	At Atlantic Boulevard	*8
			Center Street (upstream)	*21
		Atlantic Ocean	Little Egg Harbor	*8
			Great Bay	*8
			Mullica River	*9
Maps available for inspection at the Municipal Building, Gifford Road and Route 9, Tuckerton, New Jersey.				
New Jersey	Longport, Borough, Atlantic County (Docket No. FEMA-6470).	Atlantic Ocean	Entire shoreline from northeastern corporate limits to Point Drive (extended).	*15
			Entire shoreline of Risley Channel and Beach Thorofare from Point Drive (extended) to northeastern corporate limits.	*10
Maps available for inspection at the Municipal Building, 2301 Atlantic Avenue, Longport, New Jersey.				
New Jersey	Woodbridge, Township, Middlesex County (Docket No. FEMA-6254).	Rahway River	Entire length of river within community	*10
		South Branch Rahway River	Approximately 2,790' downstream of corporate limits	*13
			At downstream corporate limits	*15
			Upstream of New Dover Road	*20
			Upstream of Green Street	*30
			Upstream of Wood Avenue	*40
		Parkway Branch	At confluence with South Branch Rahway River	*36
			Downstream of Garden State Parkway	*44
		Pumpkin Patch Brook	At downstream corporate limits	*61
			Upstream of Inman Avenue	*69
			Upstream of Inwood Avenue	*86
		Woodbridge River	At confluence with Arthur Kill	*10
			At Homestead Avenue	*10
			Upstream of Omar Avenue	*11
			Downstream of Randolph Avenue	*11
		Raritan River	Shoreline within community west of Edison bridge	*10
			Shoreline within community east of Edison bridge	*13
		Spa Spring	At confluence with Woodbridge River	*10
			Downstream of Convery Boulevard	*15
		Heards Brook	At confluence with Woodbridge River	*10
			Upstream of Amboy Avenue	*25
			Downstream of U.S. Route 9	*42
Maps available for inspection at the Municipal Building, One Main Street, Woodbridge, New Jersey.				
New York	Altamont, Village, Albany County (Docket No. FEMA-6449).	Altamont Tributary 1	Severson Avenue (upstream side)	*477
			Approximately 1,020' upstream of Severson Avenue	*535
			Upstream corporate limits	*621

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
		Altamont Tributary 2	Approximately 350' downstream of Delaware and Hudson Railroad.	*463
			Delaware and Hudson Railroad (downstream side)	*478
			Upstream corporate limits	*564
Maps available for inspection at the Village Hall, Main Street, Altamont, New York.				
New York	Avoca, Town Steuben County (Docket No. FEMA-6449).	Cohocton River	Downstream corporate limits	*1,152
			Upstream of State Route 415	*1,172
			Upstream of westbound Interstate Route 390 (2nd crossing).	*1,210
			Upstream of Conrail (downstream crossing)	*1,231
			Upstream corporate limits	*1,238
		Goff Creek	Confluence with Cohocton River	*1,173
			Upstream of eastbound State Route 17	*1,194
			Approximately 4,750' upstream of eastbound State Route 17.	*1,230
			Approximately 4,000' downstream of County Route 69	*1,260
			Downstream of County Route 69	*1,291
			Upstream corporate limits	*1,308
		Castle Creek	Confluence with Cohocton River	*1,224
			Upstream of County Route 6	*1,244
			Approximately 3,720' upstream of County Route 6	*1,271
Maps available for inspection at the Town Hall, Three Chase Street, Avoca, New York.				
New York	Black Brook, Town Clinton County (Docket No. FEMA-6449).	Ausable River	Downstream corporate limits	*504
			Confluence of West Branch Ausable River	*551
		West Branch Ausable River	Confluence with Ausable River	*551
			Downstream Old Bridge	*577
Maps available for inspection at the Town Hall, Main Street, Au Sable Forks, New York.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 0, 73, and 74

Oversight of the Radio and TV Broadcast Rules

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: This Order amends broadcast station regulations in Part 0 and Parts 73 and 74 of the rules of the FCC. Amendments are made to delete regulations that are no longer necessary, correct inaccurate rule texts, contemporize certain requirements and to execute editorial revisions as needed for purposes of clarity and ease of understanding.

EFFECTIVE DATE: May 11, 1983.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Steve Crane (202) 632–5414, Policy and Rules Division, Mass Media Bureau.

List of Subjects

47 CFR Part 0

Classified information, Freedom of information, Organization and functions (Government agencies), Privacy, Sunshine Act.

47 CFR Parts 73 and 74

Radio broadcast.

Order

In the matter of an oversight of the radio and TV broadcast rules.

Adopted: May 4, 1983.

Released: May 11, 1983.

By the Chief, Mass Media Bureau.

1. In this *Order*, the Commission focuses its attention on the oversight of its radio and TV broadcast rules. Modifications are made herein to update, delete, clarify or correct broadcast regulations as described in the following amendment summaries:

(a) In § 73.150, (b)(1)(i), a cross reference is made to nominal station power which is incorrect. It directs the rule reader to "see § 73.41(c)." It is corrected to read "see § 73.14." (See appendix item 1).

(b) In paragraph (a) of § 73.202, cross reference is given to specific noncommercial educational FM assignments for communities in Arizona, California, New Mexico and Texas. It states "These [assignments] are set forth in § 73.507." It should read "* * * in § 73.504" and is corrected herein. (See appendix item 2.)

(c) The parenthetical cross reference in the opening sentence in § 73.1226 (c) incorrectly reads "* * * (per § 1.613, Filing of contracts) * * *". It is corrected to read "* * * (per § 73.3613, Filing of contracts) * * *". (See appendix item 3.)

(d) In the Second Report and Order in Gen. Docket No. 79–137, 46 FR 36850, July 16, 1981, the Commission amended the rules in Part 73 pertaining to acceptance of applications and cut-off list procedures as follows:

"* * * we will amend our Rules to make the 30-day cut-off period run from the Commission release of the cut-off list, and *will eliminate Federal Register publication,* * * *" (emphasis added). "It is our experience that an interested party is alerted by * * * an applicant's local publication of notice of filing * * * and the Commission's public notice of the cut-off list and *not the publication in the Federal Register*" (emphasis added).

This revision in the rules brought about amendments in §§ 73.3571, 73.3572, and 73.3573. Modification should also have been made in § 73.3564, Acceptance of applications, to conform to this Commission action. That inadvertance is corrected herein by removing the reference to publication of filing acceptance and cut-off lists in the Federal Register as stated in paragraph (c) of § 73.3564. (See appendix item 4.)

(e) Another error needs correcting in § 73.3564(c). There we find a requirement that an applicant must submit proof of publishing a notice of application filing in a local newspaper, *after* tendering his application. On April 1, 1982, the Commission amended and relaxed § 73.3580(h) eliminating this provision. 47 FR 17065, April 21, 1982. We now require, *in the application*, a certification of compliance with the local notice rule found in § 73.3580(c). The text of § 73.3564(c) is revised to conform to this rule revision. (See appendix item 4.)

(f) With the adoption of the Second Report and Order in Gen. Docket 79–137, a change was made in § 73.3580(c) of the rules (this proceeding is also discussed in paragraphs (d) and (e) above).

Subsequent to that rule change in Docket 79–137, this same rule section and paragraph (§ 73.3580(c)) was amended in another Report and Order in a different proceeding. The rule changes adopted in the latter proceeding were correctly made in § 73.3580(c) but, inadvertently, that part of the text which had been modified in G.D. Docket 79–137 was *reinserted* into the newly amended § 73.3580(c). Correction is made herein. (See appendix item 5.)

(g) From time to time a licensee, or someone associated with the operation of a station in one of our services, brings to our attention an aberration existing in one of the rules of that service when stating requirements therein. One such correspondence wished to know why the posting of station and operator licenses can be accommodated in the Part 73 Broadcast rules by enclosing licenses in a binder or folder in lieu of affixing to the wall at the posting locations and not be allowed in the rules for auxiliary services in Part 74. There is no valid reason (except oversight). And so we will make appropriate changes in the separate rule sections via this Order to conform Part 74's licensee posting requirements, as closely as possible, to the Part 73 posting regulations in § 73.1230. (See appendix items 6, 7, 8, 9, 12 and 13.)

(h) In the Report and Order adopted in BC Docket 81–793, 47 FR 55931, the Commission eliminated the notification to the FCC by licensees of TV auxiliary broadcast stations when installing multiplexing equipment on their existing licensed equipment. (Authority of the FCC was not required prior to installation—just notification to FCC at installation.) The notification requirement is stated in two rule sections in Subpart F of Part 74: § 74.603, Sound channels; and in § 74.651, Equipment changes. When the rules were amended, only § 74.651 was revised and § 74.603 was inadvertently overlooked. Appropriate notification excision is made herein conforming § 74.603 to the Commission's decision in BC Docket 81–793. (See appendix item 11.)

(i) The rule drafting in the Report and Order in BC Docket 81–793 discussed in paragraph (h) above, resulted in a minor rule discrepancy in § 74.602, Frequency assignment which is corrected in this Order. In contemporizing the introductory text of paragraph (a) of this section, a sentence was omitted in the amendment pertaining to authorization of the 38.6 to 40 GHz band for TV pickup use on a secondary basis to fixed stations. The unintentional deletion is restored to the rule herein. (See appendix item 10.)

(j) In the Report and Order in BC Docket 82–320, adopted February 17, 1983, 48 FR 12094, the Commission eliminated three Commission policies: the suburban community policy, the Berwick Doctrine and the de facto reallocation policy. Via this Report and Order the Commission also eliminated paragraph (b) in § 73.203 and 73.607. Through inadvertence, the elimination of two rule subparagraphs in § 0.283, Authority delegated [to Chief, Mass Media Bureau] was overlooked. They are paragraphs 0.283 (a)(11)(i) and (ii) *Station location* and (a)(12) *Main studio location.* They are deleted in their entirety herein (See paragraph item 14).

2. No substantive changes are made herein which impose additional burdens or remove provisions relied upon by licensees or the public. We conclude, for the reasons set forth above, that these revisions will serve the public interest.

3. These amendments are implemented by authority delegated by the Commission to the Chief, Mass Media Bureau. Inasmuch as these amendments impose no additional burdens and raise no issue upon which comments would serve any useful purpose, prior notice of rulemaking, effective date provisions and public procedure thereon are unnecessary pursuant to the Administrative Procedure and Judicial Review Act provisions of 5 U.S.C. 553(b)(3)(B).

4. Since a general notice of proposed rulemaking is not required, the Regulatory Flexibility Act does not apply.

5. Therefore, IT IS ORDERED, That pursuant to Sections 4(i), 303(r), and 5(d)(1) of the Communications Act of 1934, as amended, and §§ 0.71 and 0.283 of the Commission's Rules, Part 0 of Volume I and Parts 73 and 74 of Volume III of the FCC Rules and Regulations ARE AMENDED as set forth in the attached Appendix, effective May 11, 1983.

6. For further information on this *Order*, contact Steve Crane, Mass Media Bureau, (202) 632–5414.

(Secs. 4, 303, 48 stat., as amended, 1066, 1082; 47 U.S.C. 154, 303)

Federal Communications Commission.

Laurence E. Harris,

Chief, Mass Media Bureau.

Appendix

PART 73—[AMENDED]

§ 73.150 [Amended]

1. In 47 CFR 73.150, Directional antenna systems, the parenthetical cross reference in paragraph (b)(1)(i) incorrectly states (see § 73.41(c). It is corrected to read (see § 73.14).

§ 73.202 [Amended]

2. In 47 CFR 73.202, Table of Assignments, the last sentence of paragraph (a) incorrectly states, "These are set forth in § 73.507." It is corrected to read, "These are set forth in § 73.504."

§ 73.1226 [Amended]

3. In 47 CFR 73.1226, Availability to FCC of station logs and records, the first sentence in paragraph (c) incorrectly states, in part, "* * * (per § 1.613, Filing of contracts) * * *". It is corrected to read "* * * (per § 73.3613, Filing of contracts) * * *".

4. 47 CFR 73.3564 is amended by revising paragraph (c) to read as follows:

§ 73.3564 Acceptance of applications.

* * * * *

(c) At regular intervals the FCC will issue a Public Notice listing all applications and major amendments thereto which have been accepted for filing. Pursuant to §§ 73.3571(c),

73.3572(c) and 73.3573(d) such notice shall establish a cut-off date (no less than 30 days from the date of issuance) for the filing of mutually exclusive applications and petitions to deny. However, no application will be accepted for filing unless certification of compliance with the local notice requirements of § 73.3580(h) (Local public notice of filing of broadcast applications) has been made in the tendered application.

5. 47 CFR 73.3580 is amended by revising paragraph (c) to read as follows:

§ 73.3580 Local public notice of filing of broadcast applications.

* * * * *

(c) An applicant who files an application or amendment thereto which is subject to the provisions of this section, must give a notice of this filing in a newspaper. Exceptions to this requirement are applications for renewal of AM, FM, TV, and International broadcasting stations; low power TV stations; TV and FM translator stations; FM booster stations; and applications subject to paragraph (e) of this section. The local public notice must be completed within 30 days of the tendering of the application. In the event the FCC notifies the applicant that a major change is involved, requiring the applicant to file public notice pursuant to §§ 73.3571, 73.3572, 73.3573 or 73.3578, this filing notice shall be given in a newspaper following this notification.

* * * * *

PART 74—[AMENDED]

6. 47 CFR 74.165 is amended by revising paragraph (a) and by adding new paragraph (c) as follows:

§ 74.165 Station and operator licenses; posting of.

(a) The station license and any other instrument of authorization or individual order concerning the construction of the equipment or manner of operation of the station shall be posted in the room in which the transmitter is located. If the station is licensed for portable-mobile operation, the station license or photocopy thereof shall be affixed to the equipment or kept in the possession of the operator on duty at the transmitter. If a photocopy is used, the original license shall be available for inspection by an authorized representative of the FCC.

* * * * *

(c) Posting of the operator licenses and the station license and any other instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

7. A new paragraph (c) is added to 47 CFR 74.265 as follows:

§ 74.265 Station and operator licenses; posting of.

* * * * *

(c) Posting of the operator licenses and the station license and any other instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

8. 47 CFR 74.365 is amended by revising paragraph (a) and by adding new paragraph (c) as follows:

§ 74.365 Station and operator licenses; posting of.

(a) The station license and any other instrument of authorization or individual order concerning the construction of the equipment or manner of operation of the station shall be posted in the room in which the transmitter is located. If the station is licensed for portable-mobile operation, the station license or a photocopy thereof shall be affixed to the equipment or kept in the possession of the operator on duty at the transmitter. If a photocopy is used, the original license shall be available for inspection by an authorized Government representative.

* * * * *

(c) Posting of the operator licenses and the station license and any other instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

9. 47 CFR 74.564 is amended by revising the present text and designating it paragraph (a) and by adding new paragraph (b) as follows:

§ 74.564 Posting of station licenses.

(a) The station license and any other instrument of authorization or individual order concerning the construction of the equipment or manner of operation of the station shall be posted in the room in which the transmitter is located, provided that if the transmitter operator is located at a distance from the transmitter pursuant to § 74.533, the station license shall be posted at the operating position.

(b) Posting of the station license and any other instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

10. In 47 CFR 74.602, paragraph (a) is revised to read as follows:

§ 74.602 Frequency assignment.

(a) The following frequencies are available for assignments to TV pickup, TV STL, TV relay and TV translator relay stations. Additionally, the band 38.6–40 GHz is available for assignment without channel bandwidth limitation to TV pickup stations on a secondary basis to fixed stations:

* * * * *

11. In 47 CFR 74.603, paragraph (a) is revised to read as follows:

§ 74.603 Sound channels.

(a) The frequencies listed in § 74.602(a) may be used for the simultaneous transmission of the picture and sound portions of TV broadcast programs and for cue and order circuits, either by means of multiplexing or by the use of a separate transmitter within the same channel. When multiplexing of a TV STL station is contemplated, consideration should be given to the requirements of § 73.687 of this Chapter regarding the overall system performance requirements. Applications for new TV pickup, TV STL, TV relay and TV translator relay stations shall clearly indicate the nature of any mutliplexing proposed. Multiplexing equipment may be installed on licensed equipment without authority of the FCC, provided the installation of such apparatus on a TV STL station shall not result in degradation of the overall system performance of the TV broadcast station below that permitted by § 73.687 of this chapter.

* * * * *

12. 47 CFR 74.664 is amended by revising paragraph (a) and by adding new paragraph (c) following the note as follows:

§ 74.664 Station and operator licenses; posting of.

(a) The station license and any other instrument of authorization or individual order concerning the construction of the equipment or manner of operation of the station shall be posted in the room in which the transmitter is located.

* * * * *

Note.—* * *

(c) Posting of the operator licenses and the station license and any other

instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

13. 47 CFR 74.965 is amended by revising paragraphs (a) and (b) and by adding new paragraph (e) as follows:

§ 74.965 Posting of station and operator licenses.

(a) The station license and any other instrument of authorization or individual order concerning the construction of the equipment or manner of operation of the station shall be posted in the room in which the transmitter is located.

(b) In cases where the transmitter is operated by remote control, the documents referred to in paragraph (a) of this section shall be posted at the control point of the transmitter.

* * * * *

(e) Posting of the operator licenses and the station license and any other instruments of authorization shall be done by affixing the licenses to the wall at the posting location, or by enclosing them in a binder or folder which is retained at the posting location so that the documents will be readily available and easily accessible.

PART 0—[AMENDED]

§ 0.283 [Amended]

14. In 47 CFR 0.283, *Authority delegated,* paragraphs (a)(11) *Station location* and (a)(12) *Main studio location* are removed, and paragraphs (a) (13) through (16) are redesignated as (a)(11) through (a)(14).

BILLING CODE 6712-01-M

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1033

[Amdt. 3 to Service Order No. 1499]

Chicago & North Western Transportation Co. Authorized To Use Tracks and/or Facilities of Chicago, Milwaukee, St. Paul & Pacific Railroad Co.

AGENCY: Interstate Commerce Commission.

ACTION: Amendment No. 3 to Service Order No. 1499.

SUMMARY: Amendment No. 3 to Service Order No. 1499, authorizes Chicago and North Western Transportation Company (CNW) to use tracks and/or facilities of Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Debtor, (Richard B. Ogilvie, Trustee) (MILW). This order permits CNW, under agreement with the Trustee, to operate MILW lines between Jefferson and Herndon, Iowa, as part of a program to provide access to lines under purchase agreement which are in need of refurbishing.

EFFECTIVE: 11:59 p.m., May 31, 1983, and continuing in effect until 11:59 p.m., May 31, 1984, unless modified, amended or vacated by order of this Commission.

FOR FURTHER INFORMATION CONTACT: M. F. Clemens, Jr., (202) 275–7840 or 275–1559.

PART 1033—CAR SERVICE

Decided May 25, 1983.

Upon further consideration of Service Order No. 1499 (47 FR 23723), and good cause appearing therefor:

It is ordered, that § 1033.1499 *Service Order No. 1499, Chicago and North Western Transportation Company Authorized to use tracks and/or facilities of the Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Debtor, (Richard B. Ogilvie, Trustee)* is amended by substituting the following paragraph (n) for paragraph (n) thereof:

(n) *Expiration date.* The provisions of this order are extended for one year, and shall expire at 11:59 p.m., May 31, 1984, unless otherwise modified, amended or vacated by order of this Commission.

Effective date. This amendment shall become effective at 11:59 p.m., May 31, 1983.

This action is taken under authority of 49 U.S.C. 10304–10305 and Section 122, Pub. L. 96–254.

This amendment shall be served upon the Association of American Railroads, Transportation Division, as agent of the railroad subscribing to the car service and car hire agreement under the terms of that agreement and upon the American Short Line Railroad Association. Notice of this amendment shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members J. Warren McFarland, Bernard Gaillard, and John H. O'Brien.

Agatha L. Mergenovich,
Secretary.

[FR Doc. 83-14587 Filed 5-31-83; 8:45 am]
BILLING CODE 7035-01-M

49 CFR Part 1153

[Ex Parte No. 428]

Discontinuance or Change of Train or Ferry Service

AGENCY: Interstate Commerce Commission.

ACTION: Notice of final rules.

SUMMARY: The Commission has modified its regulations regarding discontinuance or change of train or ferry service by revising 49 CFR Part 1153 (formerly 49 CFR Part 1122) and partially eliminating 49 CFR Part 1153.9 (formerly 49 CFR Part 1100.246). These changes eliminate unnecessary and redundant informational requirements and streamline present regulations. Procedures under 45 U.S.C. 561 are eliminated, because they are no longer necessary. The regulations are set out in the Appendix.

DATES: These procedures will be effective on June 1, 1983.

FOR FURTHER INFORMATION CONTACT:
Louis E. Gitomer, (202) 275–7245
or
Gloria E. Blazsik, (202) 275–0948.

SUPPLEMENTARY INFORMATION: Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to T.S. InfoSystems, Inc., Room 2227, Interstate Commerce Commission, Washington, D.C. 20423, or call 289–4357 (D.C. Metropolitan area) or toll free (800) 424–5403.

The index terms covering 49 CFR Part 1153 are as follows: Administrative practice and procedure; Railroads

The Commission has certified that this action will not have a significant economic impact upon a substantial number of small entities for reasons set forth in its decision.

Decided: May 19, 1983.

By the Commission, Chairman Taylor, Vice Chairman Sterrett, Commissioners Andre and Gradison.

Agatha L. Mergenovich,
Secretary.

Appendix

49 CFR Part 1153 is revised to read as follows.

PART 1153—TRAIN OR FERRY DISCONTINUANCE OR CHANGE OF OPERATION

Subpart A—Procedures Under 49 U.S.C. 10908

Sec.
1153.1 Scope of rules.
1153.2 Notice of change or discontinuance.

Sec.

1153.3 Information required with notice.
1153.4 Procedures governing the proceeding.

Subpart B—Procedures Under 49 U.S.C. 10909

1153.5 Scope of rules.
1153.6 Procedures on a petition.
1153.7 Rules pertaining to the hearing.

Authority: 5 U.S.C. 553, 45 U.S.C. 501, and 49 U.S.C. 10321, 10908, 10909.

Subpart A—Procedures Under 49 U.S.C. 10908

§ 1153.1 Scope of rules.

These rules govern the proposal of a carrier to discontinue or change train or ferry service which operates between two or more States.

§ 1153.2 Notice of change or discontinuance.

A separate notice for each unrelated proposal to discontinue or change train or ferry service shall be:

(a) Filed with the Commission 45 days before the discontinuance or change is to be effective

(b) Concurrently mailed to the chief executive officer and railroad regulatory body of each State in which the train or ferry is operated, and

(c) Posted in a conspicuous place in each station, depot, passenger car, or facility served by the train or ferry. This notice shall contain the following information:

(1) Exact corporate name and address of the carrier.

(2) The train or ferry number and name or other description of the train or ferry which is the subject of a discontinuance or change; the name of each station, depot, or facility affected by the proposal; and the termini between which the train or ferry operates.

(3) The date when the proposal will be effective.

(4) That persons wishing to object to the proposal should notify the Commission at Washington, D.C. of their objections and their reasons for opposition at least 30 days before the effective date of the change.

(5) The notice shall be not less than 8½x11 inches and the wording in not smaller than 12-point type. The words "Notice of proposed change (or discontinuance, if appropriate) of service" shall appear in large bold-face type near the top.

§ 1153.3 Information required with notice.

A "Statement Regarding Proposed Discontinuance or Changes of Train or Ferry Service" shall be filed at the Commission along with each separate notice. The statement shall contain the following either in the statement itself or in attached exhibits:

(a) Name and address of counsel or officer to whom correspondence should be addressed.

(b) Complete description of the present service and the proposed change, including the effect on each train station, depot, or other facility affected.

(c) The reasons for the proposal.

(d) Description of alternative common carrier service available in the area described in the notice. If none, so state.

(e) A brief summary of the use of the trains or ferries involved for the last calendar year, and for the current year to the extent available. If information is not submitted, an explanation for the omission is required.

(f) The financial results of the operations described in paragraph (e), above.

(g) A copy of the carrier's balance sheet as of the latest available date and of its income statement for the last calendar year, and for the part of the current year for which such information is available. If on file with the Commission, this information may be incorporated by reference.

(h) A map showing the geographic area and route involved in the proposal.

(i) A certification that pursuant to section 1153.2 a copy of the notice has been posted and that the notice and "Statement Regarding Proposed Discontinuance or Change of Train or Ferry Service" have been mailed.

(j) Either attestation and verification as required by 49 CFR 1104.4 or an affirmation or declaration as required by 49 CFR 1104.5.

§ 1153.4 Procedures governing proceedings on the proposed discontinuance or change.

(a) Protests. Interested persons opposed to a proposed discontinuance or change of operations shall file with the Commission an original of their protest by telegram, letter, or other writing. The protest shall identify the protestant and the carrier involved, state the interest of the protestant, and the grounds for opposition. The protest shall be filed with the Commission no later than 30 days before the proposed change is scheduled to go into effect.

(b) Intervention. Intervention in any proceeding will be allowed in accordance with 49 CFR 1113.7.

(c) Notice of proceeding. After the period for protests ends, the Commission will give notice to the carrier(s) involved, the chief executive officer of each State in which the train or ferry is operated, and any other interested parties of record as to whether a proceeding investigating the discontinuance or change will be instituted. If a proceeding is instituted, the Commission may order continuance of the train or ferry service pending completion of the proceeding.

(d) Reconsideration of decision as to whether to investigate. Petitions for reconsideration of the Commission's decision as to whether to investigate the proposed change or discontinuance shall be filed with the Commission within 10 days after the date of service of the Commission's decision. Interested persons may reply within 15 days after the date of service of the Commission's decision. If an order is desired requiring continuance of the service pending the proceeding the petition shall be filed with the Commission 15 days prior to the date the discontinuance is to take effect and shall contain a request for expedited handling.

Subpart B—Procedures Under 49 U.S.C. 10909

§ 1153.5 Scope of rules.

These rules govern petitions filed by a carrier under 49 U.S.C. 10909 to discontinue or change train or ferry service which is operated entirely within one State.

§ 1153.6 Procedures on a petition.

(a) *Contents.* Petitions filed under 49 U.S.C. 10909 shall contain the information in § 1153.2(a) and § 1153.3(a)–(j). Additionally, the following information shall be provided:

(1) The date on which a request to change or discontinue the transportation was filed with the appropriate State authority.

(2) Identification of the State authority with which the petition was filed.

(3) Description of the action, if any, taken by the State authority on the petition, including a copy of the record of the State proceeding, if available, or a copy of the State law prohibiting the action.

(b) *Notice of the petition.* No later than the date on which a carrier files its petition, it shall serve copies of its entire petition on the State Governor, the State authority which denied or failed to act on the carrier's request, and on all parties of record in the proceeding at the State level. *See,* in addition, 49 CFR 1104.12. Copies of the State record need not be furnished to the Governor, State agency, or other parties of record.

§ 1153.7 Rules pertaining to the hearing.

Notice of the hearing. If a hearing is requested by any interested party in opposition in the State proceeding, the Commission shall give all interested parties at least 30 days' notice of the

hearing to be conducted in the State in which the train or ferry is operated.

49 CFR Parts 1162 and 1307

[Ex Parte No. MC-165]

Exemption of Motor Contract Carriers From Tariff Filing Requirements

AGENCY: Interstate Commerce Commission.

ACTION: Final rules.

SUMMARY: The Commission has adopted final rules to exempt all motor contract carriers of property from tariff filing requirements under 49 U.S.C. 10702(b), 107(b) and 10762(f). The rules result from a proposed rulemaking proceeding (47 FR 57303, December 23, 1982) suggested by an application filed by the Contract Carriers Conference of the American Trucking Associations. The exemption will promote competitive and efficient service designed to meet the needs of shippers, receivers, and consumers; will permit a variety of quality and price options to meet changing market demands and the diverse requirements of the shipping public; will allow the most productive use of equipment; and will maintain a sound, safe, and competitive privately-owned motor carrier system. The Commission also concluded that it would not exempt contract carriers of passengers at this time. The rules adopted are set forth in the appendix.

EFFECTIVE DATE: These rules will be effective on July 1, 1983.

FOR FURTHER INFORMATION CONTACT:
Wendy Tillis, (202) 275-6445
or
Jane Morris, (202) 275-6434.

SUPPLEMENTARY INFORMATION: Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write to T.S. InfoSystems, Inc., Room 2227, Interstate Commerce Commission, Washington, DC 20423, or call 289-4357 (D.C. Metropolitan area) or toll free (800) 424-5403.

Environmental and Energy Considerations

We adopt the preliminary finding in our proposed rules that this action will not significantly affect the quality of the human environment or the conservation of the energy resources. No comments have been submitted on any matter indicating that a contrary position is warranted.

Regulatory Flexibility Analysis

We also adopt the preliminary finding that this proceeding will have a significant economic impact on a substantial number of small entities and that those impacts will be beneficial.

The vast majority of comments did not specifically address the issue of impact on small entities. A few comments suggested that small shippers would be harmed by the proposed exemption for the same reasons that larger shippers would be harmed. These fears should be adequately dispelled by our discussion above.

The Chief Counsel for Advocacy of the United States Small Business Administration (SBA) supports the exemption because it contends that the regulatory burden of filing tariffs falls disproportionately on small carriers. The SBA notes that while all carriers incur some costs in the preparation of tariffs, small carriers, which comprise the vast majority (88 percent) of contract, carriers, have fewer revenue miles over which to spread the cost and thus are competitively disadvantaged relative to larger entities. We agree with the SBA's assessment of the impact of this exemption.

Freight, Motor carriers.

49 CFR Part 1307

Freight, Motor carriers, Moving of household goods.

(49 U.S.C. 10321, 10702(b), 10761(b), 10762(f) and 5 U.S.C. 553)

Decided: May 17, 1983.

By the Commission, Chairman Taylor, Vice Chairman Sterrett, Commissioners Andre and Gradison. Commissioner Andre joined by Vice Chairman Sterrett, concurred with a separate expression.

Agatha L. Mergenovich,

Secretary.

Commissioner Andre, joined by Vice Chairman Sterrett, concurring:

The Contract Carrier Conference is to be commended for its part in initiating this proceeding. The Federal Trade Commission had filed a petition for tariff relief in June, 1982, but there was some question at the time whether this Commission could consider the FTC petition since it had not been filed by a carrier. The concern was laid to rest in July when the Conference filed on behalf of its contract carrier members. These two petitions focused attention on a costly and non-productive aspect of regulation. Consequently, the Commission issued a notice of proposed rulemaking in December, 1982, committing itself to a final decision within sixty days of the close of public comment. While the announced deadline was not met, the case has not languished either. So perhaps the result in this case is twice beneficial. The contract carrier sector, its carriers and users, will benefit from an increase in competitive efficiency and a decrease in unproductive costs. And the Commission may have discovered a way to speed its discretionary docket: commit itself to public target dates and run the risk of embarrassment.

There should be no doubt that tariff filing imposes costs on the public. There is the expense involved in the paperwork. More than 66,000 contract tariffs were filed last year. Various estimates of the time and money spent on these filings have been made and challenged in this docket. A precise estimate is not possible, but its components would include private sector costs, and those of the Commission as well, since the public pays both as increments either to prices or taxes. If the total cost per tariff is no more than $500, then tens of millions are expended annually on paperwork alone.

A second type of cost that needs consideration is the loss of business opportunity. Agreements between carriers and shippers can be impeded because of the added delay and expense of tariff filing. Where the benefits to both parties are large, tariff concerns will not defeat a deal. But in cases where the gains at first appear small or where time is of the essence, agreements may not be reached. Just how much is lost to the public is unknown, but prudent policy requires the assumption that significant losses are possible. A third category of cost stems from the fact that the filing requirement impinges on the free operation of the price system, perhaps defeating it altogether in some instances. Filing makes contract carriage less competitive and efficient than otherwise. While the process by which diminished competition lessens consumer welfare is well understood, these losses are not easy to identify specifically or to quantify reliably. Nevertheless, competitive efficiency is so central to consumer welfare that it is safe to assume that the anti-competitive impact of the tariff system may be its worst feature.

It is fortunate that there is no need to quantify any of these costs precisely. There are convincing statements in the record that expenditures of cash and management time are considerable, and that business opportunities are frequently missed, and competition diminished. Whatever the arguable range of the costs thus incurred, the sums are clearly not trivial. The question that then arises is this: what are the public benefits that warrant the continued imposition of non-trivial costs on the transportation system? The answer is that there are none. Of the 66,000 contract tariffs filed last year, none were suspended or investigated. So it is irrelevant what one thinks about the efficacy of rate regulation; these tariffs are not being used to support an active program of rate prescription. In fact, the Interstate Commerce Commission has only limited power over contract rates. It cannot set maximum rates for contract carriers, and the statute does not make

discrimination between shippers unlawful. The Commission's power is restricted to the prescription of minimum rates. That is, the Commission's authority is limited to deciding when the rates in a contract might be too low.[1] But even in the field of minimum rates there has been no recent activity that would indicate that the tariff system is used to support active rate regulation. The Contract Carrier Conference characterizes minimum rate complaints as "vanishingly rare" and states that it is unable to determine the last time that the Commission upheld such a complaint. No one seriously challenges this characterization.

There is an argument that, without regard to the power to prescribe rates, the very fact of tariff filing itself opens up the competitive process in a way that enhances performance and deters predatory conduct. Legislation in 1957 required contract carriers to file the actual rates that they charged their customers;[2] prior to that, minimum rates, whether or not used by the carrier, were all that had to be included in tariffs. The 1957 enactment contained several provisions that were designed to curtail the expanding impact of contract carriage,[3] and the provision requiring the filing of actual rates was clearly influenced by the belief that "open" contract pricing would enhance the competitive position of common carriage.[4] The opposition to tariff exemption in this proceeding relies heavily on this 1957 legislation, and understandably so.

The difference between 1983 and 1957 is, however, more than just a quarter century. The most obvious difference is the Motor Carrier Act of 1980.[5] The 1935 statute that initiated motor carriage regulation sought to create a controlled entry system in which competitors could be protected from themselves. Not surprisingly, outsiders became more aggressive as the profit opportunities inside the cartel grew more considerable. Problems with "predatory" rail rates, the growth of private carriage, "unauthorized" operations, and the spread of contract carriage all reflect the inevitable weakness of cartels. In 1957 the Congress sought to attack one aspect of this problem by tightening the regulatory regime. In 1980 that course was emphatically reversed. It has been said often, but still bears repeating: the Commission now operates under a revised National Transportation Policy that designates competition and efficiency as the principal regulatory tools. Substantial freedom has been returned to all categories of carriers, so that they may choose their prices and services as the dictates of the market demand. Contract carriers have been relieved of the stigma of second class citizenship. They are now permitted to serve any number of customers, they may hold common carrier authority, they may contract with freight forwarders, and they may commingle loads of contract freight and common carrier freight on the same truck.[6]

Nevertheless the opposition parties would still have the Commission adhere rigidly to the tariff filing aspect of the 1957 law because they argue that "open" pricing is required by the competitive goals of the Motor Carrier Act of 1980. But experience demonstrates that "open" pricing, whether by tariff or otherwise, is not necessary to achieve acceptable competitive performance. Agricultural trucking has always been exempt from rate regulation and tariff filing, and this has not led to destructive or predatory practices. Recently the Commission exempted much of intermodal transportation from tariff and rate regulation,[7] and the experience so far has been a welcome increase in the vitality of this market without any serious indication of anti-competitive behavior or public harm. The Commission long ago granted a tariff filing exemption to armored car service, again without any harmful public impact.[8]

For the past year tariff exemptions have been given to contract carries on an individual basis, perhaps more than two hundred and fifty to date. There is no evidence that these exemptions have lessened competition in the marketplace. While "open" pricing has a superficial attractiveness, even without tariff listings a competitor is not likely to be unable to find out the price he must offer in order to be competitive. Indeed an argument can be made the other way, that price lists facilitate price fixing, and that the Commission is well advised to grant this exemption, which is, of course, reversible, on the theory that concealed rate reductions can be counted on to break down any remaining stickiness in the outmoded pricing patterns of an industry emerging from regulation. Given that experience with the variety of exemptions above shows no need for open pricing, it is clearly within the Commission's discretion, and not arbitrary or unfounded, for the Commission to continue to issue individual contract exemptions. However, that process would necessarily involve a high cost in terms of legal and administrative fees. A blanket exemption will reduce these costs substantially, with the advantage that the remaining contract carriers will receive relief simultaneously.

The Regular Common Carrier Conference of the American Trucking Associations and other representatives of the common carrier sector make two additional arguments that warrant comment: first, they claim that contract carriers will use secret, unregulated rates to predatory advantage; and, second, they argue that common carriers cannot be expected to remain competitive with others that do not suffer the common carrier's regulatory burden. On examination, the predation argument can be seen to be meritless, except as it relates in an unintended way to the claim that common carriage will be handicapped by regulatory requirements. Predation is not inferred from aggressive competiton, even that which results in wide swings in marketshare between competitors.[9] Predation is characterized by an intent to achieve monopoly gain through tactics that are not related to the productive efficiency of the firm. The example most often cited, although far less often realized, is the use of below-cost pricing to drive out rivals and capture markets that are thereafter subjected to higher, monopoly prices. The problem should be a false concern in the trucking industry. "Captive" markets are not defensible over any significant period because entry into trucking is relatively inexpensive and rapid, particularly since the industry's principal capital stock can be readily leased and is itself mobile. Consequently, unless non-market barriers are postulated, the risks of undertaking a predatory campaign loom so large that they should discourage all but the irrational. There is the immediate cash drain of pricing below the out-of-pocket cost of providing service, there is the danger that the demand for lower prices will spread beyond the markets targeted for capture, and there is the need to be concerned with treble damage actions should the strategy be detected and proven in the courts. So it should not be surprising that a predatory binge is not credible. Preoccupation with this unlikely problem does not justify the retention of a costly industrywide tariff scheme as prophylaxis.

There is, however, some possible merit to the argument that uneven regulatory requirements will distort the competitive relationship between contract and common carriers. While there may be no purely market originated barriers that could reward a predatory strategy, cost differences imposed by government regulation might suffice. In the academic criticism of transportation regulation that preceded reform legislation there is unanimous agreement that government-conferred privilege has been capable of sustaining monopoly advantage where the marketplace would have otherwise eroded it.[10] Whether

[2] Pub. L. 85-124, 71 Stat. 343 (1957).

[3] The most significant of the 1957 amendments restricted the number of customers that a contract carrier could serve. See *Umthun Trucking Co. Extension—Phosphatic Feed Supplies*, 91 M.C.C. 691 (1962).

[4] See Senate Report No. 335, 85th Cong. 1st Sess. (1957); House Report No. 895, 85th Cong. 1st Sess. (1957); quoted extensively in the comments of Bulk Carrier Conference, Inc. (1-20-83, this docket.)

[5] Pub. L. 96-296, 94 Stat. 793 (1957).

[6] See section 10 of the Motor Carrier Act of 1980, *supra*, and House Report 96-1069, 96th Cong. 2d Sess. (1980) at 22.

[7] Ex Parte No. 230 (Sub-No. 5), *Improvement of TOFC/COFC Regulation*, (not printed) served February 19, 1981, aff'd sub nom. *American Trucking Associations* v. *I.C.C.*, 658 F. 2d 1115 (5th Cir. 1981).

[8] *Armored Carrier Corp., Pet. for Relief*, Sec. 218(a), 303 I.C.C. 781 (1958).

[9] The Motor Carrier Act of 1980 includes a statement in its new entry standards to the effect that diversion of revenues from an existing firm is not a probable indicator of competitive harm. (Section 5 of the Motor Carrier Act of 1980, amending 49 U.S.C. 10922(b).) An underlying purpose of the reform law is to insure that shippers have an opportunity to do business with efficient transportation firms. That necessarily implies an expectation of "diversion" and a tolerance for it.

[10] See e.g. T. G. Moore, *Freight Transportation Regulation*, (1972); A. F. Friedlander, "The Social Costs of Regulating the Railroads," printed in the *American Economic Review* (May 1971); and, generally A. E. Kahn, *The Economics of Regulations*, Volumes 1 & 2 (1970). It is important to note that the advantage thus gained does not necessarily pass to the equity holders of the regulated firms, indeed it is somewhat unusual

the elimination of tariff filing for a part of the industry confers a sufficient advantage in cost and efficiency to result in significant distortion depends on the magnitude of the savings thus permitted. Since savings above the trivial range have been assumed here, the Commission cannot completely disregard this problem. However the proper response is not maintenance of the status quo. It is to proceed rapidly to equalize the advantages that may have been conferred.

The Commission should, for example, immediately institute a proceeding to consider granting blanket authority for short notice rate changes by common carriers[11] and we should allow the filing of rates for individually named shippers.[12] These actions would permit common carriers to respond rapidly and specifically to competitive pressures. By acting now on these and other measures[13] we can avoid the alternative of gradual, haphazard reform that is likely to cause interim misallocation of energy, talent and resources. I am confident that the Commission will reach these additional matters promptly, and that the result will be to give all carriers as much opportunity as exists in the Interstate Commerce Act to take advantage of the reforms of 1980. The Commission can thus insure that it does not, in the course of regulatory reform, create new and unnecessary distortions along the way.

---

when it does. Labor and suppliers, even competing modes are just as likely to be the beneficiaries of the market power created by government restriction.

[11] A majority of the Commission voted in Ex Parte 297 (Sub-No. 5) to institute such a proceeding.

[12] The Commission issued a notice of proposed rule to consider rates for named shippers in June 1982, and the record has been closed for some time.

[13] The record is ripe for decision in Ex Parte 230 (Sub-No. 6), *Improvement of TOFC/COFC Regulation (Railroad Affiliate Motor Carriers and Other Motor Carriers)*. A favorable decision in this case would permit independent motor carriers to participate more fully in the TOFC/COFC exemption. The Commission would also be well advised to consider a class exemption for finance transactions under 49 U.S.C. 11343(e). The Commission has ample authority to further streamline motor carrier consolidations. A class exemption would facilitate any restructuring in the industry that the recent recession and the reforms of surface transportation regulation may indicate.

Appendix

Title 49 of the Code of Federal Regulations is amended as follows:

PART 1162—TEMPORARY AUTHORITY PROCEDURES UNDER 49 U.S.C. 10928

1. In § 1162.3, paragraph (b) is revised to read as follows:

§ 1162.3 Processing of applications.

* * * * *

(b) *Publication of rates and charges.* A contract carrier of passengers or a common carrier may not lawfully perform transportation under a grant of temporary authority unless and until compliance has been made with rate and other requirements of 49 U.S.C. 10761 and 10762.

* * * * *

2. In § 1162.5, the first sentences of (a)(3) and (b)(1) are amended and as revised, the paragraphs read as follows:

§ 1162.5 Rates, fares, charges, and special permission applications.

* * * * *

(a) * * *

(3) *Motor contract carriers.* A motor contract carrier of passengers may not lawfully provide transportation until effective rates, fares, and/or charges together with supporting schedule provisions are on file with the Commission as required by 49 U.S.C. 10761 and 10762 and the Commission's rules and regulations.

* * * * *

(b) *Emergency-temporary authority.* (1) Motor carriers. Each application for emergency temporary authority for 30 days or less (except those involving the Railway Express Agency, substitution of motor for rail service, or contract carriers of property) shall be accompanied by a statement of the rates, fares, charges, and other tariff or schedule provisions to by filed under Special Permission M–60160 or M–60161, §§ 1306.100, 1306.101, 1307.100, and 1307.101 of this chapter, for use in the event the authority is granted.

* * * * *

PART 1307—FREIGHT RATE TARIFFS, SCHEDULES, AND CLASSIFICATIONS OF MOTOR CARRIERS

3. The heading and text of § 1307.0 are revised to read as follows:

§ 1307.0 General.

Motor contract carriers of property shall not be required to publish or file schedules stating the rates or charges covering the services provided or the rules, practices, or regulations affecting those rates and charges.

§§ 1307.1 through 1307.18 [Removed and reserved]

4. Sections 1307.1 through 1307.18, inclusive, are removed and reserved for future use.

§§ 1307.21 through 1307.50 [Removed and reserved]

5. Sections 1307.21 through 1307.50, inclusive, are removed and reserved for future use.

§ 1307.101 [Removed and reserved]

6. Section 1307.101 is removed and reserved for future use.

Proposed Rules

Federal Register
Vol. 48, No. 106
Wednesday, June 1, 1983

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 1007

[Docket No. AO-366-A21]

Milk in the Georgia Marketing Area; Supplemental Notice of Hearing and a Rescheduling of Hearing on Proposed Amendments to Tentative Marketing Agreement and Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Supplemental notice and a rescheduling of public hearing on proposed rulemaking.

SUMMARY: The notice provides for an additional proposal to be considered, and reschedules a previously announced public hearing on the Georgia milk order. The additional proposal was submitted by the Milk Industry Foundation (MIF) and would provide that all exported fluid milk products shall be classified and pooled identically. The MIF said that this treatment would continue a Department policy whereby all fluid milk products are treated alike under Federal milk orders regardless of processing or packaging. All the remaining proposals specified in the prior notice (48 FR 21962) will be considered at the rescheduled hearing.

DATE: The hearing will convene July 12, 1983.

ADDRESS: The hearing will be at the Atlanta Airport Hilton, 1031 Virginia Avenue, Hapeville, Georgia 30354, beginning at 9:30 a.m., local time.

FOR FURTHER INFORMATION CONTACT: Martin J. Dunn, Marketing Specialist, Dairy Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250, 202-447-7311.

SUPPLEMENTARY INFORMATION: Prior document in this proceeding:

Notice of Hearing: Issued May 10, 1983; published May 16, 1983 (48 FR 21962).

The notice is hereby given, pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*), and the applicable rules of practice and procedure governing the formulation of marketing agreements and orders (7 CFR Part 900) that consideration will be given at the rescheduled hearing to an additional proposal submitted by the Milk Industry Foundation that would classify and pool exported fluid milk products identically. The prior hearing notice is hereby changed in the following respects:

Proposed by the Milk Industry Foundation:

Proposal No. 5.

"Whatever classification and pooling is provided for aseptically processed fluid milk products (UHT milk) will also be available for all other exported fluid milk products."

The proposed amendment, as set forth above, has not received the approval of the Secretary of Agriculture.

List of Subjects in 7 CFR Part 1007

Milk marketing orders, Milk, Dairy products.

Signed at Washington, D.C., on May 26, 1983.

William T. Manley,

Deputy Administrator, Marketing Program Operations.

BILLING CODE 3410-02-M

NUCLEAR REGULATORY COMMISSION

10 CFR Part 50

[Docket No. PRM 50-24]

John F. Doherty; Denial of Petition for Rulemaking

AGENCY: Nuclear Regulatory Commission.

ACTION: Denial of Petition for Rulemaking.

SUMMARY: The Nuclear Regulatory Commission is denying a petition requesting that the Commission amend its regulations governing the domestic licensing of production and utilization facilities to specifically require prescribed action by the Commission in the event of objects falling from earth's orbit on the grounds that the requested amendments are unnecessary. The provisions of the Atomic Energy Act of 1954, as amended, permit the Commission to take actions of the kind outlined by the petitioner; the requested amendments are therefore unnecessary. Based on experience, the Commission has found its present practice of notification and monitoring the progression of natural or man-induced events that may impact the operation of licensed facilities is adequate. Further, the Commission is authorized to order licensees to act to protect health and minimize danger to life or property.

ADDRESSES: Copies of correspondence and documents cited below are available for public inspection and copying for a fee at the Commission's Public Document Room at 1717 H Street NW., Washington, D.C.

FOR FURTHER INFORMATION CONTACT: Mr. Kenneth Perkins, Chief, Incident Response Branch, Division of Emergency Preparedness and Engineering Response, Office of Inspection and Enforcement, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Telephone: 301 (492-4614).

SUPPLEMENTARY INFORMATION: In a submittal dated July 6, 1979, Mr. John F. Doherty filed with the Commission petition for rulemaking PRM-50-24.

The Petition

The petitioner requested that the Commission adopt a regulation which would state that it is the duty of the Commission to inform all holders of Class 103 licenses (production and utilization facility licensees) of any announcement by any Federal agency or department of predicted or expected falling objects from earth's orbit, whether the falling object is the responsibility of the announcing agency or the responsibility of a foreign nation. The petitioner also requested that the Commission adopt a regulation which specifies that the Commission inform and advise the affected licensees until a prediction of the most likely impact area(s) can be issued by the responsible department or agency. The petitioner requested that the Commission order plants near the probable impact area to be shut down.

Basis for Request

As the basis for the request, the petitioner stated that the Commission should specifically prepare for a possible occurrence of a situation similar to the Skylab incident in which orbiting objects of considerable size could be expected to fall to earth with considerable force.

Request for Comments on Petition

A Notice of Filing of Petition for Rulemaking was published in the **Federal Register** on August 16, 1979 (44 FR 47997). The comment period expired October 1, 1979. The Commission received one letter of comment in response to the notice.

The one commenter opposed the petition on the basis that adequate provisions currently exist within the regulations to permit the Commission to take the required actions should the health and safety of the public be jeopardized. These provisions include the authority to order that a licensed facility be shut down. The commenter also suggested that the proposal could result in the taking of unnecessary adverse action in the absence of a credible threat.

Disposition of Petition

The Commission already has the authority to take the actions the petitioner requests. For instance, the Atomic Energy Act of 1954, as amended, authorizes the Commission to "* * * prescribe such regulations or orders as it may deem necessary * * * to govern any activity authorized * * * including * * * restrictions governing the * * * operation of facilities * * * in order to protect health and to minimize danger to life or property." Consequently, a specific regulation that deals with objects falling from earth orbit and that prescribes actions on the part of the Commission is unnecessary.

External events may occasionally affect the routine operation of NRC-licensed production and utilization facilities. Within the framework of the current NRC licensing process, these events are considered in the siting and design of power reactors. Plants in operation may be subject to natural or man-induced events that warrant particular attention. The NRC is kept apprised of developing situations that have the potential to impact routine operation at power reactors. In the past, these situations have included events such as the Skylab reentry, the COSMOS 1402 reentry, the Mt. St. Helens eruption, hurricanes, and other severe environmental conditions.

As an example of an NRC response to a specific situation, in addition to the information notice that was issued to licensees during the Skylab reentry, the NRC response center was activated to monitor the situation and was prepared to act if necessary. NRC maintained contact with the Federal Emergency Management Agency (FEMA) and the National Aeronautics and Space Administration during the reentry process. Skylab debris fell on and near Australia. However, had Skylab "skipped" on reentry and continued for another partial orbit, its trajectory would have caused it to become a potential threat to a number of U.S. nuclear facilities. A large uncertainty existed at the time as to which Skylab orbit would be the last. Nuclear plant shutdowns were not ordered because: (1) The shutdown of a large number of facilities could have caused a potentially serious power disruption; (2) vital parts of nuclear power plants have substantial protection from external hazards, and (3) a direct strike on a nuclear power plant is extremely unlikely. Those NRC-licensed reactor facilities that were projected to be in the potential reentry path were alerted and advised to (1) have technical management available to augment staff in the event of a problem, and (2) be prepared to cope with a loss of offsite power. The actions taken by the NRC during the Skylab incident demonstrate that the Commission was prepared to act in the appropriate manner to protect the health and safety of the public under its existing statutory authority and regulations and that sufficient reason does not exist to grant the petition in whole or in part.

Denial

Based on the above considerations, the Commission hereby denies the petition for rulemaking PRM 50–24, dated July 6, 1979, filed by John F. Doherty.

A copy of the petition for rulemaking, a copy of the letter of comment, and the Commission's letter of denial are available for public inspection and copying for a fee at the Commission's Public Document Room at 1717 H Street N.W., Washington, D.C.

Dated at Bethesda, Maryland this 6th day of April 1983.

For the Nuclear Regulatory Commission.

William J. Dircks,

Executive Director for Operations.

DEPARTMENT OF LABOR

Employment and Training Administration

20 CFR Parts 632, 633, 634, and 684

Proposed Rules Under Title IV of the Job Training Partnership

AGENCY: Employment and Training Administration, Labor.

ACTION: Advance notice of proposed rulemaking; notice of availability of document.

SUMMARY: This advance notice alerts interested persons to forthcoming rulemaking and offers an opportunity to request informational, draft copies of proposed rules covering certain Parts of Title IV of the Job Training Partnership Act (Pub. L. 97–300). The proposed rules cover: Part A, Section 401, Native American Program: Part A, Section 402, Migrant and Seasonal Farmworker Programs; Part B, Sections 421–439, Job Corps; and Part E, Sections 461–465, Labor Market Information. Any regulations to be published on other Parts of Title IV will be issued at a later date. Release of the draft regulations is intended to alert interested persons to issues which will be submitted for public comment in the forthcoming proposed rules.

ADDRESS: Requests for draft copies, including self-addressed envelope and/or mailing label, should be addressed to the Assistant Secretary of Labor for Employment and Training, U.S. Department of Labor, 601 D. Street, NW., Room 9000, Washington,D.C. 20213. Attention: Patrick J. O'Keefe, Acting Administrator, Office of Strategic Planning and Policy Development.

FOR FURTHER INFORMATION CONTACT: Patrick J. O'Keefe, Telephone (202) 376–6600.

SUPPLEMENTARY INFORMATION: On October 13, 1982, the President signed the Job Training Partnership Act, Pub. L. 97–300. To provide basic program planning information as early as possible, the Department is making available to interested persons, upon written request, a prelimanary draft of the proposes regulations implementing Title IV of the Job Training Partnership Act. Release of the draft regulations is intended to alert interest persons to issues which will be submitted for public comment in the forthcoming proposed rules.

Signed this 26 day of May 1983.

BILLING CODE 4510-30-M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 948

Public Comment Period and Opportunity for Public Hearing on Modified Portions of the West Virginia Permanent Regulatory Program; Correction

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Proposed rule; correction.

SUMMARY: On May 19, 1983, at 48 FR 22586, OSM published a notice announcing procedures for a public comment period and hearing on the substantive adequacy of certain program amendments submitted by the State of West Virginia as modifications to its permanent regulatory program under the Surface Mining Control and Reclamation Act of 1977. Due to an inadvertent error, the **"DATES"** section of that notice stated that written comments not received on or before 4:00 p.m. on May 19, 1983, will not necessarily be considered. The correct date should have been June 20, 1983.

DATES: Written comments not received on or before 4:00 p.m. June 20, 1983, will not necessarily be considered. A public hearing on the proposal will be held from 7:00 p.m. to 9:00 p.m. on June 13, 1983, at the OSM Charleston Field Office listed below under **"ADDRESSES"**. Any person interested in making an oral or written presentation at the hearing should contact Mr. David H. Halsey at the OSM Charleston Field Office by the close of business on June 8, 1983. If no one has contacted Mr. Halsey to express an interest in participating in the hearing by that date, the hearing will not be held. If only one person has so contacted Mr. Halsey, a public meeting, rather than a hearing, may be held and the results of the meeting included in the Administrative Record.

ADDRESSES: Written comments should be mailed or hand delivered to: Office of Surface Mining Reclamation and Enforcement, Charleston Field Office, Attention: West Virginia Administrative Record, 603 Morris Street, Charleston, West Virginia 25301, Telephone (304) 347-7158.

See **"SUPPLEMENTARY INFORMATION"** for addresses where copies of the West Virginia program, the amendments and the administrative record on the West Virginia program are available. Each requestor may receive, free of charge, one single copy of the proposed program amendments by contacting the OSM Charleston Field Office listed above.

FOR FURTHER INFORMATION CONTACT: David H. Halsey, Director, Charleston Field Office, Office of Surface Mining Reclamation and Enforcement, 603 Morris Street, Charleston, West Virginia 55301, Telephone: (304) 347-7158.

Dated: May 25, 1983.

Arthur W. Abbs,

Acting Assistant Director, Program Operations and Inspection.

BILLING CODE 4310-05-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[A-4-FRL 2356-2; KY-013]

Designation of Areas for Air Quality Planning Purposes; Kentucky—Redesignation of Sixty-Seven Counties to Attainment for Ozone

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: On the basis of ozone air quality data submitted by Kentucky, EPA proposes to change the Section 107 attainment status designation for sixty-six rural counties (populations less than 50,000) in that State from unclassifiable to attainable. On the same basis, it is proposed to change the designation of Fayette County from nonattainment to attainment. The public is invited to submit written comments on the proposed actions.

DATE: To be considered, comments must be received on or before July 1, 1983.

ADDRESSES: Written comments should be addressed to Melvin Russell of EPA Region IV's Air Management Branch (see EPA Region IV address below). Copies of the materials submitted by the State may be examined during normal business hours at the following locations:

Air Management Branch, EPA, Region IV, 345 Courtland Street, N.E., Atlanta, Georgia 30365

Kentucky Department for Environmental Protection, 18 Reilly Road, Bldg. No. 2, Ft. Boone Plaza, Frankfort, Kentucky 40601

FOR FURTHER INFORMATION CONTACT: Melvin Russell, Air Management Branch, EPA Region IV, at the above address, telephone 404/881-3286 (FTS 257-3286).

SUPPLEMENTARY INFORMATION: On March 3, 1978 (43 FR 8962 at 8996), EPA made initial ozone attainment status designations for the Commonwealth of Kentucky. All the counties identified in today's notice except Fayette County were included in the "Rest of State" entry under the heading "Cannot be Classified or Better than National Standards" in the "Kentucky—Ox" table of 40 CFR 81.318. Fayette County was identified as not attaining the primary standards.

During the spring of 1981, the Kentucky Department for Environmental Protection (KDEP) completed the establishment of a statewide ozone network in order to determine the attainment status of rural counties. Monitoring sites were placed so as to be representative of the maximum number of counties under EPA's policy that an ozone monitor is generally representative of the air quality within a 50 km radius of the monitoring site. In this manner, Kentucky hoped to be able to designate numerous counties attainment for the ozone standard, and so free them from the requirement to control emissions from major volatile organic compound (VOCV) emitting sources under the State's statewide ozone control strategy.

Kentucky established ozone monitors in the following counties: Clay, Floyd, Mercer, Clark, Pendleton, Ohio, Carter, Hardin, Oldham, Henry, Calloway, Hopkins, Fulton, Pulaski, Metcalfe and Logan and collected data from the sites during 1979 through 1981. These monitoring sites met all of EPAs, monitoring siting criteria and operated in conformance with 40 CFR Part 58.

KDEP on April 20, 1982, requested on the basis of data collected in all of the foregoing counties except Mercer, Calloway, Hopkins and Ohio, that 67 rural counties be redesignated from unclassified to attainment for the ozone standards:

Adair, Barren, Bath, Bell, Bourbon, Bracken, Breathitt, Breckinridge, Bullitt, Carroll, Carter, Clark, Clay, Clinton, Cumberland, Elliott, Estill, Fleming, Floyd, Franklin, Fulton, Gallatin, Grant, Green, Greenup, Hardin, Harlan, Harrison, Henry, Hickman, Jackson, Johnson, Knott, Knox, Larue, Lawrence,

Lee, Leslie, Letcher, Lewis, Magoffin, Martin, Mason, Meade, Menifee, Metcalfe, Monroe, Montgomery, Morgan, Nelson, Nicholas, Oldham, Owen, Owsley, Pendleton, Perry, Pike, Powell, Robertson, Rowan, Scott, Shelby, Spencer, Taylor, Todd, Trimble, and Wolfe.

The Department also requested the redesignation of Fayette County from nonattainment to attainment of the ozone standard. This county's original nonattainment designation was based on data collected prior to 1978. The State's submittal of April 20, 1982, indicated that the ozone standard was not violated during the 1979, 1980, or 1981 ozone season. EPA's review indicated that the State's request was consistent with the redesignation criteria for nonattainment ozone areas, and therefore approvable. Because of the rural nature of this county, a control strategy demonstration is inappropriate. In addition, the Federal Motor Vehicle Control program nationwide and the implementation of RACT controls in major urban areas provides assurance that VOC emissions in urban areas which might lead to ozone problems in rural areas are sufficiently reduced to prevent future violations.

The National Ambient Air Quality Standard for ozone is 0.12 parts per million (ppm); the number of days per year above the standard must be less than or equal to one. If more than one year of data is used, the numnber of days above the standard is averaged over the number of years, to determine if the average number of days above the standard is less than or equal to one per year. If the number of days above 0.12 is greater than one (>1) the standard is violated.

Regarding the unclassified counties, the following tables indicates the two highest readings for the 1981 ozone season at the monitors used for the redesignation request:

County	Maximum (ppm)	2d maximum (ppm)	Number of days >0.12 ppm	Expected days >0.12 ppm
Clay	.085	.082	0	0
Floyd	.090	.090	0	0
Clark [1]	.150	.110	1	1
Pendleton	.095	.088	0	0
Carter	.109	.098	0	0
Hardin	.088	.088	0	0
Oldham	.090	.090	0	0
Henry	.109	.099	0	0
Fulton	.096	.087	0	0
Pulaski	.102	.096	0	0
Metcalfe	.089	.084	0	0
Logan	.099	.095	0	0
Greenup	.111	.105	0	0
Hancock	.099	.098	0	0
Fayette	.115	.094	0	0

County	Maximum (ppm)	2d maximum (ppm)	Number of days >0.12 ppm	Expected days >0.12 ppm
Fayette	.106	.101	0	0

[1] This maximum value occurred at 5:00 a.m. October 24, 1981. Since daylight is considered necessary for the creation of ozone and because this reading occurred near the end of the ozone season, this is considered to be anomalous.

EPA's review of the redesignation request for the unclassified Counties identified several problems in the request. Region IV EPA discussed the issues with Kentucky personnel and on June 21, 1982, officially requested the additional justification. Kentucky submitted the additional supporting information on October 11, 1982.

The State's October 11, 1982, submittal indicated that monitoring data for Bullitt County did not warrant redesignation. Data from an ambient monitor in Bullitt County recorded a concentration of 0.130 ppm in 1980, and using the procedure to account for missing days, three days of expected exceedance were calculated.

The State's redesignation request is consistent with Section 107 of the Clean Air Act and EPA guidance. The Act permits the redesignation of areas; the EPA guidance that defines the general criteria for redesignation consists of various guidance memoranda and the EPA publication titled "Guidelines for the Interpretation of the Ozone Air Quality Standard."

The basic criteria followed in the present case are as follows:

1. Any rural county designated as unclassified for ozone can be redesignated attainment if it is within 50 kilometers of an ambient monitor that records no violations of the ozone standard (0.12 parts per million, not to be exceeded more than once per year) for one ozone season. The ozone season in Kentucky is May through October.

2. Any county designated as nonattainment for ozone can be redesignated attainment if (a) there are eight consecutive quarters of ambient air quality data showing no violations and (b) significant reductions in actual emissions have occurred and these reductions are commensurate with an air quality improvement (to attainment) monitored in the last calendar year; in the latter case, the last year of data is sufficient for redesignation purposes. All emission reductions must be enforceable and quantifiable.

With regard to unclassified areas, EPA's decision to redesignate to attainment is made on a case-by-case basis. Each monitor and the area within a 50 km radius is studied to determine if the monitored data is representative of the counties included in the circle in whole or in part. Meteorological data must support the redesignation request.

EPA has determined that in light of the EPA redesignation criteria and Kentucky's April 20, and October 11, 1982 submittals, redesignation of affected counties as requested by Kentucky is in order.

Proposed Action

EPA today proposed to designate the following Kentucky counties attainment for ozone: Adair, Barren, Bath, Bell, Bourbon, Bracken, Breathitt, Breckinridge, Carroll, Carter, Clark, Clay, Clinton, Cumberland, Elliott, Estill, Fayette, Fleming, Floyd, Franklin, Fulton, Gallatin, Grant, Green, Greenup, Hardin, Harlan, Harrison, Henry, Hickman, Jackson, Johnson, Knott, Knox, Larue, Lawrence, Lee, Leslie, Letcher, Lewis, Magoffin, Martin, Mason, Meade, Menifee, Metcalfe, Monroe, Montgomery, Morgan, Nelson, Nicolas, Oldham, Owen, Owsley, Pendleton, Perry, Pike, Powell, Robertson, Rowan, Scott, Shelby, Spencer, Taylor, Todd, Trimble, and Wolfe.

A 30-day comment period is being provided because the submitted redesignations and the issues involved are not so complex as to warrant a longer comment period. At the close of the comment period, EPA will respond to comments and publish a notice of final rulemaking.

Under 5 U.S.C. 605(b), the Administrator has certified that area redesignations do not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.)

The Office of Management and Budget has exempted this rule from the requirements of Section 3 of Executive Order 12291.

40 CFR Part 180

[PP 7E1940/P291; PH-FRL 2373-5]

Endosulfan; Proposed Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes that a tolerance be established for the combined residues of the insecticide endosulfan and its metabolites in or on the raw agricultural commodity raspberries. The proposed regulation to establish a maximum permissible level for residues of the insecticide in or on the commodity was requested in a petition submitted by the Interregional Research Project No. 4 (IR–4).

DATE: Comments must be received on or before July 1, 1983.

ADDRESS: Written comments to: Emergency Response and Minor Use Section, Registration Support and Emergency Response Branch, Registration Division (TS–767C), Environmental Protection Agency, Rm. B, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT: Donald Stubbs (703–557–1192) at the above address.

SUPPLEMENTARY INFORMATION: The interregional Research Project No. 4 (IR–4), New Jersey Agricultural Experiment Station, P.O. Box 231, Rutgers University, New Brunswick, NJ 08903, has submitted pesticide petition 7E1940 to EPA on behalf of the IR–4 Technical Committee and the Agricultural Experiment Station of Utah.

This petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a tolerance for the combined residues of the insecticide endosulfan (6,7,8,9,10,10-hexachloro-1,5,5a,6,9a-hexahydro-6,9-methano-2,4,3-benzodioxathiepin-3-oxide) and its matabolite endosulfan sulfate (6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-6,9-methano-2,4,3-benzodioxathiepin-3,3-dioxide) in or on the raw agricultural commodity raspberries at 0.1 part per million (ppm).

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purpose for which the tolerance is sought. The toxicological data considered in support of the proposed tolerance included acute oral rat toxicity studies with median lethal doses (LD_{50}) of 40, 43, and 142 milligrams (mg)/kilogram (kg) of body weight (bw) for males and 9, 18, and 53 mg/kg bw for females; a 1-year chronic dog feeding study with a no-observed-effect level (NOEL) of 30 ppm (0.75 mg/kg/day); a rat and a rabbit teratology study with no observed teratogenic effects and NOEL's of 2.0 and 0.7 mg/kg/day, respectively for maternal toxicity; oncogenicity studies on rats and mice were negative for oncogenic effects for females and inconclusive for males; a dominant lethal mutagenicity study in mice with no observed mutagenic potential at 10 mg/kg and an Ames test which was negative at 1,000 micrograms per plate. Studies considered desirable but lacking are a more adequate delineation of the oncogenic potential for male rats and mice, a long-term reproduction study, a rat chronic feeding study, and a more adequate definition of mutagenic potential.

The acceptable daily intake (ADI), based on the 1-year dog feeding study (NOEL) of 0.750 mg/kg/day) and using a 100-fold safety factor, is calculated to be 0.0075 mg/kg of body weight (bw)/day. The maximum permitted intake (MPI) for a 60-kg human is calculated to be 0.4500 mg/day. The theoretical maximum residue contribution (TMRC) from existing tolerances for a 1.5-kg daily diet is calculated to be 0.6080 mg/day; the current action will increase the TMRC by 0.00005 mg/day (0.008 percent) and will utilize an additional 0.01 percent of the ADI. The tolerance that will be established by this proposed rule is considered to pose a negligible incremental dietary risk since dietary exposure will not be significantly increased.

The nature of the residues is adequately understood and an adequate analytical method, gas chromatography, is available for enforcement purposes. Since there are no animal feed items involved, there will be no secondary residues in meat, milk, poultry, or eggs. There are presently no actions pending against the continued registration of this chemical.

Based on the above information considered by the Agency, the tolerance established by amending 40 CFR 180.182 would protect the public health. It is proposed, therefore, that the tolerance be established as set forth below.

Any person who has registered or submitted an application for registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this notice in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document control number, [PP 7E1940/P291]. All written comments filed in response to this petition will be available in the Emergency Response Section, Registration Division, at the address give above from 8:00 a.m. to 4:00 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–534, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests.

(Sec. 408(e), 68 Stat. 514 (21 U.S.C. 346a(e)))

Dated: May 23, 1983.

Douglas D. Campt,

Director, Registration Division, Office of Pesticide Programs.

PART 180—[AMENDED]

Therefore, it is proposed that 40 CFR 180.182 be revised to read as follows:

§ 180.182 Endosulfan; tolerances for residues.

Tolerances are established for the total residues of the insecticide endosulfan (6,7,8,9,10-hexachloro-1,5,5a,6,9,9a-hexahydro-6,9-methano-2,4,3-benzodioxathiepin-3-oxide) and its metabolite endosulfan sulfate (6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9*a*-hexahydro-6,9-methano-2,4,3-benzodioxathiepin-3,3-dioxide) in or on the following raw agricultural commodities:

Tebuthiuron; Proposed Tolerances

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes that tolerances be established for the combined residues of the herbicide tebuthiuron and its metabolites in or on the raw agricultural commodities milk and grass hay. The proposed regulation to establish maximum permissible levels for residues of tebuthiuron in or on the commodities was requested in a petition submitted by the Elanco Products Company.

DATE: Comments must be received on or before July 1, 1983.

ADDRESS: Written comments to: Product Manager (PM) 25, Registration Division (TS-767C), Office of Pesticide Programs, Environmental Protection Agency, Rm. 245, CM #2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT: Robert Taylor, PM-25, (703-557-1800) at the above address.

SUPPLEMENTARY INFORMATION: EPA issued a notice published in the **Federal Register** of September 22, 1982 (47 FR 41853) which announced that the Elanco Products Company, 740 South Alabama St., Indianapolis, IN 46285, had filed pesticide petition 2F2727 with the Agency. The petition requested that the Administrator, pursuant to section 408(e) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of tolerances for the combined residues of the herbicide tebuthiuron (*N*-[5-(1,1-dimethylethyl)-1,3,4-thiadiazol-2yl]-*N*,*N*'-dimethylurea) and its metabolite containing the dimethylethyl thiadiazole moiety in or on the raw agricultural commodity milk at 0.2 part per million (ppm).

There were no comments received in response to the notice of filing.

The petition was subsequently amended by increasing the tolerance level for milk to 0.3 ppm and proposing a tolerance for the raw agricultural commodity grass hay at 20.0 ppm. Because of the potential of increased risk to humans, these tolerances are being reproposed at this time to allow for public comments.

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purpose for which the tolerances are sought. The toxicological data considered in support of the proposed tolerances include several acute studies; a 90-day rat feeding study with a no-observed-effect level (NOEL) of 1,000 ppm (50 mg/kg); a 90-day rat feeding study with a NOEL of 1.25 mg/kg; a 2-year rat feeding study with a systemic NOEL of 400 ppm (20 mg/kg/day) and no oncogenic effects observed up to and including 1,600 ppm (80 mg/kg), the highest dose tested; a 2-year mouse oncogenic study negative for oncogenicity at 1,600 ppm (240 mg/kg), the highest dose tested; a rat teratology study negative at 1,800 ppm (90 mg-kg), highest dose tested; a rabbit teratology study negative at 25 mg/kg, highest dose tested; a rat dominant lethal study negative at 75 mg/kg; an Ames test negative up to 1 mg/ml; rat, dog, and rabbit metabolism studies; a 162-day cattle feeding study with a NOEL of 30 ppm (.45 mg/kg); a 30-day chicken feeding study with a NOEL of 1,000 ppm (125 mg/kg); and a 2-generation rat reproduction study with a systemic NOEL > 100 ppm (5 mg/kg) and reproductive NOEL >400 ppm (20 mg/kg).

The acceptable daily intake (ADI), based on the 2-year rat feeding study (NOEL of 20 mg/kg/day) and using a 100-fold safety factor, is calculated to be 0.20 mg/kg/day. The maximum permissible intake (MPI) for a 60-kg human is calculated to be 12 mg/day. The theoretical maximum residue contribution (TMRC) from existing tolerances for a 1.5 kg daily diet is calculated to be 0.2232 mg/day. The current action will utilize 1.07 percent of the ADI. Published tolerances utilize 1.86 percent of the ADI.

Data desirable but lacking include a 1-year dog feeding study and additional mutagenicity data. The company has agreed to provide the additional data.

The nature of the residues is adequatley understood and adequate analytical methods, gas chromatography with a flame photometric detector and high performance liquid chromatography, are available for enforcement purposes. There are presently no actions pending against the continued registration of tebuthiuron. Secondary residues are likely to occur in meat, fat, and meat byproducts of cattle, goats, horses, and sheep and milk, but the proposed tolerance on milk and previously established tolerances on meat, fat, and meat byproducts will cover these residues. Residues are not likely to occur in eggs, meat, fat, and meat byproducts of poultry since no poultry feed items are involved.

Based on the above informtion considered by the agency, the tolerance established by amending 40 CFR 180.390 would protect the public health. It is proposed, therefore, that the tolerances be established as set forth below.

Any person who has registered or submitted an application for registration of a pesticide, under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this notice in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in accordance with seciton 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document

control number, [PP 2F2727/P296]. All written comments filed in response to this petition will be available in the Product Manager's office, Registration Division, at the address given above from 8:00 a.m. to 4:00 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–534, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requiremetns do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the Federal Register of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests.

(Sec. 408(e), 68 Stat. 514 (21 U.S.C. 346a(e)))

Dated: May 23, 1983.

Douglas D. Campt,

Director, Registration Division.

PART 180—[AMENDED]

Therefore, it is proposed that 40 CFR 180.390 be amended by adding, and alphabetically inserting, the raw agricultural commodities grass, hay, and milk to read as follows:

§ 180.390 Tebuthiuron; tolerances for residues.

* * * * *

Commodities	Parts per million
* * * * *	
Grasses, hay	20.0
* * * * *	
Milk	0.3
* * * * *

BILLING CODE 6560-50-M

40 CFR Part 610

[AMS-FRL-2373-1]

Amendment for Fuel Additives To Be Included and Evaluated as Fuel Economy Retrofit Devices and to Redefine Manufacturers

AGENCY: Environmental Protection Agency.

ACTION: Reopening of the comment period.

SUMMARY: On December 28, 1982 EPA published a Notice of Proposed Rulemaking (NPRM) entitled Amendment and Clarification of the Test Procedures and Criteria for Fuel Economy Retrofit Devices (47 FR 57742). The NPRM provided for a 60 day comment period which was to end on February 28.

The Lubrizol Corporation and Pennzoil Company both requested an extension of the comment period so that they could prepare and submit comments with respect to the NPRM. Lubrizol's reason for an extension was that until recently, it did not fully realize the impact the rulemaking may have on their company. Pennzoil's reason was that because the title of the NPRM (and the Federal Register table of contents) were not descriptive enough, the company was not aware the NPRM involved fuel additives until recently.

In recognition of the importance of complete and well prepared comments, and also because other interested parties may not be aware the NPRM involves fuel additives, EPA has decided to reopen the comment period for 30 days.

DATES: Comments on the subject NPRM must be submitted on or before July 1, 1983.

ADDRESS: Written comments should be submitted to: U.S. Environmental Protection Agency, Central Docket Section (LE–131), Gallery 1, West Tower Lobby, Waterside Mall, 401 M Street, S.W., Washington, D.C. 20460, ATTN: Docket No. A–82–01.

Availability of documents: Copies of material relevant to this rulemaking are located in Public Docket No. A–82–01, at the U.S. Environmental Protection Agency, Central Docket Section (LE–131), Gallery 1, West Tower Lobby, Waterside Mall, 401 M Street S.W., Washington, D.C. 20460. The docket may be inspected between 8 a.m. and 4 p.m., Monday through Friday. A reasonable fee may be charged for copying services.

FOR FURTHER INFORMATION CONTACT: Merrill W. Korth, Test and Evaluation Branch, Emission Control Technology Division, Environmental Protection Agency, 2565 Plymouth Road, Ann Arbor, MI 48105. Telephone (313) 668–4299.

SUPPLEMENTARY INFORMATION: This rulemaking revises the definition of "retrofit devices" to specifically include fuel additives. Additionally, it clarifies EPA's intention to test fuel additives as retrofit devices. Finally, it revises the definition of "manufacturer" as it applies to retrofit devices and also guarantees certain rights to manufacturers which heretofore have been courteously granted by the Agency.

Dated: May 20, 1983.

Kathleen M. Bennett,

Assistant Administrator for Air, Noise and Radiation.

INTERSTATE COMMERCE COMMISSION

49 CFR Ch. X

[Ex Parte No. MC–165 (Sub–1)]

Motor Contract Carriers of Property; Proposal To Allow Issuance of Permits Authorizing Industry-Wide Service

AGENCY: Interstate Commerce Commission.

ACTION: Notice of proposed policy statement and proposed change in the form OP–1.

SUMMARY: This proceeding explores the extent to which changes in the statutory approach to licensing contract carriers (49 U.S.C. 10923) contemplate issuance of permits on a industry-wide basis. It also sets forth proposed changes in the OP–1 application form that would recognize the feasibility of contract carriers requesting authority by class of proposed customer. This proceeding comes about because of a petition submitted to the Commission by the Bureaus of Competition, Consumer Protection, and Economics of the Federal Trade Commission.

DATE: Comments are due on July 18, 1983.

ADDRESS: The original and 15 copies of comments should be sent to: Ex Parte No. MC–165 (Sub–1), room 2203, Office of the Secretary, Interstate Commerce Commission.

A copy of the comments should also be sent to: Peter P. Metrinko, Lead Counsel, Room 250, Federal Trade Commission, Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Mark S. Shaffer, (202) 275–1723

or

Howell I. Sporn, (202) 275–7691.

SUPPLEMENTARY INFORMATION: The Federal Trade Commission, through several of its Bureaus,[1] has petitioned

[1] Bureaus of Competition, Consumer Protection, and Economics filed the petition pursuant to provisions set forth at 49 CFR 1110.2 and 1110.8.

the Commission to institute a declaratory order proceeding to consider granting motor contract carriers operating authority to serve entire industries.[2] The immediate impetus for this filing is the fact that the Motor Carrier Act of 1980 [3] eliminated a provision of earlier law that had required a direct restriction on the number of customers that might be served by a contract carrier. The FTC Bureaus hail this enactment, but impliedly do not believe that full use is being made of its potential. They believe that some contract carrier applications are still needlessly confined to requests for authority to serve individually named shippers. They argue that, if their proposal is adopted, carrier and shipper costs will be reduced, to the ultimate benefit of the public. They believe that with industry-wide licenses shippers and carriers would no longer choose to forego otherwise mutually beneficial opportunies because of anticipated delays, uncertainties and cost associated with applying for government permission. The Bureaus contend that industry-wide licenses would permit contract carriers to adjust more rapidly to changing opportunities, avoiding repetitive requests for ICC authority.

To implement their petition the Bureaus suggest that we eliminate the requirement that contract carriers specify the name of the individual firm or firms with which they seek to do business. The Bureaus believe that the Commission can thereby continue to insure that the remaining statutory prerequisites of contract carriage are met, but at the same time, by following their plan, enhance the efficiency of contract carriage and eliminate unnecessary regulatory burdens.

Background

The Commission has exercised jurisdiction over the contract carriers for as long as it has been directly regulating their common carrier counterreparts. It has done so primarily to prevent the contract carrier sector from competing too vigorously with common carriage. Contract carriers were perceived to have a competitive advantage arising out of their lighter regulatory burden. (Contract carriers are not required to serve all comers with the same rates and service, nor were they initially required to have any of their rates approved by the Commission.) Restraints were consequently placed on contract carriage, including (1) requirements that conditioned the terms of contracts and required their filing with the Commission, (2) limitations on the number of customers with which a contract carrier might do business, and (3) decisional standards which required that the applicants must show that there are indicia of specialized contract service. In effect, contract carriers were not permitted to hold themselves out too openly to the public.[4]

The attitudes of the Congress, the Commission and the courts have fluctuated over time on the proper role of contract carriage. Early ICC restrictions on the number of customers permitted contract carriers were disapproved by the Supreme Court in 1957 in *United States* v. *Contract Steel Carriers, Inc.*[5] The Court believed that the carriers were free to search aggressively for new customers. The Commission and the common carrier industry were successful in convincing Congress that the Court's approach was unsound. Congress enacted legislation that required contract carriers to serve limited numbers of customers with dedicated vehicles or special services designed to meet distinct needs.[6] The Commission refined this statutory directive to the point where the "rule of eight" was widely recognized as the upper limit on the number of customrs normally permitted.[7] However, in a reversal of administrative direction, the Commission announced in 1979 its determination that the rule of eight was unnecessary, and proposed a more liberal policy of contract carrier entry.[8] As the Bureaus have argued, the Motor Carrier Act of 1980 codifies a similar change in policy direction by Congress and the Executive.

Discussion

We believe that there is merit to the Bureau's petition, and we tentatively propose to amend the OP–1 application form so as to give explicit recognition to the feasibility of requesting authority by class of proposed customer. There is nothing in the Interstate Commerce Act or the rules governing the application process that directly precludes the grant of authority for classes of shippers such that industry-wide authority might be obtained. Nevertheless the weight of custom and precedent, together with the specifics of our application form, may work to create the occasional impression that named, pre-determined customers are a prerequisite of all but certain very specialized applications. Whatever may have been the correct policy prior to the pasage of the Motor Carrier Act of 1980, it is now evident that the preferred statutory approach to the licensing of contract carriers is one that will permit them to serve more shippers, and thereby realize their full potential.[9] A contrary policy would be inconsistent with the regulation of motor carriage through competitive entry.

Section 10923 of the Interstate Commerce Act explicitly contemplates the issuance of permits directed to classes of shippers as well as to individually named customers.[10] This has been an option for the Commission since before the Motor Carrier Act of 1980. In the past, its use has been limited to circumstances were specialized shipping requirements in here in the nature of the carriage; valuables carried by armored car is the usual example cited.[11] Class permits were made available in these circumstances partly on the theory that a showing of "distinct needs" could be presumed in these situations, obviating the necessity for the individual customer assessment suggested by the 1957 amendments noted above. But it is equally true that the limitation on the use of class authorizations arose out of the established policy of containing the scope of business activity in the contract carrier sector.[12]

There is no longer any statutory justification for restrictions on the scope of competitive activity among contract carriers. The Motor Carrier Act of 1980 eliminated for motor freight carriers the "limited number" restriction that had been legislated in 1957.[13] The purpose behind this change was to permit each contract carrier to serve more shippers and the House Public Works Committee so stated. Congress spoke of ratifying the Commission's move to eliminate the rule of eight, while retaining the

---

[2] The Bureaus, in the same pleading, petitioned the Commission to institute a rulemaking to consider eliminating the requirements that motor contract carriers of property file rate schedules. That issue is being addressed in Ex Parte No. MC–165, *Exemption of Motor Contract Carriers From Tariff filing Requirements*, 47 FR 57303 (December 23, 1982). Comments on the issues here have been filed by Carnaco Transport, Inc., on its own behalf and by the Motor Common Carriers of Property. These comments will be considered in reaching final conclusions in this proceeding.

dedicated equipment and specialized service conditions on the issuance of new permits.[14]

Three factors then, the pre-existing statutory power to grant permits for service to classes of persons, the newly enacted elimination of the limited number requirement for contract property carriers, and the general pro-entry regulatory reform principles behind the entirety of the Motor Carrier Act, suggest that a petition such as that filed by the Bureaus should be unnecessary. That is, applications for specified classes of customers should be recognized as unobjectionable if they otherwise meet the criteria for contract carriage. However, it appears from a cursory review of our docket that this may not always be the case.

For example, one of our review boards, faced with that part of a recent application which requested contract authority for automobile manufacturers as a class, could find grounds only for the grant of authority to a single named manufacturer, a manufacturer that the board knew to have ceased business. Authority to serve the bankrupt shipper was granted because, while still in business, the shipper had submitted a statement supporting the application. But as to the general issue of class authorizations, the board opined that such class permits could only be issued where it had been established in advance that each and every member of the class has a need for dedicated equipment or specialized services.[15] A second review board faced with a quite similar request reached exactly the opposite conclusion, permitting any industry-wide authorization for the transport of motor vehicles on the theory that the new Motor Carrier Act contemplated broader grants and more intensive competition in the contract carrier sector.[16]

This split of opinion among our review boards is reason enough for an expression of policy on the part of the Commission. While we offer no conclusion on the merits of the evidentiary presentations made in these applications, it should be clear that the first review board's conclusion as to the prerequisites for class authorization are at odds with our views of what the Motor Carrier Act and the Interstate Commerce Act now permit.

As stated by the House Public Works Committee, increased entry into motor carriage is extremely important because it provides the major balancing factor for the increased pricing freedom allowed by the Motor Carrier Act of 1980.[17] The new entry emphasized by the Public Works Committee was not confined to the actual appearance of a replacement carrier, but included, perhaps more importantly, the *potential* of new entry. Potential entry, when it appears as a credible threat, has a pervasive restraining effect on pricing behavior. Furthermore, when potential entry acts effectively, it does not involve the turbulent changes in existing customer/supplier relationships which normally accompany price competion from an actual new entrant. This is a factor that this Commission is bound to consider since we are under Congressional directive to oversee the transition to a more competitive motor carrier industry with as little disruption as possible.[18]

Consequently, it is an important aspect of our entry policy to encourage both potential and actual new entry amidst the spontaneity of the competitive marketplace and the discipline of the price system. In the context of common carriage we have undertaken this task by the authorization of broad commodity categories over wide territorial areas. By this proposed policy statement and change in our application form, we seek to emphasize that our goals are the same for the contract carrier sector. Thus, for the reasons advanced by the Bureaus (enhanced efficiency, lower shipping costs, reduced regulatory burdens) and in discharge of our responsibility to ensure a satisfactory level of competitive authority in all sectors of motor carriage, we have determined to initiate this proceeding. Admittedly, the actual change proposed—a minor modification in the wording of the application form as set forth in the appendix—is more symbolic than real.[19] (The form, just as it is, has supported class applications and should continue to do so during the pendency of this proceeding.) Nevertheless, whether or not our tentative conclusions on the import of the amendments to section 10923 remain undisturbed, this proceeding will have given everyone notice of the Commission's views.

The Commission will complete and publish its final decision on these matters within 45 days of the filing of public comment.

Environmental and Energy Considerations

The proposed policy statement should not have any significant impact upon the quality of the human environment or conservation of energy resources. However, comments on these issues are welcome.

This notice of proposed policy statement is issued pursuant to 49 U.S.C. 10923(c)(1), (d)(1) and (2) and 5 U.S.C. 553.

Decided: May 12, 1983.

By the Commission, Chairman Taylor, Vice Chairman Sterrett Commissioners Andre and Gradison. Chairman Taylor concurred with a separate expression.

Agatha L. Mergenovich,

Secretary.

Chairman Taylor, concurring:

We are unanimously agreed that nothing in the 1980 Motor Carrier Act, our regulations, or current Commission policy precludes a grant of authority for classes of shippers. Further, nothing in our application procedures prevents such results, and an applicant may choose to serve an individual shipper, shippers, a particular industry, or industries under an individual permit.

A contract carrier applicant need only decide how broad an authority it desires in an individual permit. It can then file an application with evidence that reasonably supports the breadth of the application and enables the Commission to determine the distinct needs or other requirements of the contracting person or class to be served. Such evidence need not consist of shipper support,[20] especially, for example, where a carrier, common or contract, has provided broad service to a particular industry over a period of time and now seeks to provide specialized service on a contract basis to meet distinct shipper needs within that industry.

If there is any confusion on the above points, either amongst contract carriers or with the Commission's own boards, a simple policy statement could have put the matter to rest. Accordingly, while I agree with the decision affirming the ability of carriers to seek industrywide permits, I see no reason for a "symbolic" rulemaking with its inherent costs, delays, and continued uncertainties.

Appendix

The proposed changes in the Form OP–1 (revised 11/82) are as follows:

1. On page 5 of 6, question VIII (a) would be revised to read:

(a) If the applicant seeks contract carrier authority, list the person or class of persons (industry or industries), it would serve in the proposed operation:

2. On page 5 of 6, question VIII (b) would be revised to read.

(b) If the applicant seeks motor contract carrier authority, state the ways in which statutory requirements will be met (i.e., either (1) by furnishing transportation service through the assignment of motor vehicles for a continuing period of time for the exclusive use of each person or class of persons served, or (2) by furnishing transportation services designed to meet the distinct need of each person or class of persons, and if the latter, describe briefly the distinct need).

[FR Doc. 83-14558 Filed 5-31-83; 8:45 am]

BILLING CODE 7035-01-M

---

[14] H.R. Rep. No. 96–1078, *supra*, at 22.

[15] MC-147470 (Sub-No. 1), *Ray Cobb Transportation Co., Ext.*, decision served March 31, 1983.

[16] MC-43939 (Sub-No. 391), *Commercial Carriers, Inc.*, decision served April 20, 1983.

[17] H.R. Rep. 96–1069, *supra*, at 12.

[18] H.R. Rep. 96–1069, *supra*, at 11.

[19] The Bureau's request suggested that the permits be granted on an industry-wide basis, or, alternatively, in terms of commodity groupings. We believe that it is sufficient to deal with both suggestions simply in terms of classes of shippers, particularly since these classes will often be described in terms of commodities such as, shippers or manufacturers of building materials, etc.

[20] See, for example MC–30837 (Sub-No. 583) *Kenosha Auto Transport Corp., Contract Carrier Application* (not printed) decided Feb. 15, 1983, appeal pending and MC–71802 (Sub-No. 1), *Transports, Inc., Contract Carrier Application*, (not printed) decided Oct. 15, 1982, appeal pending. Both applicants were granted authority without shipper support, to serve a particular industry rather than an individual.

Notices

Federal Register
Vol. 48, No. 106
Wednesday, June 1, 1983

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Public Information Meeting

AGENCY: Advisory Council on Historic Preservation.

ACTION: Notice.

SUMMARY: Notice is hereby given pursuant to Section 800.6(b)(3) of the Council's regulations, "Protection of Historic Cultural Properties" (36 CFR Part 800), that on June 14, 1983 at 7:00 p.m., a public information meeting will be held at the Pittman Memorial Auditorium, St. Mary's College Campus, 900 Hillsborough Street, Raleigh, North Carolina.

This meeting is being called by the Executive Director of the Council in accordance with Section 800.6(b)(3) of the Council's regulations. The purpose of the meeting is to provide an opportunity for representatives of national, State, and local units of government, representatives of public and private organizations, and interested citizens to receive information and express their views concerning the proposed disposition of the Tucker Carriage House, an undertaking of the Housing Authority of the City of Raleigh. The Tucker Carriage House is eligible for inclusion in the National Register of Historic Places. Consideration will be given to the undertaking and alternate courses of action that could avoid or mitigate adverse effects on the property.

The following is a summary of the agenda of the meeting:

I. An explanation of the procedures and purpose of the meeting by a representative of the Executive Director of the Council.

II. A description of the proposed disposition of the Tucker Carriage House.

III. A statement by the North Carolina State Historic Preservation Officer.

IV. Statements from local officials, private organizations, and the public on the effects of the undertaking on the property.

V. A general question period.

Speakers should limit their statement to 5 minutes. Written statements in furtherance of oral remarks will be accepted by the Council at the time of the meeting. Additional information regarding the meeting is available from the Executive Director, Advisory Council on Historic Preservation, 1522 K Street, NW., Washington, D.C. 20005, telephone number 202–254–3495, Attention: Don L. Klima.

Dated: May 26, 1983.

Robert R. Garvey, Jr.,

Executive Director.

[FR Doc. 83–14652 Filed 5–31–83; 8:45 am]

BILLING CODE 4310–10–M

DEPARTMENT OF AGRICULTURE

Flue-Cured Tobacco Advisory Committee; Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463) announcement is made of the following committee meeting:

Name: Flue-Cured Tobacco Advisory Committee

Date: June 24, 1983

Place: Tobacco Division, Agricultural Marketing Service, U.S. Department of Agriculture, Laboratory, Room 223 Flue-Cured Tobacco Cooperative Stabilization Corporation, 1306 Annapolis Drive, Raleigh, North Carolina 27605.

Time: 1 p.m.

Purpose: To discuss marketing area opening dates and selling schedules for flue-cured tobacco to be sold in each marketing area for the 1983 season. Also, other matters as specified in 7 CFR Part 29 will be discussed.

The meeting is open to the public. Persons, other than members, who wish to address the Committee at the meeting should contact Lioniel S. Edwards, Director, Tobacco Division, Agricultural marketing Service, U.S. Department of Agriculture, 300–12th Street, SW., Washington, D.C. 20250 (202) 447–2567. Written statements should be submitted prior to or at the meeting.

Dated: May 26, 1983.

William T. Manley,

Deputy Administrator, Marketing Program Operations.

[FR Doc. 83–14697 Filed 5–31–83; 8:45 am]

BILLING CODE 3410–02–M

Federal Grain Inspection Service

Renewal of Designation of D. L. Boltenhouse Grain Inspection (OH)

AGENCY: Federal Grain Inspection Service, USDA.

ACTION: Notice.

SUMMARY: This notice announces the renewal of designation of D. L. Boltenhouse Grain Inspection as an official agency responsible for providing inspection services under the U.S. Grain Standards Act, as amended (7 U.S.C. 71 *et seq.*) (Act).

EFFECTIVE DATE: July 1, 1983.

ADDRESS: James R. Conrad, Chief, Regulatory Branch, Compliance Division, Federal Grain Inspection Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 1647 South Building, Washington, DC 20250.

FOR FURTHER INFORMATION CONTACT: James R. Conrad, telephone (202) 447–8525.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Secretary's Memorandum 1512–1; therefore, the Executive Order and the Secretary's Momorandum do not apply to this action.

The January 3, 1983, issue of the **Federal Register** (48 FR 45) contained a notice from the Federal Grain Inspection Service (FGIS) announcing that Boltenhouse's designation would terminate on June 30, 1983, and requesting applications for designation as the agency to provide official services within the specified geographic area. Applications were to be postmarked by February 2, 1983.

Boltenhouse was the only applicant for the designation.

FGIS announced the name of this applicant and requested comments on same in the March 1, 1983, issue of the **Federal Register** (48 FR 8519). Comments were to be postmarked by April 15, 1983.

Seven favorable comments were received regarding Boltenhouse's designation renewal.

After evaluating all available information in regard to the designation criteria in Section 7(f)(1)(A) of the Act, and in accordance with Section 7(f)(1)(B), FGIS has determined that Boltenhouse is able to provide official

services in the geographic areas for which its designation is being renewed. The assigned area is the entire geographic area, as previously described in the January 3 issue of the **Federal Register.**

Effective July 1, 1983, and terminating June 30, 1986, the responsibility for providing official inspection services in the specified geographic area is asigned to Boltenhouse.

A specified service point, for the purpose of this notice, is a city, town, or other location specified by an agency to conduct official inspection and where the agency and one or more of its licensed inspectors are located. In addition to the specified service points within the assigned geographic area, the agency will provide official services not requiring a licensed inspector to all locations within its geographic area.

D. L. Boltenhouse Grain Inspection has recently informed FGIS that it has changed its name to D.L. Boltenhouse Grain Inspection Service.

Interested person may contact the Regulatory Branch, specified in the address secion of this notice, to obtain a list of the specified service points. Interested perons also may obtain a list of the specified service points by contacting the agency at the following address: D. L. Boltenhouse Grain Inspection Service, P.O. Box 96, Bellevue, OH 44811.

(Sec. 8, Pub. L. 94–582, 90 Stat. 2873 (7 US.C. 79))

Date: May 13, 1983.

Neil E. Porter,

Acting Director, Compliance Division

BILLING CODE 3410-EN-M

Request for Comments on Applicants for Designation in the Areas Currently Assigned to Fostoria Grain Inspection (OH), Louisiana Department of Agriculture (LA), and North Carolina Department of Agriculture (NC)

AGENCY: Federal Grain Inspection Service, USDA.

ACTION: Notice.

SUMMARY: This notice requests comments from interested parties on the applicants for designation as the official agencies in the areas currently assigned to Fostoria Grain Inspection, Louisiana Department of Agriculture, and North Carolina Department of Agriculture.

DATE: Comments to be postmarked on or before July 18, 1983.

ADDRESS: Comments must be submitted in writing, in duplicate, to Lewis Lebakken, Jr., Regulations and Directives Management Staff, Federal Grain Inspection Service, U.S. Department of Agriculture, Room 0667, South Building, 1400 Independence Avenue, SW., Washington, DC 20250. All comments received will be made available for public inspection at the above address during regular business hours (7 CFR 1.27(b)).

FOR FURTHER INFORMATION CONTACT: Lewis Lebakken, Jr., telephone (202) 382–1738.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Secretary's Memorandum 1512–1; therefore, the Executive Order and Secretary's Memorandum do not apply to this action.

The April 1, 1983, issue of the **Federal Register** (48 FR 14016) contained a notice from the Federal Grain Inspection Service requesting applications for designation to perform official services under the U.S. Grain Standards Act, as amended (7 U.S.C. 71 *et seq.*) (Act), in the areas currently assigned to the official agencies. Applications were to be postmarked by May 2, 1983.

Fostoria Grain Inspection (Fostoria), the only applicant, requested designation for all of the geographic area currently assigned to that agency. Louisiana Department of Agriculture (Louisiana), the only applicant, requested designation for all of the geographic area currently assigned to that agency. North Carolina Department of Agriculture (North Carolina), the only applicant, requested designation for all of the geographic area currently assigned to that agency. Each agency applied for a renewal of designation for a 3-year period.

In accordance with § 800.208(b)(2) of the regulations under the Act, this notice provides interested persons the opportunity to present their views and comments concerning the applicants for designation. All comments must be submitted to the Regulations and Directives Management Staff, specified in the address section of this notice, and postmarked not later than July 18, 1983.

Consideration will be given to comments and to other available information before a final decision is made in this matter. Notice of the final decision will be published in the **Federal Register**, and the applicants will be informed of the decision in writing.

(Sec. 8, Sec. 9, Pub. L. 94–582, 90 Stat. 2873, 2875 (7 U.S.C. 79, 79a))

Dated: May 13, 1983.

Neil E. Porter,

Acting Director, Compliance Division.

BILLING CODE 3410-EN-M

Request for Applicants for Designation To Perform Official Services in the Geographic Area Currently Assigned to Amarillo Grain Exchange, Inc. (TX), and Wisconsin Department of Agriculture, Trade and Consumer Protection (WS)

AGENCY: Federal Grain Inspection Service, USDA.

ACTION: Notice.

SUMMARY: Pursuant to the provisions of the U.S. Grain Standards Act, as amended (Act), designations of official agencies shall terminate not later than triennially and may be renewed in accordance with the criteria nad procedures prescribed in the Act. This notice announces that the designation of two agencies will terminate, in accordance with the Act and requests applications from parties, including the agencies currently designated, who are interested in being designated as the official agency to conduct official services in the geographic area currently assigned to each of the specified agencies. The official agencies are Amarillo Grain Exchange, Inc., and Wisconsin Department of Agriculture, Trade and Consumer Protection.

DATE: Applications to be postmarked on or before July 1, 1983.

ADDRESS: James R. Conrad, Chief, Regulatory Branch, Compliance Division, Federal Grain Inspection Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 1647 South Building, Washington, DC 20250. All applications submitted pursuant to this notice will be made available for public inspection at the above address during regular business hours.

FOR FURTHER INFORMATION CONTACT: James R. Conrad, telephone (202) 447–8525.

SUPPLEMENTARY INFORMATION: This action has been reviewed and determined not to be a rule or regulation as defined in Executive Order 12291 and Secretary's Memorandum 1512–1; therefore, the Executive Order and Secretary's Memorandum do not apply to this action.

Section 7(f)(1) of the Act (7 U.S.C. 71 *et seq.*, at 79(f)(1)) specifies that the Administrator of the Federal Grain Inspection Service (FGIS) is authorized, upon application by any qualified

agency or person, to designate such agency or person to perform official services after a determination is made that the applicant is better able than any other applicant to provide such official services in an assigned geographic area.

Amarillo Grain Exchange, Inc. (Amarillo), 1300 South Johnson Street, Amarillo, Texas 79101, was designated as an official agency under the Act for the performance of inspection functions on August 11, 1978. Wisconsin Department of Agriculture, Trade and Consumer Protection (Wisconsin), 801 West Badger Road, Madison, Wisconsin 53713, was designated as an official agency under the Act for the performance of inspection functions on July 1, 1978; weighing on November 20, 1978.

The agencies' designations will terminate on November 30, 1983. This date reflects administrative extensions of official agency designations, as discussed in the July 16, 1979, issue of the **Federal Register** (44 FR 41275). Section 7(g)(1) of the Act states generally that official agencies' designations shall terminate no later than triennially and may be renewed according to the criteria and procedures prescribed in the Act.

The geographic area presently assigned to Amarillo, in Texas, pursuant to Section 7(f)(2) of the Act, and which is the area that may be assigned to the applicant selected for designation is the following:

Bounded: on the North by the Texas-Oklahoma State line;

Bounded: on the East by the Texas-Oklahoma State line south-southwest to the eastern Clay County line; the eastern Clay County line;

Bounded: on the South by the southern and western Clay County lines; the southern Wichita County line; the southern and western Wilbarger County lines; the southern and western Hardeman County lines; the southern and western Childress County lines north to U.S. Route 287; U.S. Route 287 northwest to Donley County; the southern Donley and Armstrong County lines west to Prairie Dog Town Fork of the Red River; Prairie Dog Town Fork of the Red River northwest to State Route 217; State Route 217 west to FM 1062; FM 1062 west to U.S. Route 385; U.S. Route 385 north to Oldham County; the southern Oldham County line west to the Texas-New Mexico State line; and

Bounded: on the West by the Texas-New Mexico State line north to the Texas-Oklahoma State line.

Amarillo has also provided service on an interim basis to a specified geographic area in Texas. This geographic area, which is also available for assignment to an applicant selected for designation, is as follows: Bell, Bosque, Brown, Coleman, Collin, Comanche, Cooke, Dallas, Denton, Ellis, Falls, Fannin, Grayson, Hamilton, Hill, Hunt, Johnson, Lamar, Limestone, McLennan, Milam, Red River, Tarrant, and Williamson Counties.

In addition, Amarillo has provided service on an interim basis to a specified geographic area in Oklahoma. This geographic area, which is also available for assignment to an applicant selected for designation, is as follows: Beaver, Cimarron, and Texas Counties.

The geographic area presently assigned to Wisconsin, pursuant to Section 7(f)(2) of the Act, and which is the area that may be assigned to the applicant selected for designation is the entire State of Wisconsin, except those export port locations within the State.

Interested parties, including Amarillo and Wisconsin, are hereby given opportunity to apply for designation as the official agency to perform the official services in each geographic area, as specified above, under the provisions of Section 7(f) of the Act and § 800.196(b) of the regulations issued thereunder. Designations in the specified geographic areas are for the period beginning December 1, 1983, and ending November 30, 1986. Parties wishing to apply for these designations should contact the Regulatory Branch, Compliance Division, at the address listed above for appropriate forms and information. Applications must be postmarked not later than July 1, 1983 to be eligible for consideration.

In making a determination as to which applicant will be designated to provide official services in a geographic area, consideration will be given to applications submitted and other available information.

(Sec. 8, Sec. 9, Pub. L. 94–582, 90 Stat. 2873, 2875 (7 U.S.C. 79, 79a))

Date: May 13, 1983.

Neil E. Porter,

Acting Director, Compliance Division.

BILLING CODE 3410-EN-M

Food and Nutrition Service

Determining Eligibility for Free and Reduced Price Meals and Free Milk in Schools; Income Eligibility Guidelines

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice.

SUMMARY: This Notice announces the Department's annual adjustments to the Income Eligibility Guidelines to be used in determining eligibility for free and reduced price meals or free milk for the period from July 1, 1983-June 30, 1984. These guidelines are used by schools, institutions, and centers participating in the National School Lunch and School Breakfast Programs, Special Milk Program for Children, Child Care Food Program and by commodity schools. The annual adjustments are made pursuant to section 9 of the National School Lunch Act. The guidelines are intended to direct benefits to those children most in need and are revised annually to account for increases in the Consumer Price Index.

EFFECTIVE DATE: July 1, 1983.

FOR FURTHER INFORMATION CONTACT: Stanley C. Garnett, Branch Chief, Policy and Program Development Branch, School Programs Division, FNS, USDA, Alexandria, Virginia 22302 (703) 756–3620.

SUPPLEMENTARY INFORMATION:

Classification

This Notice has been reviewed under Executive Order 12291 and has not been classified major because it does not meet any of the three criteria identified under the executive order. The action announced in the notice will not have an annual effect on the economy of $100 million, will not cause a major increase in costs or prices and will not have a significant impact on competition, employment, investment, productivity, innovation or the ability of U.S. enterprises to compete with foreign based enterprises in domestic or foreign markets.

This notice has also been reviewed with regard to the requirements of Pub. L. 96–354, the Regulatory Flexibility Act. The Administrator of the Food and Nutrition Service has certified that this action will not have a significant adverse economic impact on a substantial number of small entities.

This notice imposes no new reporting or recordkeeping provisions that are subject to OMB review in accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3587).

Background

Pursuant to sections 9 and 17 of the National School Lunch Act (42 U.S.C. 1758 and 42 U.S.C. 1766), and sections 3 and 4 of the Child Nutrition Act of 1966 (42 U.S.C. 1772 and 1773(e)), the Department annually issues the Income Eligibility Guidelines for *free and reduced price meals* in the National School Lunch Program (7 CFR Part 210), School Breakfast Program (7 CFR Part 220), Child Care Food Program (7 CFR

Part 226), commodity schools (7 CFR Part 210.2) and the guidelines for *free milk* in the Special Milk Program (7 CFR Part 215).

The Bureau of Census has announced several technical changes in the official statistical definition of poverty, one of which directly affected the revision of the annual poverty income guidelines by eliminating the farm/nonfarm distinction. Therefore, the terms farm/nonfarm poverty guidelines will no longer be referenced in this notice.

The Department requires schools and institutions which charge for meals separately from other fees, to serve *free meals* or, at local option, *free milk* to all children from any family whose income is at or below *130* percent of the poverty guidelines for that family's size. The Department also requires such schools and institutions to serve *reduced price meals* to all children from any family whose income is move than *130* percent of the poverty guidelines for that family's size but at or below *185* percent of the poverty guidelines for that family's size.

Definition of Income

"Income," as the term is used in this notice means income before deductions for income taxes, employees' social security taxes, insurance premiums, bonds, etc. It includes the following: (1) Monetary compensation for sevices, including wages, salary, commissions or fees; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) social security; (5) dividends or interest on savings or bonds or income from estates or trusts; (6) net rental income; (7) public assistance or welfare payments; (8) unemployment compensation; (9) government civilian employee, or military retirement, or pensions or veterans payments; (10) private pensions or annuities; (11) alimony or child support payments; (12) regular contributions from persons not living in the household; (13) net royalties; and (14) other cash income. Other cash income would include cash amounts received or withdrawn from any source including savings, investments, trust accounts and other resources which would be available to pay the price of a child's meal.

"Income" as the term is used in this notice, does not include any income or benefits received under any Federal programs which are excluded from consideration as income by any legislative prohibition. Furthermore, the value of assistance to children or their families shall not be considered as income if prohibited by the authorizing legislation, such as the National School Lunch Act and the Child Nutrition Act of 1966.

The Income Eligibility Guidelines

The following are the Income Eligibility Guidelines to be effective from July 1, 1983 through 30, 1984. The Department's guidelines for free meals and milk and reduced price meals were obtained by multiplying the Federal income poverty guidelines by *1.30* and *1.85* respectively, and by rounding the result upward to the next whole dollar. Weekly and monthly guidelines were computed by dividing annual income by 52 and 12 respectively, and by rounding upward to the next whole dollar. The rounding procedure is consistent with the procedure used in the Food Stamp Program.

Section 9(b)(1)(B) of the National School Lunch Act requires that effective July 1, 1983 the income guidelines for determining eligibility for free lunches must be the same as the gross income eligibility standards for the Food Stamp Program. Section 5(c) of the Food Stamp Act of 1977, as amended by Pub. L. 97–253, reads in part "In no event shall the standards of eligibility for the Virgin Islands of the United States or Guam exceed those in the forty-eight contiguous States." Therefore, as of School Year 1983–84 Guam will be grouped with the forty-eight contiguous States rather than with Hawaii as it has been in previous years.

INCOME ELIGIBILITY GUIDELINES

[Effective from July 1, 1983 to June 30, 1984]

Household size	Federal poverty guidelines			Free meals—130 percent			Reduced price meals—185 percent

BILLING CODE 3410–30–M

Special Supplemental Food Program for Women, Infants, and Children; Income Poverty Guidelines

AGENCY: Food and Nutrition Service, USDA.

ACTION: Notice.

SUMMARY: The Department announces adjusted income poverty guidelines to be used by State agencies in determining the income eligibility of persons applying to participate in the Special Supplemental Food Program for Women, Infants and Children (WIC Program). These income poverty

guidelines are to be used in conjunction with the WIC Regulations, 7 CFR Part 246, as amended in the final rule published on September 25, 1981, at 46 FR 47422.

DATES:

Effective Date: The income poverty guidelines contained herein shall become effective on July 1, 1983.

Implementation Date: State and local agencies shall begin applying the new income eligibility standards to all new applicants, as well as to all ongoing participants at the time of each participant's next regular certification, on July 1, 1983.

FOR FURTHER INFORMATION CONTACT: Barbara Hallman, Branch Chief, Policy and Program Development Branch, Supplemental Food Programs Division, FNS, USDA, Park Office Center, Alexandria, Virginia 22302, (703) 756-3730.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under Executive Order 12291, and has been determined to be nonmajor. The final action will not have an annual effect on the economy of $100 million or more, will not cause a major increase in costs or prices, and will not have a significant economic impact on competition, employment, investment, productivity, innovation or on the ability of United States based enterprises to compete with foreign based enterprises in domestic or export markets. The final action has been reviewed in accordance with the requirements of the Regulatory Flexibility Act and will not have a significant impact on a substantial number of small entities.

The Child Nutrition Act of 1966, as amended by Pub. L. 95-627, requires the Secretary to establish income criteria to be used with nutritional risk criteria in determining a person's eligibility for participation in the WIC Program. The law provides that persons will be eligible for the WIC Program only if they are members of families that satisfy the income standard prescribed for reduced-price school meals under section 9 of the National School Lunch Act. Under the Omnibus Budget Reconciliation Act of 1981, Pub. L. 97-35, enacted August 13, 1981, the income limit for reduced-priced school meals is 185 percent of Office of Management and Budget income poverty guidelines. No standard deduction or hardship deductions are allowed when calculating a family's income using 185 percent of the income poverty guidelines. These guidelines are to be adjusted annually for changes in the Consumer Price Index effective each July 1.

The Department published a final rule on September 25, 1981, at 46 FR 47422 implementing the provisions of Pub. L. 95-627 and 97-35, which require State agencies to set an income limit on eligibility to participate in the WIC Program. The rule specifies that State agencies establish income guidelines that are not less than the guidelines established for State or local free or reduced-price health care, except that the State agency's income standard may not be greater than the income criteria established under Section 9 of the National School Lunch Act for reduced-price school meals or less than 100 percent of the income poverty guidelines for each family size.

The National School Lunch Act, as amended by Section 803 of Pub. L. 97-35, states that beginning July 1, 1983, the income guidelines for determining eligibility for free lunches for any school year shall be the same as the gross income eligibility standards for the Food Stamp Program. In turn, Section 5 of the Food Stamp Act of 1977 specifies that in no event shall the standards of eligibility for Puerto Rico, the Virgin Islands of the United States, or Guam exceed those in the 48 contiguous States. As a result of these provisions, income limits for households in Guam will now be the same as those for the 48 States, the District of Columbia and Territories. In addition, consistent with the method used to compute eligibility guidelines for reduced-price meals under the National School Lunch Program, the Federal income poverty guidelines were muptiplied by 1.85 and the results rounded upward to the next whole dollar.

The Bureau of the Census announced in the **Federal Register** for December 28, 1981, at 46 FR 62674, several technical changes in the official statistical definition of poverty. These changes were incorporated into the poverty statistics from the Current Population Survey beginning with estimates for calendar year 1981 issued in 1982. One of these changes which impacts on the WIC Program eliminates the farm/nonfarm distinction; this distinction will no longer appear in WIC Income Poverty Guidelines Notices.

At this time the Department is publishing the maximum and minimum income limits by household size for the period of July 1, 1983, to June 30, 1984. The first table of this notice contains the income limits by household size for the 48 contiguous States, the District of Columbia and all Territories, including Guam. Because the income poverty guidelines for Alaska and Hawaii are higher than for the 48 contiguous States, separate tables have been included for the convenience of those State agencies.

Effective July 1, 1983–June 30, 1984

Family size	CMR income poverty guidelines (100%) annual	FNS income guidelines for reduced-price lunches (185%) annual

CIVIL AERONAUTICS BOARD

Jet East, Inc.; Application for an All-Cargo Air Service Certificate

May 26, 1983.

In accordance with Part 291 (14 CFR Part 291) of the Board's Economic Regulations effective November 8, 1978, notice is hereby given that the Civil Aeronautics Board has received an application, Docket 41429, from Jet East, Inc., 7363 Cedar Springs, Dallas, Texas 75235 for an all-cargo air service

certificate to provide domestic cargo transportation.

Under the provisions of § 291.12(c) of Part 291, interested persons may file an answer in opposition to this application within twenty-one (21) days after publication of this notice in the **Federal Register**. An executed original and six copies of such answer shall be addressed to the Docket Section, Civil Aeronautics Board, Washington, D.C. 20428. It shall set forth in detail the reasons for the position taken and must relate to the fitness, willingness, or ability of the applicant to provide all-cargo air service or to comply with the Act or the Board's orders and regulations. The answer shall be served upon the applicant and state the date of such service.

Phyllis T. Kaylor,

Secretary.

BILLING CODE 6320-01-M

DEPARTMENT OF COMMERCE

International Trade Administration

Stainless Steel Round Wire; Announcement of Third Quarter 1983 Monitoring Prices

AGENCY: International Trade Administration, Department of Commerce.

ACTION: Announcement of the Third Quarter 1983 Monitoring Price Levels for Imports of Stainless Steel Round Wire Products.

SUMMARY: The Department of Commerce announces that base prices for third quarter 1983 trigger prices of stainless steel round wire products will remain unchanged from the second quarter base price levels. Size extra prices for stainless steel round wire will increase an average of 0.1 percent from their second quarter 1983 levels. Changes in labor and gas costs accounted for a large part of the increase. The Department uses trigger prices to monitor the prices of stainless steel wire and cold drawn round bar under 0.703 inches in diameter for possible initiation of antidumping or countervailing duty investigations if unfair sales of these products appear to be injuring domestic producers. Each quarter the Department reviews Japanese steel production and delivery costs and revises trigger prices accordingly. The third quarter trigger price applies to stainless steel round wire products and round stainless steel drawn bars in sizes under 0.703 inches in diameter exported to the United States on or after July 1, 1983.

FOR FURTHER INFORMATION CONTACT: Juanita S. Kavalauskas, Agreements Compliance Division, Import Administration, Room 3099, Department of Commerce, Washington, D.C. 20230, telephone: (202) 377-3793.

SUPPLEMENTARY INFORMATION: Trigger price monitoring procedures for stainless steel round wire are the same as those published in the TPM Procedures Manual (46 FR 49928). Japanese stainless steel wire manufacturers agreed to supply cost of production and transportation information necessary to monitor the import prices. Commerce uses Special Summary Steel Invoices to monitor imports of stainless steel round wire and small cold drawn bar under 0.703 inches diameter. In computing the invoice price for comparison to the trigger price, Commerce will use a 11.5 percent annual rate (0.96 percent per month) when interest must be adjusted and the actual rate is not known. For its calculation of trigger price levels, the yen/dollar exchange rate the Department uses to convert Japanese steel producers' yen denominated production cost to dollars is the average of the 36 months preceeding the calculation and publication of the quarter's trigger price level.

The exchange rate used in the Department's third quarter 1983 production cost estimate is 232 yen to the dollar (the yen/dollar exchange rate average for May 1980 through April 1983).

Other Charges

Trigger prices are an estimate of the Japanese stainless steel wire manufacturers' cost of production plus the cost of transporting to the United States and handling in the United States. Each trigger price includes ocean freight, insurance, interest and handling as well as the base price and extras. The ocean freight, handling and interest are shown for each of the major importing regions: Pacific Coast, Atlantic Coast, Gulf Coast and the Great Lakes. All prices are shown in U.S. dollars per metric ton.

The interest component of the delivery charge has been adjusted to reflect the current level of prime interest rate. Handling and ocean freight charges remain unchanged. The extras shown define the coverage in terms of sizes, grades, and qualities.

The following rules apply to product coverage and extras:

(1) If a product fails to fit the general description because the cost of producing that product varies substantially from the cost of producing the product described in the heading, the product is not covered.

(2) If a product is covered by a grade which is not in the base coverage and for which no grade extra is listed, the product is not covered.

(3) If a product has a size specification that falls above the largest size specification shown or below the smallest size specification shown, it is not covered.

(4) If a product has a size specification that falls between two size specifications listed, it is covered and the size specification with the higher dollar value is to be used unless otherwise noted on the page.

(5) If a product embodies extras other than size or grade which are not listed, the product is covered. In those cases, the base trigger price plus any applicable extras listed will be applied.

A list of stainless steel round wire and cold drawn bar products subject to trigger price monitoring and the applicable base prices and extras are contained in the Appendix to this notice.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

Appendix

3rd Quarter 1983 Trigger Prices per Metric Ton—Stainless Steel Wire, Round Stainless Steel Drawn Bars in Sizes Under 0.703 Inches

AISI CATEGORIES 20 AND 12

Charges to CIF	Ocean freight	Handling	Interest (percent)
Pacific Coast	$107	$9	2.2
Gulf Coast	131	8	2.9
Atlantic Coast	131	4	2.9
Great Lakes	171	4	3.5

Interest charge equals F.O.B. trigger base price including size extra times interest factor.

Insurance = 1% of base price + extras + ocean freight.

Extras ($/M.T.):

1. Annealed Wire—Group I
A. Base prices, including grade extras.
B. Size by grade group.
C. Small bar size extras.
2. Hard/Spring Wire—Group II.
A. Base prices, including grade extras
B. Size by grade group.
3. Soft/Intermediate Wire—Group III
A. Base prices, including grade extras.
B. Size by grade group.
4. Coating.
5. Finish.
A. Centerless ground.
B. Centerless ground and polished.
6. Diameter Tolerance.
7. Straightening and cut to length
A. Size range.
B. Length.
8. Packaging.

Note.—This coverage applies to stainless steel round wire and stainless steel bar under 0.703 inches produced by drawing. Bar, in these sizes, if produced by hot rolling is not covered by published prices.

1. Group I—Annealed Wire: Soft wire in which there is no further cold drawing after the last annealing treatment. This wire is made by annealing in open fired furnaces or molten salt followed by pickling, which produces a clean gray matte finish. It is also made with a bright finish by annealing wet, oil or grease drawn wire in a protective atmosphere, and is sometimes described as bright annealed wire.

3. Group III—Soft/Intermediate Wire: wire drawn one or more drafts after annealing as required to produce minimum strength or hardness. The properties can be varied between soft temper and those approaching spring temper wire. Wire in this temper is usually produced in a variety of dry drawn tempers. Cold heading wire belongs in this group.

BILLING CODE 3510–25–M

Steel Pipe and Tube Products From South Africa; Suspension of Investigation

AGENCY: International Trade Administration, Commerce.

ACTION: Notice of Suspension of Investigation.

SUMMARY: The Department of Commerce has decided to suspend the countervailing duty investigation involving carbon steel pipe tube products from South Africa. The basis for the suspension is an agreement by Tubemakers of South Africia, Ltd. and Brollo (Africa), Ltd. (the respondents), the only known South African manufacturers for export of the carbon steel pipe and tube products under investigation, to renounce all benefits which we find to be bounties or grants on exports of steel pipe and tube products to the United States.

EFFECTIVE DATE: June 1, 1983.

FOR FURTHER INFORMATION CONTACT: Steven Morrison, Office of Investigations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street & Constitution Avenue, NW., Washington, D.C. 20230, telephone: (202) 377–3965.

SUPPLEMENTARY INFORMATION: On October 6, 1982, we received a petition from counsel for the Committee on Pipe and Tube Imports. The Committee consists of domestic companies which produce carbon steel pipe and tube products. The petition alleged that manufacturers, producers, or exporters in South Africa of carbon steel pipe and the tube products receive benefits which constitute bounties or grants within the meaning of the countervailing duty law.

We found the petition sufficient, and on October 26, 1982, we initiated a countervailing duty investigation (47 FR 49057).

Since South Africa is not a "country under the Agreement" within the meaning of section 701(b) of the Act and the merchandise under investigation is dutiable, the domestic industry is not required to allege that and the U.S. International Trade Commission is not required to determine whether, imports of this product cause or threaten material injury to the U.S. industry in question.

We presented a questionnaire in Washington, D.C, to the South African government on October 26, 1982. On November 19, 1982, we amended the scope or investigation and published notice of this amendment in the **Federal Register** (47 FR 53440). On December 10, 1982, we found that the case was extraordinarily complicated (47 FR 56377). The questionnaire response was received on January 31, 1983.

Notice of the affirmative preliminary countervailing duty determination was published on March 9, 1983 (48 FR 9899). We directed the U.S. Customs Service to suspend liquidation of all entries, or withdrawals from warehouse, for consumption of the subject merchandise on or after March 9, 1983, and to require a cash deposit or the posting of a bond in the amount of 19.5 percent for Tubemakers of South Africa, Ltd. and 23.3 percent of the f.o.b. value of the merchandise for Brollo (Africa), Ltd. and all others.

A government representative, acting on behalf of the respondents, proposed entering into a suspension agreement pursuant to section 704 of the Tariff Act of 1930 (the Act), as amended (19 U.S.C. 1671c), and section 355.31 of the Commerce Regulations (19 CFR 355.31). Initially this proposal was based on an export tax on benefits. On April 20, 1983, the respondents and the Department of Commerce initialed a proposed suspension agreement, which was based upon the respondents' agreement to eliminate completely all benefits which we preliminarily found to be bounties or grants on exports of the subject merchandise to the United States.

On April 20, 1983, we provided copies of the proposed suspension agreement to the petitioners and to other parties to the proceeding. After consulting with the petitioner and considering respondents' and petitioners' comments, we have modified portions of the proposed suspension agreement. On March 14 through 25, 1983, we conducted a verification of the respondents' submission in this investigation. During verification, programs not mentioned in the preliminary determination were found. We requested additional information on the their operation and funding because these programs may have been conferring a benefit under the U.S. contervailing duty law. Accordingly we added a requirement that these programs be renounced in the suspension agreement as proposed and initialed. Additional information recently received establishes that the General Levy and Import Subsidy Scheme has conferred a subsidy under U.S. countervailing duty that law, and the SEIFSA training program has not conferred a subsidy.

Programs Not Discussed in the Preliminary Determination

The General Levy and Import Subsidy Scheme

Between 1970 and 1976, steel was in short supply in South Africa and had to be imported at prices higher than for steel produced in South Africa. In order to stabilize prices at that time, the government absorbed the difference between the government controlled price for South African produced steel and the higher purchase price of foreign steel. The secondary steel producers are now repaying these government funds advanced during the earlier period.

We have recently received ISCOR records from the government of South Africa concerning this scheme. These records reveal that in the 1970–76 period, annual South African imports of steel pipe and tube exceeded exports of the same products from South Africa. In the 1970–76 period there were extensive imports of primary steel products, including hot rolled steel sheet, for which the government advanced funds to stabilize prices. Steel pipe and tube is made from hot rolled steel sheet.

The government of South Africa has characterized its advancement of these funds to stabilize prices as a loan for which it has required repayment. In order to collect the repayment, the government has required all secondary producers of steel products to pay a surcharge for each ton of steel purchased. This surcharge is rebated to secondary producers on their export sales at a rate of R9.99 per metric ton, while products sold in the domestic market are not entitled to this rebate.

The government said that it intends to have the levy cease when the money is repaid in 1984. We have determined that exemption from repayment of the loan, which is exclusively available for export sales confers a bounty on exports which is a countervailable subsidy.

SEIFSA Training

Under the Labour Relations Act of 1956, the Minister of Manpower, authorized the iron, steel, engineering and metallurgical industries to establish funds for education and training. The government has not contributed to these funds. The Metal and Engineering Industries Education and Training Fund is designed to encourage vocational education, training and employment of trained workers and the Supplementary Scheme Fund is intended to develop trained instructors, methods and training programs. The Steel and Engineering Industries Federation of South Africa (SEIFSA) performs a management function for the Metal and Engineering Industries Training Board which supervises the funds. SEIFSA is paid a fee from the funds for this management function.

The government does not participate either in the administration of the training fund or in the educational programs supported by the funds. We were provided a copy of a telex from SEIFSA which stated that the funds were supported by levies on employers and not government subsidized. This was corroborated by audited financial statements and annual reports of the funds. Therefore, we determined that SEIFSA training does not confer a subsidy under these circumstances.

Petitioner's Comments

Comment 1

Counsel for the petitioner contends that the Department should monitor prices. If respondents do not raise their prices by an amount equivalent to the subsidy they renounced, the Department should determine that the agreement has been violated or self-initiate a dumping investigation

DOC Postiion

Renunciation of benefits fully complies with the requirements of section 704 of the law concerning suspension agreements. Even if prices of South African steel pipe and tube were changed by less than the benefits renounced, this would not prove that there was either a violation of the agreement or that there was dumping in the U.S. market.

Comment 2

Counsel for the petitioner contends that the respondent should submit value as well as volume information in its quarterly reports. Petitioners believe that if the respondents have to submit value information quarterly, it will discourage then from dumping.

DOC Position

We have required respondents to give us access to value information during the annual review. This requirement is incorporated in section C of the suspension agreement. The incorporation of quarterly reporting requirements, solely for the purpose of discouraging apprehended but undemonstrated commercial conduct, is not a function of a suspension agreement renouncing subsidies. The petitioners have not demonstrated why access to the requested information on an annual basis would be inadequate.

Comment 3

The Department has not been fully informed about company specific catagory A and B benefits, the General Levy, the SEIFSA training programs, and the pricing policies of ISCOR. Petitioners rely on the verification report in support of their position.

DOC Position

The Department received additional information after the verification on all programs except the pricing policies of ISCOR. We have also verified that there is no differential in the price of primary steel for manufacturing secondary steel products for domestic and for export sales. We have enough information to proceed with a suspension agreement. The agreement contains assurances that we will be notified of potentially countervailable benefits and that the information we request during our annual reviews will be provided.

Comment 4

Counsel for the petitioner is unclear about whether the respondents can participate in SEIFSA training. He requests that we change the words "countervailable benefits" in the initialed suspension agreement to the word "benefits" in reference to SEIFSA training and also to reporting requirements. As perceived by petitioner, the present wording leaves too much discretion to the respondents to determine what is countervailable.

DOC Position

The SEIFSA training program has recently been found not to be countervailable and requirements in the initialed agreement which pertain to this program have been eliminated. To require the respondents to report all benefits would burden them with excessive reporting about obviously non-countervailable benefits such as police, fire-protection, etc. We have amended the language in the reporting section to indicate that the respondents do not have discretion to determine what is or is not countervailable.

Comment 5

Counsel for the petitioner states that the wrong four months (August through November 1982) were chosen as the representative time period. These months represent a period in which there was a high level of pipe and tube imports from South Africa.

DOC Position

We have checked the Department's monthly import statistics by country and determined that the four month period of March through June is more representative of average imports for the year. The suspension agreement has been revised to reflect this period.

Comment 6

Counsel for petitioner suggests that income tax returns be added to the monitoring information required from the respondents.

DOC Position

While it was understood that the language in the monitoring section included documents such as income tax returns, we have amended the wording specifically to include these returns in the set of information to be made available to us.

Respondents' Comments

Comment 1

SEIFSA training (the Metal and Engineering Industries Education and Training Scheme and the Supplementary Education and Training Scheme) does not confer a subsidy because it is funded and operated by private enterprise as a domestic scheme.

DOC Position

We agree that a SEIFSA training is not countervailable. We have explained our reasons for reaching this conclusion in discussing the program at the beginning of this notice. Renunciation of SEIFSA benefits in this suspension agreement is no longer required.

Comment 2

The representative for respondents argues that the General Levy and Import Subsidy Scheme does not confer a subsidy. He points out that steel imports increased to satisfy an increasing domestic demand between 1970 and 1976. Exports of pipe and tube decreased in the same period and imports increased to satisfy an expanding domestic economy. In addition, primary steel imports were not intended to support South African exports of secondary steel products. It would be illogical to assume that South African producers would import primary steel products at high premium prices in order to produce secondary steel products at a loss. Imports benefitted domestic consumers; therefore they and not the exporters should repay the government for this price stabilization scheme.

DOC Position

The information as supplied reveals that primary steel exports from South Africa exceeded primary steel imports in three of the six years from 1970 through 1975 and did not exceed primary steel imports in the other three years. The importation of primary steel products from which pipe and tube is made were substantial in the period. We cannot conclude that exported pipe and tube products or other exports did not benefit from the price stabilization scheme from the data presented.

The rebate, given only upon exportation, which operates to stimulate exports, is the subsidy which is the subject of this suspension agreement.

Comment 3

The representative of the government of South Africa objects to the lack of an injury test for non-signatories to the GATT Subsidies Code while other non-signatory nations than South Africa get the injury test.

DOC Position

Because South Africa has not signed the Subsidies Code or substitutable equivalent agreement, it is not entitled to an injury test under the countervailing duty law. This case was investigated under 19 U.S.C. 1303, as amended, which does not permit an injury test for dutiable products. Even if other nations may be eligible for exceptions written into the countervailing duty law concerning injury tests, the present investigation was conducted in accordance with the countervailing duty law as it generally is applied to non-signatories. In our opinion, the U.S. countervailing duty law is consistent with the international obligations of the United States.

Comment 4

The respondents representative protests our acceptance of an export tax as a basis for suspension agreements with Brazil and our rejection of the South African proposal for an export tax as a basis for a suspension agreement in this investigation. He further protests the requirement that respondents have to include, under the suspension agreement, all their pipe and tube

exported to the United States, not just the pipe and tube which is the subject of the investigation.

DOC Position

It is not possible to predict accurately the percentage export tax that would be required for pipe and tube. In the case of South African tax law, a company can defer the application and/or receipt of benefits under certain programs. Also the benefits attibutable to exports to the United States as a percent of world sales is indeterminate until after the tax year is completed for some schemes. The possibility of undertaxing exports of steel pipe and tube to the United States unintentionally and creating a breach of the agreement would be great. We have found that the problems created by even unintentional breaches of intergovernmental suspension agreements generally outweigh the benefits that could be gained through a suspension agreement.

The agreement covers all products exported by the respondents. A thorough verification of the specific products under investigation would require us to screen hundreds of invoices, shipping records and benefit applications and would consequently prolong the required annual verification efforts. The time and cost required to verify the suspension agreement as originally proposed would, in our judgment, not make effective monitoring possible and would not be in the public interest.

Comment 5

The Iron and Steel Export Promotion Scheme should be reduced by evidence submitted by the government of South Africa concerning the contribution of secondary manufacturers to the scheme. Further the government protests that certain records (extracts of SEIFSA annual reports) were refused on verification.

DOC Position

The extracts referred to have been independently submitted by the government of South Africa and are part of the record. They are both directed to the same fact which has been well documented by other records, namely, there is a levy on the sale of primary steel, currently four rands per metric ton. The South African government has argued that it would be illogical for the primary steel producers to levy themselves. However, the objective evidence, the accounting records of the South African Steel Producers Coordinating Council reveal that the primary producers are paying the four rands per metric ton to fund the scheme. The South African government, ISCOR and the respondents in this investigation were all asked to produce invoices or any other records showing this charge was passed through to secondary producers of steel products. They could not. Further, the respondents obtain their steel at a discount from the ceiling price. Even if the invoices showed that the four rands per metric ton were nominally passed through, it is not clear why the discount should not be allocated first to the primary producers absorbing the levy to fund the scheme. The logic for this is compelling because the purpose of the scheme is to stimulate exports, to expand the production base, and to provide economies of scale to the primary steel producers through enlarging their (indirect export) market. It is the primary steel producers who benefit most from the existence of this scheme.

Suspension of Investigation

We have determined that the agreement eliminates the bounties or grants completely with respect to exports of the merchandies under investigation directly or indirectly to the United States, can be monitored effectively, and is in the public interest. Therefore, we find that the criteria for suspension of an investigation pursuant to section 704 of the Act have been met. The terms and conditions of the agreement are set forth in Annex 1 to this notice.

Pursuant to section 704(f)(2)(A) of the Act, the suspension of liquidation of entries or withdrawals from warehouse for consumption of steel pipe and tube products from South Africa effective March 9, 1983, as directed in the preliminary affirmative countervailing duty determination, is hereby terminated. Any cash deposits on entries of carbon steel pipe and tube products from South Africa pursuant to that suspension of liquidation shall be refunded and any bonds posted shall be released.

The Department intends to conduct an administrative review within 12 months of the publication of this suspension as provided in section 751 of the Act.

Notwithstanding the suspension agreement, the Department will continue the investigation if we receive such a request in accordance with section 704(g) of the Act within 20 days after the date of publication of this notice.

This notice is published pursuant to section 704(f)(1)(A) of the Act.

Dated: May 20, 1983.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

Annex I—Suspension Agreement on Steel Pipe and Tube Products From the Republic of South Africa

Pursuant to the provisions of section 704(b) of the Tariff Act of 1930 (the Act) and section 355.31 of the Commerce Regulations, the United States Department of Commerce (the Department) enters into the following suspension agreement with Brollo Africa (Pty.) Ltd., Barbara Road, P.O. Box 8008, Elandsfontein, 1406 Transvaal, South Africa, and Tubemakers of South Africa, Ltd., General Hertzog Road, Peacehaven, P.O. 1905, Vereeniging, 1930 Transvaal, South Africa. On the basis of this agreement, the Department shall suspend its countervailing duty investigation initiated on October 26, 1982 with respect to steel pipe and tube products from South Africa in accordance with the terms and provisions set forth below:

A. Product Coverage

The suspension agreement is applicable to all steel pipes and tubes manufactured by Brollo Africa (Pty.) Ltd. and/or Tubemakers of South Africa Ltd. in South Africa and directly or indirectly exported to the United States (hereinafter referred to as the subject product) and which are currently provided for in items 610.30, 610.31, 610.32, 610.35, 610.36, 610.39, 610.40, 610.42, 610.43, 610.45, 610.46, 610.48, 610.49, 610.51, 610.52 of the *Tariff Schedules of the United States Annotated.*

B. Basis of the Agreement

1. Brollo Africa (Pty.) Ltd. (Brollo), and Tubemakers of South Africa (TOSA) are the only known manufacturers of the South African products under investigation which are exported to the United States. Brollo and TOSA voluntarily agree not to apply for or receive any countervailable benefits from the Export Incentive Programs administered by the South African Department of Industries, Commerce & Tourism, the Department of Inland Revenue, and the South African Steel Producers Coordinating Council on exports of the subject product. Specifically:

(a) Effective April 1, 1982, the Central Government Rail Rebate has been terminated by the Republic of South Africa. Brollo and TOSA will not apply for or receive any countervailable

benefits under this program if it is reinstated.

(b) Brollo and TOSA will not apply for or receive the tax credit (Category B) allowed on the value-added component of the subject product for all shipments entering the United States, or withdrawn from warehouse, for consumption on or after September 30, 1983.

(c) Effective April 1, 1982, the Finance Charges Aid Scheme has been terminated by the Republic of South Africa. Brollo and TOSA will not apply for or receive countervailable benefits under this program if it is reinstated.

(d) Brollo and TOSA will not apply for or receive a tax deduction on market development expenses under the Export Marketing Assistance Program (Category D0 with respect to shipments of the subject product entering the United States, or withdrawn from warehouse, for consumption on or after September 30, 1983.

(e) Brollo and TOSA will not apply for or receive an income tax deduction for the customs duty paid on imported raw materials used in the production of exported materials (Category A) with respect to shipments of the subject product entering the United States or withdrawn from warehouse, for consumption on or after September 30, 1983.

(f) Brollo and TOSA will not apply for or receive any export rebates of the import levy or other countervailable benefits under the General Levy and Import Subsidy Scheme administered by the South African Steel Producers Coordinating Council (SASPCC), with respect to shipments of the subject product entering the United States or withdrawn from warehouse for consumption on or after September 30, 1983.

(g) Brollo and TOSA will not participate in or receive any rebates from the Iron/Steel Export Promotion Scheme with respect to shipments of the subject product entering the United States, or withdrawn from warehouse, for consumption on or after September 30, 1983.

(h) Brollo and TOSA shall notify the Department, within sixty days before taking any action, regarding any benefit that the Department may consider countervailable before it intends to apply for or accept any changes in present or future benefits it is receiving from the government of the Republic of South Africa with respect to shipments of the subject product entering the United States, or withdrawn from warehouse, for consumption on or after the effective date of this agreement, except those specific benefits being phased out by September 30, 1983.

(i) Brollo and TOSA will not apply for or receive benefits under any other program subsequently determined by the Department, in this or a subsequent proceeding, to confer bounties or grants under the Act to the subject product.

(j) If any additional program is found countervailable, in this or a subsequent proceeding, the Department shall officially notify Brollo and TOSA.

(k) If any program that has been renounced in this agreement is subsequently determined not to be countervailable, Brollo and TOSA may officially notify the Department, who will determine whether to release the companies from the obligation to continue the renunciation of that program in this agreement.

Renunciation of the receipt of these benefits does not constitute an admission by Brollo and TOSA that such benefits are bounties, grants or subsidies within the meaning of the U.S. countervailing duty law.

Brollo and TOSA certify that no new countervailable benefits will be applied for or received for the subject product as a substitute for or supplement to any benefits eliminated by this agreement.

2. In accordance with the provisions of the Act and applicable regulations, this agreement applies to the product described in Paragraph A which is produced in South Africa and exported directly or indirectly to the United States.

3. Brollo and TOSA agree that during the four-month period following the effective date of the suspension of the investigation the quantity of the subject product exported directly or indirectly to the United States from the Republic of South Africa, will not exceed the quantity of such exports during the four-month period of March through June, 1982.

C. Monitoring

Brollo and TOSA agree to supply to the Department such information as the Department deems necessary to demonstrate that they are in full compliance with this agreement including, but not limited to, access to their financial records including receipts, income tax returns, payment records and vouchers, journals and ledgers, and also copies of any resolutions, decrees, or legislation governing changes in the programs that they have renounced in this agreement. They shall also provide volume and value information for exports to the United States and world-wide figures, if necessary, and they shall provide copies of any application and assessment forms for any programs that they have renounced in this agreement. Brollo and TOSA will notify the Department if they: (1) transship the subject product through a third country, (2) alter their position with respect to any terms of the agreement, (3) apply for or receive directly or indirectly the benefits of the programs described in Part B of this agreement for the manufacture or exportation of the subject products.

Furthermore, Brollo and TOSA agree to undertake the obligation to report to the Department within 15 days of the beginning of each calendar quarter (April, July, October, January) the volume of carbon steel pipes and tubes they have exported to the United States. Brollo and TOSA also agree to permit such verification and data collection as deemed necessary by the Department in order to monitor this agreement. The Department shall request such information and perform such verifications periodically for administrative reviews conducted under section 751 of the Act.

D. Violation of the Agreement

If the Department determines that the agreement is being or has been violated or no longer meets the requirements of section 704 (b) or (d) of the Act, then the provisions of section 704(i) shall apply.

Signed on this day of May 20, 1983, for Brollo (Africa), Ltd., and Tubemakers of South Africa, Ltd.

J. J. Pienaar,

Special Representative, Brollo Africa (Pty.), Ltd., and Tubemakers of South Africa, Ltd.

I have determined that the provisions of Paragraph B completely eliminate the bounties or grants being provided in South Africa with respect to carbon steel pipes and tubes exported directly or indirectly to the United States and that the provisions of Paragraph C ensure that this agreement can be monitored effectively pursuant to section 704(d) of the Act. Furthermore, I have determined that this agreement meets the requirements of section 704(b) of the Act and is in the public interest as required in section 704(d) of the Act.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510-25-M

Sodium Gluconate From the European Communities; Final Results of Administrative Review and Supplement to Suspension Agreement

AGENCY: International Trade Administration, Commerce.

ACTION: Notice of Final Results of Administrative Review and Supplement of Suspension Agreement.

SUMMARY: On February 22, 1983, the Department of Commerce published in the **Federal Register** the preliminary results of its administrative review and proposed supplement to the agreement suspending the countervailing duty investigation on sodium gluconate from the European Communities. The review covered the period November 30, 1981 through May 31, 1982. The notice stated that Joh A. Benckiser GmbH did not account for 85 percent of all EC imports of this merchandise into the United States during the period, but that an additional firm located in the EC, Akzo Chemie Nederland B.V., had consented to enter into the suspension Agreement.

Interested parties were invited to comment on our preliminary results. We received no timely comments. Based on our analysis, we have determined that Benckiser has compiled with the terms of the suspension agreement, and that Benckiser along with Akzo now account for 85 percent of all EC sodium gluconate imports into the U.S.

EFFECTIVE DATE: June 1, 1983.

FOR FURTHER INFORMATION CONTACT: Tom Hodge or Lorenza Olivas, Office of Compliance, International Trade Administration, U.S. Department of Commerce, Washington, D.C. 20230; telephone: (202) 377–2786.

SUPPLEMENTARY INFORMATION:

Background

On February 22, 1983, the Department of Commerce ("the Department") published in the **Federal Register** (48 FR 7489) the preliminary results of its administrative review and proposed supplement to the agreement suspending the countervailing duty investigation on sodium gluconate from the European Communities (46 FR 60288, December 9, 1981). The Department has now completed that administrative review.

Scope of the Review

The merchandise covered by the review is the chemical sodium gluconate, imported directly or indirectly from the European Communities ("the EC"). Such imports are currently classifiable under item 437.5250 of the Tariff Schedules of the United States Annotated. The review covers the period November 30, 1981 through May 31, 1982 and two programs of the Common Agricultural Policy ("the CAP") of the EC: (1) a production refund for dextrose and glucose derived from corn or potatoes; and (2) export restitution payments to exporters of sodium gluconate.

Final Results of Review

Interested parties were invited to comment on our preliminary results. We received no timely comments. Based on our analysis, we determine that Joh A. Benckiser GmbH, has complied with the terms of the suspension agreement for the period November 30, 1981 through May 31, 1982, and with Akzo Chemie Nederland B.V., now a signatory to the agreement, account for 85 percent of all EC sodium gluconate imports into the United States. Benckiser during the period of review did not apply for or receive any benefits under the two programs cited above for exports to the United States, did not accept substitute or equivalent benefits, and met all of the reporting requirements of the agreement. Akzo, has also renounced all benefits from the two CAP programs and agreed not to apply for or receive benefits under substitute or equivalent programs for exports to the United States (see Appendix A).

Therefore, the suspension agreement for sodium gluconate from the EC shall remain in effect. The Department intends to begin immediately the next administrative review of the agreement.

The Department encourages interested parties to review the public record and submit applications for protective orders, if desired, as early as possible after the Department's receipt of the information in the next administrative review.

This administrative review and notice are in accordance with section 751(a)(1) of the Tariff Act of 1930 (19 U.S.C. 1675(a)(1)) and § 355.41 of the Commerce Regulations (19 CFR 355.41).

Dated: May 25, 1983.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

Appendix A—SUPPLEMENT TO SUSPENSION AGREEMENT SODIUM GLUCONATE FROM THE EUROPEAN COMMUNITIES

Pursuant to the provisions of section 704 of the Tariff Act of 1930 ("the Tariff Act") and § 355.31 of the Commerce Regulations, the United States Department of Commerce ("the Department") enters into the following agreement with Akzo Chemie Nederland B.V., Amersfoort, Netherlands ("Akzo"). On the basis of this agreement and (a) similar agreement(s) with other manufacturers or exporters of sodium gluconate from the European Communities ("the EC") ("related agreements"), the Commerce Department shall not reopen its countervailing duty investigation with respect to sodium gluconate from the EC in accordance with the terms and provisions set forth below.

A. Product Coverage

This suspension agreement is applicable to all sodium gluconate manufactured by Akzo and exported to the United States for consumption therein either directly or through intermediaries and which is exported either directly from the Netherlands or is transshipped through third countries. Sodium gluconate is the sodium salt of gluconic acid and it is currently provided for in item 437.5250 of the Tariff Schedules of the United States Annotated.

B. Basis of Agreement

Akzo hereby voluntarily renounces the right to all export and production refunds on maize used in the sodium gluconate production chain for exportation to the United States provided by the EC under its Common Agricultural Policy ("the CAP"). Since 1979, Akzo's exports of sodium gluconate to the United States have averaged 8 percent of total EC export of sodium gluconate to the United States.

In addition, Akzo agrees that no substitute or equivalent benefits have been or will be received. This renunciation is applicable to all sodium gluconate produced from any basic agricultural product and exported to the United States.

Akzo will under no circumstances alter or terminate this renunciation without notifying the Department of Commerce in writing thirty days prior to such action. Any such alteration or termination of the renunciation will result in the reopening of the investigation in accordance with the provisions of paragraph D of this agreement.

C. Monitoring

Akzo agrees to supply to the Department such information as the Department deems necessary to demonstrate that it is in full compliance with this agreement. Akzo shall notify the Department whenever it (1) transships through third countries, (2) alters its mode of manufacture, production or exportation of sodium gluconate, (3) receives directly or indirectly any export or production refunds on any agricultural product used in the sodium gluconate production chain for exportation to the United States provided by the EC under its CAP.

Furthermore, Akzo will permit such verification and data collection as is requested by the Department in order to monitor this agreement. The Department will request such information and perform such verifications periodically pursuant to reviews conducted under section 751 of the Tariff Act.

D. Violation of the Agreement

It the Department determines that the agreement or the related agreement(s) is being or has been violated or no longer meets the requirements of sections 704(b) or (d) of the Tariff Act, then the provisions of section 704(i) shall apply.

E. Other Provisions

In entering this agreement, Akzo agrees to be bound by the same terms and conditions as the agreement between Joh A. Benckiser GmbH, Benckiserplatz 1, D–6700 Ludwigshafen/Rhein, Federal Republic of Germany (Benckiser) and the United States Department of Commerce dated November 22, 1981.

It is understood that Akzo is entering this agreement to supplement Benckiser's annual imports, a review of which has revealed account for less than 85 percent of the sodium gluconate exported to the United States from the EC. The effective date of this suspension agreement is the date of publication in the Federal Register.

Signed this 15th day of April, 1983. Agreed to: Akzo Chemie Nederland B. V., by Max N. Berry.

I have determined that the provisions of paragraph B eliminate any subsidy the EC is providing on the manufacture, production, and exportation to the United States of sodium gluconate within the meaning of the countervailing duty law. Further, I have determined that the provisions of paragraph C ensure that this agreement can be monitored effectively pursuant to section 704(d). Therefore, I have determined that this agreement to suspend this investigation meets the requirements of section 704(b) of the Tariff Act and is in the public interest as required by section 704(d) of the Tariff Act.

United States Department of Commerce.

Gary N. Horlick,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510-25-M

Management-Labor Textile Advisory Committee; Open Meeting

A meeting of the Management-Labor Textile Advisory Committee will be held June 15, 1983, 1:00 p.m., Herbert C. Hoover Building, Room 4830, 14th Street and Constitution Avenue, NW., Washington, D.C. The Committee was established by the Secretary of Commerce on October 18, 1961 to advise Department officials on problems and conditions in the textile and apparel industry.

Agenda: Review of import trends, implementation of textile agreements, report on conditions in the domestic market, and other business.

The meeting will be open to the public with a limited number of seats available. For further information or copies of the minutes contact Helen L. LeGrande (202) 377-3737.

Dated: May 26, 1983.

Walter C. Lenahan,

Deputy Assistant Secretary for Textiles and Apparel.

BILLING CODE 3510-25-M

Minority Business Development Agency

Financial Assistance Application Applications

AGENCY: Minority Business Development Agency Commerce.

ACTION: Notice.

SUMMARY: The Minority Business Development Agency (MBDA) announces that it is soliciting applications under its Minority Business Development Center (MBDC) program to operate one project for a 12-month period beginning September 15, 1983 in the SMSA of New Brunswick-Perth Amboy-Sayreville and the adjoining counties of Mercer and Monmouth. The cost of the project is estimated to be $187,000. The maximum Federal participation amount is $168,300. The minimum amount required for non-Federal participation is $18,700. The award number will be 02-10-83014-01.

Applicants shall be required to contribute at least 10% of the total program costs through non-Federal funds. Cost sharing contributions can be in the form of cash contributions, fee for services or in-kind contributions.

CLOSING DATE: June 24, 1983.

ADDRESS: New York Regional Office, Minority Business Development Agency, 26 Federal Plaza, Room 36-116, New York, New York 10278.

FOR FURTHER INFORMATION CONTACT: Joseph F. Korpsak, Telephone: (212) 264-3262.

SUPPLEMENTARY INFORMATION:

A. Scope and Purpose of this Announcement

Executive Order 11625 authorizes MBDA to fund projects which will provide technical and management assistance to eligible clients in areas related to the establishment and operation of businesses. The MBDC program is specifically designed to assist those minority businesses that have the highest potential for success. In order to accomplish this, MBDA supports MBDC programs that can: coordinate and broker public and private sector resources on behalf of minority individuals and firms; offer them a full range of management and technical assistance; and serve as a conduit through which and from which information and assistance to and about minority businesses are funneled.

B. Eligible Applicants

Awards shall be open to all individuals, non-profit organizations, for-profit firms, local and state governments, American Indian tribes and educational institutions.

C. Evaluation Process

All proposals received as a result of this announcement will be evaluated by a MBDA review panel.

D. Evaluation Criteria for Minority Business Development Center Applications

The evaluation criteria is designed to facilitate an objective evaluation of competitive applications for the Minority Business Development Center program.

MBDA reserves the right to reject any or all applications, including the application receiving the highest evaluation, and will exercise this right when it is determined that it is in the best interest of the Government to do so (e.g., the apparent successful applicant has serious unresolved audit issues from current or previous grants, contracts or cooperative agreements with an agency of the Federal Government).

Evaluation of proposals will employ the following criteria:

I. *Capability and Experience of Firm Staff*—Provide information that demonstrates the organization's capabilities and prior experiences in addressing the needs of minority business individuals and firms. Provide

information that demonstrates the staff's capabilities and prior experiences in providing management and technical assistance to minority individuals and firms. Indicate previous experience in MBE community to be served in terms of: inventorying resources and opprtunities; the brokering thereof; and providing management and technical assistance.

The following are key factors to be considered in this section:

Firm

The organization's receptivity in the MBE community to be served, i.e., business contacts in the public and private sector; leadership responsibilities; and experience in assisting MBE business persons and firms. (References from clients assisted are pertinent.)

Backgrouind credentials and references for the owners of the organization and a capability statement of what the organization can do.

Knowledge of the geographic area to be served in terms of the needs of minority businesses and past ongoing relationships with local, public and private—entities that can possibly enhance the BDC program effort—i.e., Chambers of Commerce, trade associations, venture capital organizations, banks, SBA, HUD, state, city and county government agencies, etc.

Staff

List personnel to be used. Indicate their salaries, educational level and previous experience. Provide résumés for all professional staff personnel.

Demonstrate competence among staff to effectuate mergers, acquisitions, spin-offs and joint-ventures.

Provide organizational chart, job descriptions and qualification standards involving all professional staff persons to be utilized on the project.

If any contractors are to be utilized, identify and indicate areas and level of experience. *Primary consideration will be given to inhouse capability.*

Note.—All contracting proposed should be in accordance with procurement standards in Attachment O of OMB Circulars A–110 or A–102.

II. *Techniques and Methodology*—Specify plans for achieving the goals and objectives of the project. This section should be developed by using the outline of the Work Requirements and the MBDC responsibilities as *guides* and will become part of the award document. Include start-up plan and example of work plan format. Fully explain the procedures for: outreach, screening, assisting and monitoring clients; maintaining the profile inventory of minority businesses; and brokering of new business ownership, market and capital opportunities and prevention of business failures. In summary, address how, when and where work will be done and by whom. Include level of performance.

III. *Resources*—Address technical and administrative resources, i.e., computer facilities, voluntary staff time and space; and financial resources in terms of meeting MBDA's 10% cost-sharing requirement and including a fee for services for assistance provided clients. A fee for services in the amount of 10% of the cost of assistance will be charged to all clients receiving management and technical assistance.

Cost-sharing is that portion of project costs not borne by the Federal Government. The composition and amount of cost-sharing are key factors that will be considered in determining the merit of this section. The cost sharing requirement can be met through the following order or priority: (1) cash contributions; (2) fee for services; and (3) in-kind contributions.

A. *Cash contribution* means cash that is contributed or donated by the recipient, and other non-Federal sources, i.e., public agencies and institutions, private organizations, corporations and individuals.

B. *Fee for services* is a charge to a client for assistance provided by the MBDC for M&TA and/or SCS.

C. *In-kind contribution* represents the value of non-cash contributions provided by the recipient and other non-Federal sources. The order of priority for in-kind contributions are: high technology systems to be utilized to achieve program objectives; top level staff personnel and real and personal property donated by other public agencies, institutions and private organizations. Property purchased with Federal funds will not be considered as the recipient's in-kind contribution. Under no circumstances can the in-kind contribution exceed 50% of the total non-Federal contribution.

IV. *Costs*—Demonstrate in narrative format that costs being proposed will give the minority business client and the government the most effective program possible in terms of quality, quantity, timeliness and efficiency.

Include the principal costs involved for achieving work plan under Cooperative Agreement by completing Part III—the Budget Information Section of the Request for Application.

Provide cost-sharing plan information in terms of methodology and format for billing the costs of management and technical assistance and specialized consulting services to clients.

Total project cost will be evaluated in terms of:

Clear explanations of all expenditures proposed, and

The extent to which the applicant can leverage Federal program funds and operate with *economy* and *efficiency*.

In conclusion, the applicant's schedule for start of the MBDC operation should be included in Part II. Part II will be known as the applicant's plan of operation and will be incorporated into the Cooperative Agreement Award.

A detailed justification of all proposed costs is required for Part III and each item must be fully explained.

The failure to supply information in any given category of the criteria will result in the application being considered non-responsive and dropped from competitive review.

All information submitted is subject to verification by MBDA.

E. Disposition of Proposals.

Notification of awards will be made by the Grants Officer, U.S. Department of Commerce (DOC). Organizations whose proposals are unsuccessful will be advised by MBDA, DOC.

F. Proposal Instructions and Forms.

This program is subject to OMB Circular A–95 requirements.

Questions concerning the preceding information, copies of application forms, and applicable regulations can be obtained at the above address.

Nothing in this solicitation shall be construed as committing MBDA to divide available funds among all qualified applicants.

(11.800 Minority Business Development (Catalog of Federal Domestic Assistance))

Dated: May 24, 1983.

Joseph J. Korpeak

Acting Regional Director.

BILLING CODE 3510–21–M

National Oceanic and Atmospheric Administration

Gulf of Mexico Fishery Management Council's Special Mackerel Members of the Scientific and Statistical Committee; Public Meeting

AGENCY: National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Commerce.

SUMMARY: The Gulf of Mexico Fishery Management Council, established by Section 302 of the Magnuson Fishery Conservation and Management Act (Pub. L. 94–265, as amended), has

established special members of the Scientific and Statistical Committee which will convene a public meeting to review the reanalysis of stock assessment.

DATE: The public meeting will convene on Friday, June 24, 1983, at approximately 8:30 a.m., and will adjourn at approximately 3 p.m., and will take place at the Council's Headquarters Office, Lincoln Center, Suite 881, 5401 West Kennedy Boulevard, Tampa, Florida.

FOR FURTHER INFORMATION CONTACT: Gulf of Mexico Fishery Management Council, Lincoln Center, Suite 881, 5401 West Kennedy boulevard, Tampa, Florida 33609, Telephone: (813) 228–2815.

Dated: May 26, 1983.

Richard B. Stone,

Acting Chief, Operations Coordination Group, National Marine Fisheries service.

BILLING CODE 3510-22-M

Interim Convention on Conservation of North Pacific Fur Seals; Environmental Impact Statement

AGENCY: National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Commerce.

ACTION: Notice of Intent to Prepare an Environmental Impact Statement.

SUMMARY: The National Marine Fisheries Service (NMSF) is issuing this notice to advise the public that an environmental impact statement will be prepared on the Interim Convention on Conservation of North Pacific Fur Seals, and to invite participation in the scoping process on this issue.

DATE: Comments are requested by July 1, 1983.

ADDRESS: Please address the individual identified below.

FOR FURTHER INFORMATION CONTACT: Mr. Richard B. Roe, Acting Director, Office of Protected Species and Habitat Conservation, National Marine Fisheries Service, Washington, D.C. 20235 (202–634–7461).

SUPPLEMENTARY INFORMATION: The Interim Convention on Conservation of North Pacific Fur Seals ("Interim Convention") is due to expire in October 1984. A decision must be made before this date on extension, renegotiation or termination of this treaty. Agreements leading to the present Interim Convention have been in force since 1912. These treaties have been very successful in establishing an international conservation regime to protect the northern fur seal from overharvesting. The Interim Convention is an agreement by Canada, Japan, the Soviet Union and the United States to prohibit the harvesting of northern fur seals at sea and to limit land harvests to levels consistent with wildlife mamagement principles. The Interim Convention further provides for land harvests on the breeding islands of the northern fur seals by the United States and the Soviet Union. Canada and Japan each receive 15 percent of the sealskins taken in both harvests. The United States and the Soviet Union each retain 70 percent of their respective harvest. The National Marine Fisheries Service harvests approximately 25,000 male fur seals primarily between the ages of three and four years each summer on the Pribilof Islands, Alaska.

In accordance with the purposes and policies of the National Environmental Policy Act of 1969 (NEPA), the NMFS will prepare a draft environmental impact statement (EIS) which contains a discussion of the environmental impacts of the following three alternative actions: (1) Extend the treaty for four additional years (proposed action); (2) Allow the treaty to terminate in October 1984 and manage the northern fur seal under the Marine Mammal Protection Act of 1972; (3) Renegotiate the Interim Convention before October 1984 to incorporate modifications.

This notice of intent to prepare an EIS is being sent to appropriate Federal, State and local agencies and private organizations and individuals who may have an interest in this proposal. No formal scoping meeting is planned at this time. To ensure that the full range of actions, alternatives and impacts and all significant issues relating to a decision on this matter have been identified, we invite the participation of all interested parties in this scoping process, through comments and suggestions directed to the individual identified above.

Dated: May 26, 1983.

Carmen J. Blondin,

Acting Deputy Assistant Administrator for Fisheries Resource Management, National Marine Fisheries Service.

[FR Doc. 83–14655 Filed 5–31–83; 8:45 am]

BILLING CODE 3510-22-M

Office of the Secretary

Economic Advisory Board; Meeting

Pursuant to the provisions of section 10(a)(2) of the Federal Advisory Committee Act, as amended, 5 U.S.C. App. (1976), notice is hereby given that the meeting of the Department of Commerce Economic Advisory Board will be held on Wednesday, June 22, 1983, from 9:30 a.m. to 4:00 p.m. in Room 5859 Herbert C. Hoover Building, 14th Street and Constitution Avenue, NW., Washington, D.C. 20230

The Board was established by the Secretary of Commerce on January 10, 1967. The purpose of the Board is to advise the Secretary of Commerce on economic policy issues. The intended agenda for this meeting is as follows:

- A review of the economic outlook by major sector.
- A discussion of the outlook for prices and employment and of strategies for sustaining noninflationary economic growth.

A limited number of seats will be available to the public on a first-come, first-served basis. Public participation will be limited to requests for clarification of items under discussion. Additional statements or inquiries may be submitted to the Chair before or after the meeting. Copies of the minutes will be available on request 30 days after the meeting.

Additional information concerning this meeting may be obtained by contacting Ms. Virginia R. Marketti, Office of the Under Secretary for Economic Affairs, Room 4848, Department of Commerce, Washington, D.C. 20230 (202) 377–3523.

Dated: May 26, 1983.

Robert G. Dederick,

Under Secretary for Economic Affairs.

[FR Doc. 83–14654 Filed 5–31–83; 8:45 am]

BILLING CODE 3510-18-M

CONSUMER PRODUCT SAFETY COMMISSION

Privacy Act of 1974; Deletion of System of Records; Amendment of System Notice

AGENCY: Consumer Product Safety Commission.

ACTION: Deletion of system notice; amendment of system notice.

SUMMARY: The Consumer Product Safety Commission is deleting a system of records that is no longer in use, and correcting a citation to an Office of Personnel Management system.

DATES: Effective June 1, 1983.

FOR FURTHER INFORMATION CONTACT: Joseph F. Rosenthal, Office of the General Counsel, Consumer Product Safety Commission, Washington, D.C. 20207. Telephone: (301) 492–6980.

SUPPLEMENTARY INFORMATION: The Consumer Product Safety Commission published notice of a new system of records, Office of the General Counsel

Timesheets—CPSC–6, on September 7, 1982, 47 FR 39227. This system of records was used to document and record the daily activities of CPSC attorneys. The system is no longer in use, and all records have been destroyed. Accordingly, Office of the General Counsel Timesheets—CPSC–6, is deleted from the Commission's systems of records, but the designator CPSC–6 is reserved for future use.

The Commission's complete Privacy Act systems of records, as published at 47 FR 44365, October 7, 1982, includes an Appendix II which lists pertinent record systems of other agencies. Paragraph 2 of that Appendix inadvertently lists the incorrect title for an Office of Personnel Management System. Accordingly, paragraph 2 of Appendix II of the Commission's systems of records is revised to read:

* * * * * *

2. Office of Personnel Management, OPM/GOVT–2, Employee Performance File System Records.

* * * * * *

Dated: May 25, 1983.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355–01–M

DEPARTMENT OF EDUCATION

Innovative Programs for Severely Handicapped Children

AGENCY: Department of Education.

ACTION: Notice of final annual funding priorities.

SUMMARY: The Secretary announces Fiscal Year 1983 annual funding priorities for the Innovative Programs for Severely Handicapped Children program. The Innovative Programs for Severely Handicapped Children program supports projects which establish, promote, and demonstrate activities which meet the educational needs of severely handicapped children and youth (including those who are both deaf and blind). Publication of annual funding priorities is necessary because no priorities are established in the statute or regulations governing the program. These eight priorities are intended to establish model demonstration projects designed to meet the most critical needs in educating severely handicapped and deaf-blind children. A separate competition will be held for each priority.

EFFECTIVE DATE: Unless the Congress takes certain adjournments these priorities will take effect 45 days after publication in the **Federal Register**. If you want to know the effective date of these regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: R. Paul Thompson, Special Education Programs, Department of Education, 400 Maryland Avenue, S.W., Donohoe Building, Room 4918, Washington, D.C. 20202–4714.

SUPPLEMENTARY INFORMATION: Grants for Innovative Programs for Severely Handicapped Children are authorized under Section 624 of Part C of the Education of the Handicapped Act (EHA). Section 624 provides funds for research development, demonstration, training and dissemination activities concerning education and services for handicapped children.

Parties eligible to receive funds under this program are public or nonprofit agencies, organizations, or institutions which operate a center or provide a service which meets one or more of the purposes of Part C of EHA. Part C of EHA authorizes various activities relating to education and services for handicapped children, including the operation of Regional Resource Centers, Centers and Services for Deaf-Blind Children, and programs for the Early Education of Handicapped Children.

Summary of Comments and Responses

A "Notice and Proposed Annual Funding Priorities" was published in the **Federal Register** on February 10, 1983 (48 FR 6150) listing the eight proposed priorities for the 1983 grant competitions for "Innovative Programs for Severely Handicapped Children." Because public comments indicated support for the priorities chosen, no major changes have been made. A total of 28 comments were received concerning the eight priorities. Overall, the responses supported the need for demonstration activities in relation to severely handicapped and deaf-blind children. The major comments and the Department's responses are summarized below:

Comment. One commenter objected to the prohibition against advocacy activities in connection with these projects.

Response. A change has been made. This prohibition was included to reinforce general Federal restrictions on the use of Federal grant funds for lobbying. In view of the existence of requirements governing all recipients of Federal assistance, it is unnecessary to consider the issue in this Notice. The language has been deleted.

Comment. Three commenters recommended including more detailed descriptions of the various priorities such as itemizing handicapping conditions or subject matter areas to be addressed.

Response. No change has been made. The details suggested were all in keeping with the intent of the stated priorities. However, the suggested level of detail is not necessary, and might even be misleading if interpreted as limiting the scope and variety of activities that could be proposed. The priorities as stated are meant to encourage innovative responses from the field in these areas. The current wording provides applicants an opportunity to develop creative projects which reflect the perceived current needs in educational programming for severely handicapped or deaf-blind children.

Comment. One commenter suggested the addition of a priority on promoting dental health for severely handicapped children and youth.

Response. No change has been made. The Department agrees that this is an important issue and might well be the major focus of a project funded under the stated priorities. Therefore, it is unnecessary to establish a separate priority that only addresses that issue.

Comment. One commenter suggested specific changes in wording to clarify the importance of linguistic and health issues in the education of severely handicapped and deaf-blind children.

Response. Changes have been made. The suggested language has been incorporated in the final priorities, E an G.

Comment. One commenter suggested a separate priority for programs for autistic children or severely handicapped children with communication and behavior disorders.

Response. No change has been made. The population of autistic children is included in the general category of severely handicapped children. Therefore, demonstration projects serving autistic children fall within the purview of the new priorities for severely handicapped children (specifically, priorities numbered 6, 7, and 8). Several RFP's issued by this program in the past few years have supported projects to develop model programs for autistic children. With respect to programs for severely handicapped children with communication and behavior disorders, a current procurement, RFP 83–035 "Communication Skills Development Centers for Deaf-Blind Children" focuses on communication disorders of deaf-blind children. In view of the work which has been and will not be

supported in these specific areas, the Department chooses not to establish additional priorities this year.

Comment. Two commenters suggested limiting the specific types of applicant agencies.

Response. No change has been made. Limitation of eligible applicants would be inconsistent with the requirements in program regulations at 34 CFR 315.3.

Comment. Seven commenters recommended a different breakdown of the priorities and funding, on the grounds that deaf-blind children would receive greater attention than other severely handicapped populations.

Response. Funds for projects to serve deaf-blind children and for projects serving other severely handicapped are appropriated under different budget activities. The appropriated amounts are not subject to modification through the publication of priorities.

Comment. One commenter was concerned about a perceived anti-institutional bias and questioned whether sheltered programs for institutionalized children would be considered.

Response. No change has been made. Given the mandate in EHA requiring placement in the least restrictive environment for severely handicapped children and youth, these priorities in keeping with past efforts under this program, have been targeted toward helping severely handicapped individuals make the transition from institutional to community environments. Applications from sheltered programs for projects which promote the movement of severely handicapped children from separate facilities to community-based settings, therefore, are appropriate under the stated priorities.

Comment. One commenter questioned whether severely mentally retarded children were an eligible target population, or if the program is limited to intellectually normal severely handicapped children.

Response. No change has been made. Nothing in the priorities suggests the latter limitation.

Comment. Two commenters objected to the inclusion of children ages 16 through 21 within the target populations.

Response. No change has been made. The inclusion of this age group is consistent with statutory and regulatory provisions.

Comment. One commenter suggested eliminating the at-risk priority area since it was redundant with the already successful child find activities required under Part B of the EHA and, therefore, is unnecessary.

Response. No change has been made. The priority area addresses a need for following up on identification of children who appear to be deaf-blind with the provision of services that would assist such children to make maximum use of remaining visual and auditory skills. The use of effective strategies for auditory and visual screening and training may therefore eliminate the need for placement of certain children in programs for deaf-blind children thereby reducing the costs of comprehensive and costly services programs for deaf-blind children that kind of placement entails.

Priorities

(A) *Independent Living Skills Training for Severely Handicapped Youth.* This priority supports projects which design, implement, evaluate, and disseminate innovative cost effective methods for the provision of independent living skills training for severely handicapped youth, ages 16 through 21 years of age, making the transition from "educational" to home/community environments. These approaches should be longitudinal in nature and build over time the highest possible level of independent, active, and cooperative functioning of these youth in a variety of integrated school and community settings. The projects should be designed to increase both the quality and frequency of meaningful interactions of severely handicapped youth with handicapped and nonhandicapped peers and adults.

(B) *Parent Involvement in Provision of Educational Services and Life-Long Planning for Severely Handicapped Children and Youth.* This priority supports innovative projects designed to increase the involvement of parents or surrogates in the development, establishment, and evaluation of individualized educational programs for severely handicapped children and youth, and in the life-long planning for these persons. Projects should promote the organization and effective operation of parent groups in the identification and utilization of fiscal and personnel resources for insuring quality educational services to severely handicapped children and youth.

(C) *Non-directed Demonstration Projects for Severely Handicapped Children and Youth.* This priority supports projects designed to demonstrate specific, viable procedures for meeting significant educational needs of severely handicapped (other than deaf-blind) children and youth. The content of the demonstration projects is limited only by the overall mission of the program—to demonstrate innovative and effective approaches to the education of severely handicapped children in least restrictive environments. Applicants proposing to conduct the projects must fully describe and justify the selection of the focus and particular approach to be demonstrated.

(E) *Approaches to Total Life Planning for Deaf-Blind Children and Youth.* This priority supports projects which implement innovative procedures for the development of total life planning for deaf-blind children and youth. The planning must include (a) the assessment of cognitive, linguistic, affective, and psychomotor skills and capacities of project participants; (b) an identification of services which are essential to meet the needs of the participants and which will provide for the maximization of their potential as they approach adulthood; (c) the development of strategies for life planning individualized for each project participant, with provision for modifying the planning on at least an annual basis; and (d) strategies for the application of the individualized planning designed for project participants, to nonproject deaf-blind children and youth.

(F) *Pre-vocational and Vocational Training for Deaf-Blind Children and Youth.* This priority supports projects which design, implement, and disseminate innovative practices in the pre-vocational and vocational education of deaf-blind children and youth. The practices must extend beyond, expand upon, complement, or supplement existing best practices. Also considered innovative for the purpose of this priority are feasible applications of practices still in the developmental stage in research and other experimental programs.

(G) *Identification of At-Risk Deaf-Blind Children and Youth.* This priority supports projects which design and implement strategies for the early identification of children and youth with apparent visual and auditory impairments who are at risk of being categorized as deaf-blind. The projects should devise strategies for providing relevant information to and gaining the cooperation of educational, medical, health, and social service providers. Projects must include procedures and planning for identification of handicapped children and youth such as those procedures mandated under Part B of the Education of the Handicapped Act as amended.

(H) *Adaptation/Utilization of Curricula for Deaf-Blind Children and Youth.* This priority supports projects which implement innovative strategies to develop and demonstrate the

effectiveness of individualized educational programming for deaf-blind children and youth. The curricula may include (a) new approaches unique to work with deaf-blind children and youth; (b) best practices currently in use with children and youth which have potential for being modified to meet individual differences or (c) best practices in educational programming for other types of handicapped or non-handicapped age peers adapted to meet the educational needs of the deaf-blind children and youth.

(J) *Non-directed Demonstration Projects for Deaf-Blind Children and Youth.* This priority supports projects designed to demonstrate specific, viable procedures for meeting significant educational needs of deaf-blind children and youth. The content of the demonstration projects is limited only by the overall mission of the program—to demonstrate innovative and effective age-appropriate approaches to the education of deaf-blind children and youth in least restrictive environments. Applicants proposing to conduct the projects must fully describe and justify the selection of the focus and particular approach to be demonstrated.

(Catalog of Federal Domestic Assistance No. 84.086, Innovative Programs for Severely Handicapped Children)

Dated: May 25, 1983.

T. H. Bell,

Secretary of Education.

BILLING CODE 4000-01-M

Chapter 1, Education Consolidation and Improvement Act of 1981; Intent To Repay to the State of West Virginia Department of Education Funds Recovered as a Result of Final Audit Determinations

AGENCY: Education Department.

ACTION: Notice of Intent to Award Grantback Funds.

SUMMARY: Notice is given that, under Section 456 of the General Education Provisions Act (GEPA), the U.S. Secretary of Education intends to repay under a grantback arrangement to the West Virginia State Department of Education (SEA) an amount equal to 75 percent of the funds the U.S. Department of Education (Department) has recovered as a result of final audit determinations issued by the Deputy Commissioner for Elementary and Secondary Education (now Assistant Secretary for Elementary and Secondary Education). This notice describes the SEA's plans, submitted on behalf of two local educational agencies (LEAs), for the use of the repaid funds and the terms and conditions under which the Secretary intends to make these funds available.

DATE: All written comments must be received on or before July 1, 1983.

ADDRESS: All written comments should be submitted to Dr. Thomas W. Fagan, Director, Division of Grants, Policy, and Administration, Compensatory Education Programs, U.S. Department of Education, 400 Maryland Avenue, S.W. (Room 3616, ROB-3), Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Dr. Thomas W. Fagan. Telephone: (202) 245-9877.

SUPPLEMENTARY INFORMATION:

A. Background

The Deputy Commissioner's final audit determinations were based upon Department of Health, Education, and Welfare Audit Agency (HEWAA) audits of the operation and administration of the Title I, Elementary and Secondary Education Act, program in West Virginia. In his final audit determinations, the Deputy Commissioner sought refunds of Title I funds misspent in Wayne County and Fayette County LEAs.

Wayne County LEA

The HEWAA audit of the Title I program in the Wayne County LEA covered the period of July 1, 1970 to June 30, 1974. In his final audit determination, as stated in a final determination letter dated June 17, 1976, the Deputy Commissioner sought refund of $53,710; and in a supplemental final audit determination, as stated in a final determination letter dated May 6, 1977, the Deputy Commissioner sought refund of an additional $9,316 for a total amount of $63,026. The Deputy Commissioner's final audit determination was based on violations of Section 405(b) of GEPA (20 U.S.C. 1225(b)).

Section 405(b) of GEPA was applicable to Title I grants and required that grantees obligate and expend grant funds by the end of the fiscal year succeeding the fiscal year for which the grant funds were appropriated. Funds that were not obligated by the end of that time period should have reverted to the United States Treasury. The auditors and the Deputy Commissioner determined that the Wayne County LEA could not document that $63,026 of fiscal year (FY) 1971 Title I funds had been expended during the allowable time period. The FY 1971 funds were available for obligation and expenditure through the end of FY 1972 which ended June 30, 1972.

The Title I grant for FY 1971 was received by the Wayne County LEA upon the condition that these funds would be expended in compliance with the applicable statutes and regulations. The LEA was unable to show that the total amount of $63,026 was obligated and expended by reference to adequate records. Under Section 424 of GEPA (20 U.S.C. 1232c (1976)), the LEA was required to maintain program and fiscal records necessary to verify proper obligation and expenditure of funds.

On August 17, 1976, the SEA filed an application for review of the Deputy Commissioner's final determination regarding the $53,710 with the Title I Audit Hearing Board (now Education Appeal Board). On May 12, 1977, the SEA filed an additional application for review of the supplemental determination of $9,316 and requested that this application for review be joined with the one submitted previously. In an initial decision dated February 21, 1978 [Docket No. 13-(28)-76], a panel of the Title I Audit Hearing Board upheld the Deputy Commissioner's final determination ordering the SEA to refund $63,026 to the Department. The Commissioner of Education declined to review the Board's initial decision, and therefore it became the final decision of the Commissioner.

On June 8, 1979, the SEA filed a petition for review of the Commissioner's final decision with the U.S. Court of Appeals for the Fourth Circuit. The SEA's petition was denied by the court on November 4, 1980. The SEA submitted a check for $63,026 to the Department on October 8, 1981.

Fayette County LEA

The HEWAA audit of the Title I program in the Fayette County LEA covered the period of July 1, 1973 to June 30, 1976. In a final determination letter dated June 14, 1977, the Deputy Commissioner ordered the SEA to refund $125,000 of Title I funds that had been expended improperly in the Fayette County LEA for the construction of an administrative office building.

Section 141(a)(1) of Title I (20 U.S.C. 241e(a)(1)(1976)) provided in pertinent part that Title I funds could only be used for "the excess costs of programs and projects (including the acquisition of equipment, payments to teachers of amounts in excess of regular salary schedules as a bonus for service in schools eligible for assistance under this title, the training of teachers, and, where necessary, the construction of school facilities and plans made or to be made for such programs, projects, and facilities) (A) which are designed to

meet the special educational needs of educationally deprived children in school attendance areas having high concentration of children from low-income families * * *."

In 1975, the Fayette County LEA requested that the SEA approve an amended plan permitting the LEA to spend $125,000 of Title I funds to meet part of the building costs for a county school board administrative office complex. The $125,000 was allocated to that portion of the building complex to be occupied by Title I personnel. The SEA approved the expenditure of funds and the building was constructed.

The auditors and the Deputy Commissioner concluded that the building was not a "school facility" as defined by the statute and regulations and that the construction was not essential to the success of the Title I program.

Section 403(13) of the Elementary and Secondary Education Act (20 U.S.C. 244(13) (1976)), which applied to Title I, provided that "[t]he term 'school facilities' means classrooms and related facilities (including initial equipment) for free public education * * *." An almost verbatim definition of school facilities was contained in the Title I regulations (45 CFR 116.1(w)(1974)) then in effect. The Deputy Commissioner determined that the administrative office building did not qualify as a school facility under these definitions and also that the construction was not demonstrated as being essentail in order to ensure the success of a Title I program or project in accordance with 45 CFR 116.17(i)(1974).

On July 13, 1977, the SEA filed an application for review of the Deputy Commissioner's final determination with the Title I Audit Hearing Board. In a decision dated June 20, 1980 [Docket No. 3–(33)–77], a panel of the successor Education Appeal Board issued an initial decision which upheld the Deputy Commissioner's final determination ordering the SEA to refund $125,000 to the Department. The Secetary did not set aside or modify the Board's initial decision, and therefore it became the final decision of the Secretary.

The SEA filed a petition for review of the Secretary's final decision with the U.S. Court of Appeals for the Fourth Circuit on October 15, 1980. The Court affirmed the Secretary's decision on October 15, 1981. On August 31, 1982, the SEA submitted a check to the Department for $129,000, which included $125,000 for the improperly expended Title I funds and $4,000 for an interest penalty payment.

B. Authority for Awarding a Grantback

Section 456(a) of GEPA (20 U.S.C. 1234e(a)) provides that whenever the Secretary has recovered funds following a final audit determination with respect to an applicable program, the Secretary may consider those funds to be additional funds available for that program and may arrange to repay to the LEA affected by that determination an amount not to exceed 75 percent of the recovered funds. The Secretary may enter into this grantback arrangement if the Secretary determines that—

(1) The practices and procedures of the LEA that resulted in the audit determination have been corrected, and that the LEA is in all other respects in compliance with the requirements of the applicable program;

(2) The SEA has submitted to the Secretary a plan for the use of the funds to be awarded under the grantback arrangement which meets the requirements of the applicable program, and, to the extent possible, benefits the population that was affected by the misexpenditures that resulted in the audit exception; and

(3) The funds to be awarded under the grantback arrangement, if used in accordance with the SEA's plans, would serve to achieve the purposes of the program under which the funds were originally granted.

C. Request for Repayment of Funds Awarded Under a Grantback Arrangement

In a document dated August 27, 1982 (revised March 1983), the SEA formally requested that repayment of $47,270 (75 percent of the $63,026 returned to the Department) under a grantback arrangement be made to the Wayne County LEA. The formal request to the Department for a repayment of $93,750 (75 percent of the $125,000 recovered program funds) to the Fayette County LEA was submitted by the SEA on October 26, 1982 (revised March 1983).

The SEA includes in its requests detailed budgets prepared by the LEAs for the expenditure of the funds to be awarded under the grantback arrangement. The SEA provides assurances that the practices and procedures of the LEAs that resulted in the audit determinations have been corrected and that the LEAs are in all other respects in compliance with the current program requirements. Separate accounting records documenting the expenditures of funds awarded under the grantback arrangement will be maintained.

D. Plans for Use of Funds Awarded Under a Grantback Arrangement

In accordance with Section 456(a)(2) of GEPA, the SEA submitted plans on behalf of the LEAs explaining the LEAs' intentions to use the grantback funds to meet the special educational needs of educationally deprived children in programs administered under Chapter 1 of the Education Consolidation and Improvement Act of 1981 (Chapter 1). Chapter 1 supersedes Title I. The SEA's proposals, therefore, reflect the requirements in Chapter 1—a program that is designed to serve educationally deprived children in low-income areas.

The plans demonstrate that the Wayne County and Fayette County LEAs consulted with parents and teachers in designing the programs for which funds are sought under the grantback arrangement. According to their plans, the LEAs intend to use the grantback funds in FY 1984.

Wayne County LEA

The Wayne County LEA proposes to use the $47,270 from these grantback funds for a structured computer-based remedial reading and mathematics program. This program will provide supplemental instruction and will include the prepackaged software materials available in the subject areas plus some special programmed materials recommended by the reading and mathematics teachers. Approximately 20 to 40 students in the Middle and Junior High School classes who are experiencing learning difficulties in the regular Chapter 1 program will participate in this program.

Fayette County LEA

The Fayette County LEA proposes to use the $93,750 in grantback funds to expand remedial mathematics to educationally disadvantaged children in 17 participating Chapter 1 schools needing these services who would otherwise not receive mathematics instruction because of a lack of Chapter 1 funds. Additionally, supplementary remedial mathematics materials are to be provided on a limited basis to 14 Chapter 1 schools currently participating in the regular Chapter 1 remedial mathematics program.

E. The Secretary's Determinations

Based upon a thorough review of the SEA's requests for the repayment of funds under Section 456 of GEPA, including the SEA's discharge of its payment obligations to the Department of October 8, 1981 and August 31, 1982, the SEA's assurances described in part C of this notice, and the SEA's plans and

budgets, the Secretary makes the following determinations:

(1) The LEAs have corrected the practices and procedures that resulted in the final audit determinations, and the LEAs are in all other respects in compliance with the requirements of the Chapter 1 program;

(2) The SEA has submitted plans for the use of the funds to be awarded under the grantback arrangement that meet the requirements of the Chapter 1 program and, to the extent possible, benefit the Chapter 1 children who were affected by the misexpenditures that resulted in the audit exceptions; and

(3) The funds to be awarded under the grantback arrangement, if used in accordance with the SEA's plans, would serve to achieve the purposes of the Chapter 1 program.

These determinations are based upon the best information available to the Secretary at the present time. If this information is not accurate or complete, the Secretary is not precluded from taking appropriate administrative action.

F. Notice of the Secretary's Intent to Enter Into a Grantback Arrangement

Section 456(d) of GEPA requires, at least thirty days prior to entering into an arrangement to award funds under a grantback, that the Secretary publish in the **Federal Register** a notice of his intent to do so, and the terms and conditions under which the payment will be made.

In accordance with this requirement, notice is given that the Secretary intends to make available under a grantback arrangement to the SEA an amount equal to 75 percent of the funds the Department recovered as a result of the Deputy Commissioner's final audit determinations. The Secretary bases his intention to enter into a grantback arrangement under Section 456 of GEPA on his determinations outlined in part E of this notice, and payment by the SEA of all funds owed to the Department as a result of these final audit determinations.

G. Terms and Conditions Under Which Payment Under the Grantback Arrangement Will Be Made

Section 456(b) of GEPA provides that any payments made under a grantback arrangement shall be subject to the terms and conditions that the Secretary deems necessary to accomplish the purposes of the affected program. The SEA agrees to comply with the following terms and conditions under which payment under the grantback arrangement will be made:

(1) The SEA will spend the funds awarded under the grantback in accordance with—

(a) All applicable statutory and regulatory requirements, including the requirements concerning the participation of eligible children attending private schools;

(b) The plans that the SEA submitted and any amendments to those plans that are approved by the Secretary; and

(c) The budgets that were submitted with the plans and any amendments to the budgets that are approved by the Secretary.

(2) In accordance with Section 456(c) of GEPA and the SEA's plans, all the funds received under the grantback awards will be expended by September 30, 1984.

(3) The SEA, on behalf of the LEAs, must, not later than January 1, 1985, submit a report to the Secretary which indicates that the funds awarded under the grantback have been spent in accordance with the approved budgets.

(4) Separate accounting records must be maintained documenting the expenditures of funds awarded under the grantback arrangement.

Invitation to Comment

The Secretary invites public comments on this notice of intent to award funds under a grantback arrangement to the West Virginia SEA on behalf of the Wayne County and the Fayette County LEAs. Interested persons may send written comments to Dr. Thomas W. Fagan at the address at the beginning of this notice. All comments must be received on or before July 1, 1983.

Dated: May 24, 1983.

T. H. Bell,

Secretary of Education.

[FR Doc. 83-14581 Filed 5-31-83; 8:45 am]
BILLING CODE 4000-01-M

Office of Special Education and Rehabilitative Services

Innovative Programs for Severely Handicapped Children

AGENCY: Department of Education.

ACTION: Closing date notice for transmittal of applications for fiscal year 1983.

Applications are invited for new demonstration projects under Innovative Programs for Severely Handicapped Childern.

Authorization for this program is contained in Section 624 of Part C of the Education of the Handicapped Act. (20 U.S.C. 1424)

Applications may be submitted by public or nonprofit private agencies, organizations, or institutions which operate a center or provide a service which meets one or more of the purposes of Part C of the Education of the Handicapped Act.

The main intent of the program is to support model projects which develop and demonstrate improvements in existing methods, approaches, or techniques for meeting the educational needs of severely handicapped and deaf-blind children.

Closing date for transmittal of applications: An application for a grant must be mailed or hand delivered by the date indicated on Table 1, as specified.

PRIORITY AREAS—PROGRAMS FOR SEVERELY HANDICAPPED CHILDREN, FISCAL YEAR 1983

Priority No.	Priority area		Anticipated	
			Funding level	Number of awards
84.086A	Independent living skills training for severely handicapped youth.	July 15, 1983	$280,000	3
84.086B	Parent involvement in provision of educational services and life-long planning for severely handicapped children and youth.	July 15, 1983	360,000	3
84.086C	Non-directed demonstration projects for severely handicapped children and youth.	July 15, 1983	$450,000	4
84.086E	Approaches to total life planning for deaf-blind children and youth.	July 15, 1983	350,000	1
84.086F	Pre-vocational and vocational training for deaf-blind children and youth.	July 15, 1983	350,000	1
84.086G	Identification of at-risk deaf-blind children and youth.	July 15, 1983	240,000	2
84.086H	Adaptation/utilization of curricula for deaf/blind children and youth.	July 15, 1983	350,000	1
84.086J	Non-directed demonstration projects for deaf-blind children and youth.	July 15, 1983	350,000	1

Applications delivered by mail: An application sent by mail must be addressed to the Department of Education, Application Control Center, Attention 84.086, 400 Maryland Avenue, S.W., Washington, D.C. 20202–4714.

An applicant must show proof of mailing consisting of one of the following.

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3). A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the U.S. Secretary of Education.

If an application is sent through the U.S. Postal Service, the Secretary does not accept either of the following as proof of mailing:

(1) a private metered postmark, or (2) a mail receipt that is not dated by the U.S. Postal Service.

An applicant should note that the U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, an applicant should check with its local post office.

An applicant is encouraged to use registered or at least first class mail.

Each late applicant will be notified that its application will not be considered.

Applications delivered by hand: An application that is hand-delivered must be taken to the U.S. Department of Education, Application Control Center, ROB 3, Room 5673, 7th and D Streets, S.W., Washington, D.C.

The Application Control Center will accept a hand-delivered application between the hours of 8:00 a.m. and 4:30 p.m., (Washington, D.C. time) daily, except Saturdays, Sundays, or Federal holidays. An application that is hand-delivered will not be accepted after 4:30 p.m., on the closing date.

Available funds: It is expected that funding will be available to award new grants in FY 1983, as indicated in Table 1, above.

These estimates of funding levels do not bind the U.S. Department of Education to a specified number of grants or to the amount of any grant, unless that amount is otherwise specified by statute of regulation. Grant approval is for a three-year period subject to an annual review of progress and availability of funds.

Priorities for funding: The selection of priorities was based upon a comprehensive review of the program's history, including the number of responses to various RFP's, and responses to the 1982 grant competition. An analysis of comments from professionals serving severely handicapped and deaf-blind children as to perceived needs in the field was also made and considered. The priority areas are listed below. For further elaboration of the intent of each selected area, please consult the "Notice of Final Annual Funding Priorities," included in the application package.

84.086 A Independent living skills training in the application package.
84.086 B Parent involvement in provision on educational services and life-long planning for severely handicapped children and youth;
84.086 C Non-directed demonstration projects for severely handicapped children and youth;
84.086 E Approaches to total life planning for deaf-blind children and youth;
84.086 F Pre-vocational and vocational training for deaf-blind children and youth;
84.086 G Identification of at-risk deaf-blind children and youth;
84.086 H Adaptation/utilization of curricula for deaf-blind children and youth; and
84.086 J Non-directed demonstration projects for Deaf-Blind Children and Youth.

Application form: Application form and program information packages are expected to be ready for mailing as indicated on Table 1, above. These materials may be obtained by writing to: Special Needs Section, Program Development Branch, Special Education Programs, Donohoe Building, Room 4916, U.S. Department of Education, 400 Maryland Avenue, S.W., Washington, D.C. 20202–4714.

Applications must be prepared and submitted in accordance with the regulations, instructions, and forms included in the application package. However, the program information is only intended to aid applicants in applying for assistance. Nothing in the program information package is intended to impose any paperwork, application content reporting or grantee performance requirement beyond those imposed under the statute and regulations. The Secretary strongly urges that the narrative portion of the application not exceed 50 pages in length. The Secretary further urges that the applicant submit only the information that is requested.

Applicable regulations: Regulations applicable to this program include the following:

(a) Regulations governing Auxiliary Activities under the EHA (34 CFR Part 315);

(b) The Notice of Final Annual Funding Priorities which is published in the **Federal Register** and included in the application package; and

(c) The Education Department General Administrative Regulations (34 CFR Part 74, 75, 77, and 78).

FOR FURTHER INFORMATION CONTACT: R. Paul Thompson, Special Needs Section, Program Development Branch, Special Education Programs, Donohoe Building, Room 4916, U.S. Department of Education, 400 Maryland Avenue, S.W., Washington, D.C. 20202–4714; Telephone: (202) 472–7993.

(Catalog of Federal Domestic Assistance No. 84.025, Innovative Program for Severely Handicapped Children)

(20 U.S.C. 1424)

Dated: May 25, 1983.

T. H. Bell,

Secretary of Education.

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Bonneville Power Administration

Transmission Policy

AGENCY: Bonneville Power Administration (BPA), Energy.

ACTION: Notice of proposed policy, BPA File Number: TrP–1.

SUMMARY: In this notice, BPA describes its proposed policy applicable to the planning of transmission facilities for use by Federal and non-Federal power and the transmission servies provided on the BPA transmission system for non-Federal power. This policy is necessary to achieve the most efficient and equitable use of BPA's transmission system. Future wheeling arrangements will be subject to this policy. Opportunity for public review and comment will be provided.

In Section I, General Information, facts and concepts are described which are necessary for an understanding of the context and significance of transmission in the Pacific Northwest and wheeling in particular. Section II, Proposed Transmission Policy, is organized into four sections. The first, General Principles and Objectives, sets forth those key principles and objectives which are the basis for the policy. The second part contains certain defined terms. The third part, Types of Services, describes the categories of uses of the Federal Columbia River Transmission System (FCRTS) which BPA proposes to offer for use by customers for non-Federal power. The fourth part, Losses, states BPA methodology for transmission losses. Appendices A and B are proposed contract principles for generic agreements for the integration and use of capacity services, respectively.

DATES: BPA will provide an information forum for explanation and clarification and a comment forum to receive public comment on the proposed policy. The

information meeting will be on June 7, 1983, 9:00 a.m.–5:00 p.m. and the comment meeting will be on June 28, 1983, 9:00 a.m.–5:00 p.m. Both meetings will be in Room 464 of the BPA headquarters building.

Written comments on the proposed policy are encouraged. They must be received by July 8, 1983.

ADDRESSES: Written comments should be submitted to the Public Involvement Manager, Bonneville Power Administration, P.O. Box 12999, Portland, Oregon 97212. All comments should be identified by the file number TrP–1.

FOR FURTHER INFORMATION CONTACT: Donna L. Geiger, Public Involvement Manager, at the above address, or by calling 503–230–3478. Oregon callers outside of Portland may use the toll-free number 800–4452–8429; callers in California, Idaho, Montana, Nevada, Utah, Wyoming, and Washington may use 800–547–6048. Information may also be obtained from:

Mr. James L. Jones, Deputy Power Manager—P, P.O. Box 3621, Portland, Oregon 97208, 503–230–5112.

Mr. Maureen R. Flynn, Assistant to the Power Manager—P, P.O. Box 3621, Portland, Oregon 97208, 503–230–4268.

Mr. Georgy E. Gwinnutt, Lower Columbia Area Manager, Suite 288, 1500 Plaza Building, 1500 NE. Irving Street, Portland, Oregon 97208, 503–230–4551.

Mr. Ladd Sutton, Eugene District Manager, Room 206, 212 East Seventh Avenue, Eugene, Oregon 97401, 503–687–6952.

Mr. Ronald H. Wilkerson, Upper Columbia Area Manager, Room 561, West 920 Riverside Avenue, Spokane, Washington 99201, 509–456–2518.

Mr. George E. Eskridge, Montana District Manager, 800 Kensington, Missoula, Montana 59801, 406–329–3060.

Mr. Ronald K. Rodewald, Wenatchee District Manager, P.O. Box 741, Wenatchee, Washington 98801, 509–662–4377, extension 379.

Mr. Richard D. Casad, Puget Sound Area Manager, 415 First Avenue North, Room 250, Seattle, Washington 98109, 206–442–4130.

Mr. Thomas Wagenhoffer, Snake River Area Manager, West 101 Poplar, Walla Walla, Washington 99362, 509–525–5500, extension 701.

Mr. Robert N. Laffel, Idaho Falls District Manager, 531 Lomax Street, Idaho Falls, Idaho 83401, 208–523–2706.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Scope and Relationship to Other Actions

When this policy revision effort was begun by a **Federal Register** notice of intent dated February 17, 1981 (46 FR 12658), it was intended to support the then pending transmission rate adjustment. That rate adjustment covered the rates charged for wheeling on BPA facilities within the region and also on the Pacific Northwest/Pacific Southwest Intertie. The 1981 transmission rate adjustment was filed though the policy revision effort was not completed at that time. Prior to the next transmission rate filing, this policy revision will be completed as a separate action.

On May 20, 1982, BPA published notice in the **Federal Register** (47 FR 21912) of its intent to reopen the policy revision effort. Written comments were received in response to that notice. These comments as well as those submitted in response to the original notice are part of the Official Record on this policy.

On October 7, 1982, and on January 13 and 14, 1983, BPA met with representatives of customers and interested entities to discuss their recommendations for a transmission policy. These comments and all comments received previously have been considered in the development of this proposed policy. Portions of the preliminary draft policy which were distributed to interested parties and used in the January meetings have been substantially changed. Specific italicized references throughout the policy text will point out these changes. This commentary, however, is not part of the policy.

This policy *does not* address certain issues which will be covered in the following actions:

1. *Transmission Rate Filing.* The proposed 1983 transmission rates is compatible with this proposed policy. The rate development process itself will cover issues such as the method for determining an equitable allocation of costs between Federal and non-Federal power, functionalization of costs between generation and transmission, and other issues necessary to the rate development process.

2. *Customer Service Policy.* BPA's Customer Service Policy will address issues involving the facilities which BPA will or will not provide for deliveries to power sales customers and for wheeling obligations. This policy is being developed through a separate process.

3. *Policy on Use of the Pacific Northwest-Pacific Southwest Intertie.* Use of the Intertie is governed by separate contracts and rates. Policy development will be conducted in the context of interregional resource strategy through a separate process.

4. *Transfer Service.* Service to transfer loads are covered by separate contractual agreements between BPA and other utilities.

B. Background and History

BPA operates and maintains the FCRTS according to its legislative authority in order to (1) integrate and transmit electric power from existing or additional Federal or non-Federal generating units; (2) provide service to BPA customers; (3) provide interregional transmission facilities, and (4) maintain the electrical stability and electrical reliability of the Federal system. BPA is required by law to recover the costs associated with the production, purchase, conservation, and transmission of electric power, and to repay with interest the Federal investment in the transmission and generation facilities of the Federal system.

BPA has negotiated numerous wheeling agreements. Many of the agreements were negotiated prior to the 1974 Federal Columbia River Transmission System Act and reflect the conditions and policies prevalent at the time of negotiation. Provisions that vary among agreements include the type of facilities made available, the type pf service, the determination of losses, the treatment of non-Federal transmission facilities, and the degree of flexibility allowed wheeling customers in the use of the FCRTS. Some of the contracts also contain language concerning the determination of costs and the design of the rates. Differences in transmission uses by Federal and non-Federal power complicate the task of showing that costs of the transmission system have been equitably allocated. BPA hopes to reduce the extent of these complications through the development of a revised transmission policy.

BPA's view of the role of its transmission in the Region was described in the Final Role EIS, Section 1980, which included a specific reference to wheeling policy as it was then envisioned. In that document, BPA proposed to maintain an active role in planning and constructing the Region's transmission facilities.

C. The One-Utility Standard

The one-utility standard applied to transmission means that all the Region's transmission facilities should be planned and constructed in the most

efficient, reliable, and economic manner, compatible with environmental and other responsibilities, as though the transmission system were owned by a single entity. BPA believes that this standard is essential to any policy because it results in the greatest benefits to the electric power consumer. For example, it would be inconsistent with the one-utility standard to plan the construction of two transmission lines by different entities if one line, used by both, would perform the necessary electrical transmission.

This proposed policy has been developed because BPA believes it is most consistent with the one-utility standard. The BPA transmission role statement set forth in Section II.A. below is a natural extension of this standard.

D. Relationship Between Interconnected Utilities

The Region's transmission system is formed by the interconnected facilities of many entities. One of the most complex problems of transmission planning, operation, and commercial use is to account fairly for the cost or benefits experienced on one system as a result of its connection to another.

Utilities account for the power that they intend to interchange with each other by means of scheduling or reporting power to and from systems, but actual electrical flow does not necessarily match these schedules or reports. The difference is referred to as "inadvertent flow." The utility whose system carries the inadvertent flow suffers the costs associated with it, such an increased losses.

BPA plans and encourages other utilities to plan transmission facilities on a "single utility" basis as a matter of policy. Major benefits of single utility planning include reduced construction of regional transmission facilities, reduced environmental impacts, increased system efficiency (lower losses) and increased system reliability.

In order for these benefits to be realized, it is necessary to make interconnections. The primary test of the need for an interconnection should be that the connection is beneficial from the single utility standpoint. Since a properly planned interconnection provides a net benefit to the overall system, at least one of the interconnecting utilities must realize a benefit. Often both parties benefit.

There will also be costs associated with making the interconnection. These costs will be incurred by one or both of the utilities involved. At the least, there will be some cost to provide the physical connection. At the other extreme, power flowing through the interconnection may require a utility to add major transmission facilities or may cause substantially increased losses on the utility's system. It is this problem which BPA addresses in General Principles and Objectives, Section II.B., below.

E. Compliance With National Environmental Policy Act (NEPA)

NEPA procedures must insure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. BPA has undertaken a review of the proposal to revise its wheeling policy to determine the level of NEPA documentation that is necessary in this case. Preliminary analysis has not revealed any significant environmental issues nor have any environmental impacts been identified. An appropriate environmental review under DOE's NEPA guidelines will be prepared and integrated into the development of the revised wheeling policy, and will be available at the time that a final policy is recommended.

II. Proposed Transmission Policy

A. BPA Transmission Role Statement

BPA will plan to provide transmission facilities within the Pacific Northwest region to integrate and transmit power from existing or additional Federal and non-Federal plants, to provide service to its customers, to provide interregional transimission opportunities and to maintain Federal system electrical stability and reliability. It will perform this function in a manner compatible with its responsibilities with respect to the environment and to fish and wildlife so as to achieve as nearly as practicable maximum efficiency, reliability, economy, and other benefits as if the region's transmission system were owned by a single utility. BPA will provide access to available capacity in the Federal system for all utilities on a fair and non-discriminatory basis. BPA will provide wheelling services on its facilities under terms which will encourage use of the Federal system so that the benefits of interconnection and of system diversity will be realized by the region's electric power consumers to the greatest extent possible.

B. General Principles and Objectives

This section had been rewritten for clarity. The intent expressed in the preliminary draft has not been changed. Point No. 3 has been substantially rewritten to answer questions and comments already received.

1. BPA's goal is that the Region's transmission system be planned and constructed to achieve as nearly as practicable the maximum efficiency, reliability, economy, and other benefits as if the region's system were owned by a single utility.

2. BPA will plan the Federal Transmission System using BPA's projected requirements for Federal power, plus known commitments to non-Federal power.

3. Interconnected systems should share equitably the burdens and benefits of interconnection. Interconnected utilities are expected to provide facilites adequate to transmit the peak capability of their resources to their distributed loads. To the extent such facilities have not been provided, utilities should compensate inpacted systems.

4. BPA will provide transimission services and manage the use of the Federal transmission system in order to fulfill its statutory duties to ensure that the system is available to all utilities on a non-discriminatory basis. BPA wheeling contracts are intended to be an agreement to provide service to a customer, but not to grant the right to resell to third parties the use of the capacity of BPA facilities.

5. Transmission rates, charges, and contract terms will be designed so as to recover the costs of transmission allocated to non-Federal power. Contracts will be negotiated so as to assure appropriate revenue recovery from the planned uses covered by the contract through the use of termination charges or other protective provisions.

6. BPA will encourage conservation of losses and economic operation of resources by facilitating, to the extent practicable, the efficient use of the Region's generating resources, transmission and distribution facilities.

7. BPA encourages the reciprocal adoption of these general principles and objectives by BPA and other Northwest utilities.

C. Defined Terms

The definitions of terms provided below are to be used in the context of this proposed policy only. They are not intended to affect the meanings of the same or similar terms in other documents, contracts, or BPA publications.

"Firm wheeling" means transmission service which BPA provides for any non-BPA power scheduled or otherwise made available, limited only by the amount and time period specified in an agreement.

"Integration" means a transmission service by which BPA provides interconnection with the Federal system and firm wheeling for all firm or nonfirm power belonging to the customer up to the total of the customer's Transmission Demands to points of delivery as specified in the customer's contract.

"Network" means those facilities which primarily perform the bulk transmission function of the system.

"Nonfirm" wheeling means transmission service which BPA will provide pursuant to an agreement subject to BPA's determination that there is capacity available on the Federal transmission system.

"Point of Delivery" (POD) means connection points between the Federal system and non-Federal facilities where non-Federal power wheeled is delivered to a customer bvy BPA.

"Point of Integration" (POI) means connection points between the Federal system and non-BPA facilities where power to be wheeled is made available to BPA.

"Transmission Demand" means the level of power specified in a wheeling contract in megawatts (MW's) which is the maximum amount of power at each point of interconnection for which BPA is obliged to provide wheeling services.

"Wheeling" means the use of the transmission facilities of one system to transmit power of and for another system. As applied to services performed by BPA, it means the transmission of non-Federal power on the Federal system on behalf of utilities owning or purchasing such power.

D. Types of Wheeling Services

This section has been substantially rewritten in response to comment and evaluation of the preliminary draft. The major changes are as follows:

First, the "General Availability" section clarifies the terms for availability of the integration service in the context of existing contracts.

Second, detail on terms for firm services which had appeared in this section in the preliminary draft are now contained as contract principles in the attachments. No contract principles are attached for nonfirm service because the terms are brief and adequately described in this section and because no change in the basic service is proposed for this policy.

Third, the preliminary draft referred to "Other Firm Services" which do not appear separately in this section. The services referred to as "Partial Year" or "Seasonal" firm were treated separately for formula power contracts and the FPT rate schedule. They are now provided for sufficiently in the general principles for the integration service in Appendix A and therefore are not distinguished as individual services in this text. "Station Service" is also provided for sufficiently under the principles for both integration and the use of capacity service.

Fourth, the preliminary draft was issued before the BPA transmission rate filing and tentatively referred to billing determinants for the services period. Billing determinants are now being established in the rate process and therefore are not mentioned here. One partial exception is the short distance discount referred to in Appendix A. A formula for the discount has been proposed in the transmission rates. The guidelines for applying it must be developed in this policy process. This concept was discussed during the January 1983 meetings though it was not sufficiently developed to have been included in the preliminary draft.

Fifth, the preliminary draft stated that BPA was considering a method of providing a direct rebate of nonfirm revenues to firm rate payers. There was concern expressed at the January meetings about the potential for giving a double advantage to low load factor customers by offering this rebate in addition to the envisioned energy billing determinant. The proposed transmission rate filing for the integration service includes capacity and energy billing. Due to the concern expressed and to the potential administrative difficulty of direct repayment of nonfirm revenues, the reference to that rebate has been dropped.

Sixth, the preliminary draft stated: "Wheeling contracts will not be offered to non-utility entities without another utility party to the transaction which is willing and able to perform operational and technical obligations normally undertaken by a wheeling party in accordance with usual wheeling practices." This is a statement of historical BPA wheeling practice and is reflected in the attached contract principles. This issue has been sufficiently highlighted by the preliminary draft and the discussions it engendered. It is now treated as a contract principle in this proposed policy and is not shown as a separate issue.

1. *General Availability.* After the effective date of this policy and of the final transmission rates, BPA intends to serve all subsequently arising wheeling needs pursuant to the terms outlined in this section. The formula power "point to point" wheeling service and the Formula Power Transmission (FPT) rate will not be offered for new contracts, through the FPT rate schedule has been filed to preserve its use for existing contracts.

The integration service provides the greatest general efficiency for both BPA and a wheeling customer when it is comprehensive, that is, absorbs all the utility's network wheeling. In addition, because the billing methods under former contracts are different from the IR rate proposed, it would be most efficient to have the transition affect all of a utility's billing. For conversion to the integration service, BPA will require conversion of all firm network wheeling contracts, excepting those which include major services not provided by the terms of the integration contract principles in Appendix A, or payments which are unable to be adjusted pursuant to filed rate schedules. All newly arising firm network transmission needs must be covered by an integration contract, but this will not require mandatory conversion of all pre-existing contracts.

If less than all of the utility's existing firm network contracts are converted, the integration contract will include terms necessary to prevent loss to BPA due to simultaneous operation under different agreements, if necessary. A utility may elect to convert existing use of facility transmission agreements to a general contract for the integration service, but the obligation to pay facility-specific charges for identifiable BPA facilities provided for or used by the customer will not be discontinued.

2. *Integration Service.* a. Long-term firm wheeling will be provided on BPA facilities between points of integration (POI's) and points of delivery (POD's) as specified in the agreement between the parties for a contracted amount of transmission demand.

b. Transmission demands and scheduling limits at certain POI's and at POD's will be determined such that use does not exceed the transmission capability of facilities.

c. BPA will continue to use prudent utility accounting, reporting, and scheduling practices to determine amounts of power wheeled under contracts.

d. Terms in the integration agreement governing changes of Transmission Demands, POI's or POD's, etc. will assure that BPA has long-term revenue stability in relation to its long-term obligation to provide service.

e. The contract will provide for rate adjustment notice periods and may establish billing determinants, and other charges.

3. *Use of Capacity Service.* This service is available for firm long-term service when the transmission use

involves facilities for which the user and extent of use are readily identified, particularly where the users are few in number and access to the facilities is limited as in the case of radial lines. Other terms for service are addressed in Appendix B.

4. *Nonfirm Service.* Nonfirm service is provided using capacity of the Federal system which, in BPA's sole determination, is availabie. BPA will offer nonfirm transmission service for nonfirm energy apart from the integration service, if appropriate. The following terms will apply for such separate arrangements.

a. Energy may be made available to BPA at any point where the Federal System interconnects with a resource or with another utility, by advance agreement with BPA.

b. Energy will be delivered to the customer's system at any point of delivery having appropriate facilities, load, or contractual arrangements to receive such energy, by advance agreement with BPA.

E. Losses

For firm transmission on integrated facilities, hourly amounts of power to be returned to BPA as losses will be determined using an average Federal system loss factor. Hourly BPA system losses will be assessed to wheeling customers in proportion to their respective amounts of power using the Federal system.

Loss factors for all services using radial facilities shall be calculated separately for such facilities. Hourly losses shall be shared (if more than one user) in proportion to amounts of power wheeled, unless otherwise mutually agreed upon losses are reciprocally applied.

Losses for all nonfirm service within the Region which is being provided apart from an integration agreement shall be calculated from a percentage loss factor determined for the Federal system.

Losses shall be returned 168 hours later from the P.O.D.'s at which power was delivered.

Issued in Portland, Oregon, May 23, 1983.

Peter T. Johnson,

Administrator.

Appendix A—Integration Contract Principles

BPA's intent is to offer a firm wheeling contract providing for a utility's wheeling needs among points within the Pacific Northwest Region. Consistent with past practice, BPA's contractual relationship will be with the receiver of power. Firm and nonfirm power will receive firm transmission service up to the level of the total of the contract transmission demands. The basic charge will be the postage stamp capacity and energy rates, although use of facility charges may be applied to certain facilities, if appropriate.

1. Term

The term for firm integration service will normally be 20 years. The customers will have a right to renew firm service at the end of the 20 year term, subject to renegotiation based on existing system capability and transmission policy.

2. Points of Interconnection (POI)

In order to be a POI, the facilities must be so designated in the appropriate exhibit of a wheeling contract between the parties. A POI in one contract is not necessarily a POI in any other contract unless specifically included.

A POI may be any of the following points where power from a resource of the customer is deemed to enter the FCRTS:

a. A point or points near a generating facility where the Federal system is interconnected;

b. An interchange point between the systems of BPA and another utility where power is made available to BPA for the account of the customer;

c. An interconnection point between the systems of BPA and the customer where power not readily identified with a specific generating facility is made available to BPA; or

d. The terminal of an Intertie facility on the FCRTS at which the customer has arranged to receive power into the region.

3. Points of Delivery (POD)

In order to be a POD, the facilities must be so designated in the appropriate exhibit of the wheeling contract between the parties. BPA's obligation to deliver power at such point shall be subject to demand limits which may be specified for such points in the event that combined schedules exceed the capabilities of the facilities. A POI or POD in one contract is not necessarily a POD in any other contract unless specifically included.

A POD may be any of the following points where power wheeled is deemed to be delivered to the customer:

a. A point on the customer system;

b. A POI at which station service power may be delivered; or

c. The terminal of an Intertie facility at which the customer has arranged to export power from the region.

4. Facilities provided at or for a POI or POD, responsibility for the cost thereof, and responsibilities for maintaining and operating such facility shall be subject to BPA's Customer Service Policy, and may be specified in the wheeling contract between the parties.

5. Transmission Demand

a. A Transmission Demand shall be set for each POI based on the peak capability of a resource or share of a resource belonging to the customer, or the peak demand in a contract of the customer, and consistent with the customer's submittals for firm planning.

b. In the event that the power from a POI can be demonstrated to leave the Federal system at a point 75 miles or less from such POI, a discounted demand charge may apply, subject to approval of the short distance discount formula in the IR-83 rate proposal through the rate process.

c. For purposes of determining the customer's firm Transmission Demand, BPA will apply the principle in subsection (i) below for new integration contracts, and the principle in (ii) below in the event that facilities are added to the customer's existing system.

(i) To the extent that the customers' existing transmission facilities which it, owns or has a contract right to use, are sufficient to transmit the peak capabilities of its resources to its distributed peak loads, no further Transmission Demand will be claimed to be using any existing parallel Federal facilities. If the customer's existing transmission facilities are not sufficient as described, a firm Transmission Demand for the excess peak capability may be established as a wheeling load on parallel Federal facilities.

(ii) If the peak capability of the customer's resources is increased, or if new transmission facilities are constructed by the customer, BPA will evaluate the transmission capacity of the customer's facilities by a line capacity allocation method. After such evaluation, if it is determined that the customer does not have sufficient capacity to transmit the peak capability of its resources to its distributed loads, a firm Transmission Demand will be established as a wheeling load on parallel Federal facilities for the additional capacity that is required.

6. Changes in Transmission Demands

a. Transmission Demands may be increased, if consistent with Section 5 above, subject to BPA determination of available capacity upon 3 months notice and not more frequently than once a year.

b. Transmission Demands may be reduced, if consistent with Section 5 above, subject to the following:

(i) To the extent that there is an equivalent increase in the Transmission Demand of another BPA firm wheeling customer, the reduction will take effect after 3 months prior written notice;

(ii) If no equivalent increase in another customer's Transmission Demand, the reduction will take effect after 2-years prior written notice; (rate process notice)

(iii) Facility-specific charges associated with such Transmission Demand, for instance, UFT charges on facilities provided at a POI, will not be reduced unless appropriate arrangements have been made for termination charges or mitigation of non-use.

7. Power Wheeled

The power wheeled for any hour shall be the sum of amounts made available to BPA at each POI, not to exceed the sum of Transmission Demands. Such amounts shall not be reduced amounts of energy required to be delivered to BPA as replacement energy or as energy returned in compensation for services provided by BPA pursuant to agreements (obligation energy). Such obligation energy must be made available to BPA by or on behalf of the other part at the points designated in the agreement from

which the obligation is derived. Obligation energy supplied to BPA pursuant to the Canadian Entitlement Allocation Agreements may be made available as provided in such agreements.

Power wheeled may be distributed among POIs such that the amount scheduled from a POI exceeds the Transmission Demand for such point, subject to a demand limit which BPA may specify in the event that combined schedules exceed the capability of the transmission facilities. Hourly amounts of power which exceed the peak capability established for parallel facilities of the customer, if any, shall be added to power wheeled for such hour.

8. Losses

Losses shall be returned 168 hours later from the respective PODs at which such amount of power were delivered, unless otherwise mutually agreed by the parties.

Appendix B—Use of Capacity Contract Principles

BPA's intent is to offer a firm contract providing the utility with the right to use capacity in specifically identified facilities in exchange for payment of a pro rata share of the full annual costs of such facilities. This would include the right to use such facilities for transmission in either direction up to the amount of the Transmission Demand to the extent that the utility has load and resources at both ends of the facilities.

1. Term

Term will be a maximum of 20 years. BPA may offer to renew firm service at the end of the 20 year term, subject to renegotiation based on existing conditions for those facilities and transmission policy.

2. Points of Interconnection and Delivery (POI/POD)

To be agreed upon by the parties, subject to BPA's determination of available capacity of its facilities.

3. Transmission Demand

The Transmission Demand will be the customer's noncoincidental peak demand on such facilities, if determinable. If not determinable, the Transmission Demand may be the peak operating demand of a resource using facilities, or other reasonable measurement of the utility's peak use of such facilities.

4. Changes in Transmission Demand

a. Transmission Demands may be increased if consistent with Section 3 above, subject to BPA determination of available transmission capacity, upon 3 months prior written notice, and not more frequently than once a year.

b. Transmission Demands may be reduced, if consistent with Section 3 above, subject to termination charges as necessary to recover costs of facilities installed by BPA to provide such service.

BILLING CODE 6450-01-M

Economic Regulatory Administration

[ERA Docket No. 83-CERT-071]

Carstab Corp.; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

Carstab Corporation (CARSTAB), 1560 West Street, Reading, Ohio 45215, filed an application on May 9, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its chemical manufacturing facility in Reading, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, CARSTAB indicates that the volume of natural gas for which it requests certification is approximately 160,000 Mcf per year. This volume is estimated to displace the use of approximately 1,159,000 gallons of No. 2 fuel oil (less than 0.2 percent sulfur) per year.

The eligible sellers are Exxon U.S.A., P.O. Box 2810, Houston, Texas 77001; Texas Gas Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 45302; and Ohio Gas Marketing Corporation, 3933 Price Road, Newark, Ohio 43055. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 1273, Charleston, West Virginia 25325; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by The Cincinnati Gas & Electric Company, P.O. Box 960, Cincinnati, Ohio 45202; and The Union Light, Heat & Power Company, P.O. Box 32, Covington, Kentucky 41012, local distribution companies.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG-43, Room GA-007, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register.**

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of the group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary.

If EPA determines that an oral presentation is necessary, further notice will be given to CARSTAB and any person filing comments and will be published in the **Federal Register.**

Issued in Washington, D.C., on May 25, 1983.

James W. Workman,

Director, Office of Fuels Programs, Economic Regulatory Administration.

BILLING CODE 6450-01-M

[ERA Docket No. 83-CERT-013; etc.]

Cone Mills, Corp., et al.; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

In the matter of Cone Mills Corporation, [ERA Docket No. 83-CERT-013;] W. R. Grace & Company, [ERA Docket No. 83-CERT-014;] Mohican Mills Division, [ERA Docket No. 83-CERT-015;] Spartan Mills, [ERA Docket No. 83-CERT-017;] Wake Forest University, [ERA Docket No. 83-CERT-018;] Clyde Fabrics, Incorporated, [ERA Docket No. 83-CERT-019;] The General Tire and Rubber Company, [ERA Docket No. 83-CERT-020;] Westinghouse Electric Corporation, [ERA Docket No. 83-CERT-021;] Michelin Tire Corporation, [ERA Docket No. 83-CERT-022.]

On April 12, 1983, and as amended on May 3, 1983, Cone Mills Corporation (CONE), P.O. Box 488, Greenville, South Carolina 29602; Cryovac Division of W. R. Grace & Company (CRYOVAC), P.O. Box 464, Duncan, South Carolina 29334; Mohican Mills Division (MOHICAN), P.O. Box 190, Lincolnton, North Carolina 28092; Spartan Mills (SPARTAN), P.O. Box 5784, Spartanburg, South Carolina 29304; Wake Forest University (WAKE FOREST), P.O. Box 7201, Reynolda Station, Winston-Salem, North Carolina 27109; Clyde Fabrics, Inc., Division of TI-CARO, Incorporated (CLYDE), P.O. Box 760, Newton, North Carolina 28658; The General Tire & Rubber Company (GENERAL), One General Street, Akron, Ohio 44329; Westinghouse Electric Corporation (WESTINGHOUSE), P.O. Box 7002, Charlotte, North Carolina; and

Michelin Tire Corporation (MICHELIN), P.O. Box 2846, Greenville, South Carolina 29602, filed with the Administrator of the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at one university and fourteen manufacturing facilities in North Carolina and South Carolina, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the applications on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In their applications, the Applicants indicate the total volume of natural gas for the fifteen North Carolina and South Carolina facilities for which they request certification is approximately 3,517,870 Mcf per year. This volume is estimated to displace the use of approximately 22,651,317 gallons of No. 6 fuel oil (2.0–2.9 percent sulfur) per year.

The quantities at each location are subject to variation with changes in demand, but estimated gas usage and resulting oil displacement volumes are listed below:

ERA Docket No. and location	Estimated volume (Mcf) per year	Estimated oil (No 6) displacement (gallons) per year	Percent sulfur content
83-CERT-013 (Cone):			
1. Union Bleachery Plant, Greenville, S.C.	730,000	5,012,555	2.8
2. Salisbury Plant, Salisbury, N.C.	438,000	3,007,533	2.1
3. Central Power Plant, Greensboro, N.C.	329,500	2,255,700	2.1
83-CERT-014 (Cryovac): 1. Cryovac-Duncan Plant, Duncan, S.C.	16,060	110,278	2.0
83-CERT-015 (Mohican): 1. Mohican Mills, Lincolnton, N.C.	209,875	1,441,142	2.1
83-CERT-017 (Spartan):			
1. Spartan Plant, Spartanburg, S.C.	78,110	536,287	2.9
2. Startex Mills, Startex, S.C.	178,485	1,225,597	2.9
3. J. H. Montgomery Mill, Chesnee, S.C.	94,170	646,634	2.9
4. Powell Mill, Spartanburg, S.C.	46,720	320,810	2.9
5. Whitney Mill, Spartanburg, S.C.	1,095	7,519	2.9
83-CERT-018 (Wake-Forest): 1. Wake Forest University, Winston-Salem, N.C.	146,000	1,002,533	2.1
83-CERT-019 (Clyde): 1. Clyde Fabrics Mill, Newton, N.C.	155,125	1,065,192	2.1
83-CERT-020 (General): 1. Charlotte Tire Plant, Charlotte, N.C.	425,225	2,919,878	2.1
83-CERT-021 (Westinghouse): 1. Westinghouse Turbine Plant, Charlotte, N.C.	159,505	1,095,267	2.1
83-CERT-022 (Michelin): 1. Greenville Manufacturing Plant, Greenville, S.C.	511,000	3,508,987	2.1
Total	3,517,870	22,651,317	

For each application noted above, the eligible seller is Oklahoma National Gas Company, P.O. Box 871, Tulsa, Oklahoma 74102. The gas will be transported by Transcontinental Gas Pipeline Corporation, P.O. Box 1396, Houston, Texas 77251; Northern Natural Gas Company, 2223 Dodge Street, Omaha, Nebraska 68102; and Piedmont Natural Gas Company, Inc., P.O. Box 33068, Charlotte, North Carolina 28233, a local distribution company.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning any of these applications to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register**.

An opportunity to make an oral presentation of data, views, and arguments either against or in support of any of these applications may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to the Applicant and any person filing comments and will be published in the **Federal Register**.

Issued in Washington, D.C., on May 24, 1983.

BILLING CODE 6450–01–M

[ERA Docket No. 83–CERT–065]

The Kroger Co.; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

The Kroger Co. (KROGER), 1014 Vine Street, Cincinnati, Ohio 45201, filed an application on May 9, 1983, with the Economic Regulatory Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its food processing facility in Cincinnati, Ohio, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In this application, KROGER indicates that the volume of natural gas for which it requests certification is approximately 200 million cubic feet (200 MMcf) per year. This volume is estimated to displace the use of approximately 1,408,450 gallons of No. 2 fuel oil (0.49 percent sulfur) per year.

The eligible sellers are Exxon USA, P.O. Box 2810, Houston, Texas 77001; and Texas Gas Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 45302. The gas will be transported by Columbia Gas Transmission Corporation, P.O. Box 2173, Charleston, West Virginia 25325; and Texas Gas Transmission Corporation, 3800 Frederica Street, P.O. Box 1160, Owensboro, Kentucky 42301; and by The Cincinnati Gas & Electric Company, P.O. Box 960, Cincinnati, Ohio 45202; and The Union Light, Heat and Power Company, P.O. Box 32, Covington, Kentucky 41012, local distribution companies.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any

person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Daigneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register**.

An opportunity to make an oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. The request should include a summary of the proposed oral presentation and a statement as to why an oral presentation is necessary. If ERA determines that an oral presentation is necessary, further notice will be given to KROGER and any person filing comments and will be published in the **Federal Register**.

Issued in Washington, D.C., on May 25, 1983.

James W. Workman,

Director, Office of Fuels Programs, Economic Regulatory Administration.

[FR Doc. 83–14595 filed 5–31–83; 8:45 am]

BILLING CODE 6450–01–M

[ERA Docket No. 83–CERT–034]

Orange and Rockland Utilities, Inc.; Application for Certification of the Use of Natural Gas To Displace Fuel Oil

Orange and Rockland Utilities, Inc. (ORU), One Blue Hill Plaza, Pearl River, New York 10965, filed an application on April 25, 1983, with the Economic Administration (ERA) for certification of an eligible use of natural gas to displace fuel oil at its Lovett Plant generating station located at Tomkins Cove, New York; and its Bowline Point generating station, located in West Haverstraw, New York, pursuant to 10 CFR Part 595 (44 FR 47920, August 16, 1979). More detailed information is contained in the application on file and available for public inspection at the ERA Natural Gas Division Docket Room, RG–43, Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, from 8:00 a.m. to 4:30 p.m., Monday through Friday, except Federal holidays.

In its application, ORU indicates that the volume of natural gas for which it requests certification is approximately 25,000 Mcf per day. This volume is estimated to displace the use of approximately 1.5 million barrels of No. 6 fuel oil (0.37–0.6 percent sulfur) per year. ORU anticipates that approximately 75% of this amount be displaced at the Lovett Plant, with the balance being displaced at the Bowline Point facility.

The eligible seller is Exxon Corporation, P.O. Box 2180, Houston, Texas 77001. The gas will be transported by Columbia Gulf Transportation Company, P.O. Box 1273, Charleston, West Virginia 25323; and by Columbia Gas Transportation Corporation, P.O. Box 1273, Charleston, West Virginia 25323.

In order to provide the public with as much opportunity to participate in this proceeding as is practicable under the circumstances, we are inviting any person wishing to comment concerning this application to submit comments in writing to the Economic Regulatory Administration, Office of Fuels Programs, Natural Gas Division, RG–43; Room GA–007, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, Attention: Paula A. Diagneault, within ten (10) calendar days of the date of publication of this notice in the **Federal Register**.

An opportunity to make oral presentation of data, views, and arguments either against or in support of this application may be requested by any interested person in writing within the ten (10) day comment period. The request should state the person's, interest and, if appropriate, why the person's interest and, if appropriate, why the person is a proper representative of a group or class of persons that has such an interest. If ERA determines that an oral presentation is necessary, further notice will be given to ORU and any person filing comments and will be published in the **Federal Register**.

Issued in Washington, D.C. on May 25, 1983.

James W. Workman,

Director, Office of Fuels Programs, Economic Regulatory Administration.

Energy Information Administration

Changes to DOE Reporting and Recordkeeping Requirements

AGENCY: Energy Information Administration, DOE.

ACTION: Notice of changes to the inventory of Department of Energy reporting and recordkeeping requirements.

SUMMARY: The Energy Information Administration (EIA) of the Department of Energy (DOE) hereby gives notice to respondents and other interested parties of changes to the inventory of current energy information collections as defined in the Paperwork Reduction Act of 1980 (Pub. L. 96–511).

The listing that follows this notice indicates changes made during the quarter from January 1, 1983, to March 31, 1983, to the inventory of current DOE information collections published in the **Federal Register**, 47 FR 55,410 (December 9, 1982).

The listing includes new information collections approved by the Office of Management and Budget (OMB), collections reinstated, collections extended, collections discontinued or allowed to expire, and changes to continuing information collections. For each new requirement, requirement extended, and requirement discontinued, the current DOE control or form number, the title, and the OMB control number and approval expiration date are listed by DOE sponsoring office. If applicable, the appropriate Code of Federal Regulations citation is also listed. Also, information collections not utilizing structured forms are designed by an asterisk (*) placed to the right of the control or form number.

FOR FURTHER INFORMATION CONTACT: Carolyn Sinclair, EI–73, Energy Information Administration, Mail Stop 1H–023, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C. 20585, (202) 252–2313.

Single, blank information copies of those collections utilizing structured forms may be obtained by contacting Delores McCadney, National Energy Information Center, EI–22, Forrestal Building, U.S. Department of Energy, Washington, D.C. 20585, (202) 252–8800.

Issued in Washington, D.C., May 23, 1983.

J. Erich Evered,

Administrator, Energy Information Administration.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. G-3894-011, et al.]

Natural Gas Companies; Applications for Certificates, Abandonment of Service and Petitions to Amend Certificates [1]

May 23, 1983.

Take notice that each of the Applicants listed herein has filed an application or petition pursuant to Section 7 of the Natural Gas Act for authorization to sell natural gas in interstate commerce or to abandon service as described herein, all as more fully described in the respective applications and amendments which are on file with the Commission and open to public inspection.

Any person desiring to be heard or to make any protest with reference to said applications should on or before June 7, 1983, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, petitions to intervene or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211, .214). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Persons wishing to become parties to a proceeding or to participate as a party in any hearing therein must file petitions to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by Sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure a hearing will be held without further notice before the Commission on all applications in which no petition to intervene is filed within the time required herein if the Commission on its own review of the matter believes that a grant of the certificates or the authorization for the proposed abandonment is required by

[1] This notice does not provide for consolidation for hearing of the several matters covered herein.

the public convenience and necessity. Where a petition for leave to intervene is timely filed, or where the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicants to appear or to be represented at the hearing.

Kenneth F. Plumb,
Secretary.
